With other interesting variations.

Correct answers from Digamma, J.D., Shogi, E.D., Sigma, W.D.C., E. J. King, W.H.S., and Kr.

PROBLEM No. 197.

Here is a curiosity which may be interesting to our solvers. It is easy enough, but the "four-in-one" position is decidedly ingenious.

By GEORGE J. SLATER.

BLACK.

WHITE.

White to play and mate in two moves.
Black to play and mate in two moves.
White forces Black to mate in two moves.
Black forces White to mate in two moves.

CORRECTIONS.

We regret to find some errors in our last column (September 21st):—
Game No. 346.—White 32nd move should be P to Q Kt 3.
Game No. 349.—White 36th move should be B to K 4.

THE HASTINGS CONGRESS.

We reprint a few of the games and hope to have full details of the finish by next week.

SYDNEY CHESS CHAMPIONSHIP.

Mr. Jacobsen has played all his games, and he still retains the club championship. His final score is 24 wins, one loss, and one draw—a splendid record, indeed.

Mr. Jacobsen is a native of Hull, England, where he was known as the "Boy Phenomenon." His colonial performances appear below:—
Queensland: Won chess championship, gold trophy presented by the late Justice Mein, March 1st, 1887. Started chess column in *Queenslander*.
New South Wales: Arrived November, 1889. Defeated Ridley, T. E. Ash, and De Vine, in private matches; 1891, won second prize in championship tournament; 1893, first prize in championship; 1895, first prize in three handicap tournaments.

We give a good specimen of Mr. Jacobsen's play:—

GAME No. 356.

The following game was played recently between Messrs. Jacobsen and Crane. The winner's play from the 12th move is exceptionally fine.

RUY LOPEZ.

WHITE. W. Crane, jun.	BLACK. J. Jacobsen.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—Kt to K B 3
5—P to Q 3	5—P to Q 3
6—P to Q B 3	6—B to K 2
7—Q Kt to Q 2	7—Castles
8—Kt to B sq. (a)	8—Kt to K sq.
9—B to Kt 3	9—Kt to R 4
10—B to B 2	10—P to K B 4
11—Kt to K 3 (b)	11—P to B 5
12—Kt to Q 5	12—B to Kt 5!
13—Kt takes B ch.	13—Q takes Kt.
14—P to Q 4	14—P takes P
15—Q takes P	15—Kt to Q B 3
16—Q to Q 3 (c)	16—Kt to K 4
17—Kt takes Kt	17—P takes Kt
18—B to Kt 3 ch.	18—K to R sq.
19—P to B 3 (d)	19—Q to R 5 ch.
20—K to B sq.	20—R to Q sq.
21—Q to K 2	21—Kt to B 3 (e)
22—Q to K sq. (f)	22—Q to R 4
23—Q to B 2 (g)	23—R to Q 6!
24—B to B 4 (h)	24—Kt takes K P (i)

Position after Black's 24th move.

BLACK.

WHITE.

25—P takes B	25—Q takes Kt P
26—B takes R	26—Q to Q 8 ch.
27—Q to K sq.	27—Kt to Kt 6 ch. (j)
28—K to B 2	28—Kt takes R ch.
29—K to B sq.	29—Q takes B ch.
30—K to Kt sq.	30—P to B 6!
31—P takes P	31—Q takes K B P
32—B to Kt 5	32—Kt to B 7

And White resigned.

(a) Or 8—P to K R 3 with 9—P to K Kt 4, if necessary.
(b) White never recovers from the cramping effects of his opponent's next move. 11—P takes P was compulsory.
(c) Inferior to 16—Q to Q 5 ch. and 12—Q to K Kt 5.
(d) If 19—Castles, then comes Black's P to B 6.
(e) Black starts sacrificing, but giving up the Kt seems scarcely sound.
(f) Suppose 22—P takes B—Kt takes P, 23—Kt to Kt sq. and White should with patience repel the attack.
(g) White "fiddles" about too much with the Q: 23—B to Q 2 was all right.
(h) Very weak, clearly superior was B to B 2.
(i) Beautifully conceived. Black has R, B and Kt en prise, and White is doomed whether he captures, or moves the Q.
(j) The ball at his foot, and he finishes merrily.

MRS. HEYWOOD.

We learn from the *Illustrated Sporting and Dramatic News* that the widow of the lamented G. C. Heywood has succeeded him as chess editor of the *Newcastle Weekly Chronicle Supplement*. Previous to her marriage Mrs. Heywood was a member of the Ladies' Chess Club, which met for

some years in Little Queen-street, London; and which owed its success to Mrs. Down and her daughters—all excellent and enthusiastic chess players.

MASON ON ATTACK.

In successful attack the obvious principle, says Mr. Mason, is concentration of superior force upon a decisive point. "What a decisive point may be depends upon the balance of force and the skill of the players. It may be the King himself; it may be only a Pawn. Or the point may be to secure a piece or a Pawn in the occupation of some square from which it may damage the enemy. For example, the power of a passed Pawn is almost proverbial, and a passed Pawn results from attack based upon the principle mentioned. But a player may succeed in one or more attacks and yet lose in suffering a greater one upon himself. A winning attack upon the King makes nothing of all other reverses. This, however, is not to be looked for against a fine player. He is aware that the security of his King is all in all, short of actual mate of his adversary. Therefore if you can attack the King be sure there is no attack against your own by which mate may be given first, or which will necessitate a general retreat on your part for his defence. This kind of retreat commonly spells disaster. You attack when you should be fortifying your defence."

HASTINGS CONGRESS.

SCORE AFTER THE 18TH ROUND.

Albin	7	Pillsbury	14
Bardeleben	8½	Pollock	6
Bird	7½	Schiffers	8½

PASSENGERS.

ARRIVED.

Per British steamer *Altmore*, from Portland, Or., and Victoria, B.C.:—Mr. W. Houseman and

Mr. J. Black in cabin; one Chinese and 9 Japanese in steerage.

Per British steamer *China*, from Hongkong via Nagasaki:—Mr. J. B. Crook, Mr. H. N. Brown, Mr. E. F. MacKay, Mr. H. O. S. Thompson, Mrs. T. R. Adams, and Captain Radcliffe, R.B., in cabin. For San Francisco:—Rev. E. Unangst, D.D., Miss M. E. Magee, and Mr. C. S. Barff in cabin. For Honolulu:—Mr. Chang Fong and Mr. Chang Yick Leong in cabin.

Per French steamer *Océanien*, from Marseilles via ports:—Mrs. de Carier, child and amah, Péres Munge and Marion, Mr. Thompson, Mr. Gilbrin, Mr. Audarin, Mr. Chimatake, Mr. and Mrs. J. J. B. Heemskock, Mrs. Holtermann, Miss Cadet, Mr. Holtermann, Mr. Gony, Mr. Lévy, Mr. Ungerer, Mr. and Mrs. Takimoto, Mr. A. P. MacEwen, Mr. R. Steiner, Mr. W. D. Graham, Mr. and Mrs. Wrightson, Mr. Bonnet, Mr. Mori, Mr. Shin Yah, Captain Harrison, Mrs. Harrison, 2 children and amah, Mr. Turner, Fièvre Vidal, Mr. de Gunzburg and servant, Mr. Wooy, Mr. Schwol, Mr. Potter, Mr. Cheng Kan, Mr. Okamoto, Mr. Ah Se, Mr. Cheng She Shin, Mr. Cheng Hung, Mr. Wong Gaeh, Mr. Sam Tuck Hing, Mrs. Ah Sam, Mr. A. Ching, Mrs. Sargent and 2 children, and Mr. Meadows in cabin; 4 Chinese in steerage.

DEPARTED.

Per British steamer *China*, for San Francisco, via Honolulu:—Mr. G. Arone, Mr. J. L. Biley, Mr. C. S. Barff, Mr. J. D. Chappell, Dr. Geo. Chismore, Mr. Chang Fung, Mr. Chang Yick Leong, Mr. J. Colomb, Mr. and Mrs. A. G. Davis, Mr. and Mrs. A. M. Easton, 2 children and maid, Mr. and Mrs. C. G. Holmes, 2 children, Mr. W. J. Kenny, Prof. A. N. Krasnow, Mr. Ralph Lane, Mr. C. de Mouchy, Miss M. E. Magee, Mr. S. Nishimura, Mr. H. G. Simon, Mr. I. M. Scott, Mr. C. P. E. Schouw, Mr. M. Schelechnikoff, Rev. E. Unangst, Mrs. W. A. Wilson, General G. B. Williams, and Mrs. Wright in cabin.

CARGO.

Per British steamer *China*, for San Francisco, via Honolulu:—

	SAN FRANCISCO	NEW YORK	CHICAGO	ST. LOUIS	HAMMOND	TON	DEMON	TOTAL
Shanghai	1,845	489	—	408	—	—	—	2,742

REPORTS.

The British steamer *Altmore*, Captain Watson, reports:—Arrived at Yokohama the 25th September at 2.30 p.m. after a twenty-two days passage from Astoria. During most of this time had nothing but gales of wind and very high seas; had only about two clear days all the way, mostly fogs or very heavy rain. The barometer on passage averaged about 30.5, and the gales mostly from S.W. During the last two days had gale from S.E., veering round with heavy rain to the W.S.W. The ship's decks more or less flooded all the way over. On the whole the passage was far from pleasant.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 18th September at noon; on the 19th off Lammocks hove to 10 hours in a typhoon, had strong N.N.E. winds and rough sea to Nagasaki. Left Nagasaki the 23rd; experienced thick and rainy weather through the Inland Sea, and all the way to port. September 20th, picked up 5 Chinese men from a wrecked junk off Ocksue Island, bound from Wenchow for Foochow.

LATEST COMMERCIAL.

IMPORTS.

Good business continues. Yarn—Strong demand for fine counts, Plain and Gassed, singles and doubles, with a higher range of prices. Shirtings—Good trade in glb., market strong. Fancies have all had a turn at satisfactory prices. Italian Cloth is about ½ cent. per yard dearer all round with some business done in other Woollens also.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ lb., 38½ yds., 39 inches	\$1.30 to 2.90
Grey Shirtings—9 lb., 38½ yds., 45 inches	2.75 to 3.15

No. 168, Bombay	—	

MEALS.

Good trade, especially in Iron, and prices moving up. Sales of all kinds have been more satisfactory than for some time past.

Flat Bars, 4 inch	PER PICUL.	13 20 to 3 25
Flat Bars, 4 inch	3 25 to 3 30	
Round and square up to 4 inch	3 20 to 3 30	
Iron Plates, assorted	3 50 to 3 65	
Sheet Iron	4 30 to 4 50	
Galvanized Iron sheets	9 00 to 9 25	
Wire Nails, assorted	5 50 to 5 90	
Pin Plates, per box	5 50 to 5 75	
Pig Iron, No. 3	1 65 to 1 70	

KEROSENE.

Prices lower owing to the sharp competition between the two large American and Russian holders. Buyers go slow, taking advantage of every fresh reduction in price, and expect yet lower quotations ere long. Stock is down to 6,500,000 gallons, but fresh arrivals will be here before long.

American	\$2.00 to 2.05
Russian	1.95 to 2.00
Langkat	1.90

SUGAR.

Brown—A revival in the trade. Small arrivals and large sales with strong market. All prices advanced and outlook satisfactory. White—Good sales at quotations both "spot" and "to arrive." Market healthy and prices tending upwards.

Brown Takao	PER PICUL.	\$3.70 to 3.80
Brown Manila	4.30 to 4.60	
Brown Daitong (New)	3.30 to 3.35	
Brown Canton	3.25 to 3.80	
White Java and Penang	6.10 to 6.20	
White Refined	6.25 to 9.50	

EXPORTS.

RAW SILK.

Quiet market, with small doings for Europe. The high range of prices has stopped the trade and most quotations are nominal, although \$1,010 is reported paid for a small lot of something extra-super in Filatures. Holders firm, believing that buyers will come on again shortly.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 den.	Nom 970 to 980
Filatures—Extra 13/15, 14/16 deniers	970 to 980
Filatures—No. 1, 10/13 deniers	Nom. 940 to 950
Filatures—No. 1, 13/15, 14/16 den.	Nom. 940 to 950

Kakedas—No. 2	780 to 790
Kakedas—No. 2	740 to 750

WASTE SILK.

Good demand for the better grades of Noshi, but holders prevent large transactions by their stubborn attitude. If they would be a little bit current a heavy business could be done. Pierced Cocoons still in the doldrums for the same reason.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$130 to 135
Noshi—Filature, Good	120 to 125
Noshi—Oshu, Best	130 to 135
Noshi—Oshu, Good	120 to 125
Noshi—Oshu, Medium	110 to 115
Noshi—Shinshu, Best	80 to 85
Noshi—Shinshu, Good	70 to 75
Noshi—Bushu, Best	140 to 145
Noshi—Bushu, Good	130 to 135

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is a Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

YOKOHAMA: SATURDAY, OCT. 5TH, 1895.

BIRTH.

At Kogawa-cho, Osaka, on the 2nd inst., the wife of Wm. WYND of a daughter.

SUMMARY OF NEWS.

CHOLERA is steadily decreasing all over the Empire.

THREE hundred railway workmen left Tokyo on the 30th ult. for Formosa.

COUNT A. DE BYLANDT, the Netherlands Minister, leaves Japan in November next.

A MAN was run over and killed by a train at Uyeno, Tokyo, on the 29th ult.

THE Autumn regatta of the Yokohama Amateur Rowing Club took place to-day.

THE Yokohama Philharmonic Society start the new season with a balance in hand of \$50.

A LARGE conflagration occurred at Nemuro on the 3rd inst., 943 houses being destroyed.

THE bad weather of the past week on the China coast has greatly hindered steamships on the voyage to Japan and the departure of all

the trans-Pacific mail steamers was postponed from two to three days beyond schedule date in consequence.

SATURDAY'S Sailing race, for the Grand Hotel Cup, resulted in another win for Mr. Laffin's *Mary*.

OVER 300 artisans, who have been working in the dock-yard at Port Arthur, lately returned to Japan.

FOUR persons were burnt to death during the recent fire at Imo-o, Tsu-u District, Okayama Prefecture.

AN outbreak of rinderpest among cattle recently imported from Korea is reported from Okayama Prefecture.

THEIR Imperial Highnesses Princesses Tsune and Kane returned to Tokyo on the 1st inst. from Nikko.

MR. SHIMAMURA, the newly appointed Japanese Consul-General at Honolulu, will shortly leave Tokyo for his post.

LI HUNG-CHANG is China's sole representative in the negotiations regarding the new commercial treaty with Japan.

SALVAGE work is still steadily proceeding at the *Belgic*, and hopes are now entertained of floating her within a few days.

ANOTHER batch of ponies, half and three-quarter bred mares, arrived this week and were drawn for at the Race Club.

THE announcement that Count Mutsu has resigned the portfolio of Foreign Affairs for a third time, is authoritatively denied.

MR. GRIFFIN was re-elected President, and Mr. J. Davieson, Secretary of the Yokohama Chess Club at the annual general meeting.

MR. HASHIGUCHI, the new Japanese Consul at Ninsen, Korea, left Yokohama for Korea on the 27th ult. by the *Chow Chow Foo*.

THE Government has issued his exequatur to Señor Don Fernando Gomez de Bonilla as Spanish Consul at Yokohama.

THE repairs to the Russian Legation having been completed, H.E. the Russian Minister removed from Yokohama to Tokyo on the 28th ult.

COUNT and COUNTESS INOUE have returned to the capital. They received a hearty welcome at Shinagawa station from representatives of all classes.

THE old members easily defeated the new members in the Cricket match last Saturday. White and Crawford both passed the half century in runs.

At the annual meeting of the Yokohama Choral Society the old officers were all re-elected. The Society intends giving three concerts during the coming winter.

A PLOT to assassinate the Ministers of State, —those more particularly connected with the Liaotung negotiations—has been discovered in Tokyo, and two men are under arrest.

MESSRS. Minoda Chojiro, Ozeki Teijiro, Kusakabe Kimebei, and other Yokohama merchants have applied to the Authorities for permission to organize a Guild of Curio Merchants.

THE removal of the Yokohama Railway Station to Hiranuma is contemplated by the Railway Bureau, the change being regarded as necessary owing to the inadequacy of accommodation on the present site.

THE factory for gassed yarns now being built by the Japan Cotton Spinning Co., Osaka, will be thoroughly completed in January or February

next; a portion of the machinery will be in working order this month.

MRS. KATO, the wife of the Japanese Minister to England, will leave Tokyo about October 10th for Kyoto, whence she will proceed to Kobe; she will leave the latter port for England by a steamer sailing on the 19th inst.

THE other day when the German ship *Irene* was engaged in target practice off Hakodate, she ran down a Japanese fishing boat containing ten fishermen. The matter has been settled by the payment of yen 200 by the Germans.

THE Hantan Railway Co. proposes to extend its line, now 35 miles in length, between Himeji and Inuno. The line will be increased to over 50 miles, and yen 1,500,000 is to be added to the capital to meet the expenses of construction.

WORK on the large naval dock was commenced at Kure the other day. The dimensions of the dock are, length 141 mètres, breadth 28.38 mètres, in the upper part, and 24.725 mètres below, with a depth of 13.4 mètres. Vessels under 15,000 tons will be able to enter the dock.

REUTER telegraphs—Louis Pasteur, the world-renowned French *savant*, is dead. There is great excitement at Stamboul owing to the arrival off Lemnos (a large island in the Ægean Archipelago) of seventeen British men-of-war. There is excitement in Germany owing to the reported looting of the German mission near Swatow. The German press urges that cruisers should be sent. The London papers recognise the presence of Prince Lobanoff at the review as a proof of the tightening of an alliance which strengthens France from a military, and Russia from a financial point of view. Further letters from Madagascar state that the sufferings of the troops are terrible, and that the army is dwindling daily. The hospitals are crowded, there being over three thousand sick under treatment. The Peary Relief Expedition, with the Explorer Lieut. Peary and his companions, has returned to St. John's, New foundland. When relieved the expedition was almost starved. At a meeting of New York and London Athletic Clubs, which was held at New York, the Americans won all the eleven events, creating in the course of the competition several World's records.

THE outlook is very bright for a good autumn season for Importers. Trade is fair all round and as the cold weather approaches, quotations for Blankets and Woollens will still further improve. A good demand prevails for Metals, though holders would like to record better prices. Still this may be accomplished as stocks up-country are very low, and supply does not meet demand outside the chief trade centre. There is little to note in Kerosene, the market not having yet been galvanized into the usual autumn activity: buyers control the market. Deliveries of Brown Sugar continue satisfactorily, though naturally there is less doing after the late heavy transactions. Quotations are firm for White in the face of the good trade now being done. The market is very steady for Raw Silk, without very much doing, but a reduction in prices would undoubtedly bring about more business in the future. A fair trade has been done in Waste, and the large stocks both here and in the country districts must send holders' ideas down to even more reasonable limits pretty shortly. A small business continues in Tea, holders being occupied in filling small orders to complete stocks. Exchange has remained fairly steady throughout the week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Rumours of probable Cabinet changes have occupied a considerable space in the columns of the vernacular press during the week. These rumours have been reproduced by us from time to time. They are of a conflicting nature, and are evidently based not so much on partially ascertained facts as on a vague yet very general feeling that sooner or later changes of some sort are inevitable in the *personnel* of the Government. The impression in well-informed circles is that no change will take place for the present at any rate, except perhaps in a single instance, namely, the appointment of a new Minister of Communications. The duties of that post are now temporarily discharged by Viscount Watanabe, Minister of Finance, pending the choice of a suitable candidate. Opinion is general that the choice will fall upon Baron Ito Miyoji, the well known Secretary-General of the Cabinet. For the past few months, in every rumour of Ministerial changes, his name has been mentioned as a candidate for the portfolio of Foreign Affairs, of Agriculture and Commerce, or of Communications. Even his bitterest enemies do not deny that he is well qualified for a Ministerial appointment.

The attacks on the Radical Party have ceased to excite any interest. Alluding to rumours of an understanding between the Cabinet and that Party, the *Fiji Shimpō* places no confidence in such stories, but even assuming them to be true, sees nothing surprising or improper in such a relationship, especially at the present juncture when the Government and the Radicals are well agreed on all important political questions. The vehement traducers of the Radicals are reminded that the very position they now seek with such a clamour of reproach to assign to their political opponents was occupied by their own Party in 1888-89, when their leader held a portfolio. If it was honourable to coöperate with the Government at that time, it is incomparably more honourable to do so at a juncture like the present, when harmony between the Government and the Diet is of vital importance to the interests of the country. In another article our contemporary advises the Opposition politicians to be more cautious in selecting questions to measure strength with their antagonists. They are prone to seize upon whatever weapon offers for attacking the Government, and that want of discrimination is one reason of their repeated defeats by the Cabinet. Possibly they are at present embarrassed by the absence of good questions for tactical purposes. If so, they had better remain quiet and bide their time. Nothing could be more unprofitable for themselves or more undesirable for the country than that they should pursue a wild and indiscriminate policy of antagonism to those in power.

The *Nippon* returns once more to the discussion of what it calls the national attitude in foreign affairs; or, in other words, the attitude that the nation as a whole ought to maintain toward particular foreign countries irrespective of the diplomatic policy of the Government. The latter, says our contemporary, is very often controlled by considerations of a temporary nature. The Russian and English Governments may, under particular circumstances, unite for a common end, but the two nations must be permanently antagonistic, for their geographical positions condemn them to be natural enemies. The French and the Germans hate each other, but that circumstance does not prevent the Governments of the two countries from sometimes treading a common path with regard to a certain question and for special reasons. Similarly the Japanese Government may at times be forced to pursue a hostile policy toward Russia, but the *Nippon* reminds its countrymen that temporary incidents cannot alter the truth that Russia is Japan's natural friend. Consequently, the Japanese people are advised to bear that truth always in mind, and cultivate Russian goodwill irrespective of the policy pursued by the Government. As to England, our contemporary

plainly remarks that she is Japan's natural opponent, for she lies in the path of the latter's southward development. Hence the Japanese should be prepared to encounter the opposition and even the hostility of the English. Whatever changes the diplomatic policy of the country undergo, the truth that Russia is Japan's natural friend and England her natural enemy can never change, according to the *Nippon*. A clear understanding of this truth is of paramount importance to Japan at the outset of her new career as a commercial and maritime power.

The *Kokkai* strongly urges the importance of understanding Russia and the Russians. The little knowledge possessed by the Japanese about that interesting country and people is only second-hand information obtained through the prejudiced medium of English or French books. Those that understand Russian are exceedingly few, nor does their acquaintance with the language go beyond every-day conversation: they have not made a study of Russian literature. Russia remains a sealed book to the Japanese and the result is that they entertain an altogether erroneous notion as to her aggressiveness and treacherousness. Such a state of affairs is especially unfortunate, seeing that the two countries are destined to be brought into very close contact, politically as well as commercially. The *Kokkai* is not so pronounced in its advocacy of a Russian alliance as the *Nippon*, but that it is very amicably disposed toward the great Northern Power can not to be gainsaid. It concludes by recommending its countrymen to study Russian and travel in Russia, so that an intimate and unprejudiced knowledge of the country and people may be acquired.

The vernacular press is united in urging manufacturers and merchants to demonstrate their competence to fight successfully against other nations, especially in China. To forestall others is to control them, says the proverb. Immediate steps should be taken to utilize the commercial advantages secured by the Treaty of Shimonoseki. The *Nichi Nichi* is glad to hear that the commissioners sent to China by the Kanegafuchi Spinning Factory have come back convinced of the possibility of successfully competing with Europeans in the spinning industry in Shanghai. If such be the case even in an old settlement like Shanghai, where Occidentals have had the start of the Japanese in every respect, it may be taken for granted that success will certainly attend Japanese enterprise in the newly opened ports, where nothing prevents them from getting the start of Europeans.

The *Fiji Shimpō* writes in a similar strain. It calls upon the principal capitalists of Japan to devote their money to industrial and commercial purposes in China. There are not fields enough for them in Japan, the host of smaller capitalists being sufficient for all home purposes. China offers a vast field for the greater capitalists, and their plain course is to devote themselves to industrial and commercial undertakings in that country. The real battle between the Japanese and the Europeans has yet to be fought out in peaceful pursuits. Whether Japan will be able to maintain in peace the honours she has won in war, depends entirely upon the conduct of her leading capitalists at the present juncture.

The *Kokumin Shimbun* regrets to observe that its countrymen have ceased to pay attention to the opening of trade with Liaotung. Japan's expansion does not necessarily mean the enlargement of her territories, it also signifies the development of her commerce and the emigration of her people. Three Powers have objected to the Japanese occupation of Liaotung, but they are not unreasonable enough to remonstrate against the settlement of Japanese trade in the peninsula, a place well adapted for both purposes. The climate is severe in winter, but the late campaign proved that the Japanese can stand Manchurian cold perfectly well. The

soil gives many valuable products. As to commerce, more than 3,000,000 *yen* worth of commodities are yearly exported thence to Japan through the hands of Europeans and Chinese. Here is a splendid opportunity for Japanese merchants to open out a field for themselves. Japan has lost Liaotung politically, but commercially the district still invites her enterprise. The *Kokumin* advises its countrymen to emigrate there and develop the place's rich natural resources.

Count Inouye's return from Korea has been quite an event in the capital, where a belief existed that his arrival would settle the pending question of Ministerial changes. As to work done by him in Seoul, all persons seem compelled to acknowledge that his mission has been a complete success, so far as success was possible under the circumstances. Nobody can dispute the zeal, energy, and ability shown by him in the discharge of his difficult task. The *Chuo Shimbun*, in an article evincing much sympathy with the distinguished statesman, says that, should the edifice built by him with so much pain and perseverance prove unable to stand permanently erect, it will be no fault of his, but must be ascribed entirely to the materials with which he was obliged to work.

EDITORIAL NOTES.

YOKOHAMA CHORAL SOCIETY.

THE annual general meeting of the members of the Yokohama Choral Society was held in Van Schaick Hall on Monday afternoon, Mr. J. T. Griffin, in the chair. The accounts for the year were submitted and passed. They showed an income of \$397.27, including a balance from last year of \$18.12; the expenditure, principally on account of new music, was \$404.92. From the net profits of the three concerts given last winter, the Society handed over to the Philharmonic Society \$125,—a little more than half—as its share in the proceeds. The election of officers and committee resulted in the return of the old officials, Mrs. Low taking the place of Mrs. McNeill on the Committee. The roll is now, President: Mr. John T. Griffin; Vice-President: Mrs. Poole; Treasurer: Mr. F. Townley; Secretary: Rev. E. S. Booth; Committee: Mrs. W. W. Campbell, Mrs. Low, Miss Webb, and Mrs. Wheeler. The list of members is on the increase, eight new ones being elected at the meeting. The winter's work will include, we understand, Smart's "Bride of Dunkerron," which will be given at the first concert in December; Mendelssohn's "Lauda Sion," for the second concert in February; and Cummings' "Fairy Ring," for the third and last concert of the season—truly music-lovers in the community have something very agreeable to look forward to.

FUNERAL OF THE LATE MR. G. NATERMANN.

A VERY large number of Kobe residents assembled on Friday morning at the house of the late Mr. G. Natermann, to pay the last sad tribute of respect to their deceased friend. The number of wreaths sent was especially large, representing all sections and all nationalities in the community, some being from Yokohama friends also. The Japanese friends of the deceased sent many stands of flowers, which preceded the hearse on the walk to the cemetery. The pall-bearers were Messrs. Stoffregen, Hasche, Visscher, Haynemann, Kellmann, Ziegfeld, Schlüter, and Ailion, who on arrival at the cemetery carried the coffin to the graveside. Here Mr. O. Keil, of Yokohama, who had come down for the special purpose of attending the funeral, delivered by special request a brief address in German, in which in a few-chosen words he directed attention to the many virtues and excellent qualities of the deceased. We grieve, he said, when those taken away are full of years; how much more sad then was it in the present case, when a friend was stricken down in the prime of manhood. Many could testify from their own experience that he who lay dead was a friend not only in word but in deed, and there was scarcely any public in-

stitution in Kobe to which he did not contribute his share of support. We have buried a good man; to many he was more. His loss which they felt as a friend would be felt even more keenly by the relatives in the distant home-land. To them we extend our sympathy, while we shall keep his memory green. Rest in peace! The speaker concluded by reciting the words of the Lord's prayer, after which the assembled mourners slowly dispersed.—*Kobe Chronicle*.

THE LATE MR. BECKMAN.

MR. BECKMAN, the Second Officer of the *Belgic*, who lost his life on the evening of the stranding, had been with the company ten years, going to the Pacific coast on the *Belgic* with Captain W. H. Walker and other officers of the boat when the vessel was sent out in 1885 by the White Star Line. Since that time he has served as second officer. He was born in Leipzig fifty-two years ago. At an early age he went to Hamburg and took a course in a nautical school. Then he went to sea and became an expert navigator. He was employed by several English companies and served as second officer on two of the White Star Line steamers. Five years ago in San Francisco he married a young German woman of Bremen. They lived at 1017, Pierce-street, when the *Belgic* was in port. Afterward they moved to 124, Fulton-street. They had one child, a girl, who died in infancy. Mrs. Beckman is prostrated with grief over the sad news from Yokohama. She is much younger than her husband, being but 32 years of age.

THE VISITING SHANGHAI TEAM.

WRITING of the Cricket team that Shanghai is sending to Yokohama for the Cricket week, the *N.-C. Daily News* says:—"The Committee of the Shanghai Cricket Club had a good deal of trouble in getting a team together at all. A few weeks ago things looked quite rosy, and when a wire was sent to Yokohama accepting their challenge a very respectable team was on paper. However, 'man proposes and fate disposes,' and the team now looks very different from what it did then, men who were confident of being able to get away, being now prevented from going. With the true sporting spirit which, we believe, still does exist in Shanghai, other men have come forward and taken their places, fully determined that, sooner than disappoint Yokohama, the team should be somehow made up, and we heartily wish every success may attend their efforts. The eleven is much better all round than the one which was defeated so disastrously by Kobe, in fact it possesses a fair amount of batting strength, but, like many an S.C.C. team before it, it lacks bowling. It will be seen that the Committee have invited A. E. Lanning to join the team and we think they have done wisely. He plays with a very straight bat and will be sure to keep up his wicket even if he does not make runs fast. As to the rest the public knows them all, and if zeal and determination can win the match against Yokohama the Club may be well contented to leave its honour in their hands. They are sure to receive a hearty welcome, and that will compensate them a little if they are defeated; but who can say, with that glorious uncertainty of cricket, that they will not return crowned with the well-earned laurels of victory. In any case they have the best wishes of every true Shanghaiander." The team was constituted as follows when the last mail left:—Messrs. H. Adams, J. U. Buchanan, W. B. Cheetham, R. Sale Hill, W. F. Inglis, A. E. Lanning, R. Macgregor, W. A. C. Platt, E. W. Sharples, A. P. Wood, E. P. Wickham, and R. C. Farbridge (Capt).

YOKOHAMA PHILHARMONIC SOCIETY.

THE annual general meeting of this Society was held in Keil's Building on Wednesday afternoon, when the Report and Accounts were duly passed. Mr. Griffin intimated that the Society had obtained a lot of new music from home; he regretted that some old members had departed, but had hopes that the ranks would be filled with new blood; and suggested that when necessary for the proper rendering of some pieces, more wind instruments were required, the services of members of the Yokohama band

might be requisitioned. Regarding the post held last year by Mr. Fraser, he did not feel justified in filling it up, as he understood that gentleman would be absent for two months: he would undertake his duties until his return. Votes of thanks having been tendered the Chair and Mr. Keil for the use of the room, the meeting separated. Below are the Report and Accounts:—

PRESIDENT'S REPORT: FIRST SEASON (1894-1895).

We may congratulate ourselves on a very successful opening Session,—the result being satisfactory both musically and financially.

At the meeting held 24th September, 1894, Mr. Griffin was appointed Conductor, and Mr. C. I. Fraser was elected Hon. Sec. and Treasurer.

Practice commenced on 1st October, and on the 19th December we made our first appearance before the Public, in conjunction with the Yokohama Choral Society. Other concerts were given in February and May, 1895, with marked success.

The best thanks of the Society are hereby presented to Mr. C. I. Fraser, Mr. O. Keil, Dr. Munro, and Mr. N. A. Walter for valuable gifts of music. We have further imported from England a good stock of works, which will be amply sufficient for some time to come.

The Treasurer's account is appended, showing a balance in hand of \$50.

The temporary removal to Kobe of Mr. Fraser is a cause of deep regret, his hearty co-operation in the work of the Society having been of inestimable value.

JOHN GRIFFIN, President.

Yokohama, 30th September, 1895.

C. I. FRASER,
Hon. Treasurer.

Yokohama, 30th, September 1895.

SILK HANDKERCHIEFS, HABUTAYE, ETC.

THE export of silk handkerchiefs, habutae, *chirimen*, and so forth, continues to develop with remarkable rapidity. The figures for the first eight months of this year, as compared with the corresponding figures for last year, were:—

	1895. Yen.	1894. Yen.
Silk Handkerchiefs.....	3,204,637.....	2,246,669
Habutae	5,944,335.....	3,684,544
<i>Chirimen</i> and other	1,325,013.....	333,479
	10,473,985.....	6,264,692

These figures become the more remarkable when we remember that, as recently as 1891, the exports of habutae, *chirimen*, and so forth, were not deemed worthy of special mention in the customs returns, and the export of silk handkerchiefs for the whole of that year aggregated only 2½ million yen.

THE WARSHIPS ON THE YANGTSE.

THE natives at Wuhu and Nanking are somewhat excited over the visit of the *Aeolus*, *Spartan*, and *Rainbow*, says the Shanghai morning journal, as they do not know what the visit portends. The *Aeolus* has left Nanking for up river, her place being taken by the *Rainbow*, which is anchored in a position to command the city. No communication has been made with the shore. The *Spartan* was at Wuhu on Wednesday, Sept. 25th, and the *Plover* left Kinkiang for Nanking, having been telegraphed for. The U.S.S. *Machias* has arrived at Chinkiang. When the *Aeolus* passed the *Yuenwo*, she went by her as if the river boat was at anchor. Four more British men-of-war are due at Woosung and will also proceed up the river.

PROFESSOR ANDERSON ON ART IN ITS RELATION TO ANATOMY.

PROFESSOR ANDERSON, who is known personally to so many of our readers, is now delivering a course of lectures at the Royal Academy. In a recent address, as abstracted in the *Lancet*, he said that anatomy owed a heavy debt to art, although he might also say that art owed an almost equal one to anatomy. "But before anatomy was studied as a science the great masters of Greek sculpture, without any aid from dissection, produced works which were masterpieces of artistic beauty and anatomical correctness, although while sculpture had advanced to such a pitch medicine and surgery

were still in a purely empirical stage. . . . The lecturer passed on to consider the decline of classical learning and art, and after mentioning the mediæval treatises on anatomy, which were illustrated in a way from dissections of the lower animals, came to times when anatomists employed the great artists to illustrate their works. Leonardi da Vinci executed a series of anatomical drawings for his own improvement. The work of Berengarius was touched upon, and then came the immortal work of Vesalius, illustrated by a pupil of Titian. Professor Anderson then mentioned the anatomical works of the seventeenth century in the illustrations to which anatomical correctness was subordinated to the debased art of the day. The figures were represented in various affected attitudes standing on pedestals in pseudo-Italian landscapes, holding aside their skin or muscles to show the internal organs."

SUBSCRIPTION GRIFFINS.

A SECOND batch of ten Half-bred Subscription Mares came down from Hokkaido on Monday and were drawn for on Tuesday morning at the Race Course. They are all rising three, and compare favourably with the last lot, Nos. 1, 2, 8 and 9 being the most taking. Below are the names of drawers:—

1. Grey $\frac{3}{4}$ Bred by Bradley 4...Mr. Bennett.
2. Bay $\frac{3}{4}$ Bred by ShahMr. State.
3. Grey $\frac{3}{4}$ Bred by Bradley 4...Mr. Worthington.
4. Bay $\frac{3}{4}$ Bred by SpooneyMr. Nemo.
5. Grey $\frac{1}{2}$ Bred by Bradley 4...Mr. Cavalette.
6. Bay $\frac{3}{4}$ Bred by SpooneyMr. Durand.
7. Grey $\frac{3}{4}$ Bred by Bradley 4...The Club.
8. Grey $\frac{3}{4}$ Bred by Bradley....Mr. Cavalette.
9. Grey $\frac{3}{4}$ Bred by Bradley 4...Mr. de Flesch.
10. Grey $\frac{3}{4}$ Bred by Bradley 4...Mr. Avis.

METALS.

MESSRS. S. W. ROYSE & Co. in their report dated August 24th, say:—"The improvement noticeable in the Pig Iron markets at the end of July has been well maintained during the month, and prices have steadily advanced, being now about 1s. 6d. per ton higher than they were some four weeks ago. A further advance seems quite probable; shipments are good and there is a good enquiry for early delivery and also for delivery sometime ahead, but makers are not anxious to commit themselves far forward. There is also a better tone in the Manufactured Iron trade, and prices are improving. Copper has advanced steadily, being about £2 10s. dearer in the last month, and £4 10s. dearer in the last two months, and is now quiet. Tin has been losing ground somewhat, but is now improving again. Spelter is easing again. Lead is slightly lower than at the beginning of this month, and is steady."

SHANGHAI FILATURES.

HERE is an interesting paragraph from Mr. Acting Consul-General Jamieson's Shanghai trade report for 1894:—"A conspicuous item in this year's return is an export of 4,344 cwts. of silk reeled in the Shanghai steam filatures. The cocoons are purchased in the interior, brought to Shanghai and reeled under skilled foreign supervision. The result is the finest and most valuable silk the world produces. Silk treated in these filatures is worth from 25 to 50 per cent. more than the product of the same cocoons would be if reeled by native methods. There are now nine separate steam filatures at work in Shanghai, running together 3,500 basins, and two more are in course of construction. The anticipated out-turn for the season 1895-96 is expected to be over 5,500 bales."

PROTECTION TO FOREIGN TRADE MARKS IN CHINA.

MR. VICE-CONSUL SCOTT, in his report on the Shanghai Mixed Court for 1894, says:—"Under 'Forgery' are included several cases of fraudulent imitation of the trade marks of European firms. As is well known, China has no statutory enactments bearing on trade marks, but custom, which in China has acquired the force of law, acknowledges the right of each merchant and trader to his own 'chop' or brand under which he conducts his business and marks his goods. In dealing with natives

imitating the trade marks of European firms, it is due to the Mixed Court magistrate to recognise his ready co-operation and assistance in suppressing all attempts at fraud. The forged articles have been confiscated, and the rights of the European merchant maintained against Chinese imitators of his trade marks." It is certainly convenient in some cases to have Courts that regard "old custom" as good law, and enforce their view by fines and confiscations. But such a liberal estimate of a legal tribunal's competence might prove occasionally very embarrassing.

THE RESULT OF SHORT WORKING HOURS.

AN English manufacturer has communicated to a daily paper an interesting report of the result of a five years' experience of the eight-hour rule in his works. He says that at first the wage-cost per ton went up, then dropped, and is now as low as it was in 1889, when the twelve-hour law was in force. In other words, the men get as much work done in eight hours as they used to get done in twelve. This is not attributed to a coincidental improvement in machinery or the methods of manufacture. The managers of the works, who have considered the point, are convinced that, although the men work less hours, the aggregate efficiency of their work is not diminished. This view is supported by the showing of the factory books, which record greater regularity of attendance, increased application, and improved health of the workmen. Many of them used to be irregular and drunken, but such cases are now rare. In the long double shift at the end of each week the men often used to be found asleep. Under the new conditions this does not happen. They look fresher and healthier, and the change in them is markedly shown in the comparatively nimble and lively gait with which they leave the works at the end of the shift.

SUNKEN ROCK DISCOVERED BETWEEN INUBOYE-SAKI AND NOSHIMA-SAKI.

CAPTAIN MAHLMANN writes to the Kobe papers:—The following report from Captain J. Samuelson of the German steamer *Hainan* at Nagasaki has been received at my office:—"On the 1st of September while on my voyage from Hakodate and when in Lat. 35° 03' N. Long. 140° 15' E., my vessel struck an unmarked Rock or Reef, Katsura point being then distant about 2 miles and Kominato point about 4 miles. The soundings marked on my chart near this spot being 79 and 150 fathoms, and near the beach 9 and 10 fathoms. The draft of my vessel being 14 feet 5 inches at the time, I have concluded that the Rock is covered about 14 feet. In my opinion the Rock is unknown as I have been unable to find it marked on any chart, nor mentioned in the China Sea Directory. The damage done to my vessel being: four plates and three frames bent about Engine-room ballast-tank, on the port side."

THE RESPONSIBILITIES OF EMPIRE.

THE *Spectator* gives a formidable catalogue of the responsibilities devolving upon Her Majesty's Secretary of State for Foreign Affairs at the present juncture:—

Take the existing situation of the Empire, and see what endless questions it presents—questions where to give the right answer means safety and honour for our race; the wrong one, if not actually ruin and disgrace, confusion and annoyance. We will not touch on home problems, though they are serious enough, but merely on the more pressing Foreign and Colonial difficulties which beset the path of the Cabinet. To begin with, there is the Armenian question. The Government is impelled by the sense of justice and right to force the Turks to stop massacring and outraging their Christian subjects in Asia Minor. But they can only reach the Turk effectively in co-operation with the Powers. But this co-operation may at any moment beget antagonism, and may raise the whole Eastern question in its most aggravated form. Could there be a stronger example of the responsibilities with which a British Cabinet is faced? They have to save the Christian subjects of the Sultan, yet a false step in doing so might plunge Europe into the most terrible war that the world has ever known—the war in which, to use Prince Bismarck's grim phrase, the vanquished Power will be "bled as white as veal." So much for Eastern Europe. Look at the problems of Asia. The Pamirs question is still unsettled, and it is still possible to ask how far are we wise in spending the resources of India to resist an invasion which may never come, or which at any rate might be averted by giving Russia access to the sea. Go further east, and the responsibilities involved in the answers which must sooner or later be given to certain impending questions increase a hundredfold. Tacitly, but

none the less significantly, Japan asks us to ally ourselves with her in resisting the claim of Russia to dominate the Northern Pacific and North-Eastern Asia. Are we to move onwards or away from that offer of alliance? If we say "No" to Japan, we may lose a make-weight which in years to come might be most useful. If we say "Yes," we may destroy the otherwise good prospect of coming to an understanding with Russia. China by itself offers dilemma after dilemma. Are we to acquiesce in her relapse into anarchy, or are we to interfere to save her, or again, are we to see her come under the tutelage of Russia without securing any compensation? From the Chinese problems we must pass to those of the Upper Meikong and the evacuation of Chantaboon. Will the Cabinet be justified in risking a war with France, in order to maintain our rights in the Shan State, which includes a piece of both banks of the Meikong,—a place so unknown and remote that, till a year ago, it had hardly been traversed by white men? It would be a great responsibility to make war on such a subject. Yet it might be a greater to allow our undoubted rights to be infringed by the French. To a hostile Power, one dare not yield rights, however insignificant. Again, have we, or have we not, a right to insist upon the evacuation of Chantaboon; and if we have, is it worth while to insist on that right? So much for the Far East. Let us turn to Africa. Here the responsibilities thicken fast. First, how are we to treat the Germans at the places where we and they are rivals, and what are the concessions worth making to secure them as active friends? That seems a small question when looked at from a distance. Observed closer, it will be seen to be fraught with the most momentous possibilities. Between us and France the African questions are always momentous. They may be put in a series of questions. "What is to be our answer as regards Egypt, supposing that France, or France and Russia, demand evacuation?" "What are the proper steps for enforcing our explicit claim to the valley of the Upper Nile, supposing that France allows those claims to be violated by a military expedition?" "Shall we, in combination with Italy and the Congo State, make an advance against the Mahdi?" When the Government has answered these questions they are confronted with the hardly less difficult problems of West Africa. How far are they to stand absolutely firm as regards French aggression on the Niger, and how far should they conciliate the French? Take, again, such a problem as that of Morocco. At any moment that may become a "live" question, and the Government be obliged to decide what are the interests of England in the Shereefian Empire, and on what terms they would consent to a French occupation. The Colonial problems which are before the Government at this moment are only less serious and difficult than those of Foreign policy. Take the South African problem alluded to by us elsewhere. The British Government are confronted with that remnant of ill-judged magnanimity, the Transvaal. How are they to force the Boers to recognise our suzerainty in fact as well as in name, and to give their rights to the Uitlanders, without doing anything to alarm the Dutch of the Cape or to injure the cause of South African unity,—a cause on which the well-being of the Empire as a whole may be said to depend. Another Colonial problem of no ordinary difficulty, though it has been little mentioned in the Press, is that involved in the demands of the Canadian Parliament *à propos* of the Copyright Law. Canada wants something which would bring the whole system of international copyright to ruin. The Government will have to oppose that demand, and yet not infringe the Parliamentary independence of Canada. Take another set of American difficulties,—those connected with Newfoundland. The people of Newfoundland have a grievance against the French which may any day become acute and involve the question of how to be just to France without offending the people of Newfoundland. Again, the whole problem of Newfoundland and of its relations with the Empire is perplexed and difficult, and a false step may prove most dangerous.

HONGKONG AND THE YACHT RACES.

ON the news arriving in Hongkong of the withdrawing of the *Valkyrie III* some enthusiastic yachtsmen telegraphed:—"Lord Dunraven, New York—Hongkong respects you. Bravo. Lowson;" and received the following reply "Lowson, Hongkong—Thanks, Dunraven."

A JAPANESE MATHEMATICIAN.

MR. S. KIMURA, at present staying at the Japanese Legation at the Hague, appears to devote some of his spare time to the study of mathematics, a science in which he is evidently a proficient. We find in the last issue of *Nature* a letter from him, containing a very pretty bit of demonstration in Quaternions.

ACCIDENT TO CAPT. FAWKES, R.N.

WE (*Singapore Free Press*) regret to hear that Captain Fawkes, R.N., of the *Mercury*, is laid up, to some extent, with an injury to his knee, the result of a slip and heavy fall on the steps of the Singapore Club.

THE MURDER IN THE HARBOUR.

THE preliminary examination of the coolie Iida Tsunekichi, who is under arrest on suspicion of having murdered a Chinese cook on board the *Empress of India*, concluded on the 30th ult., and the case was transferred to the Criminal Court.

THE ANTI-FOREIGN RIOTS IN KWANTUNG.

NEWS was received in Shanghai on September 21st by telegraph stating that a fresh outbreak against foreigners had occurred in the province of Kwantung. The outrage was the work of a

band of 600 organized armed ruffians, acting under a recognized chief, who systematically attacked the Basle Mission at a place called Minlien, a few miles from Swatow. No further details are given. The Mission has its headquarters in Hongkong.

THE "KINSHU-MARU" ASHORE.

A CORRESPONDENT at Ujina informs the *Kobe Chronicle* that a telegram has been received there to the effect that the *Kinshu Maru* (formerly the *Kintuck*) has gone ashore in Kelung harbour through her cables parting. She struck on a sandy beach, so it is supposed that no damage is done. The accident presumably occurred during the great storm experienced a few days since in the China Sea.

SEAMEN'S HOME FOR NAGASAKI.

A SUM of \$1,766.01 has been already collected for the purpose of establishing a Seamen's Home for Nagasaki. The men and officers of the U.S. Fleet on this station contribute most liberally, over \$1,000 coming from them alone.

ROWING AT KOBE.

THROUGH the energy of the Rev. S. Swann, sufficient entries have been obtained to warrant the holding of a number of rowing races at Kobe on Oct. 19th.

EX-QUEEN LILIUOKALANI.

A TELEGRAM which appears in the Canadian papers says that the Council of State of Hawaii pardoned Queen Liliuokalani on the 3rd Sept., and she is to be liberated.

THE WAR AND CLAN GOVERNMENT.

There are those that maintain that the general effect of the war will be an increase of the prestige of great clan leaders, since some of these contributed so materially to the success achieved. Such, however, is not the opinion of the *Fiji Shimpō*. In an article on this subject published some days ago, the *Fiji* discusses the subject of Clan influence in the Government, and comes to the conclusion that it has been on the decline for many years past, and that the late war has not in any way averted the fate awaiting it—total extinction. Here is the gist of our contemporary's article. Though there is no denying that the present Government originated in clanship, ever since the Restoration there has always been an anti-clan feeling entertained by certain members of the Cabinet, and this feeling has been considerably strengthened and increased by the support it has received from public opinion as represented by the Diet and the press. In ancient times such a victory as that lately won by Japan over China would undoubtedly have enabled the leaders of the conquering armies to dictate the future domestic and foreign policy of the empire, but to-day nothing of the kind can possibly happen. The whole spirit of the age is against it. Though the valiant men that marched at the head of our armies are regarded with gratitude and admiration, were they to attempt to use their prestige for the purpose of influencing the government of the country, the public would at once interfere and use the power entrusted to it to avert such a calamity. The men that have attained wide popularity in the late war, such as Nozu, Kabayama, Ito, Yamagata, Oyama, Kawakami, are men whose chief object has been to serve the Departments to which they belong and not to increase military and naval prestige in the Cabinet. To suppose that the success achieved by these leaders could be utilised for purely political purposes is equivalent to imagining that Japan has relapsed into the despotism of ancient times. If there is one fact more than another that has been impressed upon the members of the present Cabinet by recent events, it is the necessity of the closest union between the Government and the people, and the importance of utilising every advantage we have gained to the furtherance of the interests of the nation as a whole, as distinct from those of any one political party. The consideration of the general effects of the war has led us to the conclusion that instead of increasing, the war has materially decreased, Clan influence in the counsels of the nation.

CURRENT TOPICS.

The *Mesamashi*, as already noticed, ought not perhaps, to be regarded as an authorized spokesman of the Radical Party, but its writings cannot be entirely passed over where that Party's affairs are concerned, for, petty and unimportant a publication as it is, no other daily journal has connection with any section of the Party. Our readers may therefore be interested in what the *Mesamashi* has to say about the situation of the *Jiyu-to*. It does not acknowledge any understanding between the Party and the Government, but even supposing, for argument's sake, that some relations do exist, the *Mesamashi* fails to understand why such a fact should be counted a proof of the Party's degeneration or corruption, seeing that the combination would be a step in precisely the right direction, from the point of view of those that advocate a system of party Government. Moreover, according to the argument employed by the Progressionist journals, the Progressionists themselves must be said to have been degenerate and corrupt when their leader entered the Kuroda Cabinet. "We can not," says the *Mesamashi*, "view the relationship between a political party and the Cabinet in the same light as the Progressionists view it, for they appear to believe that there is necessarily something reprehensible in such a connection. If it turns out that the policy pursued by the Ito Cabinet coincides with the views of the Radical Party, the latter will not hesitate to declare itself the friend of the Government. The present dastardly attempt to discredit the Radicals by charging them with being corrupt supporters of the Ministry ill becomes politicians that pose as champions of party government. Perhaps the Progressionists have been betrayed into this inconsistent attitude by a sentiment of jealousy, perceiving themselves anticipated in the introduction of a system of government by party." The present attacks on the Radical party are due to the envy excited by its prosperous condition, and simply show that the prospects for the introduction of government by party have improved.

Niigata was the only provincial district where the Liaotung agitation seemed for a time to evoke general sympathy. But if very detailed correspondence published in the *Nichi Nichi Shimbun* be credible, the reports hitherto received from that Prefecture were greatly exaggerated. The excitement apparently caused in connection with the question was the result of a deeply laid scheme devised by a few local politicians who hoped to make capital out of the agitation. Their plan succeeded so far as to effect a combination of the local newspapers representing the Radicals, Progressionists, and National Unionists. But there the success ended. The real character of the agitation soon became known to the people in general, who had not been over zealous from the first. Moreover, the greater portion of the Radicals strongly condemned the conduct of the proprietor of the *Jiyu Shimpō*, who made his columns a medium for fomenting the agitation simply out of a selfish desire to maintain his position as President of the Local Assembly. The much-talked-of secession of the local Radicals from their Party was merely a tale. Even Mr. Takaoka, the proprietor of the above mentioned journal, is said to have come up to the capital for the purpose of explaining away his reprehensible conduct.

The Army Bill has been returned to the General Staff Office for modification, the War Office being of opinion that the proposed scheme involved too much expense. In what respect curtailment will be effected, we do not know, but there does not seem to be any reason for anticipating that the programme of military development lately translated into these columns from the *Nichi Nichi Shimbun* will be materially altered.

It was at first reported that the ninth session of the Diet would be convened at an earlier date than usual. But present probabilities indicate that the opposite will be the case. The Bills to

be presented are so numerous it is said, and are being elaborated with so much care, that some time must elapse before they can be completed.

The *Jiji Shimpō* is certainly to be admired for the indefatigable zeal with which it returns over and over again to its favourite idea of reconciliation between the elder statesmen within and without the Government. It declares that on all points of national policy perfect unanimity of views exists between the Government and the Opposition. The Government was formerly blamed for a weak and vacillating foreign policy, but it has proved itself capable of even undertaking a foreign war; while, on the other hand, the Opposition parties which have hitherto been open to the criticism that, on various pretexts, they obstructed measures for the increase of the Army and the Navy, are now clamouring for even more sweeping military and naval developments than the authorities themselves are prepared to approve. There being thus no difference of opinion between the Cabinet and the Opposition, the *Jiji* thinks that the time has arrived for effecting a reconciliation between statesmen whose dissensions have cost the country so dear. In our contemporary's opinion the first step toward reconciliation should be taken by those in power, for it thinks that upon their attitude entirely depends the success of such a movement. Though perfectly aware that not differences of opinion but personal considerations primarily prevent these statesmen from joining hands, the *Jiji* is persuaded that at a juncture like the present all such considerations should be laid aside. Excellent as this advice seems, we fear that it has little chance of being adopted, for party antipathies now run higher than ever.

We reproduce the following note from the *Kokkai*:—"Whether it be the result of a definite understanding between the two clans, we do not know, but the position of Minister President of State has hitherto been occupied in turn by statesmen of Satsuma and Choshu origin. Supposing, then, that Marquis Ito resigned, who would be his successor? According to a Satsuma politician, Count Kuroda is averse to shouldering the responsibility of the position. Neither are the Satsuma men of the younger generation in favour of his accepting the office. As to Marquises Saigo and Oyama, they, too, do not wish to assume the duties of such a post at the present juncture. The influence formerly exercised by these three statesmen is said to be now in the hands of Count Kabayama and Viscounts Takashima and Kawakami. Another influential member of the Satsuma clique is Mr. Sonoda, Metropolitan Inspector-General of Police. As to Count Nozu, though influential in military circles, he is said to be indifferent about politics. It was by the support of these younger leaders of the Satsuma section that Count Matsukata entered the Cabinet, their object being to set him up as Marquis Ito's successor. But a difference of views was subsequently discovered between him and his supporters, and this, together with other complicated circumstances, led to his retirement from office. The younger Satsuma leaders then decided to choose a candidate for the post of Premier from among themselves, their selection falling on Viscount Takashima. With this purpose in view, they advised him to accept the post of Vice-Governor-General of Formosa, for a successful campaign against the insurgents would surely bring about his promotion to the rank of Count with the additional honour of being made a Field Marshal. He will thus be a candidate for the Premiership should circumstances favour the formation of a Satsuma Cabinet. However, the passage from the present Cabinet to one with Viscount Takashima at its head will probably be delayed by the organization of an intermediate Ministry. Men say that the chief of such a Ministry will be either Count Inouye or Marquis Saigo, but this hypothesis is very improbable, for Count Inouye's succeeding Marquis Ito in the office of Premier, thus running two Choshu Cabinets continuously, would be against tradition. Neither is it likely that Marquis Saigo will be so unwise as to accept

the post under present circumstances. He has always been remarkable for sagacity in shaping his line of conduct. Consequently there is great difficulty in predicting the nature of the intermediate Ministry. The younger Satsuma leaders are so conscious of an enormous access of power since the recent war, that they have no idea of relying upon the support of a political party.

Concerning a report emanating from the *Imperial News Agency*, that Count Mutsu has again tendered his resignation, the *Mesamashi*, a Radical journal, states that it is a baseless story, the fact being that the Foreign Minister is, on the contrary, resolved to retain his office until death deprives him of ability to serve his Emperor and his country.

Very contradictory reports are circulated about probable changes in the *personnel* of the Ministry. We reproduce them for what they may be worth. The *Nippon*, for instance, writes:—"Rumours about Ministerial changes multiply thick and fast since Count Inouye's return. According to the latest report, for the trustworthiness of which we can not vouch, though it seems to be more worthy of notice than the stories hitherto circulated, Count Inouye may not immediately enter the Cabinet, but in the course of a month or two, it is not unlikely that the chair of Communications will be occupied by him. Of course the balance of power between the Satsuma and Choshu clans will not be affected by his acceptance or non-acceptance of a Ministerial portfolio, for he is powerful whether in the Government or out of it. But he desires to occupy the position of Minister of Communications, being enthusiastic on the subject of completing the railway system of the country. As to Count Mutsu, it will be necessary for him to give up all business for some time. Moreover, the present acting Minister of Foreign Affairs is evidently not well fitted for the post at an important juncture like the present, when weighty diplomatic problems demand solution. The post requires special qualifications, and the only men fit for it in the official circle are Marquis Ito and Count Inouye. Certain circumstances prevent Count Inouye's occupying it; neither is Marquis Ito likely to desire it. So after all, the choice will fall on Baron Ito Miyoji. It is even believed that his appointment will take place in a few days."

The *Jiji Shimpō's* information is different. It says:—"The papers are now vying with each other in publishing rumours about probable changes in the Cabinet. It is stated, for instance that Marquis Ito is about to retire from office, recommending Count Inouye as his successor. It is also rumoured that Count Mutsu has tendered his resignation on account of sickness, and that his successor will be either Marquis Saionji or Count Inouye. Another rumour has it that Count Inouye desires to receive the portfolio of either Finance or Communications. Yet another says that Viscount Enomoto will leave the Cabinet, and that his office will be given to Baron Ito Miyoji. Various as are the theories now circulating, they chiefly turn upon Count Inouye's supposed entrance into the Cabinet and the alleged resignation of Count Mutsu. But our information goes to show that neither is Count Mutsu likely to tender his resignation, nor will Count Inouye take any hasty step. In short, we are informed that for the present there will be no change in the Cabinet. So the rumours mentioned above may be regarded as baseless. The story of Baron Ito's entrance into the Cabinet is, perhaps, not serious."

COLONEL SAKAI.

It is stated that the much regretted Major-General Baron Yamane's place will be taken by his subordinate Colonel Sakai, at present commander of a Regiment in the same Brigade of the Guards. Colonel Sakai comes from Tosa. He entered the Army as a Lieutenant in July 1871. His record since then has been brilliant, for he took part in all the wars that have occurred since he received his commission.

ECONOMICAL AND INDUSTRIAL.

There is a project to connect Uraga with Yokosuka by an electric railway. At Uraga, works have been commenced for the construction of two docks, and the importance of the place will be still further increased by contemplated measures of national defence. Consequently, connection with the railway system of the country is expected to prove profitable. The estimated capital of the projected company is 200,000 *yen*. Among the projectors, we notice Messrs. Morioka Masazumi, Seki Naohiko, Masuda Takashi, Oye Taku, Yokoyama Magoichiro, Tanaka Heihachi, Inouye Kakugoro, and so forth.

Representatives of the Chambers of Commerce from all parts of the country are assembling at Nagoya to hold the fourth annual conference, from the 25th instant. Among the subjects to be submitted for deliberation, mention may be made of the establishment of a floating exposition, the opening of communications with foreign Chambers of Commerce, the abolition of import duties on Cotton, the investigation of the bearings that treaty revision will have upon trade and industry, the grant of subsidies to the Bank of Japan and the Specie Bank in order to cause them to extend the scope of foreign exchange, and so forth.

Notwithstanding the change of Minister of Finance, the elaboration of a project for establishing an Industrial Bank is receiving undiminished attention at the Treasury. According to the present plan, the Industrial Bank will be located in Tokyo and will serve as the focus of a number of agricultural or manufactural banks that are to be established in the provincial centres of economy throughout the country.

Private projects for building dockyards already aggregate no less than seven, namely, two at Uraga, and one each at Yokohama, Moji, Awajishima, Hakodate, and Sakai. Fearing disastrous competition between these various establishments, some persons are said to be sounding the views of the projectors as to the possibility of amalgamation. The idea is not likely to succeed, we fear. It may be added that to Osaka at present belongs the credit of constructing by far the greater portion of the small steam vessels plying in Japanese waters. There are altogether thirty docks at Osaka, all of them on a very small scale. The total number of vessels, principally launches, constructed at these docks during last year was thirty-four, with an aggregate tonnage of 3,432 tons, the largest having a tonnage of only 270 tons.

There is a project on foot in the capital for the establishment of a cotton mill in Shanghai. The scheme is said to be based on a report from Mr. Wada Toyoji, of the Kanegafuchi Spinning Factory, and Mr. Hata Zenjiro, of the Mitsui Busan Kaisha, who recently returned from a trip taken to Shanghai with the object of studying the subject *in loco*. The capital is to be a million *yen*, and the number of spindles will be 20,000. The principal projectors are said to be the shareholders of the Kanegafuchi Spinning Factory.

The following table shows the amount of deposits in the Government postal savings bank, at the end of the month of August, during the last three years:—

	Number of Depositors.	Amount of Deposits. <i>yen</i> .
August 31st, 1893	989,092	24,586,456.343
August 31st, 1894	1,070,000	26,042,789.067
August 31st, 1895	1,139,331	26,646,102.069

Two years ago, the merchants of Tokyo and Osaka conceived the project of establishing a large sugar refinery. The scheme has now been revived with great zeal, and there is a prospect of its being speedily carried out. Correspondence is said to be passing between Mr. Shibusawa, of Tokyo, and Mr. Ogawa Zenkichi, of Kobe, as to the date of a conference between the principal promoters of the affair.

KOREAN NEWS.

The Söul correspondents of the Japanese papers seem to be convinced that everything possible under the circumstances has been accomplished by Count Inouye, whose return to Japan furnishes them with an opportunity to review his services in a comparatively fair and impartial manner. They acknowledge that what has been done by him could not have been done by anybody else. Something of the confidence reposed by them in the ex-Japanese Minister, may be seen from the fact that they express great doubt as to the permanent stability of things now that the pressure of his great personal influence has been withdrawn. For the present, however, they believe that little fear exists of faction intrigues such as will disturb the political arrangements left as a legacy by the Count. A conversation that he had with the Korean Ministers of State for eight hours at the Home Office shortly previous to his departure, is said to have produced a deep impression upon his listeners, though the nature of the discourse is not known to outsiders. That the conversation related to important matters, is evident from the fact that even the Vice-Ministers of State were excluded from the conference. One of the correspondents professes to have learned that among the matters discussed, the most important was the financial position of the Government, and that in connection with this Count Inouye promised to use his influence for a fresh loan of 3 million *yen* from Japan.

The few days during which the Count stayed at Ninsen waiting for a steamer to carry him home, were very busily employed in social duties and lecturing the residents of the place on the proper manner of conducting themselves towards Koreans. In a long speech delivered at the Consulate, he is reported to have dwelt upon the political relations between Japan and Korea, alluding even to matters so delicate that the correspondents hesitate to give publicity to them. He discussed, among other things, the historical relations between Korea and Japan, on the one hand, and Korea and China on the other. He also compared the relative positions of the Japanese and Chinese merchants in Korea. Lastly, he expounded the policy that should be followed by Japanese trading in the peninsular Kingdom, and advised them to be forbearing to the people, and honest and industrious in their business.

Concerning the new Japanese Representative, Viscount Miura, it is stated that shortly after his arrival in Söul, he was attacked by a severe cold but had nearly recovered by the time of Count Inouye's departure. The Viscount is now a centre of attention in the Korean capital, but the correspondents refrain from offering any opinions about him.

On the 19th ultimo, the foreign Ministers were invited to an entertainment at the Palace, in commemoration of the Queen's return to the capital in 1880, after a few months banishment to the country during the *émeute* of that year.

Notwithstanding the great noise made in Söul about the insurrection at Sang-wön, an official report received from the Japanese commanding officer at Phyöng-yang makes it plain that the affair is trifling. Instead of several hundred insurgents, as was at first reported, not more than 180 are involved in the so-called insurrection. They protest that they are actuated by the purest of motives, their only object being to rid the district of wicked officials by whom it is harassed. In fact, they apparently abstain from acts of plunder and licence toward the people. It is reported that a party of them, when moving to a locality farther removed from the quarters of the Japanese soldiers, paid regularly for the hire of baggage animals. It is believed that they are now staying at Haiju in Hwang-hai-do, where they feel more secure than at Sang-wön, their great dread being a movement of Japanese troops from Phyöng-yang. The Korean soldiers at Haiju are said to have been so ill-supplied with ammunition that they could not make any immediate stand against the disturbers of the peace.

A train of coolies recently left Söul for Phyöng-yang, laden with the much needed ammunition, so that by this time the Korean soldiers must be marching against the insurgents.

Here is a story illustrating the difficulties of reforming the local administration in Korea. A young official recently appointed Secretary of a Prefecture in Chhang-chhông-do, left the capital for his post, and arriving at the place, presented himself to the Governor, who received him without any of the cordiality and respect due to his second in authority. On saying that he had received his appointment from the acting Minister of Home Affairs, the newly arrived secretary was told that the Governor would receive as his lieutenant none but an official deriving his commission direct from the King. He was then shown to an apartment usually occupied by menials of the lowest class, and was ordered to remain there until correspondence could be had with the central Government, when the Governor entertained no doubt that he should receive instructions to send back the young man to the capital. Evidently the Governor held the Cabinet in Söul in utter contempt or he would not have dared to adopt such measures toward an official accredited by the ministry.

The reform in the national costume, introduced by Prince Pak while in the position of Minister of Home Affairs, removed all the outward marks of class distinctions, so dear to Korean aristocrats. But the opposition of the latter, and the disgrace of the statesman principally responsible for the change, have induced the Court to revive most of the discarded insignia of rank.

Ming Yon-chun, who was recently included in a general amnesty, arrived at Ninsen from Shanghai on the 23rd ultimo. He was accompanied by Gen Seitaku, who had been despatched by the Queen to recall him, and by several other persons. The party landed, under an escort of policemen, who boarded the ship as soon as she entered the port. Ming, as though apprehensive of an attempt against his life, made straight for the hill at the back of the Japanese settlement, whence he directed his steps to the country seat of Mr. An Keiju, Minister of War, at a village named Kwa-son. There he passed the night. The *Chuo Shimbun's* correspondent, who saw him passing through Ninsen with his retinue in the manner above described, states that the celebrated Korean nobleman wore a suit of dark garments, held a bamboo cane in his hand, and was as plump and fair complexioned as ever. Later intelligence mentions that Ming will probably be appointed Minister of Finance.

On the 20th ultimo, an impressive ceremony was performed in the suburbs of Söul, at a spot dear to every Japanese heart as the site of a stronghold held by the renowned warrior Kato Kiyomasa in the days of Hideyoshi's invasion. The ceremony consisted in offering a requiem for the souls of those that had fallen in the recent war with China. The officiating priest was the Rev. Mr. Matsumi, of the Hongan-ji sect. The ceremony commenced about three in the afternoon. There were present a large number of Japanese, including the members of the Legation and Consulate, the officers of the battalion stationed in Söul, and the principal representatives of the mercantile community. After the usual recitation from the sacred volumes, those assembled burnt incense and prayed for the repose of the gallant dead. The most touching part of the service is said to have been the singing of the well known martial air, "The Duties of an Imperial Soldier," by boys and girls from the school in the settlement. The spectators were greatly effected by the sight of the little ones lustily chanting the duties that they, in their time, would be called upon to perform as defenders of their homes and country.

The Korean Government is said to have determined to extend the postal system to Kaisöng and Sui-wön. Mr. Yamada, Japanese Adviser to the Department of Agriculture and Commerce, has been despatched to the latter place to make the necessary investigations for opening a post office there.

FORMOSA NEWS.

The Third Brigade (Second Division), hitherto stationed in the Liaotung peninsula, is now on its way to Formosa. The Fourth Brigade (same Division) which is already in Formosa, being stationed at various places north of Shinchu, will be collected in Kelung for embarkation southward, together with the newly arrived Brigade, in the beginning of next month.

Hearing of the arrival of Vice-Governor-General Viscount Takashima, about forty leading Chinese merchants of Taipeh waited on him on the 14th instant. His Excellency gave the visitors a hearty welcome, and addressed to them a short speech, urging them to exert their personal influence for the promotion of public peace and good order. Major Hanasaka also spoke in Chinese. On taking leave, the merchants presented to the Vice-Governor-General their cards, on which were inscriptions wishing him long life and prosperity.

Instances of friendly intercourse between the Japanese and the aborigines in Formosa have already been mentioned. We may now notice that Governor-General Count Kabayama recently issued a proclamation to the troops in the island, pointing out the paramount importance of gaining the confidence of the aborigines, who, though ignorant and uncivilized, are not incapable of faithful friendship if treated with loyalty and consideration. Officers and men were strongly urged by the Governor-General not only to abstain from all acts of hostility toward the natives, but also to cultivate their amity by benevolence and magnanimity.

The rate of sickness among the Imperial Guards is said to have considerably increased since the occupation of Taiwan and Chang-hua. The prevailing disease is malarial fever, but the mortality is comparatively small, and it is reported that the fighting capacity of the troops has not suffered much.

Perceiving that the Japanese troops do not move southward of Chang-hua, the insurgents that fled from that place, are said to be collecting at various points and menacing the outposts of the Imperial Guards. With the exception of petty skirmishes, however, no fighting worth mention seems to have taken place since the fall of Chang-hua.

According to the reports of Chinese spies, Liu's army is badly in want of provisions and money. An office has been opened at Tainan for the issue of paper currency, which is being forced upon the people in payment for provisions and other things supplied to the army. At Anping, a new fort has been nearly finished at the back of the town, and the forts on the sea side have been repaired. It is also alleged that communications are constantly going on between Liu and some sympathizers in Amoy. Recently 2,000 rifles arrived at Anping from Amoy, said to have been originally supplied by General Liu Kun-yi and Viceroy Chang Chih-tang. Liu Yung-fu's nephew is also said to be at Amoy for the purpose of recruiting. These and other statements embodied in the reports of Chinese spies can not, of course, be taken as trustworthy in every particular. But that correspondence is kept up between Liu Yung-fu and some friends at Amoy, has long been suspected, and now seems to be generally believed in Japan.

Harrassed by the unrestrained licence of the insurgents, the people of the southern part of the island are said to have despatched deputations to the Imperial troops imploring their speedy advance and promising to coöperate heartily with them. It is further stated that forced contributions of money are levied from the people, and that those unable to pay are obliged to join the ranks of the insurgents.

NEWS FROM PEKIN.

The Grand Secretary Li returned Mr. Hayashi's visit at the Japanese Legation on the 11th ultimo at 9.30 a.m. He came in a palanquin, his well known lieutenant, Mr. Wu Ting-fang, accompanying him in a carriage. The escort consisted of only two or three mounted men. Mr. Hayashi, followed by Secretary Tei, went to the doorway to receive the distinguished visitors. A conversation ensued, lasting about two hours, but having, it is said, no reference to business. Earl Li, in a tone betraying much feeling, is said to have referred, among other things, to the striking contrast between the position of Marquis Ito and his own. While Marquis Ito enjoyed the ever increasing favour of his Imperial master, Li had fallen more and more under the displeasure of his Emperor, so that there was an apprehension even of his being degraded to the rank of a Baron. He was aware of the influence exercised by the press in Japan, but journalistic criticisms, however strong, could not seriously effect the position of a Minister of State; whereas, in his own case, he had no recourse but to bow before the impeachment of the Censors, whose recommendations even the Emperor could not choose but respect. In this strain, the Earl is said to have expressed his feelings with the utmost frankness, but it must be confessed that the story is a little difficult of credence. At all events, although Earl Li's star is apparently declining, Japanese in Pekin, well acquainted with Chinese affairs, are strongly disposed to think that he is secretly labouring to lay a foundation on which he may once more raise an edifice of political greatness, and that, in this endeavour, there are good chances of his succeeding. Already there is talk of a triangular alliance between him, Viceroy Chang Chih-tung, and Wang Tung-ho, the three greatest men in China at the present moment. Mention has previously been made of a secret meeting between Li and Wang at Tientsin, shortly before the former's recent journey to Pekin. Since Li's arrival in the capital, the intercourse between the two statesmen is said to be frequent and increasing in cordiality on both sides. If Li succeeds in emerging safely from this serious crisis in his career, and there seems to be a probability of his doing so, well-informed Japanese have no doubt that he will again recover political ascendancy.

Mr. Uchida Kosai, the newly appointed Secretary of Legation, reached Pekin on the 9th ultimo. It is an open secret that he carried with him important instructions to the Japanese Minister. A week after his arrival, namely, on the 16th ultimo, Secretary Kawasaki, who had accompanied Mr. Hayashi, left Pekin for Japan.

According to official intelligence from Pekin, negotiations for the conclusion of the Treaty of Commerce and Navigation have already been opened between the Plenipotentiaries of the two countries, Earl Li being the sole delegate on the side of China.

MR. J. R. HEROD.

Mr. J. R. Herod, Secretary of the United States Legation in Tokyo, is about to proceed home on six months' leave of absence. Mr. Herod has proved himself an official of such exceptional abilities during his service in Japan, and his personal qualities have made him so popular in society, that his speedy return to Tokyo will be generally desired.

THE JAPANESE SECRETARY OF THE U.S. LEGATION.

We understand that the position of Japanese Secretary of the United States Legation in Tokyo has been resigned by Dr. N. Whitney, and that his successor is Mr. R. S. Miller, who has been discharging the post during Dr. Whitney's leave of absence. Dr. Whitney's resignation is due, we believe, to his desire to devote himself entirely to missionary labours in Japan.

THE POLITICAL ASSASSINATION CASE.

On the 25th and 26th ultimo, several arrests were made in Tokyo and Mito of persons suspected of a plot to assassinate the leading statesmen now in power. The principal of those apprehended seem to be two *Soshi*, named Watanabe Takeo and Shinozaki Yu-ichiro. The former is a *heimin* of Fukushima Prefecture, aged 27 years. Before coming to the Capital last December, he had borne the character of somewhat dull but bigoted *soshi*, a strong sympathiser with the now defunct anti-Mixed-Residence movement. At one time he is reported to have worked at the general election in the interest of Mr. Abe Iwane, the well-known introducer of the Representation for the Strict Enforcement of the Treaties—we refer to the general election that followed the dissolution of the Diet resulting from the attitude of the Lower House toward the anti-Mixed Residence agitation. After coming to Tokyo, Watanabe bore various aliases; for example as Nakai and Kobayashi. Under the latter name he was living in a lodging house kept by Mrs. Tokoro, in Sakumacho, Shiba, where the police arrested him on the 26th instant. During his stay in the lodging house, he behaved so quietly and soberly that no suspicion attached to him. A few days before the date of his apprehension, however, he visited the graves at Uyeno of the well known assassins Shimada Ichiro (murderer of Okubo), Kurushima Tsunekichi (who attempted Count Okuma's life), and Nishi Buntaro (who killed Viscount Mori). On the evening of the 25th, he asked a fellow-lodger, named Okaga—with whom he was on very intimate terms, though the intimacy did not extend to divulging his scheme—to accompany him to a certain restaurant and pledge him in a cup of *saké*, saying that circumstances might make it necessary for him to take leave of Okaga at any moment. The two youths were just leaving their lodging when the police arrested them, Okaga, however, being released soon afterwards. Watanabe was found to have on his person a pistol, a photograph of a certain Minister of State, a written declaration as to the motives of his conduct, and letters addressed to his relations. These documents, it is said, prove their writer to be an illiterate person, and show also that he had been an admiring reader of journals advocating a programme of indiscriminate antagonism toward the statesmen in power.

The other principal suspect, now under arrest, namely Shinozaki Yuichiro, is a few years past thirty. Hailing from the Prefecture of Gumma, he has long been the leader of a band of *soshi* in Tokyo, and used to be under the influence of such men as Oi Kentaro and Kokubo Kishichi. Unlike ordinary *soshi*, however, he was noted for regularity of life and integrity of purpose, his reputation in these respects being quite exceptional. A man of strong physique, he is said to be fairly well skilled in the arts of fencing and *Jujutsu*. The bare fact of his presence often sufficed to prevent *soshi* of opposite parties from disturbing a lecture meeting. He was arrested at Mito, whither he had gone a few days previously to visit his patron, Mr. Kokubo, Vice-President of the Local Assembly. Several other accomplices have also been arrested, but of them little is known, except that some of them are believed to have engaged in the manufacture of dynamite bombs. It is rumoured that the ramifications of the plot extend to unlooked for quarters, but our information points to the improbability of the affair's having any connection whatever with either political parties or public men of standing. Watanabe comes from the same place as did the assailant of the Viceroy Li, and there is an idea that the execution of the plot on account of which he has been arrested was deferred owing to the Shimonoseki affair, but all this is so vague that we do not pretend to have any faith in it.

With the exception of Watanabe and Shinozaki, all persons arrested on suspicion of being accomplices in the assassination plot have been released after examination. Having been closely questioned by Police Inspector Ogura

The sea-going torpedo-boat *Forban* in its preliminary trials off Havre proved itself to be the fastest afloat. The contract speed was 29 knots, but despite a heavy sea and high wind the *Forban* easily accomplished 30.2 knots, a greater speed than has ever been attained before.

on Sunday last, the two men were, on the same day, transferred to the charge of the Court of Cassation, under whose jurisdiction falls the crime of which they are accused, namely, plotting against the Government with murderous intent. But the Court of Cassation, in virtue of a provision of the Law for the Constitution of Tribunals, has entrusted the Tokyo Local Court with the preliminary hearing of the case. One journal states that it was the purpose of the prisoners to assassinate Marquis Ito on the occasion of Count Inouye's arrival in the capital from Korea, when they thought that the Premier would be sure to go to the station to welcome home his friend. Watanabe, the principal plotter, is said to be so ready to confess everything, that the law officers examining him entertain some doubt of his seriousness. The affair is regarded as a mystery by critics that ought apparently to be well informed. They say that the plot has been discovered, not by constables or men in the service of the Metropolitan Police Board, but by persons of a very different description. Who those persons are, we are not told. Another circumstance, noticed as being at least very singular, is that witnesses summoned for examination are chosen, not from among men that were on terms of close intimacy with the prisoner, but from quarters least expected. Those that thus regard the affair in the light of a mystery, are inclined to believe that there is at the bottom an arch schemer, of whom the present prisoners are but blind instruments. But so far as we have been able to gather, no foundation exists for such theories.

It is reported that two youths suspected of complicity with this plot were arrested in the Shiba district of Tokyo on the evening of the 30th ultimo. Their names are not published, neither are we told whether they are still held in custody. As to the principal actor in the abortive drama, Watanabe Takeo, the *Yiji Shimpō* publishes a very minute narrative of his past career. The eldest son of a well-to-do farmer in the village of Kohama, Prefecture of Fukushima, he early devoted himself to local politics, and was particularly fond of making arrangements for lecture meetings and otherwise busying himself when his locality was visited by politicians of the type of Messrs. Oi Kentaro and Kokubo Kishichi. He longed to go up to the Capital and learn the trade of politics, but his father, being a plain and sober-minded countryman, did not encourage this propensity. At the time of the general election in 1893, Watanabe had an opportunity of associating with a large number of *soshi* and men of that description who had come from Tokyo to earn money by assisting whatever candidates were prepared to offer them good terms. The ignorant and simple-minded youth listened with admiration to the bragging nonsense of these professional agitators, and his longing desire became more intense than ever to visit the Capital where men of such eloquence and knowledge could be met with daily. Accordingly, in February or March last, he secretly left home without consulting even his father, and came up to Tokyo under the assumed name of Kumoi Kazuharu. He had hoped to receive assistance from a man named Yamakawa Matazo, his only friend in the big city. But on inquiry, he learned to his chagrin that this individual had accompanied the expeditionary forces as a coolie. Fortunately, however, he made the acquaintance of a friend of Yamakawa, a man named Okaga, who had a position in a printing office in Ginza, and through his introduction, Watanabe found some work there. He continued in this way for two or three months, when, his friend Okaga having left the office on account of sickness, he also took his departure, and entered Marquis Nabeshima's tea factory at Nakashibuya as a day labourer. A month afterwards, he took service with Viscount Honjo, but here, too, he did not stay more than thirty days, preferring to have recourse to this friend Okaga, who was then living in Udagawa-cho, Shiba, and who housed him for some weeks. During this time, a tall and powerful looking man called and inquired for Watanabe, but the youth be-

ing known to the family only by his assumed name of Kumoi, they told the visitor that there was no such person in the house. Watanabe, however, who had been reading in an adjacent room, came out, and welcoming the visitor conducted him to his room, where the two held an earnest conference for some time. This incident did not suggest any suspicion to the family of Okaga, for to change one's name is a common thing in Japan. Sometime in July, Watanabe left Okaga's house pretending that he had business in Kōishikawa, after which nothing was heard of him by Okaga until the 21st ultimo, when he received a postal card from Watanabe, dated Koyoma, in the Prefecture of Tochigi, saying that the writer would come to the capital in a few days. But Watanabe arrived in Tokyo that very night, and at once called at Okaga's. Finding the latter absent, he put up in a lodging house at Nishikonya-cho. The next morning, he again called on Okaga, and told him that he had been requested by a friend to assist at an election for a local legislature. Watanabe's dress and general appearance indicated that he was now in improved circumstances. He promised Okaga an entertainment at a restaurant in a few days. Subsequently, he moved to a lodging house kept by Mrs. Tokoro in Sakumacho, and on the 25th instant, he was leaving the latter place in company with Okaga, whom he had invited, when they were arrested by the police. It is further stated that the prisoner has always been noted as a man of few words but thorough fidelity. He stood high in the favour of certain politicians as he was never known to betray a secret.

JAPAN'S FUTURE POLICY.

An extremely well written and thoughtful article on the situation created by the late war appears in the *Taiyō* (*The Sun*) of the 5th instant. The writer is Mr. Shigeoka Kungoro. A short account of his career may tend to give weight to his writings. Mr. Shigeoka went to Paris for the purpose of studying French Law and Political Economy in 1878. He entered the Paris University shortly afterwards, and graduated in Law in 1891. He now practises as a barrister and fulfils his duties as a member of the House of Representatives. The political party with which he has most sympathy is the *Yiyu-to*. Mr. Shigeoka's article is of sufficient interest and importance to bear the following full reproduction.

The late war was the means of showing to the world at large to what extent Japan had progressed during the twenty years that preceded it. Up to that time she was regarded as a much-to-be-pitied small Eastern State. Suddenly she found herself respected on all sides and admitted to the ranks of the more powerful nations of the world. All this cannot but afford intense gratification to every subject of Japan. But it must not be forgotten that the new situation brings with it enormous responsibilities and demands the adoption of an entirely new policy. In endeavouring to forecast what that policy should be difficulties and complications of no ordinary magnitude present themselves, creating serious anxiety to every thoughtful mind. In expressing my own opinion on this subject my chief desire is that it should lead to a full discussion of the topics dwelt upon in this article.

Since the conclusion of the war, the one subject of controversy among all parties has been how best to spend the indemnity received from China. It has been contended that the best way of making use of the large sums of money coming into the country is to devote them to the increase and better equipment of the army and navy, to the augmentation of the war fund, to the paying off of the late war loan, and on. The majority of writers that have undertaken to express opinions on this subject have made it appear as though the one great difficulty of the situation is how to get rid of the enormous amount of money to be received from China, and they have been attacking imaginary foes—men who are supposed to object

to the money being spent in the manner indicated above. How to spend the indemnity money is after all a very minor question. The problem that awaits solution embraces a much wider area and is of far greater intricacy. How to shape our future policy so as to avoid the rocks and quicksands that lie in our path—this is the one great difficulty of the present situation, as I shall now proceed to show.

Of late years the nations of Europe, to the great regret of political economists, have done nothing but increase public expenditure and swell their debts. The chief cause of this state of things is the warlike spirit prevailing in Europe, necessitating the maintenance of vast armaments. But added to this, each of the great Powers has been gradually adding to its dominions territory the development and government of which have imposed a new burden on the State. With European jealousies and rivalries Japan is happily not concerned. It is unnecessary that she should take her standard from the great Powers of Europe as regards public expenditure. Though during the past twenty years the whole machinery of government has been greatly enlarged, the increase in public expenditure has not proceeded in anything like a corresponding ratio. Twenty years ago Japan's yearly expenditure amounted to 60 or 70 million *yen*. To-day, including contingent expenses, the sum required does not exceed 89 million *yen*. Thus in 20 years the increase has not amounted to more than about $\frac{1}{3}$. It is not desirable that Japan should ever vie with Europe in the matter of public expenditure and elaborate government. Nevertheless, there is no denying that the late war has rendered it impossible for us to pursue our traditional policy. A large outlay and great development of governing agencies have been forced upon us. I shall now proceed to discuss in order the various reforms and changes of policy that the new situation has rendered imperative.

I.—INCREASE OF ARMAMENTS.

It is patent to everyone that the competition with Westerns on which we have entered may at any time give rise to circumstances involving an appeal to arms. In such a case, were Japan unprepared, her very independence would be jeopardised. It is evident then that both the army and the navy should be increased. But the question is, to what extent is development to take place? It is quite impossible that we should make the great Powers of Europe our standard in this matter. From year to year these Powers vie with each other in the invention of new weapons of destruction at an enormous expenditure. For Japan to attempt to keep pace with them would mean hopeless bankruptcy. That being so, it is important that we should define the limits of the proposed military and naval development—that we should fix a standard and keep to it. In fixing this standard the chief point to decide is, what can the nation afford? The whole subject reduces itself to a question of finance. On every hand politicians are loud in their demands for increased armament, but the financial policy, the adoption of which can alone make Japan permanently strong, is a subject to which no attention is paid. To advocate an increase in our fighting power without defining the limit to which this increase should go is a course fraught with no little danger to the very existence of the state.

II.—THE INCREASE OF THE NATIONAL DEBT.

In Europe the maintenance of its armies has forced upon each of the great Powers a policy of extensive borrowing. The national debts of these countries are increasing at a rate that causes no little astonishment to people, like ourselves, unaccustomed to such loans. In Japan when the State borrows money, it does so with the fixed intention of returning the same within a given period. Not so in Europe. Although Governments there reserve to themselves the right of redeeming public bonds, they feel no special obligation to adopt this course. They regard the money as borrowed for ever and are content with paying interest thereon. Japan has always been averse to adopting this view of the obligations of State. But an entirely new situation has been created by the war. Before

peace was proclaimed, in addition to large sums borrowed from the Bank of Japan, the Government had raised a loan of 80,000,000 *yen*. There are those who say that the indemnity received from China will more than suffice for the discharge of these debts, but they forget that the contemplated enlargement of the Army and Navy will prevent this money from being applied to any such purpose. Moreover, with the growing responsibilities of the empire, it is by no means likely that in the future our revenue will equal our expenditure: hence an ever increasing national debt will be the unavoidable outcome of the present situation.

III.—EXTENSION OF FOREIGN INTERCOURSE.

Recent events have greatly increased our intercourse with Western nations and have impressed upon us the necessity of choosing thoroughly competent men to represent us in European countries. Hitherto Japan's representatives in Europe have ranked below those of Turkey, Greece, and Roumania. Our ministers have contented themselves with the discharge of the small civilities of diplomatic life and have never attempted to acquaint themselves with the mysteries and the secrets underlying the relations borne by one State to another. In last year's budget the estimate of the Foreign Office did not exceed 800,000 *yen*, and of this only a paltry 30,000 *yen* was voted to the Secret Service Fund. In France the expenditure of the Foreign Office amounts to 6,500,000 *yen*; in Germany to 5,000,000 *yen*. In England the Diplomatic and Consular services alone receive an appropriation of some 4,300,000 *yen*. I am not prepared to advocate such a large expenditure by Japan, but there is no gainsaying the fact that the present rate is ridiculously low and that until it is raised Japan cannot expect to be properly represented in the Councils of the West.

IV.—ENLARGEMENT OF IDEAS IN THE DIET.

The Diet undoubtedly exists principally for the object of controlling public expenditure. But the history of parliamentary institutions in Europe tends to show that the members of deliberative bodies are given to great partiality, and that, instead of keeping down public expenditure, they not infrequently lend themselves to unwarranted increase. A writer on this subject observes:—"Parliament is no longer an instrument for the reduction of expenditure but rather a means of increasing it." It is further explained by this writer that one of the chief objects of a government is to command a majority; that to do this they have to satisfy the desires of members, and that they find that the best way of effecting this is by supporting such calls for public expenditure as proceed from the constituencies. Hence the electors, the members of parliament, and the Government frequently all combine in increasing expenditure. It is only when a large majority of the members are opposed to a government that a reduction of public expense is insured. This is well illustrated in the history of our Diet. During the first few years of its existence, its one great aim was to cut down the Budget and thereby show its opposition to the Government. But no sooner did the war unite the Government and the Diet than the members of the latter vied with each other in the furtherance of heavy expenditure. Never was a more astonishing *volte-face* witnessed in any assembly. A single event proved sufficient to lead members from one extreme to the other. While it is admitted on all hands by reasonable men that extremes are to be avoided, the fact remains that by the force of counter-action the Japanese legislators who have hitherto figured as an instrument of retrenchment have now publicly declared themselves prepared to vote for hitherto unheard of expenditure. The new departure is attended with danger. Never was there greater need of caution in voting public money.

V.—THE RISE IN PRICES.

Owing to the low price of silver, the purchasing power of the Japanese has been greatly curtailed of late years. But the influx of 300,000,000 *yen* into the country cannot but work a great change. With the increase of

money, prices are bound to rise and living will consequently not be so cheap as heretofore. This change will be felt alike by the State and by the individual.

VI.—AN IMPULSE TO TRADE AND INDUSTRY.

One of the effects of the war is to make it compulsory for Japan to compete with Western nations in trade and industry. It will be the duty of the government to devise measures for the extension of our commerce, by establishing and subsidising lines of steamers, by constructing railways, roads, harbours, and docks, and by establishing banks. In addition to these measures the development of new industries will be rendered a necessity by the altered circumstances.

VII.—THE EXTENSION OF THE EMPIRE.

As a result of the war, Japan finds herself the owner of territory whose development will involve great outlay. Both Formosa and the Pescadores will eventually prove a great source of wealth to us, but for the present they will swallow up large sums of money.

In the above account of the increased expenditure involved by the new situation in which we are placed, I have confined myself to enumerating all the lines on which we shall find our expenses increasing. But taking the elements of the new situation and having enumerated them, who is there that can calculate precisely what sum of money they involve? That in the future our revenue will no longer meet our expenditure is too plain to need discussing. Thus the necessity of borrowing is forced on us. To what extent is this to take place? And how long is the nation to be called on to bear the heavy burden of a large public debt? If our Government once acquire the habit of tiding over a financial difficulty by having recourse to a loan, depend upon it, trouble will overtake us sooner or later. The question, then, is in what respects is curtailment of expense possible? Over certain elements of the situation as sketched above we can have no control. Such, for instance, as the general rise in prices. There are certain others where the honour and independence of the country cannot be maintained without a considerable increase in expenditure. But where we need wise and sober men to guide us is in determining what limit shall be imposed on our outlay. To the task of finding the happy medium our Department of Finance and the Diet must apply themselves in right earnest. That venerable statesman Gladstone, once said: "The Minister of Finance may be compared to a man carrying money through a robber-infested, mountainous district: though he may not be able to escape violent handling from his foes, yet if neither from lack of courage nor lack of care, he allows himself to be robbed, he may be said to have fulfilled the duties of his office." On all sides men are eager for large increase to our land and sea forces, but their ideas as to the cost of the desired increase and as to Japan's ability to permanently provide the funds necessary are of the vaguest kind. Hitherto the late war has brought us nothing but renown; but should our recent victories lead us to make a great financial blunder and decoy us into paths that tend to ruin, the apparent glory of our triumph will be obliterated by the reality of one subsequent downfall. There is no subject at once more vital and more puzzling than Japan's future financial policy.

THE SZECHUAN COMMISSION.

The Commission that is to inquire into the circumstances of the Szechuan outrages is certainly one of the most leisurely affairs on record. In May the outrages were committed, and judging from their extensive character as well as from the excitement caused by them among the foreign communities in the East, the natural expectation was that speedy steps would be taken to investigate the affair and to obtain redress. But it would now seem that the United States commission can not commence its labours before the early days of November, at soonest. Captain Barber, Naval Attaché of the United States Legation, who has been appointed a member of the Commission, is still in Tokyo

and does not set out until the beginning of next month. His instructions are to proceed *via* Tientsin, which means an overland journey of fully 800 miles. Assuming the utmost celerity of progress, a Chinese cart can not be expected to make more than 30 miles a day, so that the journey from Tientsin will take about a month, and the Commission can not reach the scene of operations before about the 10th of November. It may be imagined that a springless cart drawn by mules is a tardy vehicle for the purposes of a long journey, but there is no help for such matters in China. The traveller's rate of progress is necessarily regulated by that of his baggage, since he can not hope to procure enduring food or bedding at a Chinese inn. To make the journey to Chengtu by river, *via* Hankow and Ichang, would be a still slower business, so that, in the matter of choice of route, nothing can be said against the methods of the authorities. Still, the plain fact is that by the time the Commission commences its inquiries, six months will separate it from the date of the occurrences to be inquired into, and inasmuch as, during that interval, the ex-Viceroy of Szechuan, who is so confidently accused of having inspired the riots, will have had ample leisure to cover up his tracks, and the new Viceroy will have concluded an investigation and probably inflicted punishments on his own account, it is not easy to see what useful rôle the foreign Commission can hope to play. From the missionaries or the native Christians and their sympathisers only can there be any reasonable hope of obtaining evidence calculated to incriminate the Viceroy or other local officials, and if such evidence be openly collected and officially employed, the popularity of Christian propaganda in China will certainly not be increased.

GERMANY, RUSSIA, AND FRANCE.

Reuter has repeated the telegram published some days ago by a Japanese journal, to the effect that Germany had decided to join France and Russia in demanding the speedy evacuation of the Liaotung Peninsula by Japan. There is not, we believe, the smallest foundation for such a statement. Indeed, it bears on its face the impress of untruth, for it indicates that some divergence of opinion had occurred between the three Powers, or, at any rate, that some new departure had been made by two of them, and endorsed by the third, after hesitation, whereas the three have worked harmoniously throughout. We may go further, and say that, according to our information no friction has been developed in connection with the Liaotung question, the course contemplated by Japan being endorsed as reasonable by the three Powers.

THE GUARDS IN FORMOSA.

It is suggested, not without reason, that the Imperial Guards, having borne the brunt of the Formosa campaign from the outset up to the present, may feel somewhat aggrieved if the principal share in the final scene of the drama is assigned to the Second Division. But the question appears to be one of possibility. The Guards have suffered very severely, partly from casualties in the field, but above all from sickness. Their exact losses are not publicly known, but some journals, the *Fiji Shimpō* for example, allege that they can not muster for fighting purposes more than one half of the force borne on the rolls when they landed in Formosa. If that estimate takes account of the very considerable number of men that must now be detached for garrison work and to guard the long line of communications between Changhua and Taipeh, it may be correct. At all events, the march against Tainan appears to demand a larger force than the Guards can now parade, and they must bow to the inevitable. The Japanese military authorities, in every belligerent operation since the commencement of the war, have been careful to leave a very ample margin of safety; more ample, indeed, than circumstances always seemed to demand. They are evidently pursuing the same policy in Formosa.

THE LATE M. PASTEUR.

Science loses a distinguished worker by the death of M. Louis Pasteur. The deceased was born at Dôle, in the Jura, on December 27th, 1822, and was received as a pupil of the Ecole Normale in 1843, and took the degree of Doctor in 1847. In the following year he was appointed Professor of Physics at the Faculty of Sciences, Strasburg. Towards the close of the year 1854 the young Professor was intrusted, as Dean, with the organization of the newly created Faculty of Sciences at Lille. In 1857 he returned to Paris and undertook the scientific direction of the Ecole Normale. He was then in his thirty-fifth year. In December of 1863, he was appointed Professor of Geology, Physics, and Chemistry at the Ecole des Beaux-Arts, and was elected a member of the Institute. Long before this he had become well-known in scientific circles outside France, for in 1856 the Royal Society of London had awarded him the Rumford medal for his researches relative to the polarization of light and kindred subjects. Three years earlier, he received from the Emperor of the French the decoration of the Legion of Honour, and in 1863 he was promoted to be an officer of that order, the rank of Commander being given him in 1868. In the following year, 1869, M. Pasteur was elected one of the fifty foreign members of the Royal Society of London. On the 24th October, 1878, the distinguished *savant* was raised to the rank of Grand Officer of the Legion of Honour, and four years later he entered the French Academy, being elected to the chair of the late M. Littré, whose panegyric he delivered.

M. Pasteur was a voluminous writer, more especially during middle life, his contributions appearing in the "Recueil des Savants Etrangers," and the "Annales de Chimie et de Physique." He wrote many works on Chemistry and as a result of their favourable reception obtained the Jecker prize. In 1863 he published a work entitled "Nouvel Exemple de Fermentation déterminé par des Animalcules Infusoires pouvant vivre sans Oxygène Libre." This subject he diligently pursued for many years, and in 1874 the National Assembly, as a reward for his services to the state in this direction, awarded him a life annuity of 12,000 francs. In the year of M. Pasteur's election to the Academy, the Council of the Society of Arts, London, awarded to him their Albert Medal for his researches in connection with fermentation, the preservation of wines, and the propagation of zymotic diseases in silkworms and domestic animals. From that time on M. Pasteur devoted himself to the study of inoculation for diseases other than small-pox, and achieved some very remarkable results, especially in the prevention of hydrophobia. Honours were showered upon him by learned societies and faculties throughout the world, while Imperial and Royal favours were not wanting. Pasteur Institutes have sprung up in many parts of the world, the one nearest to Japan being established at Saigon. These institutions alone will keep green the memory of the great man who has just passed away.

COUNT MUTSU.

The *Nichi Nichi* confirms the report that Count Mutsu has not tendered his resignation since he withdrew it at the end of August. The circumstances under which he then desired to lay down his office were noted by us at the time. Our contemporary opines that the present rumour probably originated from imperfect information as to the Count's intended resignation on the above mentioned occasion. With regard to the Count's illness, the bulletins for the past few days have been much more favourable, but his Excellency is still confined to his room, and is unable to transact business. His absence from his office at the present juncture is a serious blow to the Government, for there are many important questions demanding the incisive ability and courageous insight for which he is remarkable.

FOREIGN MILITARY INSTRUCTORS.

The War Department in Tokyo, according to the *Choya Shimbun*, is perplexed about the question of foreign military instructors. It was proposed at one time to dispense with foreign aid in this branch of education, but the idea has been abandoned, the services of foreign instructors in the upper military schools being considered indispensable at present. What nationality to choose, however, is the problem. Our contemporary says that no country being ahead of Germany in the science of tactics and strategy, German teachers would naturally be selected but for the fact that more than a hundred and sixty Germans are already engaged for a similar purpose in China. Hence the military authorities are disposed to have recourse to some other country. There is certainly a measure of force in that argument, so far as concerns the question of secrecy. It is undeniable that military science has reached in Germany at least as high a stage of development as in any western State, and that Japan could not do better than rely on German assistance to keep herself in touch with the latest steps of tactical and strategical progress in the Occident. She already owes a great deal to Germany in this field, and her experience of German military experts is understood to have been such as should lead her to welcome the continuance of their aid. But there is no difficulty in appreciating the possible inconvenience of engaging men of the same nationality for such purposes in both empires. Granting the utmost loyalty—and that may fairly be assumed where German officers are in question—it would be impossible, under such circumstances, to maintain the mutual privacy that States situated as are China and Japan may be supposed to desire. The objection will not appeal with equal force to everybody, but to us it seems an inevitable corollary of the recent struggle.

MAJOR-GENERAL YAMANE.

Major-General Yamane, commander of the Second Brigade of the Imperial Guards, who had been suffering from malarial fever for a week, succumbed to the malady on the 29th ultimo. The critical state of the patient was reported to Tokyo by a telegram dated the morning of the 29th; and in consideration of the distinguished services rendered by him in subjugating the Formosan insurgents, the Emperor was pleased on the 1st instant to raise him to the peerage with the title of Baron, at the same time giving him the official rank of First Grade of the Fourth class. By the death of this officer the country loses one of the most deservedly popular and able commanders in the Army. Born in a *Samurai* family in the castle town of Hagi (Choshu clan) on the 7th of January, 1851, he entered the military seminary at Osaka in 1870. In the following year he joined the army with the rank of corporal, but such a favourable impression did his good conduct and ability produce upon his superiors that in the course of the same year he was promoted to be a Captain—a rise altogether without precedent even in those days of easy preferment. In 1874, he was appointed Aide-de-Camp to the commander of the Second Regiment of the Guards. At the outbreak of the Satsuma Rebellion in 1877, he received the command of a battalion of infantry of the line with the rank of a brevet Major, and in April of the same year, he was promoted to the rank of Major. After the termination of the Civil War, he remained a short while at Kagoshima serving with the garrison stationed there. Thenceforth he rose rapidly through the successive grades, becoming Major-General in command of a Brigade of the Osaka Garrison in 1890, whence he was transferred to the command of the Second Brigade of the Guards at the commencement of the recent war.

TREATY REVISION.

The *Nichi Nichi Shimbun* has the following note:—"Negotiations for the revision of the treaties are now going on with France, Germany, Holland, and Denmark. The new treaty with Holland will be signed before long, little difference of view having been developed between the two countries as to the stipulations contained in the draft forming the basis of discussion. Negotiations with France are making an unexpectedly good progress, and we are warranted in believing that the new treaty with that country will be signed at an earlier date than that with Germany, but in all probability the conference with both Powers will be brought to a conclusion in a month or two. Communication has not yet been opened with Spain, Portugal, and Austria; but steps will be taken in their cases also at no distant date. On their own side they manifest a desire to discuss the matter without loss of time."

THE WAR AND COMMERCIAL LOSSES.

The above is the title of a short article recently published in the *Yiji Shimpō*. After observing that the war involved fewer losses than the experience of other countries could have warranted Japan in expecting, our contemporary proceeds to give the history of the misfortunes of a certain Japanese trader named Shitamura Hirokata. Shitamura, several years before the outbreak of hostilities, had undertaken to supply the Chinese with sleepers for the Tientsin railway. From one cause and another the fulfilment of the contract was delayed till the year before the commencement of the war, when, after making arrangements with shipping companies for the transport of a large amount of material to Tientsin, Shitamura prepared and despatched to their destination 70,000 sleepers. Shortly after this, an order for 100,000 more was received, and by the employment of extra hands Shitamura succeeded in getting this number ready for conveyance to Hakodate, the port of shipment, when news of the rupture between China and Japan reached him. Work was immediately stopped and the sleepers remain where they were cut. In the meantime Shitamura had contracted a loan which he found himself unable to pay. The *Yiji Shimpō* is of opinion that the unfortunate trader is entitled to some recompense for his losses. With the object of soliciting Government aid, Mr. Shitamura has applied both to the Foreign Office and the Home Department, with what result is not yet known.

BILL FOR THE ENCOURAGEMENT OF MARINE BUSINESS.

According to the *Nichi Nichi's* information, the outlines of a Government Bill for encouraging marine industry are said to be as follow:—The subject may be considered under three headings, navigation, ship-building, and the education of seamen. First, as to navigation: subsidies are to be given to ships of upwards of 1,000 tons burden and a speed of 10 miles, the rate for ships of this, the lowest grade, being 25 *sen* per mile. The rate of subsidy will be increased by 10 per cent. for every increase of 500 tons burden, and by 20 per cent. for every increase of a mile in speed. Generally speaking, these subsidies will be of two kinds; those given to the Nippon Yusen Kaisha and the Osaka Shosen Kaisha for fixed mail routes, and those given to any ship proprietor running his vessels on a foreign route. The rate of subsidy will be the same, whether the ship employed on such voyages be of Japanese nationality or a chartered foreign vessel. Secondly, the subsidies to be given to shipbuilders will be at the rate of about 23 or 24 *sen* per ton, the lowest limit of tonnage entitled to such State help being 1,000 tons. Special measures will also be taken for enabling ship-builders to obtain imported materials at moderate prices, such measures, being, for instance, the diminution or

abolition of import duties. Thirdly and lastly, the resulting increased demand for trained officers and seamen will be met by extending the scope of the Government Navigation College and by endowing the private establishment, *Kai in Yeki soi-kai*, with funds for training sailors. The aggregate amount of money required under these three heads is estimated at about a million *yen*.

CONFERENCE OF THE ASSOCIATED CHAMBERS OF COMMERCE.

The conference of the Associated Chambers of Commerce sitting at Nagoya came to an end on the 29th ultimo. On the last day of the session, Mr. Kaneko, Vice Minister of Agriculture and Commerce, addressed the meeting with reference to economic conditions after the war. The next conference was fixed for April, 1896, at Hakata in Kyushu. Among the measures adopted at the conference, the principal were as follow:—First, that a memorial be presented to the Ministers of Finance, and of Agriculture and Commerce, for the abolition of the import duty on cotton, and that the Diet be petitioned on the same subject. Secondly, that the Chambers of Commerce represented at the conference should separately memorialize Government for a reduction of freight rates on the Naoyetsu railway, the charges at present being excessively high. Thirdly, that the tax now levied on Exchanges and Bourses being injuriously heavy, the Government be petitioned to reduce it. Fourthly, that a Control Chamber of Commerce be established. Fifthly, that the Chambers of Commerce carry on separate investigations as to the effects of the war upon the economic condition of the country, and as to the measures that may be rendered necessary to meet the changing circumstances of the present era; that their views on these subjects be represented to the Government and made public at the same time; and that these steps may be taken conjointly by several Chambers of Commerce. Sixthly, that Article 175 of the Commercial Code should be modified in the sense that the lowest limit of the face-value of a company's shares with a capital of and above 100,000 *yen*, be 20 *yen*, instead of 50 as at present. Seventhly and lastly, that the Government be memorialized by each Chamber of Commerce separately with a view to improving the management of the state railways, so that better commercial facilities may be provided than those existing at present. The number of measures introduced at the conference was as many as twenty-six or twenty-seven. A proposal for the establishment of a floating bazaar was approved in principle, but the final resolution was deferred until the details of the project should be elaborated by the Osaka Chamber of Commerce. The subject of trade regulations occasioned a heated debate, but a definite decision was reserved for the conference of next spring at Hakata.

MURDER IN THE HOUSE OF MISS SUTHON.

Intelligence has reached Sendai to the effect that on the night of the 24th ult. a Japanese catechumen of the American Episcopal Mission, residing in the house of Miss Suthon, a lady missionary living in Awomori, was murdered in cold blood by a robber. Mr. Jefferys, of Sendai, was telegraphed for by Miss Suthon the day after the tragedy and reports that until the official inquiry now going on is concluded, it would be premature to say what were the motives of the criminal in committing the dastardly act. According to the accounts that have reached us, he does not seem to have carried off any money, though a considerable sum was in the house at the time. Miss Suthon's experiences in Awomori have been of a most unfortunate character, for in addition to having been burnt out, with the loss of everything she possessed, it was not long ago that her cook, one morning, was found dead in his bed.

CHINA NEWS.

The remains of the mother of H.E. K'uei Chün, the newly appointed Governor of Shensi, a Manchu, who died on the 26th of August last of cholera, were removed from the residence in Nanking Road, Shanghai, on the 21st September. The funeral procession was of the usual Chinese style, though, in this instance, says the *N.-C. Daily News* those who took part in it presented a cleaner appearance than is usual on such occasions. The numerous silk umbrellas were much smaller than those ordinarily used, but the soldiers carried the old rusty muskets, tridents, and halberds, which apparently do duty whenever there is an official procession.

Mr. Ayrton has taken over charge of the British Consulate at Tamsui, and Mr. L. C. Hopkins has gone to Foochow.

Mr. F. B. Aubert, of Messrs. Butterfield and Swire, who came out to China at the end of 1870, went home in 1893 and returned to Shanghai last year, has died in the General Hospital there of cholera.

The Tsung-li Yamên, the Shanghai morning journal learns from Peking, has advised the Throne to punish Chou Taotai, the Chief Commissioner of the Chêngtu Police, (*Tsung-pao-chia-chü*) who, it will be remembered, was guilty of issuing an anti-foreign proclamation immediately after the recent riots in Szechuan.

News has been received from Peking that H.E. Hu Yü-fen, ex-Taotai of Tientsin, Provincial Judge of Kuangsi and Chief Commissioner of the Grain Supply Department during the late war, will be appointed Director-General of Railroads throughout the Empire in charge of the Constructive Staff, but under the control of a Supreme Council at Peking.

The levies raised by China during the late war are causing a good deal of trouble. At Wuchang a pretty state of affairs exists. The Governor, Tan, has received imperative orders from Peking to disband the Hupeh troops, and does not dare to carry out the orders. The men threatened to attack and destroy the yamêns in the city, and to attack the foreign buildings, both houses and chapels. No foreigners were to be killed, the object of the proposed attack on their property being to involve the high officials in difficulties with foreign governments. The Governor yielded and postponed the disbandment; but he called 500 Hunan soldiers into the city to keep order, and is calling in more. Fortunately the mutinous soldiers are all Hupeh men and have family connections in the province, which makes it difficult for them to rise.

There are at present, says the *Daily Press*, some six or seven of the Canton gunboat squadron laid up in the back reach of the river. They are tied together in pairs, perhaps with a view to economy, so that one caretaker can look after two vessels, or perhaps for mutual protection to prevent the river thieves borrowing one for a cruise or an exploring expedition, or with which to start a new republic. Strange to say, the best vessel of the fleet, the Armstrong alphabetical boat with the forty-ton gun, is one of the lot, an imitation of her, of Chinese build, being seemingly considered more worthy of retention for service, although built of wood and leaking like a basket, with timber more or less rotten.

The *North China Daily News* publishes a fac-simile of a ten cent postage stamp issued by Liu Yung-fu at Tainan-fu, in the name of the Formosan Republic. The stamp is of a light blue colour, and of the face value of 100 *cash*. On the top are characters in Ancient Chinese for "Republic of Formosa;" on the right, in Modern Chinese, "One hundred cash," and on the left "Stamp," or *sitan*, a phonetic rendering for *stamp*—"paper." In the centre and occupying about three-fourths of the surface of the stamp is the emblem of the republic—a tiger. According to the *Hupao*, the first issue of these stamps was all bought up by foreigners from Hongkong, Amoy, and Foochow and the present one is a representation of the second issue.

The Birthday celebrations of the Empress

Dowager of China were abandoned last year, in consequence of the war, after most extraordinary preparations had been made for conducting them on a scale commensurate with the influence and dignity of the august lady. It is now proposed that the celebrations be held in November next, but on a quieter scale, the high provincial officials being excused from appearing at Peking to take part in the festivities in person.

There must be some reason, says the Shanghai morning journal, for the avidity with which the Chinese are buying up property on the Carter and Markham Roads, and on the opposite side of the Soochow Creek. Eleanslea, the house and grounds formerly belonging to Mr. Robert Mackenzie, sold not long since for Tls. 8,000, has just been resold for Tls. 24,000. Is the terminus of the Soochow railway to be somewhere near there, or are the Chinese anxious, in view of what may be coming, to have property which they think will be safe under foreign protection?

A terrible explosion has occurred in the extensive coal-mine opened by Chang Chih-tung at Man Gan-san, in Hupeh Province, a little above Hankow. The mine was in charge of two Belgian experts, M. Koeline, the engineer in charge of the mine, and M. Baumogoger, the foreman coke burner. The explosion was caused by the ignition of "fire-damp" and the first report that reached Hankow was that 100 men had been killed. Dr. Cuyper immediately left Hankow for the scene of the disaster in company with the chief mining engineer, M. Marx. A later report received by telegram states that the number of deaths is 60, but that a very large number of men are seriously injured.

According to reports sent from Wenchow to Shanghai the action of the local authorities toward the native Christians at the former place is incredibly inhuman and unjust. In spite of warning given to the Taotai by the British Consul, no official steps were taken to protect the Christians, and the result was that, a week later, an attack was made on them, several of their houses being rifled and destroyed and the inmates driven out. At first the Taotai refused to send a magistrate to investigate the outrage: he said that Fênglin, where it had occurred, was too remote for such consideration. By and by some other business called for the magistrate's presence at a day's journey beyond Fênglin. This was a month after the pillaging and burning. On his return journey the magistrate called at Fênglin and reported that no damage whatever had been done. Finally the matter came up for trial. The four Christian complainants were treated like the commonest criminals; were kept kneeling for 5 hours on a hard stone floor without being allowed even to rest their hands on the ground; were required to sign a document acknowledging that they had laid a false accusation and that they had received back all their goods, and promising that they would hold no more Christian services at Fênglin; and were finally sent to prison and tortured on the pretence of not having paid their taxes. Three of them have been released at the urgent instance of the British Consul, but the fourth is still held on a charge of preferring false accusations. Apart from his most oppressive conduct on this occasion, the Wenchow Taotai had already given proof of strong anti-foreign bias. It is feared that further and grosser outrages must be expected in his district.

A "Special correspondent" of the *North China Daily News* sends some remarkable information to that journal from Japan. He professes to know what passes between the Minister of State for Foreign Affairs and the Representatives of France, Russia, and Germany at their conferences, and also what happens at Cabinet meetings. His news is that the Governments in Berlin, Paris, and St. Petersburg are insisting upon the immediate evacuation of Liaotung by Japan, and are requiring her to reduce by two-thirds her claim for a supplementary indemnity of 50 million taels. We recommend this "special correspondent" to go easy, and the public to salt his statements copiously.

"THE LUCHU ISLANDS & THEIR INHABITANTS."

MR. BASIL HALL CHAMBERLAIN'S brochure on the Luchu Islands offers a striking example of the art of conveying solid information in the lightest and most delightful form. It is not given to every man to take the geography, history, industries, agriculture, manners, customs, and language of a petty insular people, and from these naturally dry materials to construct a monograph that carries the reader along from cover to cover as easily and pleasantly as a novel of THACKERAY'S or an essay of MACAULAY'S. Indeed, we have never been able to determine to our own satisfaction the *métier* for which Mr. CHAMBERLAIN'S abilities specially designate him. As a philologist, as a historian, as an ethnologist, as a traveller, he manages equally to charm his readers by originality of thought, thoroughness of research, and graces of style. At the present moment, as we close "The Luchu Islands and their Inhabitants," our conviction is that he ought to devote himself henceforth to travelling. He has made a name in connection with Oriental subjects, but that he would place the educated world under still larger obligations by extending his field and publishing volumes of travel, we have no manner of doubt. From the accounts hitherto accessible it has been difficult to form a clear impression as to the character of the Luchuans. Mr. CHAMBERLAIN'S grandfather, Captain BASIL HALL, was the first to place on record an account derived from personal experience. That was in 1818. H.M.S. *Providence* had been wrecked, in 1797, on a reef of Miyakojima, and the commander and his men had received the kindest treatment at the hands of the people. Their story induced the British Government to send out the *Lyra* and the *Alceste*, the latter commanded by Captain BASIL HALL, in 1816, to explore and survey this *terra incognita*, and Captain BASIL HALL'S book, published two years later, became a classic. His eulogies of the people's gentle disposition and kindly ways were not confined to the pages of his charming work, for on the tombstone of a British seaman that died at Nafa he caused to be chiselled his sense of the favours received from "the King and inhabitants of this most hospitable island." Dr. MCLEOD, Dr. GUILLERARD, "even the missionaries," and all the Japanese concurred in this favourable view. The only one to differ from it was Commodore PERRY. We may here confess that we have always entertained a hesitating conviction about Commodore PERRY. His apotheosis as the Messiah of Occidental civilization in the East, and the worshipful reverence now attached to his name, have seemed to us a singularly unbecoming tribute to the truculent, masterful, blustering, and nar-

row-minded character disclosed by the man's own writings. It interests us, therefore, to find Mr. CHAMBERLAIN in practical agreement with us. "The solitary exception," he writes, "to this chorus of praise is Commodore PERRY; but then the account he himself gives of his haughty and masterful conduct, of his violent threats, and contemptuous disregard of all international law and courtesy, renders it scant matter for surprise that even Luchuan patience should have been exhausted, and that the islanders should have resorted to deceit, which is the only weapon the weak have at their disposal against the strong. The blustering Commodore's virtuous indignation at the employment of this weapon against no less august a personage than himself, makes most amusing reading by reason of its unconscious satire." It may be accepted, then, as an established fact that the Luchuans are among the most docile, gentle, ingenuous, and kindly of peoples. Of one of the islands, Yaku-no-shima, Mr. CHAMBERLAIN writes:—"The inhabitants who number some 8,800, enjoy the reputation of an almost idyllic simplicity. Doors need neither locks nor bolts in this happy island, where theft is unknown; and a man hanging up his coat on a bush will be sure to find it untouched when next he passes by that way." Perhaps a word of explanation should be added with regard to Mr. CHAMBERLAIN'S phrase "even the missionaries," lest it be read as showing that he, too, is a victim of the bitter and unreasoning prejudice prevalent among foreign laymen in the East against missionaries. The fact is that the Luchu Islands are very little subject to the comings and goings of missionaries. When Mr. CHAMBERLAIN visited the archipelago, there was only one missionary there, the Abbé FERRIÉ. It is true that the Abbé was also the sole and only foreigner in the islands, but none the less strange is to find that a field containing nearly half a million "souls to be saved" should remain almost completely outside the sphere of Christian propagandism. Mr. CHAMBERLAIN explains the phenomenon thus:—"The Luchuans, following their model, China, always wished to avoid permanent relations with foreigners, through willing to treat with humanity and courtesy those whom accident brought as occasional visitors to their shores. They disapproved altogether of certain persons who came to stay. These unwelcome guests were some French Catholic missionaries, of whom the earliest landed at Nafa in 1844, and a converted Anglo-German Jew named BETTELHEIM, who arrived as Protestant missionary in 1846. The Luchuans housed the foreign intruders, who persisted in remaining, despite frequent entreaties to depart, but heeded their preaching so little that at last, after several years, both Catholics and Protestant, having convinced themselves of the uselessness of

further persistence, left the island of their own accord." Does this statement, we wonder, cover the whole ground. Is it possible that Luchu cannot boast so much as a single Christian convert, and that these people, of preëminently sinless and gentle lives, are the only nation in the world that have turned a completely deaf ear to the tenets of the Nazarene?

Who are they, these Luchuans, differing so radically from the Japanese, with whom they have been incorporated, that while the latter used to distinguish the gentleman from the commoner by the wearing of swords, the former achieved the same discrimination by the aid of hair-pins? Here is Mr. CHAMBERLAIN'S opinion on this interesting point:—

My own conjectural restoration of the illegible pages of the early history of this remote region would be somewhat to the following effect:—That the common ancestors of the present Japanese and Luchuan nations entered Japan from the south-west, crossing the Korean Channel with the island of Tsushima as a stepping-stone, and landing in Kyushu, the southernmost great island of Japan. This is rendered probable alike by geography, by the trend of legend, and by the grammatical affinities connecting Japanese and Luchuan with Korean and Mongol. We know from history and from the testimony of place-names that this race gradually spread eastward and northward, apparently amalgamating with some comparatively civilized native tribes as to whose affinities nothing can now be ascertained, but driving before it and killing off an earlier savage race, of whom the modern Ainos are the last remnant. A glance at a map will show why, as Kyushu filled up, the bulk of the invaders pressed east and north—there was most land in that direction. There was also, however, some little land to the south, namely, the Luchu Islands, dotted like stepping-stones, visible one from the other, the whole way from the Gulf of Kagoshima to Great Luchu. The extremely close relationship subsisting between the Japanese and Luchuans, both as regards language and as regards racial type, forces one to the conclusion that a fraction of the intruding race took the southern route, perhaps from choice, more probably as a refuge from defeat in internecine strife. I should imagine further that there was not originally any thought of the subjection of the Luchuan archipelago as a whole to the Japanese empire, the very idea of such extended units being impossible before the days of centralization, and there being no trace of such a claim in the official Japanese annals when interpreted in their obvious sense; that wave succeeded wave at varying intervals, each successive wave of southward-bound emigrants subduing and partly incorporating those that had preceded it, because the men from the larger and more turbulent land to the north, where resources and all the elements of civilization were more abundant, would naturally overcome the weak, isolated islanders; that the legendary conquest by Tamemoto preserves for us under a single name the vague native recollections of many such occurrences in the distant past; and that the historical conquest of part of the group by the Prince of Satsuma in the seventeenth century, and the recent formal annexation of the whole archipelago by the Imperial Japanese Government, show us the *modus operandi* of this southward movement under modern conditions, when improved communication and greater political power facilitate action on a larger scale. We thus see, too, why it is difficult to define Luchu exactly: the reason is that the degree of "Japonization" of the archipelago has varied from time to time, and that if we are to take language and customs as our guides, it is by no means easy to say in each case whether similarity between Luchu and Japan arises from original identity or from borrowing, or whether, on the other hand, differences should be ascribed to original unlikeness, or to the fact of one or other country having preserved intact features of the common past which the other has let drop.

Whatever may be the story of the past, however, Mr. CHAMBERLAIN believes, and we share his faith, that "a few generations will suffice to obliterate all salient distinctions between annexers and annexed." He welcomes the probability, but is

careful to explain that his view is founded purely on considerations of expediency, and that he sets no store by "*doctrinaire* grounds of racial and linguistic kinship;" Here, however, we confess that we fail to apprehend his reasoning. "Does not all history teach us—to say nothing of experience,"—he says, "that the bitterest quarrels are those between people of the same kith and kin, and is not the chief advantage of a common language the facility which it affords for wounding and exasperating each other's feelings?" But surely if that were so, the best remedy would be to bring into one nationality all peoples of common kinship and common language, so as to eliminate causes of quarrel and mutual recrimination? However, such discussions lead us rather far a field from the Luchuan whose story Mr. CHAMBERLAIN tells so skilfully. He is not always kind to them, especially when he deals with their "twenty-five immensely long-lived monarchs" that occupied the throne during a space of seventeen thousand eight hundred years, commencing with TINSUNSHI, a sovereign whose name indicates him as the appropriate progenitor of such a child's box of historical toys. But have not we too our JACOBS, our ISAACS and our METHUSAHEHS, who counted their centuries as lightly as the heirs of all the ages count their decades? There is an "Old Testament" in the annals of all nations, and though it seems meet that Mr. CHAMBERLAIN, the pioneer iconoclast of Japanese myths, should be first to lay the hand of sacrilege upon Luchuan traditions, we are glad to see that he sets about the task tenderly. A more practically interesting delusion that he demolishes relates to a coal supply in Luchu. Some years ago there was talk of Luchu's proving a highly valuable group of islands, the presence of coal having been discovered there, and this talk was naturally accompanied by the reflection that such a useful naval station might require careful watching. Coal there certainly is, on an island called Iri-omote, one of the largest of the group. But the climate of this island is so terrible that even one night spent in the mountain recesses entails malarial fever. "The working of coal," Mr. CHAMBERLAIN tells us, "which, though of poor quality, promised to become a profitable industry, and was for a short time exported to Hongkong, has had to be practically abandoned in consequence of the alarming mortality among the miners."

We would fain follow Mr. CHAMBERLAIN farther through his delightful pages, but space forbids. We limit ourselves to one more extract:—

It is a curious fact, which I do not remember to have seen and anywhere noted, that in the Japanese archipelago the vegetation diminishes, instead of increasing, in rankness as one travels south. Ride about Yezo during the summer months, and the grasses and tall coarse weeds are higher than your head as you sit on horseback. Central Japan does not carry things to such an extreme, the grass on the

hills in summer being rarely much taller than a man on foot. In Great Luchu everything is much lower still. There are no tall grasses, comparatively few bamboos, few thickets of any sort. The country is park-like, and the hills, too, being lower than those of Japan and comprising no volcanic cones, but being rather gentle slopes carpeted with turf, the general effect is something closely approaching to typical English scenery. The early naval visitors to Luchu all remarked this, and went into raptures over it. For my own part, while granting the tranquil and, so to say, civilized charm of the scenery of Luchu, I do not think that it will bear comparison for a moment with the grander, more soul-stirring beauty of Japan—Japan volcano guarded, snow-crowned, and flower-strewn, where cones, as graceful as they are treacherous, alternate with rich smiling plains and rugged granite peaks never trodden but by the foot of the hardy hunter in pursuit of the antelope or the wild boar. Luchu has none of these strong contrasts. It is all dimpled and pretty and on a small scale; there is no excitement in it. When I had left Naha and was steaming up the Gulf of Kago, at whose entrance the magnificent cone called the Fuji of Satsuma keeps guard, while another volcano smokes lazily ahead, I felt as if I had said good-bye to some pretty dairymaid, and were now re-entering the presence of an empress.

COTTON MANUFACTURES IN CHINA AND JAPAN.

ACTING CONSUL-GENERAL JAMIESON, in his report on the trade of Shanghai for 1894, says:—

JAPANESE COTTON GOODS.—I had occasion last year to notice the appearance for the first time of Japanese cotton yarn in the Shanghai market. This year there appears for the first time cotton cloth of the standard grades, being the produce of the Osaka mills, in competition with that of Manchester and Lowell. But for the war the importation would probably have been greater, and I fully expect that in the near future Japanese cottons and yarn will figure as large items in the return.

The import of Japanese made yarn has made a great stride. The quantity of Bombay yarn imported shows an advance on last year, but is far below the average of 1891 and 1892. With the development of local manufacture it is to be feared that this branch of the trade will show a steady decline. It will be some years, no doubt, before the local mills can supply the whole demand, and in the meantime India and Japan can compete on fairly even terms. The removal of the export duty in Japan, which was effected last year, will give a great impetus to the exports from that country, and the appreciation of the rupee in India over the yen in Japan, which still retains its intrinsic or bullion value, will handicap the Bombay manufacturer. On the other hand, Japan has to import most of her cotton, and the duty and expenses attendant on that must enhance the cost of production very considerably. The manufacturer in China is subject to none of these disadvantages, and I therefore conclude that so soon as the right to manufacture is fairly recognised as open to all nationalities without tax or license fees, which I anticipate will soon be the case, the Chinese mill-owner will be able to undersell both his Japanese and Indian rival.

Very much of course depends upon the extent to which the Bombay manufacturer can afford to reduce. The returns which he is now receiving from sales in China already shows a lowering of about 16 per cent., and if this can be kept up or increased he would possibly contrive to offer a vigorous competition to Japanese manufacturers. The following table shows the selling price in Shanghai of a bale of £1 Bombay yarn (Connaught Mills), and the return in rupees to the manufacturers:—

Date.	Shanghai Price of 20 s. Bombay Yarn per Bale.	Exchange in India per Tls. 100.	Return to Manufacturer less duty and charges.
1893—Feb. 10...	Tls. 60.50...	300 Rs. ...	187 Rs.
Dec. 6...	67.50...	253½	171
1894—June ...	66.50...	260	173
Dec. ...	62.00...	252	156

The local production received a temporary check through the destruction by fire in Oct., 1893, of the largest mill. It has since been rebuilt and commenced working again in Nov. last. Several new mills have been, or are in process of being, built. The production both of yarn and cloth will show a large increase in 1895, and still larger in succeeding years, unless something happens to disturb the present condition of things.

Since Mr. JAMIESON wrote the above the

situation has been materially changed owing to the establishment of some five or six cotton mills in Shanghai, a direct result of the concessions obtained by Japan from China in the Shimonoseki Treaty. The Japanese negotiators of the Treaty were fully aware, of course, that the insertion of a provision securing freedom of manufacture for foreigners in China would inure chiefly to the benefit of nations other than Japan, but their programme was framed on liberal lines. It is evident that, under existing conditions, they must soon find themselves excluded from the Chinese market, for not only is labour procurable in Shanghai at rates as cheap as those ruling in Japan, but the manufacturer there will also be able to obtain a supply of raw cotton virtually on the spot, thus having at once the freight and the import and export duties that his Japanese competitor has to pay. Doubtless in her new commercial treaty with China, Japan will stipulate for the removal of the export duty on cotton, and it may be assumed that in view of the competition now threatening, the Diet will consent to abolish the duty paid by importers into Japan. Still the Japanese manufacturer, even supposing that he uses Chinese raw cottons will be handicapped to the extent of the freight either way. Where there is question of Indian or American raw material the competitors will stand, of course, on an equal footing. With reference to this it is interesting to note the course of Japan's purchases of raw cotton during the past three years:—

Places of Purchase.	1892. Yen.	1893. Yen.	1894. Yen.
British India	4,691,770	6,052,047	7,846,589
China.....	6,063,917	8,622,334	8,561,935
United States ...	1,435,862	1,273,421	2,680,671

Totals12,191,549 15,947,802 19,089,195
From French India, Korea, and other countries Japan procures a further supply to the value of about half a million yen, but her great sources are British India, China, and the United States. During the present year (up to the end of August) the total quantity imported (14½ million yen worth) shows only a very small increase as compared with last year. Turning to the import of cotton yarns in 1892, 1893, and 1894, we find that Japan's purchases from abroad showed scarcely any variation: what British India lost, Manchester gained:—

IMPORTS OF COTTON YARN.			
	1892. Yen.	1893. Yen.	1894. Yen.
British India	1,814,393	1,243,162	687,556
Great Britain ...	5,316,682	6,033,004	7,288,689

Totals 7,131,075 7,276,166 7,976,235

It may be apprehended, however, that the returns for the present year will show a considerable falling off, since the imports from January until the end of August were only 8,205,282 cattie, valued at 3,837,372 yen, against 11,829,147 cattie, valued at 5,931,718 yen, for the corresponding period of last year—a decrease of 3,593,865 cattie and 2,094,340 yen. Mr. JAMIESON, in his Shanghai report, adds the following interesting note:—

SILVER PRICES OF COTTON.—The following tables, based on actual prices at auction for ten standard grades, show the variations in silver prices of the more ordinary cotton fabrics for the past fourteen years. It is a remarkable fact that, notwithstanding the steady decline in the gold price of silver over the long series of years since 1873, the silver prices in China of Manchester goods kept remarkably steady. The fall in the Manchester price about kept pace with silver, the difference being made up by economies in freight and charges, so that merchants were able to continue to offer goods to the Chinese without being obliged to raise prices. This continued up to the middle of 1893, when, in consequence of the closing of the Indian mints, and the cessation of silver purchases in America, silver suddenly took the great drop from 3s. 2d. to 2s. 4d. per oz., dragging down with it, of course, all the Eastern exchanges. For the first time the Manchester market did not respond, and the consequence was that silver prices on this side had to rise. Trade could only be continued on this condition, and by the end of 1893 a rise of something like 39 per cent. had been established. During the year 1894, however, the Manchester market continued to fall, partly in sympathy with the general lowering of prices in England, partly through the special cause of an abundant cotton crop in America. Prices here began to retrograde, and by the end of the year had come back to a point only some 20 per cent. above the old level. This will be seen from the following:—

Year.	Prices.	Year.	Prices.
1882 average year	1,000	1891 prices in June	1,000
1883 prices in June	987	1891	952
1884	995	1892	979
1885	990	1893	1,154
1886	994	1894 January	1,394
1887	1,036	1894 June	1,390
1888	1,080	1894 December	1,215
1889	1,084		

Mr. JAMIESON'S prices are taken from actual sales at auction in Shanghai, and consequently include all charges up to the time of delivery to the Chinese purchaser. Corresponding figures, obtained, not from auction sales, but from our own market reports, show the following fluctuations in the selling prices of Manchester yarns in Japan, since 1885:—

	Yen per 100 Catties.
1885	31.0
1886	30.4
1887	32.7
1888	34.7
1889	34.6
1890	33.6
1891	31.3
1892	30.2
1893	35.3
1894	40.8
1895	39.0

It is, perhaps worth noting that these figures, though they represent the averages of the actual market quotations in Japan, are lower, in the case of the past six years, than the values of Manchester Yarns as declared at the Customs. The following table illustrates this point:—

Year.	Average Market Quotations.	Figures shown in Customs Returns.
1890	33.6	35.5
1891	31.3	34.8
1892	30.2	33.1
1893	35.3	41.5
1894	40.8	53.6
1895	39.0	46.7

This apparent discrepancy is doubtless to be accounted for by the fact that, whereas the figures for market quotations show the average price of the ten staple kinds of yarns, the Customs Returns make no distinction, but bulk together the cheap and dear varieties without reference to the quantities of each imported. It will be seen that Mr. JAMIESON'S remark applies with almost equal force to the Japanese import trade. It is only since 1893 that Manchester manufacturers have been unable to make any adjustments commensurate with the increase in the silver price of gold.

MISSIONARIES AND PUBLIC OPINION.

THERE is unquestionably a strong feeling among the public that the missionaries themselves, in some undefined manner, are partially responsible for the disasters that befall them in China. It is true that Lord SALISBURY, in his recent speech in the House of Lords, implied pretty clearly that the heinousness of the Wha-sang massacre was aggravated by the character of its victims. "Without dwelling," he said, "on the fact that those who have suffered by these terrible crimes are ministers of religion, looking upon them merely as travellers, British subjects enjoying certain rights under treaty engagements with the Chinese Government, we have a right to feel the deepest indignation at the horrible treatment to which they have been subjected." Sir CHARLES DILKE, however, said that "missionaries in going to China ought by every possible means in their power to conform to the general customs of the country and not raise a violent feeling against them;" and added that "there was some evidence, he was afraid, on the missionary side which threw some doubt upon that point."

In thus speaking, Sir CHARLES certainly echoed the views entertained by many foreigners in the East, but neither he, nor any one else, so far as we know, has ever attempted to make a detailed statement of errors of judgment or conduct fairly chargeable against the missionaries. In what respect do they deserve any measure of the misfortunes that overtake them? It was Mr. MICHIE, we think, that first attempted to translate the indictment against the missionaries into intelligible language, and even he did not get beyond contending that the privileges secured to Christian propagandists by treaty should be properly controlled by regulation, as were trade privileges similarly conferred. That contention, if it means anything, means that the missionaries stand in need of control, and that their procedure is so ill-regulated as to provoke Chinese animosity and even violence. Of what, then, are the missionaries guilty? Do they steal? Do they cheat? Do they lead immoral lives? Do they ill-treat the natives? Do they insult the religious convictions, or endeavour to bring contempt upon the revered traditions of the people among whom they dwell? Do they not, on the contrary, lead the most exemplary lives; devote themselves to deeds of charity; place their educational and medical skill at the free disposal of the people, and exhibit, in the midst of sharp suffering and adversity, a spirit of patience and benevolence such as ought to enlist universal sympathy and respect? It seems to us that the record is all in their favour. Watching the question closely for many

years, we have failed to discover any want of discretion on the part of the missionaries, unless it be an occasional display of unwise confidence in sending unprotected women into the interior, and some imprudent recourse to newspaper correspondence by men that do not represent the true missionary spirit. It has been plausibly contended that the missionary's duty is to refrain from visiting districts where his presence is likely to be resented by the people, or is considered dangerous by the Authorities. How practical effect could be given to such a proposition it is difficult to conceive. Upon whom would devolve the duty of discriminating between safe and unsafe districts? Imagine the Chinese Government officially declaring such and such a place to be suitable for Christian propagandism, and such and such a place to be unsuitable? Perhaps the idea does not extend beyond the enforced withdrawal of missionaries, as a temporary measure of precaution, from a region reported to be in a disturbed condition. But there again the Chinese Authorities would have to be the judges, and we should be much surprised to learn that either foreign Governments or foreign communities in the East would willingly recognise the right of Chinese officials to arbitrarily close any district or province in the empire at any moment to Christian missionaries. Besides, experience does not show that such a humiliating restriction of treaty privileges would be likely to prevent catastrophes. For example, no reason whatever could have been alleged for removing the missionaries from Szechuan before the recent outrages. They had been living there peacefully for years, and everything indicated their permanently undisturbed residence. At Kucheng, again, where an association of two or three hundred persons had been for some months directing their lawlessness against the local authorities without betraying any animosity to the Christians as such, could a demand for the withdrawal of the missionaries have been reasonably preferred or seriously entertained? To the principle that religious propagandism ought never to receive any kind of official protection, nor ought ever to be provided for in the stipulations of an international treaty, all men of sound judgment must subscribe. But, on the other hand, to say that the missionary is entitled to as much freedom of travel and residence as the merchant, the tourist, or the scientific explorer, is surely to claim the very smallest measure of just privilege for him. If he chooses to teach morality instead of selling cottons, or to preach ethics instead of seeking markets for trade, that is surely not a reason for discriminating against him.

"THE JAPANESE IMBROGLIO."

IN *Blackwoods' Edinburgh Magazine* for September appears an essay entitled "The Japanese Imbroglia." It is very cleverly written. Indeed, judging by the style and aided by the fact that the author is "a Correspondent in the East," we should have no difficulty in identifying the writer were not the essay disfigured by inaccuracies and contradictions difficult to attribute to a publicist of note. It must suffice, therefore, to recognise in this "Eastern Correspondent" and strong friend of China, an intimate of Mr. DETRING, and a firm believer in the ability and influence of HERR VON BRANDT. Putting aside, for the moment, the general purpose and scope of the essay, we shall devote a few moments to pointing out its departures from fact and consistency.

A month before the outbreak of the war the Russian Minister in Tokyo was instructed to make representations to Japan of such a nature that no doubt could have been left in the minds of the Mikado's Ministers as to the part which Russia must eventually play in any readjustment of the balance of power in the Far East. There was at that time only the question of Korea. The invasion of Chinese territory had not yet been thought of by any one not in the Japanese secret.

The subsequent progress of the war and the military enthusiasm of the Japanese rendered the prospect exceedingly embarrassing for Russia, who, *seeing her diplomatic warning put aside*, was obliged to consider the contingency of having eventually to defend her position by force of arms.

The italics are used by ourselves to emphasise the curious contradiction contained in the above two consecutive paragraphs. In the first, the writer explicitly admits that, at the time of Russia's alleged warning, Korea only was in question, no one then having the slightest idea of an invasion of China by Japan. In the second, he says that Russia saw her diplomatic warnings put aside during the progress of the war. In other words, Russia having given an intimation about Korea only, considered that her intimation was slighted by the invasion of Manchuria! This endeavour to establish for Russia a title to be aggrieved is disingenuous almost to clumsiness. And if continuity of ideas can not be preserved through two paragraphs, the failing naturally becomes more conspicuous in the course of two pages. Thus the writer, having declared, on page 310, that Russia "saw her diplomatic warnings put aside," and that "there was question only of Korea," informs his readers, in page 312, that "in deference to Russia's warnings, Japan refrained from the formal annexation of Korea." That is perplexing enough, yet it does not exhaust the correspondent's fertile faculties, for a few lines further on, we find him asserting that "Russia had been no less clear in her attitude respecting Liaotung than she was with regard to Korea." Her warning had been given when Korea only was in question and when "the invasion of Chinese territory had not yet been thought of by any one," but it was none the less a clear warning about Liaotung! No careful reader could possibly extract a definite

conception from this jumble of statements, but a superficial reader will doubtless gather the impression that Russia, being somehow or other flouted by Japan, acquired the right to assume an attitude of indignant protest. A very false impression that would be. From first to last Russia confined herself to the problem of Korea. Her diplomats were never so awkwardly unreasonable as to interfere with Japan's method of conducting the war, or to protest because Field Marshal YAMAGATA, having driven the Chinese armies across the Yalu, followed them to Chiulieng and Fenghwan, and because Field Marshal OYAMA struck at the enemy's final sources of strength in Port Arthur and Weihaiwei. Russia would have been within her right in endeavouring to prevent or arrest the war by mediation, or in openly assisting China against disintegration, but as a neutral she never had, nor ever attempted to assert, any title to control Japan's belligerent operations. It is mere persiflage to talk of her "warnings being disregarded during the progress of the war." Whether her warnings would be disregarded or respected could not be shown until the Japanese terms of peace were formulated, and since the recognition of Korean independence—for which alone Russia had stipulated—stood in the very forefront of those terms, no scintilla of reason for complaint on that score can be found for Russia. We do not for a moment pretend that Japan's acquisition of the Liaotung Peninsula and of the Yellow Sea's northern littoral had no concern for Russia, or that the Cabinet in St. Petersburg might not properly occupy itself with Japan's methods of respecting Korean independence. We are merely showing the palpable disingenuousness of pretending that Russia gave any warning such as could be expected to influence the course of the war, or that she acquired a grievance through Japanese neglect of her warning.

When the Japanese invasion threatened to disturb the existing status, the two Western Powers (Great Britain and Russia) might perfectly well have joined in neutralizing Korea, or they might have agreed that the one should do it with the assent of the other, or they might have joined Japan in establishing some new *modus vivendi* for the peninsula. *By such timely intervention in June 1894, whatever special form it might have taken, the war would either have been prevented, or Japan would have been forced to seek another pretext.* The Chinese, on their part, would have been pleased to rid themselves of their Korean responsibilities on such safe terms, for they were sick of their profitless and dangerous relations with the peninsular Kingdom. *There is some reason to think, moreover, that Japan herself, as well as China, would have welcomed a mild form of coercion before the war began. Japanese statesmen have said, both at the beginning of the war and since the peace, that if this Minister had been here or that other there the war could have been prevented.*

We hear much in our day of the progress of the principle of arbitration among civilized nations, about the obligation which the Peace party would impose on all nations to submit their quarrels to the judgment of neutrals before appealing to the arbitrament of war. But if any such international police ever had a chance of justifying its existence, if ever a peace-breaker could be justly brought to account by the civilized world, this surely was such a case. *The difficulty lay in the fact that there was nothing for an arbitration to work on;*

there was no quarrel nor difference to be adjusted except what has grown out of the war itself.

If our readers will compare the italicized portions of these two paragraphs, they will find another example of flagrant inconsistency surprising in the work of so able a writer; inconsistency relating to the most fundamental elements of the whole question. In one breath we are shown three courses, any of which, if taken by England and Russia, would have preserved the peace; we are told that the neutralization of Korea was the sole question to be settled; we are assured that by the "timely intervention of England and Russia, the war might have been prevented, or Japan would have been forced to seek another pretext," and we are informed that China and Japan would probably have welcomed intervention on the lines suggested. In the next breath we are asked to believe that intervention or arbitration was impossible, since "there was nothing for an arbitrator to work on; no quarrel nor difference to be adjusted." The fact is that this writer in *Blackwood* wants to prove too much. For the sake of arraigning English diplomacy he wants to prove that British statesmen should have comprehended and adjusted the cause of quarrel between Japan and China before swords were drawn; for the sake of arraigning Japan's treatment of her neighbour, he wants to prove that there was no cause of quarrel at all until after swords had been drawn. Nothing, in truth, could exceed the strength of his asseverations on the later point. "There was no dispute between the two countries," he writes, "nor the most distant allegation of a grievance. The causes of the war have indeed been copiously explained, but in progressively confused language, until at last driven from one untenable theory to another, the warmest special pleader for Japan now declares that the real reason of the war has never yet been divulged, and perhaps never will be." "No dispute between the two countries!" "Not the most distant allegation of a grievance?" Such is the assertion of a writer asking to be read seriously; a writer well aware that on three several occasions during the previous twenty years China's impractical and impossible attitude with regard to her so-called "tributaries" or "dependencies" had almost plunged her into war with Japan, and that two of those occasions were furnished by this very Korean problem, which finally came to the arbitrament of the sword; a writer thoroughly conversant with the fact that a full statement of the cause of the quarrel appeared in *The Times* in November, 1894, and elicited from the leading English journal an editorial admission that Japan had a perfectly intelligible case. We can not regard this essay in *Blackwood's* as an ingenuous attempt to compile contemporary history, neither can we identify the unfortunate special pleader for Japan

that was driven to take refuge in mystery. He ought to be recognisable, since *Blackwood's* essay elsewhere describes him as "one that had been expounding the causes of the late war for twelve months," and we ought not to be left in any uncertainty about him, since, if he be sufficiently responsible to warrant conspicuous quotation, concealment of his identity is inconsistent with honesty of reference. But does *Blackwood's* essayist court honest criticism? We almost doubt it when he ventures to tell us that Japan's "warmest special pleader," after "expounding the causes of the war for twelve months," admitted that "the real reason had never yet been divulged and perhaps never would be."

From the beginning of the war, indeed in anticipation of it, the Japanese had laid themselves out to capture the European press, in which they succeeded, as they did in their military campaign, by admirable foresight and organization. They first disarmed criticism by representing that they were engaged in a crusade against darkness and barbarism, and were spreading the light with which they had themselves been illuminated by Christendom. Before this first impression was effaced a fresh one was made by their military successes. These were naturally represented in the brightest colours by ubiquitous Japanese agents ready to supply interesting news as well as enlightened views to newspapers in need of copy. In Japan the Government annexed an important news agency, which transmitted official bulletins on an extensive scale which were received as news coming from independent sources. With some unimportant exceptions, indeed, the reports of the campaign were derived exclusively from the Japanese Government—the war correspondent, notwithstanding the praiseworthy efforts of the leading journal, having neither part nor lot in the matter. . . . The Government sent a special telegram through its subsidized news agency."

This is certainly a most courageous romance. Is it conceivable that the writer has already forgotten the main facts of a story so recent as the China-Japan war? Has he forgotten that with two exceptions the whole of the press in Great Britain were opposed to Japan in the early stages of the war? The exceptions were the *Daily Telegraph*, and the *Daily Chronicle*, journals owing their pro-Japanese inspiration to Sir EDWIN ARNOLD and Mr. HENRY NORMAN respectively. For the rest, the editors of England unanimously espoused China's cause. Where then were the evidences of the wonderful propaganda, exhibiting such "admirable foresight and organization?" If the Japanese really did set about "capturing the European press," they made a most signal failure in the case of Great Britain. But there remains the "important news agency" that was "annexed," "subsidized," and employed to transmit official telegrams as though they came from independent sources. Here, too, the writer is guilty of gross misrepresentation. The facts are perfectly familiar. One of the principal news agencies asked an Englishman in Tokyo to undertake the duty of forwarding telegraphic news from that city. The Englishman, being an employé of the Japanese Government, had to seek permission before accepting the appointment. Having obtained leave, he thenceforth telegraphed

to London such intelligence as he could collect. The whole affair was plain and above-board. Doubtless the telegrams officially sent from the Japanese commanding officers constituted the chief source of information. There could be no better source. In not so much as a single instance has it been proved that a Japanese General or Admiral wilfully misrepresented the situation at the seat of war. There was no question whatever of "annexing" or "subsidizing" the news agency. It paid its representative in Tokyo and defrayed the cost of telegraphing just as though no such thing as a Japanese Government existed. Meanwhile London was receiving from Tientsin telegram after telegram of the most egregiously false character, telling of fictitious Chinese victories and imaginary Japanese reverses. If the Central News Agency's Tokyo representative drew his information from the same source as the Japanese press and the foreign local press, he did precisely what any man in his place would have done and must have done, and in ninety-nine cases out of every hundred his reports were absolutely accurate, whereas the reports telegraphed from China and derived often from Chinese official sources, were glaringly untrue. How is all this to be reconciled with the accusation that the Japanese Government deliberately took steps to mislead the foreign public and subsidized the Central News Agency as part of the deceitful scheme? And what is meant by alleging that "the war correspondents had neither part nor lot in the matter." There were at the seat of war correspondents of *The Times*, the *Standard*, the *Pall Mall Gazette*, and several American journals. Surely we are not asked to suppose that these gentlemen telegraphed false news at the instance of the Japanese authorities. They telegraphed what they saw themselves and what they believed to be true, accepting neither official dictation nor official suggestion of any kind. Not one of them has complained that the military censors seriously curtailed his messages, and more than one have declared that they were freely permitted to telegraph the truth. But, after all, what object does *Blackwood's* essayist seek to compass by formulating these accusations against the Japanese Government? The English press was not "captured," for until Japan's successes had become signal, its voice was raised almost unanimously on behalf of China. The English public was not deceived; for Japan did win the victories telegraphed from Tokyo to London and described by correspondents that witnessed them. English criticism was not disarmed for it was directed entirely against Japan until victory declared unmistakably for her. Where then is the sin and against whom was it committed?

(TO BE CONTINUED.)

YOKOHAMA CHESS CLUB.

The annual general meeting of the Yokohama Chess Club took place at the Club Hotel on Thursday afternoon, the President, Mr. J. T. Griffin, being in the Chair. There were also present, Messrs. W. B. Mason, G. Hodges, W. Barrie, E. Mendelson, S. Komori, H. Klingen, E. Batavus, H. Tennant, F. P. Solomon, and J. Davieson, Secretary.

The meeting having been duly opened; the Secretary presented the following report:—

SECRETARY'S REPORT 1894-5.

The number of members on the roll is 47 as compared with 54 at the end of last season.

The Treasurer's account, annexed hereto, shows a balance in hand of \$139.05 against \$118.69 at 30th September, 1894. We are pleased to welcome the return of Mr. R. A. Mowat from his European trip.

The fire at the Oriental Hotel compelled us to remove to the Club Hotel. Comfortable rooms were obtained, and your Committee has arranged to continue there during the present season. No damage was done to the Club property, but an insurance has been effected which will cover any loss likely to occur hereafter, through a similar cause.

It is much to be regretted that the members did not complete the Championship games for the handsome cup so kindly presented by Mr. Keil. Your Committee earnestly hope that the matter will be seriously taken in hand during the year, and venture to suggest the advisability of members attending more regularly, and endeavouring to bring themselves into good fighting form.

It is unfortunate that it was found impossible to arrange a friendly return match between the Tokyo and Yokohama Clubs. Every effort was made by your Committee to effect a meeting, but, for some unknown cause, our Tokyo friends could not make arrangements, and we were much disappointed when our endeavours proved unsuccessful.

Your Committee now resign, and offer their best wishes for the future prosperity of the Club.

J. DAVIESON, Hon. Treas. & Secy.
Yokohama, September 30th, 1895.

J. DAVIESON, Hon. Treas. and Secretary,
Audited and found correct.
O. KEIL.
Yokohama, 2nd Oct., 1895.

The CHAIRMAN said the gist of the report was an expression of regret that the match with Tokyo had fallen through. The members had undoubtedly lost interest in the work of the Club mainly through this cause. He hoped that during the coming season, a meeting would be arranged between the two Clubs, and that the members of the Yokohama Chess Club would buckle-to and get into proper fighting form.

Mr. W. B. MASON took notice of the expression in the report, "Every effort was made by your Committee to effect a meeting but for some unknown cause, our Tokyo friends could not make arrangements." He explained that owing to the scanty membership of the Tokyo Chess Club, it had been found impossible to get a representative team together, so many of their best players finding it out of the question to arrange to play.

Mr. DAVIESON said he felt justified in using the expression as he had not received any official intimation from Tokyo of the reason for the falling through of the meeting. The challenge of the Yokohama Chess Club had not been accepted and in using the expression, "For some unknown cause," he thought he was putting the thing lightly.

The CHAIRMAN said Mr. Mason merely wished to explain the reason of the Tokyo Chess Club not meeting the Yokohama players, nothing more.

On the motion of Mr. KLINGEN seconded by Mr. BARRIE the report and accounts were passed. The election of Officers and Committee then took place. Mr. J. T. Griffin was re-elected President, Mr. Davieson, Secretary, and Messrs. Mendelson, Tennant and Batavus, Committee.

An informal discussion afterwards took place, in the course of which it was announced that during the Cricket Week, the Club would be pleased to see any chess-playing members of the Shanghai or Kobe teams in their rooms and arrange games with them over the chequered board. It was also suggested that the Club would be pleased to meet members of the Tokyo Club at any time, and if

teams of 10 or 12 could not be arranged, then matches from four aside and upward should, if possible, take place. Mr. Komor, in order to stimulate interest in Chess in general and the Club in particular offered to present a monthly record prize. Opinion was unanimous that games in the Kiel Championship Cup should start as soon as possible, and the competition be carried through to the end.

CRICKET.

OLD MEMBERS VERSUS NEW MEMBERS.

After the heavy rains of the preceding six days, the wicket on Saturday, as was only natural, proved very dead, but both Crawford and White, playing for the Old Members, managed to score half centuries. The Old members went in first, Crawford and Walford opening for the side. The Captain only scored two singles ere being caught by Libeaud. Then E. R. Morriss went out and compiled 9,—2 threes, a couple, and a single; then Edwards found his wickets. Upon White joining Crawford, a pretty exposition of the art and craft of cricket took place, both men playing in splendid style, although one or two chances were given by the field ere they voluntarily retired. The Rev. T. S. Tyng was the only other man on the side to get within double figures, and the innings closed for 155. The New Members did not make anything like so good a show, their innings being most uneventful. Their score was 55 for eight wickets. Scores:—

THE MAHOMMEDAN REBELLION IN CHINA.

The N.-C. Daily News published on the 24th September, the following interesting letter from its native correspondent in Pekin:—

There was a rumour recently in Pekin, to the effect that in consequence of the serious aspect of the Mahomedan rebellion in the North-Western provinces, the Emperor had issued a secret decree commanding the Tartar Generals E-k'ô-tang-a and Ch'ang Shun to take two Manchurian army corps, of 15,000 men each, into Shansi and the Mongol territory to the north of that province in order to prevent any eruption of the rebels into the metropolitan province of Chihli, where there are about a million and half Mussulmans who are dreaded by their Buddhist neighbours for their turbulence and extreme clannishness. While the rebellion is confined to a distance from the metropolitan province there is no occasion to fear a Mussulman outbreak, but at the first intimation of a rebel force penetrating into Chihli, there is little doubt that the Mahomedan population of the province, who can muster over 60,000 strong, hardy, and brave fighting men, will join the insurgents. Most of the Mussulmans in Chihli are either carters, muleteers, or horseherds: the latter a most unruly class constantly travelling about, armed to protect their herds of cattle from the raids of the numerous mounted bandits of Mongolia and Manchuria—who delight in robbing the property of those professing an alien religion. The Tartar troops are to co-operate, wherever practicable, with the various brigades and army corps under Generals Tung, Ma, Ch'eng, and Lui, now opposing the rebels in Kansu and Shenai.

An explanation of the apparently unaccountable tardiness of the first-named General in reaching the scene of the rebellion in Kansu has recently been received in Pekin. It will be remembered that General Tung is Commander-in-Chief of Kaslgaria and had an army of 25,000 men covering Pekin in anticipation of a Japanese invasion last winter. He was the first to be sent to aid in suppressing the rebellion, upon conclusion of peace last May. But it seems that when his army arrived near the Kansu borders last July, the corps, or rather the Buddhist portion of it, came very near being exterminated by a conspiracy amongst the Mahomedan battalions who number a good third of General Tung's forces. It was intended to massacre the Buddhists on the night of the 16th of July last, the only one to be spared being General Tung himself, who is a Buddhist and is much respected by his troops, Mahomedan and Buddhist alike. As General Tung's influence is very great in Kansu—his native province, he being a native of Ninghsia—it was intended to carry him along by compulsion, thus preventing him from using his influence for the Imperial cause. After massacring their Buddhist fellow soldiers, the Mahomedans were to capture the immense supplies of arms and ammunition carried by General Tung for the arming of the Buddhist population of Kansu, who were expected to join his ranks in large numbers, and then, after declaring for Mahmoud Khan, of Haich'eng, the Mahomedan rebel king, the mutineers were to attack the rear of the Imperial army under General Liu who is opposing the rebels in Lanchow prefecture, and so effect a junction with their co-religionists. All these facts came out through the confession of an ex-Buddhist officer in one of the Mahomedan cavalry battalions of General Tung's army, who during the first Mahomedan rebellion in the sixties had turned Mussulman in order to save his life. It seems that this officer secretly, and three hours before the massacre was begun, went to General Tung's tent and revealed everything. The latter took instant steps to arrest the ringleaders without causing alarm amongst the Mahomedan troops, and then quietly sent these regiments on various errands, some to distances forty miles off to guard the line of communications between head-quarters and Pekin, while others—the cavalry—had orders to go to Chihli to escort the grain carts back for the supply of the army. So quietly was all this done by General Tung that the various Mahomedan regiments had no time allowed them to communicate with each other before starting on their new duties, so by the time settled for the massacre, 2 o'clock in the morning, only two Mussulman regiments of 650 men each were left in an army of nearly 15,000 Buddhists. At daybreak the dozen or so ringleaders were executed before the army. But by the separation of such a large force—6,500 men—from the main army at a critical moment, General Tung's plans were momentarily disarranged, which necessitated his waiting for a reinforcement of 5,000 men raised by his nephew from the prefecture of Ninghsia, before the forward movement of the army could be made. Nearing Lanchow on the 23rd of August, General Tung's army had a serious battle with a superior force of the rebels, but he succeeded in driving the enemy towards Sining, which was at once besieged by the latter.

News has also arrived at the Board of War reporting that the civil and military authorities of Kuynan, an important city of Kansu, had been murdered by the Mahomedan population of the city, which is now held by them. The telegraph lines were cut by the rebels and for a whole fortnight no news could be got from Kansu west of Kuynan, but by his recent victory General Tung has been able to restore communication. The Szechuan Viceroy Lu has recently received orders to despatch a large force to the Shensi borders to prevent the rebellion from moving southwards via Szechuan to the great southern head-quarters of the sect, Yunnan.

THE OUTRAGES NEAR SWATOW.

The information which has come to hand regarding the looting of the Basel Mission at Moilim, about seventy miles from Swatow, depicts a course of events such as we are becoming uncomfortably familiar with in the southern provinces of China. According to the China Mail risings occurred in the surrounding districts in April last, and owed their inception to the Triad Society, one of whose members was proclaimed Emperor of China. The declared object was to overthrow the Manchus and to bring about a "China for the Chinese." During the rainy season the movement subsided, and the valiant Imperial troops recognising their opportunity, commenced to plunder the wretched natives

in the most approved style. The German Consul brought the state of affairs to the knowledge of the provincial authorities, as some of the German missionaries had been obliged to take to flight, but though troops were sent they did nothing but prey upon the people. The bandits are known as "Red Flags" and the government troops as "White Flags," but beyond their flags there is little to distinguish them in the opinion of the unfortunate natives.

After the Kucheng massacre, the Rev. G. Reusch, head of the Basel Mission in Hongkong, sent a circular to the doubtful out-stations calling the foreigners to Hongkong, until the trouble should pass over. Messrs. Kammerer, Schwable, Loanhardt, and Ziegler (from Hinnen) went to Hongkong with their families, and Mr. Flad to Macao. Mr. Nagel, being unmarried, remained in Nyenhanli for a while. He was last heard from on the 4th of September, and is probably now with the Rev. H. Mootz at Hokshu. Mr. Kammerer left on the 26th Aug., when there were already signs of trouble; and on the 27th there were disturbances at several points between Nyenhanli and Moilim. The houses of some rich Chinese were attacked at the villages of Hotung and Pethantong, and the rioters were declaring their intention of coming down from there to Moilim to plunder the station and some very rich dwellings at Tuikyanwo near by.

The station at Moilim was a fine new building, erected under Mr. Kammerer's superintendence, to accommodate the two families of himself and his co-worker. On leaving he removed everything possible (having to make the journey by boat down the river) and fastened the place up securely, but of course in case of a deliberate attack the locks and bars were useless.

When Mr. Kammerer left, the people were saying openly that the time had come to finish the work begun in April, to put an end to the dynasty which proved itself unable to govern or protect the country, to keep order internally, or to resist invaders such as the Japanese. They do not believe apparently in the official declarations that China beat Japan. That fairly represents the unanimous opinion of the populace.

Hinnen is expected to be attacked next by the rebels, who are gathering strength rapidly. Kayintsu, three days' journey down the river from Moilim, is also in danger; and the difficulty of the few foreigners who remain is that boats cannot be obtained. Ordinarily a boat can be got for \$7 for the whole journey, but now they cannot be had even for \$200. The Basel missionaries still in the district are the Rev. and Mrs. Lechler and the Rev. N. Meier, Hinnen; Rev. and Mrs. J. Löcher, the Rev. and Mrs. O. Schultze, and Dr. Wittenberg, Kayintsu; the Revs. H. Mootz and A. Nagel, Lyunchon.—N.-C. Daily News.

HONGKONG NEWS.

In an editorial based upon the news of Lieut. Taylor's visit to Tientsin, where he has taken an Australian mare in the hope of improving the China pony by cross-breeding, the Hongkong Daily Press says:—"The uncouth little brute known as the China pony at present embodies nearly all the demerits to which horseflesh is heir: a rascally and vicious temper, a big head, a short neck, a thick though strong shoulder, a concave and hard ridged back, skimpy loins, and huge bony hams. His unkempt shaggy coat intensifies all these to a degree. Yet with all his faults we love him; he is so staunch and plucky, so indefinitely improvable when treated patiently and firmly. The world all over may give an easy lead in most respects to the pampered (!) jades of Asia, but all the same we doubt if they have their peers on the globe for spirit and for endurance on starvation commons. These are qualities which redeem him, and give him a steady place in the affection of all Eastern sportsmen." Later in the same article, this journal remarks:—"The existing neglect of the horse on the part of the Chinese is only one phase of that universal degeneration which has undermined the national vitality. In the millennium before Christ, under the Ch'ao's, the Chinese bred horses with all the success which even these days marks their procreation of the humble ass and his morganatic kinsman the mule. The Ch'ao Emperors legislated for the horse with a zeal and a success equal to those which Alexander the Great bestowed on the horses of Cappadocia. Horses were classified roughly as bloods, chargers, shire-horses, post-horses hacks, and common beasts of burden; and mongrelism was strictly forbidden. The Imperial cavalry reached the respectable number of forty thousand; the arts of riding and racing were assiduously cultivated, the military craft was honourable, and horse soldiery, as among contemporary Westerns, marked its climax. During the Han

dynasty (200 B.C.—200 A.D.) the horse deteriorated with everything else; in the South the growing pressure of population and the increase of waterways probably crushed him out of existence as a coadjutor of man in the labour market. Equine matters improved under the T'ang (600—900 A. D.): hippo again waxed great in the North and at one time the pony population reached 800,000. Then once more, under the Sungs, just before Marco Polo's time, he waned, and the country went down under the hoof of the Mongol chargers—Nemesis in the shape of the animal they had neglected. Old Marco Millions deals with his usual numerical liberality when he introduces the horse. He ascribes 100,000 troopers to an ordinary Tartar Prince going forth to war. The pony in his day not only carried his master eight or nine hundred miles in ten consecutive days, but nourished his rider by allowing his veins to be tapped for refreshing draughts of blood. Kublai keeps a stud of 10,000 "all pure white without a speck," and at New Year receives 100,000 ditto as presents.

Thirty steeds both fleet and wight
Stood saddled in stable day and night,
A hundred more stood free in stall,
Such was the custom of Branksome Hall,

but this was sheer poverty to the great Khan's paddocks: his meanest post stable had 200 saddled and bridled and 200 feeding free in stall, and his postal establishment reached the enormous aggregate of 300,000. The latter day Chinaman has truly some reason to hate the big soliped, seeing his country has been three times invaded and his Government destroyed by its prowess; but for the obverse reason the gross negligence now displayed towards the horse by the Manchus is inexplicable, except on the grounds of universal dry rot. Cavalry played no part in the late war, although its potentiality on the Chinese side was infinite. If the Imperial Government could spare a few commissioners and a modest sum of money to follow the example now being set to them by a gallant young British officer they might do more to revive the antique prowess of their ancestors than by a century of diplomatic hocus pocus.

The China Traders Insurance Company, Limited in their twenty-ninth report say that for the year ended 30th April last, the net premia amount to \$1,095,865.41 and the working account shows a balance at credit of \$530,727.79, which sum the directors recommend to be appropriated in the following manner:—A dividend of 20 per cent. to shareholders, \$120,000.00; a dividend of 15 per cent. on contributions, payable to all contributors of business whether shareholders or not, \$120,000.00; to be carried to new account, \$290,727.79—\$530,727.79. It is proposed to increase the reserve fund to \$900,000 by the transfer of \$100,000 from exchange fluctuation account, this sum being the profit realized during the year by the sale of a portion of the Company's sterling holdings.

The British steamer *Iser*, from St. Petersburg for Vladivostok, which arrived at Singapore on the 13th ult., reported the death from suicide of a European fireman, five days after leaving Suez. It appears the man first attempted to drown himself, and subsequently applied a nail and hammer to his eye, from the effects of which injury he died. This steamer has on board, we learn from the *Free Press*, a large quantity of railway and bridge material and locomotives for the Trans-Siberian railway, this being the third steamer this year (other than the Volunteer Fleet) which has brought out similar material to Vladivostok. Two other vessels, the Mercantile S. S. Co.'s steamer *Obi* and the Norwegian vessel *Tiger*, are expected to follow with similar shipments from St. Petersburg for the same destination, making altogether about 20,000 tons of railway material by outside boats this year.

The Committee of the Hongkong Cricket Club in their report for the year 1894-1895 remark that the batting average list was headed by Mr. E. W. Maitland with 42.22, whilst Mr. J. G. Watson was most successful with the ball, taking 27 wickets at a cost of 11.07 per wicket. Only one score of over 100 was made, viz., J. A. Lawson, 134. Yokohama can beat these records.

A horse came by its death at Hongkong recently in a curious manner. It was harnessed to a trap and was being driven by a Chinaman when the animal suddenly made up its mind to rush off the Praya into the sea. Neither the driver nor the cart was injured, but the horse was drowned.

A writer in the *Sarawak Gazette* gives a detailed description of the saucepan signs used by Chinese house-boys in European employ, the symbols having of course more particular reference to the kitchen department. He remarks:—It is not an uncommon thing to hear people in the East say that they are still in want of a Chinese cook, whilst others will have numbers of applications directly it is known that their cook has left. The reason for

this is easily discovered if the master of the house walks down to the kitchen after his cook has been discharged, and takes notice how a saucepan, which will be found standing on the ground, is placed. Chinese servants, particularly those from Singapore, when discharged, leave signs which the new comer looks for immediately he enters the kitchen. If the place is considered a good one, a saucepan will be left on the ground with the lid put on properly. If the lid is placed in the saucepan upside down, that is to say, with the handle of the lid inside the saucepan, it means that the servant has gone away for a short time only, and that as soon as he can he intends to return, as the situation is considered a good one. If the lid of the saucepan is left on the ground near the saucepan which is standing the right way up, it means that the house is in want of servants. If the lid is put half way in and half out of the saucepan it means that the place is a good one, but the master of the house is stingy. Should the saucepan have still some rice in it, and the lid closed properly, it means that the servant is quite satisfied with everything concerning the people of the house, but that he is forced to leave on account of debts or other reasons which inconvenience him. If the master is in the habit of cutting a servant's pay for broken or lost articles, or for other faults, a mark is made on the bottom of the saucepan in chalk which will not rub out easily. The Chinese boy makes his marks behind the pantry or bedroom door, and the waterman on the bottom of his tubs. The Hylam Chinese are said to have adopted these signs from the Makao Chinese, who in the first case got the idea from the Tamils.

The Plague medals, subscribed for by the Colony of Hongkong to mark its appreciation of the labours of those who voluntarily came forward to stamp out the pest, have recently come out from home. It will doubtless be remembered, says the *Daily Press*, that the design for the medal was opened for competition, and a prize of £15 was offered for the successful artist. The award of the Selection Committee, one of whom was Sir William Marsh, was given to Mr. F. Boucher, of London, and he has succeeded in producing a very artistic design—a design which is in the highest degree praiseworthy, and which gives a very vivid and pathetic reminder of the dreaded scourge. The figures are bold, the centre one representing a plague sufferer—a Chinaman—lying on a raised ambulance. Attending him is a hospital sister on one side, and a soldier, with a whitewash brush at his feet, at the other. He is forcing back Death, who is hovering overhead—a gruesome figure. One of his long bony arms is stretched out to clutch with his broadened bony hand the patient, and in the other hand he bears a spear. On the other side of the medal are the words, "Presented by the Hongkong community for services rendered during the plague of 1894," and on the rim is engraved the recipient's name. The medallist is Mr. Wyon, of London, and too much praise cannot be bestowed upon him for this very fine specimen of his work.

A counterfeit coin manufactory has been discovered and broken up at Macao. Ten and twenty cent pieces were being struck from dies which appeared to have come from the Canton Mint. In the earlier days of that establishment the worn out dies were not destroyed and it is believed that a good many of them are in use by counterfeiters.

On Tuesday, Sept. 24th, Mr. D. Macrae, foreman at the China Sugar Refinery, East Point, made a desperate attempt to destroy his own life. He went to his bedroom in Blue Buildings and shortly afterwards his wife, who was in another room, heard the report of a revolver being fired. She ran into the bedroom, where she found that her husband had shot himself through the head. The bullet had entered near his right ear. She at once sent for the police and Dr. Stedman. The medical gentleman attended as soon as possible and ordered Macrae's removal to the Government Civil Hospital, where he was attended by Dr. Lawson, who succeeded in extracting the bullet. It is likely, says the *Daily Press*, that Macrae will recover.

The following is from the *Times of Ceylon* of the 12th ult.:—Captain L. Von Nauendorff, late of the 3rd King of Saxony's Jaeger Battalion (No. 15 in the German Army), who arrived at Colombo in the *Pring Regent Luitpold* from Australia recently, is one of a number of German officers who have been seconded for service under the Chinese Government, the latter having resolved that their army shall be taught in the European method, and having sought help from Germany for this purpose. Already several German officers have passed through Colombo for this duty, while, when he departs this week, Captain Nauendorff will have as companions some twenty or thirty other officers of the German army who are coming out by the

N.D. L. steamer *Karlsruhe*, in which vessel they will go on to China, their future station being Nanking.

Dr. Robertson, who for years was in the P. and O. Company, serving on the *Valetta*, *Zambesi*, *Hydaspes*, and *Ancona*, jumped from the deck of the *Duke of Buckingham*, outward bound from London to Brisbane, into the sea and was drowned. The sad event took place on the 17th August. He was a widower. The captain and some lady passengers, it is said, saw him go overboard, and the captain actually caught hold of him as he went over, but failed to arrest his fall.

The British gunboat *Peacock*, which has just arrived in Hongkong, encountered an exceptionally severe typhoon, resulting in the vessel's meeting with much damage. She left Amoy for Anping on the 16th September and arrived there two days later, the voyage being rather rough. In the afternoon the barometer fell very low and there was every indication of a coming typhoon, so the *Peacock*, says the *Daily Press*, left the port to escape it. At six o'clock the wind blew with considerable force, and as the centre was approaching Captain Laxton decided to hurry away to the south-west. At night the wind increased in force, the sea became rougher, the hatches were battened down, and every preparation made to contend with a heavy storm. The boat was tossed about like a log of wood, but she behaved admirably, and wave after wave dashed with terrific force over the whole vessel. Most of the water ran out again through the wash ports, but time after time it broke into the engine room, and great fears were entertained that the fires would be extinguished; indeed if the water had risen another foot this calamity would have happened. The store room was deluged; the ward room was three feet deep in water; the sailing sheets were torn into shreds; the main gaff was blown down on the deck; the gun flap on the port side was smashed; the whaler and then the officers' private skiff were carried away; at one time the quarter deck was almost flush with water; the steam launch was swept from her hangings and fell on the funnel guy, sustaining damage to her bottom; the binnacle compass was washed down, and then to complete this list of events all the lights were extinguished. For twenty minutes it was impossible to see the compass on the bridge for want of light, and the only place where the lamps could be re-lighted was the armour room. It may be imagined what an anxious time every man passed through but the crew maintained the cool attitude characteristic of the British seaman. The boat was in the storm for twelve hours altogether, and there were moments when there was every likelihood of the vessel succumbing to the fierce elements. When she arrived in harbour she was in a state of topsyturvydom. It is impossible to estimate the extent of the damage, and the men themselves had many of their personal effects completely spoiled. Rust was everywhere; hinges and locks had been wrenched away; the table in the ward room broke from its fastening and was turned upside down; in fact, there was scarcely anything on the ship that had escaped the fury of the storm. The experience was one which the officers and men will never forget, and they have good cause to be thankful that they reached Hongkong in safety.

The *Courier d'Haiphong* of September 5th, says there has been practically no rain in Tonkin, Cochinchina or Cambodia during the summer, and now that the dry season is approaching, the second crop of rice is threatened with total failure, for there seems now to be no prospect of any but very scanty showers.

In January next, says the *Straits Times*, the *Mercury* and *Caroline* in the China Station will return to England on the expiry of their present commission. At present, the rumour in naval circles is that the *Immortalité*, sister ship of the *Undaunted* and the *Melpomene*, will be commissioned to relieve the above-named ships. It may be mentioned that the *Immortalité* has recently had all her ten 6-in. breech-loaders replaced by 6-in. quick-firers.

THE JAPAN SOCIETY.

SOME DIFFICULTIES OF THE JAPANESE SPOKEN LANGUAGE.

The twenty-second ordinary meeting of the Japan Society, being the seventh and concluding meeting of the fourth session, was held at 20, Hanover Square, on June 12th. The President, His Excellency the Japanese Minister, Mr. T. Kato, was in the chair, and a crowded audience assembled to hear the long-promised paper by Mr. A. Dô-y, Vice Chairman of Council, the founder of the Society, on "Some Difficulties encountered by

Beginners in the Study of the Japanese Spoken Language." The Chairman having briefly opened the proceedings, Mr. Diósy proceeded to read his paper, in the course of which he stated:—

"The difficulties treated of in my paper are of two kinds—those which may be called "Grammatical," arising from matters of grammar, of syntax, and of pronunciation and accent, and those of a more general nature, which beset the would-be learner at the very outset, and which I distinguish by the term "Preliminary." The "Grammatical Difficulties" are more or less clearly indicated in the numerous Grammars of the Japanese spoken Language for the use of foreign students, so that I shall treat of them but briefly; the "Preliminary Difficulties," on the other hand, have not, as far as I know, received the attention they deserve, and I have, therefore, devoted myself particularly to this more general aspect of the subject, and have treated it more fully.

"The initial difficulty encountered by would-be students of the Japanese tongue is a sort of vague awe inspired by its remoteness from the languages of Europe, is a feeling of diffidence in the presence of dimly discerned obstacles, expected to prove insuperable to the average learner. This difficulty is based on a misconception of the nature of the Japanese *Spoken Language*, which, although undoubtedly difficult to acquire with a high degree of proficiency, presents no very formidable obstacles to an intelligent student, gifted with ordinary perseverance, who aims at learning as much of the language as will enable him to converse freely with Japanese of all classes. The cause of the prevailing misconception with regard to the difficulty of learning to speak Japanese is, without doubt, attributable to the very general confusion of the *written* with the *spoken* language.

It will, I think, be readily admitted that, at first sight, its aspect is appalling. The heart of the stoutest learner must quail when he gazes on a passage printed or written in the characters used in Japan to this day—vertical columns, from right to left, of Chinese ideograms interspersed with Japanese phonetic characters, the signs of the *Hira-gana* syllabary, which represent sounds, whereas the Chinese characters convey ideas, more or less pictorially, without any reference to sound. When the student is told that he must learn to identify at least four thousand of the Chinese ideograms, not to mention the forty-seven syllabic signs of the *Hira-gana* and their numerous variations, numbering over two hundred, besides the forty-seven signs of the simpler *Katakana* ("side-characters") syllabary, before he can read a Japanese newspaper with ease, it is not to be wondered at if his ardour cools somewhat. The student will, probably, become a warm advocate of the educational policy identified with that enlightened statesman, whose friendship I was privileged to enjoy, the late Viscount Mori Arinori. Viscount Mori once boldly proposed that his countrymen should abandon their native idiom and adopt the English language in its stead.

It is not within the scope of this paper to consider the much-debated question of the characters with which the Japanese continue to write their language, spending on their acquirement many years which might, apparently, be better employed, or the reasons which have, hitherto, rendered abortive the efforts of the *Roma-ji-Kwai* ("Roman Character Society") of Japan to replace the present cumbersome system by the transliteration of Japanese into Roman characters, but I may be permitted to call attention to one of the causes, the chief one, in my opinion, of the obstinate conservatism in this respect of the most progressive nation in the world. That reason is, undoubtedly, the enormous extent to which the use of the Chinese ideograms will facilitate Japan's accomplishment of her great predestined task—the regeneration of her huge neighbour China.

"The would-be student must, first of all, lay aside the feeling of discouragement produced by the consideration of printed and written Japanese, and must rest assured that the great difficulties of the language as it is *written* have absolutely nothing to do with the acquirement of a useful knowledge of Japanese as it is *spoken*.

"A widely prevailing misconception is that Japanese is an uncouth, unmusical language, presenting great difficulties to the Western organs of speech. This erroneous belief arises from a confusion, in the popular mind, of the polysyllabic Japanese, rich in clear vowels, with monosyllabic Chinese, with its nasal consonants, its five accents, all grating, more or less unpleasantly, on the Occidental ear, and so perilously similar that they render it impossible for a Chinaman with a cold in his head to make the wife of his bosom understand whether he is calling her his "treasure" (*Pao*) or "a bundle" (*Faó*).

"The confusion of Japanese with Chinese in the minds of most Europeans is pardonable, if it be

considered that the majority of the Japanese terms, or words, to be met with in our modern books of travel, or in articles in our periodicals, borrowed from China, or of Buddhist origin or created since the birth of New Japan and, consequently, spoken of by the Sinico-Japanese sounds corresponding to the Chinese ideograms representing the designations given to the new importations, or creations, for which there was no equivalent in pure Japanese.

The true Japanese language is eminently polysyllabic. No better example of this can be required than the word which stands for one of the three English words of only one letter—the personal pronoun "I"—in Japanese a word of four syllables: *Watakushi*—of five when the distinctive particle *wa* is added. The very length of the first personal pronoun, singular, which in the plural becomes *Wata-kusht-domo* (a word of six syllables as against our monosyllable "we") must tend towards modesty in Japanese style, literary or epistolary, and conversation. It would hardly prove convenient to some of our authors, journalists, and orators in this egotistical age. As a matter of fact, the personal pronouns are commonly omitted in Japanese, except in cases where such omission might cause ambiguity.

The true Japanese language is, as has been stated, polysyllabic. It is also musical and graceful, especially when spoken by the ladies of Japan. It is poetical in its imagery, capable of infinite humour, lending itself to innumerable quips and jests and to endless punning (chiefly on account of its multitude of homonyms). It is largely onomatopoeic, many words almost faithfully reproducing the sounds caused by the actions they indicate; for instance:—*Chira-chira*, or *Pira-pira*, "fluttering," "flickering," also used for "twinkling," "dazzling"; *Doku-Doku*, "gurgling" (the sound of water flowing from a bottle); *Patchi-patchi*, "cracking," "popping," "snapping"; *Piyoi to*, "hopping" (like a bird or a frog), "skipping." "True Japanese is dignified and sonorous when spoken by an eminent orator like Fukuzawa Yukichi, the great educational reformer. It is considerate and courtly to a degree in the mouths of equals, even of the lowest classes, addressing one another. It contains no foul oath, no curse of any kind (a deprivation, perhaps, in the case of a Japanese subject to attacks of gout). The *Kuruma-ya*, the combined cabman and cab-horse who draws a *jinrikisha*, uses, in conversation with his mates on the ranks, expressions of courtesy which would have graced the speech of a courtier of the *Grand Monarque*. It is true that he uses them unconsciously, automatically so ingrained are they in the language, but the fact remains that he employs terms indicating a far greater consideration for the feelings of others than is shown in the speech of even the most cultured classes in England or in America. Of course, there are some boors in Japan, as in all countries, but they are, fortunately, extremely few, and the very spirit of their language renders it exceedingly difficult for them to give vent to their ill-natured or brutal feelings. The language of *Nippon* is polite beyond all European tongues, indeed almost servile in the speech of inferiors towards superiors in rank.

That the Japanese language can give adequate expression to the martial spirit of which the nation has so recently given fresh and striking proof, is well known to all who have heard Japanese troops singing on the march, or Japanese blue-jackets chanting war-songs on the fore-castle. The best known of all Japanese war-songs is, probably, the one to which the forces of the Imperialist party marched to victory in 1868, when the Restoration of the Imperial Power was achieved and the era of the Great Change commenced. It runs thus:—

"Miya Sama, Miya Sama!
O uma-no maye-ni
Pira-pira (or Chirachira) suru-no wa
Nanja-i-na?

(Chorus)—To Ko-tonya, re-tonya, re-na!

Are wa chô-teki sei-batsu
Sei-to-no
Nishiki-no Mi-hata-wo
Shiranai ka?

(Chorus)—To Ko-tonya; re-tonya, re-na!"

MISSIONARY'S LOT NOT A HAPPY ONE.

COLONEL COCKERILL TELLS OF THE WORK THEY DO AND THE ACCUSATIONS MADE AGAINST THEM.

Tokyo, Japan, July 27, 1895.

I have a letter from a gentleman in Hartford, Conn., requesting me to give some inquiry to missionary work in Japan and write my opinion thereon. I can only say that the missionary has my sympathy. From the time he hands his half rate steamship ticket to the contumelious purser in

San Francisco to the day he returns to the people who send him abroad to tell of his hardships, his lot is not a happy one. The people on the steamer regard him as a nuisance, the people whom he seeks to rescue frequently despise him and deride him, and the men of the United States war-ships sent to protect him actually hate him.

When he is assaulted and mobbed, after the manner of the prophets of old, the heathen of the strange lands, as well as his own, seem delighted. This is largely due to the fact that too often poorly equipped, tactless, and bigoted men, who attend too severely to the business of other people, are sent upon these missions. The men, and women too, have frequently an exaggerated sense of their importance, and are prone to attach too much significance to petty signs of hostility on the part of the natives to whom they are accredited.

Last winter, for instance, while the cruiser *Charleston* was at Chefoo, China, a loud outcry was sent down from some missionaries located some miles in the interior. It was bitter weather, but the *Charleston* was ordered to go up the river to their relief. The river was filled with ice. The ship's navigator had no chart or soundings, and no pilot was allowed. The *Charleston* slowly fought her way up that frozen, tortuous steam until the sanctuary of the missionaries was reached. A half dozen or so of them were floated down to Chefoo, and after remaining there for a couple of days they quietly returned to their homes. No causes for apprehension existed in the first place. The memory of the misery and the hardships of that winter trip still abides with the officers and men of the *Charleston*, and woe betide the man who proposes on that craft to take up a collection to further gospel spread in China.

Last year when the United States cruiser *Baltimore* was stationed at Chemulpo, Korea, for the protection of the Christians located there, a letter was written and sent to the United States and published, declaring that on a certain occasion, when an attack from the Tong Haks was expected, the officers and men of the ship were so drunk as to be incapacitated for service. Out from our Navy Department came an order to investigate. The investigation was held and the authorship of the letter traced to a missionary woman, who finally admitted that she knew nothing of the matter, save that a servant in her employ had told her that on the evening of the day in question another servant had told her that she had seen in a shop, where she was buying something, two ship's men very drunk. She didn't know whether they were officers, marines, or sailors, or whether they were French, Russian, English, or Americans. So much for this. To speak of missionaries on board the *Baltimore* now is to produce silence of the densest marine character.

At Newchwang last winter, when the United States gunboat *Petrel* was there, the missionaries, who were forced to take refuge there on account of the war, made themselves very obnoxious by their querulousness and constant complaining. After the fighting in that vicinity they all went to work diligently, so an officer informs me, to hunt up "atrocities," and many of the unfounded stories sent out about the cruelty of the Japanese were traced to these people, who were inflamed against the Japanese because they had pushed the war to their abiding places, thereby discomforting them. Our *Monocacy* has been kept crawling up and down the rivers of China at the beck and call of nervous missionaries, sometimes on sand bars, sometimes on land, and it would be difficult to make any of her crew believe that the good achieved in China by mission work is at all commensurate with the cost and trouble.

However, these people are likely to be prejudiced. Of course all the stories which can be raked up and told to the discredit of the missionaries are carefully garnered and peddled about. Said one of our sailors to me recently:—"Whenever you find a small town in China or Korea you can bet that the best house in the place is inhabited by a missionary. They always look after own comfort."

The irreligious point to a small church structure which stands in Yokohama, and they tell the history of the fine residential building beside it, once occupied by the missionaries. The church resembles one of the little toy churches which the children of pious people are treated to about Christmas time, and it is alleged that when the builders made their report for home consumption they remarked that "with the bricks and straw left over from the church edifice" they had constructed a little lodge for themselves. The two structures are in evidence, and they speak for themselves. The ungodly find great cause for sneering in the fact that every missionary is known to receive an additional one hundred yen per year for each child added to his family, and the large and diversified nature of the families of the missionaries is much dwelt upon.

Again, the missionary is made the butt of every coarse, infidelic joke imaginable. These earnest, zealous, hopeful people, however, go right along with their work, giving no heed to the obstacles which beset their pathway, so long as the supplies are kept up.

The fact that the missionaries are perforce exemplars in the communities in which they dwell causes them to keep very close watch upon each other, and this leads to a vast amount of gossip, surveillance, espionage, and tittle-tattle, which is disturbing, and oftentimes distressing. The hopefulness of the noble band of workers is to me most interesting. I met recently a Presbyterian missionary, who looked to me, I must say, much better qualified for the part of *Captain Macheath* in "The Beggars' Opera," than for evangelical work in this vineyard, who admitted that, while the introduction of Christianity into Japan had been slow and painful, he believed that the change would come one of these days at a rush and that Buddhism and other pagan faiths would be swallowed up. He predicted that in twenty-five years the Empire of Japan would be completely Christianized. The seed had been sown, and the natural advancement of Japan must carry her to Christianity, he thought.

Whether it be profitable to keep up foreign missions rather than benevolent and religious educational institutions at home is a question for good people alone to answer. The missionaries certainly do great good here. Their schools are excellent, their orphans' homes, benevolent institutions and missions are well maintained, and they greatly aid the spread of foreign influence. Wherever they are established they introduce languages, order, temperance, cleanliness, and an aspiration for better things. That they are much imposed upon by hypocrites and pretenders is but natural, but upon the whole they are grandly useful to the cause of that civilization which we all maintain is destined to encircle the globe. Whether the Christianized Japanese are better people than those who cling to their ancient faiths I am not prepared to say. The opinion of many observant foreigners who have come in contact with them is that they are not so good and trustworthy as the original article of citizen—that is for Japan. The field of labour open to the missionaries of every sect is that of temperance and morality, and in this they all strive with nonsectarian spirit. The results are necessarily good, and are, I think I may safely say, almost sufficient to justify the large outlay made annually upon the missions.

What I have written here is not written in a censorious or unkind spirit. Without thorough investigation I have given a few facts which have come to me and which may convey a slight idea of the unpleasant things that our missionaries have to contend with. If I had any suggestion to make to the good people at home it would be that they use greater care in the selection of missionaries, and that they make the question of temperament, education, broad, mindedness, zeal, and general character paramount to a mere familiarity with the Scriptures.

As for actual work done by the missionaries in Japan during the year, it may be recorded that, by permission of the government, they gave to every soldier who went to the late war a copy of the Bible in Japanese; they sent a number of Christian evangelists with the troops to the seat of war; they have organized in Tokyo a society composed entirely of Japanese Christians to carry on educational work in Korea on Christian lines; they have built ten churches in Yezo, and have 584 converts; they have opened an industrial school in Hakodate for the training of Ainu children, and one boy has been graduated already and sent to Kushiro as a teacher. A district four thousand square miles in extent on the east side of the island of Yezo has been placed in charge of the Rev. Dr. Marshall Long, who now has 407 baptized Ainu under his ministrations. So much for the practicalities.

It may added that missionary work was begun in Yezo twenty years ago. As only 584 believers can be mustered to day it will be seen that the work of evangelization has been slow and somewhat discouraging. The spirit of the missionary in this quarter may be gathered from a recent article from the pen of Bishop Corfe, of Korea, in which Bishop declares that Japan can do nothing in the way of civilizing Korea because Japan is a heathen country. She has not civilized herself, the Bishop thinks, and he adds, by way of elucidation: "When the European speaks of civilization, the kind of civilization of which he is speaking is the civilization which he owes to Christ." The Bishop holds that Japanese are "barbarians" because they are heathen, and that they are destitute of national conscience. Hence, they may help Korea, but they cannot give her civilization. —*New York Herald.*

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, Sept 30th.

Louis Pasteur, the world-renowned French savant, is dead.

There is great excitement at Stamboul owing to the arrival off Lemnos (a large island in the Aegean Archipelago) of seventeen British men-of-war.

"SPECIAL" TELEGRAM TO "JAPAN MAIL."

Hakodate, October 3, 9.15 p.m.

A destructive fire has broken out at Nemuro and about 943 houses in the principal business quarter have been completely destroyed. The fire originated at the rear of the telegraph office buildings.

(FROM THE "N.-C. DAILY NEWS.")

Peking, Sept. 24th, 1 p.m.

News has just been received here from Kansu by the Office of Transmission to the effect that during a hotly contested battle on the 18th inst. forty-eight miles to the south-east of the capital city of Lanchow, between the Kashgar General, Tung Fu-hsiang's, army and a very large force of Mahommedan rebels, three battalions of cavalry and seven of infantry, numbering some 4,250 men, suddenly went over to the enemy, causing great confusion amongst the Imperial troops and threatening a disastrous defeat. Fortunately, by the desperate bravery of General Tung assisted by his two Brigade generals, Chou and Chang, with a picked body of reserve troops, the day was restored, the rebels being eventually compelled to evacuate a series of walled villages which they had held successfully against the Imperial army for three days and nights. The Imperial losses were 2,360 men in killed and wounded. The losses of the rebels are unknown, but the soldiers brought in 1,901 heads from the battlefield and from the villages. During a part of the fighting one of the Colonels of the revolting battalions was captured, and by orders of General Tung the traitor was beheaded on the field in front of the enemy. Matters, however, are extremely critical in Kansu and reinforcements are urgently needed. Applications for aid have been coming in from both Shensi and Kansu several times a week. The Imperial troops in Kansu number only some 60,000 men at the most, while the Mahommedan rebels are estimated at fully 800,000 fighting men, nearly all well-armed and in the field opposing the constituted authorities. News has also been received from West Kansu that the prefectural city of Sining cannot hold out another week against the rebels unless aid be sent. The Emperor is said to be greatly enraged at Viceroy Yang of Shen-Kan for not being prepared for this great rebellion.

London, September 26.

The French troops have routed the entire Hovas force, and have captured thirty guns. Their advance guard is now only forty miles from Tananarivo.

The impending issue of a Russo-Chinese Loan is denied at St. Petersburg, but French and Russian Banks have combined to start a bank in Shanghai with a capital of twenty million francs, beginning in 1896.

A letter from the Foreign Office has been read in the Leeds Chamber of Commerce stating that the survey and estimates for the Burma-China Railway are being prepared.

Colonel Smith, formerly member of Parliament for Wycombe, has been appointed Governor of Western Australia.

The nomination of Messrs. Bogaardt and Burkinshaw as members of the Council for the Straits Settlements has been gazetted.

London, Sept. 27.

The *Times* is publishing a series of articles emphasising the change in the whole situation in the Far East since the Chino-Japanese war, and the decline of British influence owing to the intervention of Russia, France, and Germany. The *Times* urges the Foreign Office to steadily back mercantile enterprise, as it is impossible henceforth to leave everything to individual exertion.

HASTINGS TOURNAMENT.

We reprint from the *New York Tribune* their account of the final round and some games which are interesting:—

Hastings, Sept. 2nd.

The twenty-first and last round of the International Chess Congress was played at the Brassey Institute to-day, and the result, so far as the chief honours are concerned, is the greatest triumph for American chess since Morphy crossed the ocean in the fifties and wrested laurels from the Continental players. By defeating Gunsberg in the final game the first prize was won by the phenomenal Brooklyn player, Harry N. Pillsbury. Though the youngest contestant in the tournament and the least experienced in contests of this kind, he performed the remarkable feat of beating the most renowned experts of the world, including Champion Lasker, ex-Champion Steinitz, Tarrasch, and Tschigorin. Upon winning his game which gave him a score that none of his rivals could touch, namely 16½ wins, he was greeted with resounding cheers and was heartily congratulated on all sides. The Brooklyn lad, by his modest demeanour, courageous bearing, and, above all, his beautiful play throughout the entire tourney, has won the respect and admiration of spectators and players alike, his final victory being a most popular one.

Pillsbury, soon after he was free, sent this cable message to the Brooklyn Chess Club, as whose representative he came:—

"Have beaten Gunsberg in final round, winning first honours for America, Brooklyn and myself."

Lasker defeated Burn easily, and he now leads Tschigorin for second place by half a point. Tschigorin, however, has an adjourned game with Schlechter, which he should win, and may thereby pass Lasker and take second place. The first three prizes are valued respectively at \$750, \$575 and \$425.

Tarrasch takes the fourth prize, \$300, through a victory over Vergani and also over Steinitz in their adjourned game. Fifth prize, \$200, falls to the veteran Steinitz.

CLOSE OF THE TOURNAMENT.

Hastings, September 3rd.

The two games left unfinished in the International Chess Masters' Tournament were concluded to-day.

Tschigorin beat Schlechter in a Ruy Lopez, after eighty moves, and Teichmann beat Mason in a Queen's Gambit declined, after seventy moves. Final results:

First prize—H. N. Pillsbury (16½ wins).
 Second prize—M. Tschigorin (16 wins).
 Third prize—E. Lasker (15½ wins).
 Fourth prize—Dr. S. Tarrasch (14 wins).
 Fifth prize—William Steinitz (13 wins).
 Sixth prize—R. Schiffers (12 wins).
 Seventh prize—C. von Bardeleben and R. Teichmann (11½ wins each).

YOKOHAMA CHESS CLUB.

The Annual Meeting was held on the 3rd instant at the Club rooms; and the Secretary's report with the Treasurer's account were passed. The funds show an increase, and the membership a slight decrease, on the year.

Mr. Griffin was re-elected President, Mr. Davison Sec.; Messrs. Batavus, Mendelson, and Tennant being the members of Committee for the present session. The Club starts its new campaign with 47 members and two names up for election.

The past year has been one of something like hibernation in the Club. Much earnest talk on the subject resulted in a resolution of all the Member's present to do better in the future. Suggestions were made as to various plans for effecting an improvement in the fighting trim of the Club; and there is no doubt that the Yokohama players will form a well-drilled phalanx, capable of giving a good account of themselves in all Matches or Tournaments which may arise during the coming winter.

TOKIO CHESS CLUB.

The Annual meeting was held yesterday evening (4th inst.) eleven members being present. The report was adopted; its shows a high state of efficiency and activity among the members who had attended regularly and contested bravely in the Club Tournament, Mr. Walz securing the first prize.

For the new season, Mr. C. A. W. Pownall was elected President, Mr. W. B. Mason, Secretary and Treasurer; Messrs. Cox, Dun, and Gardiner, Committee. The outlook for a good year is bright: for although the membership is not more than 20, they are mostly enthusiastic lovers and

students of the game, attending well, and practicing with assiduity. They at least do not allow the foils to rust idly on the wall.

Of course the important question of a match with Yokohama was discussed. Mr. Griffin suggested that if they found it impossible to arrange a general match, there might be a contest between the Champions of the two Clubs. This found favour and was amplified, on the suggestion of Mr. Dun, into a proposal that such a match should include the three winners of the Club tournaments on both sides. So we hope that there is now a good chance of some kind of a contest between the two Clubs during the winter or spring.

Per German steamer *Hohenzollern*, for Hongkong via ports:—Raw Silk for Europe, 295 bales; Waste Silk for Europe, 196 bales.

LATEST COMMERCIAL.

IMPORTS.

Fair trade all round without any very heavy sales. Outlook satisfactory for a good autumn season. Woollens and Blankets also feel the move and will further improve as the cold weather approaches.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.
Grey Shirtings—84 lb, 38 1/2 yds, 39 inches	\$2.30	to 2.90

No. 16s, Bombay	—

FIBRALS.

The usual autumn demand is on and the general condition satisfactory. Importers would like to see still better prices, and even that may be accomplished in due time.

	PER POUND.
Flat Bars, 1 inch	\$3.20 to 3.25
Flat Bars, 1 inch	3.25 to 3.30
Round and square up to 1 inch	3.20 to 3.30
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	9.00 to 9.25
Wire Nails, assorted	5.50 to 5.90
Tin Plates, per box	5.50 to 5.75
Pig Iron, No. 1	1.65 to 1.70

KEROSENE.

No special change to report. The S. S. *Conch* has landed her cargo from Batoum and buyers still appear to control the market. Surely prices are low enough now to suit them.

American	\$2.00 to 2.05
Russian	1.95 to 2.00
Langkat	1.90

SUGAR.

Brown—Less doing after the previous heavy sales, but deliveries are satisfactory and the market firm. White—Good trade continues and prices strong at quotations.

	PER POUND.
Brown Takao	\$3.70 to 3.80
Brown Manila	4.30 to 4.60
Brown Daitong (New)	3.30 to 3.35
Brown Canton	3.25 to 3.80
White Java and Penang	6.10 to 6.20
White Refined	6.25 to 9.50

EXPORTS.

RAW SILK.

Market steady without very much doing as exporters do not seem to be very full of orders at present quotations. A further reduction in prices would probably bring about more business in the near future. Our quotations are all nominal. Better could be done.

QUOTATIONS.—(NEW SILK.)

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is the Journal for Investors, Speculators and
Business-men.

"MONEY" is a thoroughly up-to-date Record of all Financial
and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

August 3, 1895.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 12TH, 1895.

DEATH.

At the residence of Rev. C. M. Landis, Meiji Gaku-in, Tokyo at 1.30 a.m. October 11th, Rev. GEORGE EDWARD WOODHULL, of Osaka.

SUMMARY OF NEWS.

MR. POWNALL has been elected President of the Tokyo Chess Club.

THE *Belgic* was floated on Thursday at noon and is now at Yokosuka.

MR. HIOKI TSUNETARO, ex-M.P. for Okayama Prefecture, died a few days ago.

THE deaths from cholera in Japan this year average 63 per cent. of the cases.

THE programme for the Autumn Meeting of the Nippon Race Club has been issued.

EVERYTHING promises well for the Cricket Week. The Shanghai team arrived on Tues-

day evening. The Kobe players come up to-morrow.

THE transports *Isawa Maru*, *Genkai Maru*, *Chiyo Maru*, and *Kobe Maru* have been released.

THE Committee charged with investigating horse-breeding in Japan will shortly settle down to work.

DIPHTHERIA is now very prevalent in Tokyo, and Dr. Kitazato's hospital at Shiba is filled with patients.

MR. DUNCAN McNEILL, of Yokohama, has been admitted to practise at the bar of the Supreme Court, Shanghai.

A BAZAAR is to be given in Tokyo on Wednesday and Thursday next in connection with the German mission.

THE Governor of Kyoto will petition for an Imperial visit during the approaching festival to be held in Kyoto.

MR. SHIRANE has been appointed Minister of Communications; Viscount Watanabe taking the portfolio of Finance.

MR. HARADA NOBUYOSHI, a war correspondent of the *Hochi Shimbun*, died on the 22nd ult. at Chung-hua, Formosa.

MR. SHIMAMURA, the newly appointed Japanese Consul-General at Honolulu, leaves the capital on the 18th inst. for his post.

COLONEL FUKUSHIMA has left Japan for the continent of Asia, across which he is again to ride, this time towards India and Persia.

THE amateur theatricals to be given in the Public Hall next Tuesday comprise "Cut off with a Shilling," and "Tom Cobb."

THE military storehouses at Port Athur were closed on the 1st inst., and the business officers attached to them will shortly leave for home.

THE members of the Yokohama Town Assembly have agreed to vote for Mr. Saito Matsuzo at the election for Assistant-Mayor of Yokohama.

THE Awomori murder case has had a new development this week, a Catechist and a Bible-woman connected with the Mission, having been arrested.

A BALL will be given at the Imperial Hotel, Tokyo, on the Emperor's Birthday, Marquis Saionji, Temporary Minister of Foreign Affairs, acting as host.

THE Ku-cheng Inquiry still drags its slow length along; some further executions have taken place, and more convicted prisoners released by order of the Taotai.

COLONEL SAKAI was promoted to the rank of Major-General on the 3rd inst., and appointed Commander of the Second Brigade of the Imperial Guards Division.

THE ex-Viceroy of Sze-chuan, at the instance of the English Government, has been permanently degraded from office, for his connection with the Sze-chuan outrages.

THE coolie who murdered a Chinese cook on board an Empress mail-boat, in Yokohama harbour, on Sept. 12th, has been sentenced to nine years' penal servitude.

KOREA is again greatly disturbed, the Tai Wön-kun having entered the palace at the head of some disaffected troops. The Queen is missing, and is reported to have been killed.

It is stated that about 600 non-commissioned officers and ordinary soldiers of the First and

Second Expeditionary Armies will receive decorations of the Golden Kite.

THE Government has granted yen 30,000 to the men of the transport department in the Railway Bureau, in recognition of services rendered by them during the past war.

REUTER TELEGRAPHS:—The British revenue for the past half-year shows an increase of four millions sterling as compared with the same period in 1894. Russia continues sending quantities of guns, munitions of war, and material to Vladivostock. The Premier at Adelaide has invited the other Australian Colonies to a conference to consider the question of the influx of Japanese into Australia. The Chinese Government has informed Germany who the ringleaders are of the missionary outrages at Swatow. The Chinese Legation in London states that the degradation of the Viceroy of Szechuan was decided upon before the British ultimatum was sent in. A French official note ascribes the decision to the pacific pressure exercised by France. The Foreign Office states that the ultimatum was presented before the issue of the edict degrading the Viceroy, which doubtless included China's submission. The details of the Armenian Riots at Constantinople are of the gravest nature. They were the result of an attempted procession to the Porte to present a petition, which was opposed by the Police. The crowd resisted and a major of gendarmes was shot. General riots ensued, in the course of which eighty persons were killed or wounded. There were further disturbances yesterday and there is alarm at the Palace, and troops are patrolling the streets. A reign of terror prevails at Stamboul. The Embassies have protested to the Sublime Porte against the brutality of the police towards the Armenian prisoners, and charge the police with killing the wounded. The Embassies have demanded measures to restore order and the Porte is acting in the matter. The *Novoye Vremya* prints a telegram received from Vladivostock to the effect that three Companies of Engineers have started for Manchuria to survey a railway route.

THROUGHOUT the week the Import market has been active and prices are advancing. A large business has been done in Yarns, Single and Double counts especially doing well. Woollens have seen a strong advance, and so active has been the trade in Italians that the market is now almost bare. Blankets have sold to a good tune and Grey Cloth also. In Metals, prices are looking up and the good transactions put through during the week includes both "spot" and "to arrive." Kerosene business, though good, still maintains its "hand to mouth" character, buyers expecting lower prices, though at this time of year, and with normal stocks, an advance is usually expected. The market has been cleared of Brown Formosa Sugars; Manilas and China sorts have all felt the influence of an active demand and the figures reached have been higher than for a long time past. In White sorts a steady trade has been done. The unfavourable news from Europe and America has brought about a lull in the Raw Silk trade, and transactions this week have been very small. Prices must come down very considerably if business is to be induced. In Waste also there is less demand, and holders are very stubborn. The stocks are increasing considerably and with the rising exchange dealers will be obliged to abate their demands. Late settlements in Tea have been for better grades, but Common is in request at comparatively good figures. Settlements to date are 227,000 piculs against 217,000 last year. Export 27,000,000 lbs. against 26,000,000 lbs. last year. With the advance in silver, Exchange has gone up smartly, and rates close firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

With the appointment of Mr. Shirane to the post of Minister of Communications, all talk of Ministerial changes has ceased. Public curiosity seems to be disappointed, that instead of several new Ministers, one only has been received into the Cabinet. As to the fitness of Mr. Shirane for a portfolio, no journal pretends to dispute it. The *Nichi Nichi* congratulates the country on having obtained a very able Minister. His business aptitude and long official experience fit him conspicuously for the position he has just received. In his new Ministerial capacity he is called upon to solve various problems, none of which has more pressing importance than that of railways. In dealing with this vital question, our contemporary hopes that Mr. Shirane will pursue an independent and comprehensive policy, neither attaching too much importance to, nor taking too little notice of, the suggestions offered by the Railway Council.

We have already alluded to the fact that Mr. Shirane's entrance into the Cabinet has been employed by the Progressionist organs as an occasion to fan Satsuma jealousy against an alleged monopoly of political power by the Choshu men and their friends. Among these papers, however, the *Yomiuri* writes in a reasonable strain. It regards the appointment as the inauguration of a new epoch in the history of clan government. If Saigo, Kido, Okubo, Ito, Inouye, Yamagata, Kuroda, Oyama, and so forth belong to the first generation of clan statesmen, the second generation includes Mr. Shirane and men of about his age. His entrance into the Cabinet opens Ministerial posts to men like Baron Ito Miyoji, Lieutenant-General Viscount Kawakami Soroku, Rear Admiral Yamamoto Gombei, Mr. Suyematsu Kencho, and so forth. In one sense this state of affairs must be a source of disappointment to the Opposition politicians, who aspire to be the successors of the elder clan statesmen, but who now discover that the long coveted heritage is about to be transmitted to the younger generation in the opposite camp. But the *Yomiuri* advises them not to be disappointed. On the contrary, they have cause for congratulation, since the transfer of power now taking place among the clan statesmen cannot fail to benefit the cause of party government. With the passing of political power to the second generation of the clan politicians, the position of the Opposition leaders will be relatively raised, and they will have more chance of replacing their opponents.

The comments of vernacular journals on the late Korean *coup d'état* have already been reproduced. We may notice, however, one or two articles that have since appeared on the subject. The *Kokkai* views the return of the Tai Wön-kun to power with anything but satisfaction. Supposing the Queen to be still living, the prospect is very gloomy, for she and her partisans are not likely to remain long quiet. They will try every possible means to overthrow their great rival. Nothing need prevent their invoking the aid of a foreign Power. Granted, on the other hand, that the Queen is dead, as most people seem to believe, is the situation any brighter? The *Kokkai* cannot think so, for it places little confidence in the Tai Wön-kun's good faith. Being as unscrupulous as, and more daring than, the Queen, the Tai Wön-kun, now confident in the support of the troops, may dream wild dreams of ambition and once more plunge the country into a state of anarchy.

The *Nichi Nichi Shimbun*, in a later article, remarks that order having been restored in Söul, the affair may now be regarded as over. As to the fate of the Queen, our contemporary sincerely hopes that the conjectures about her death may yet prove unfounded, and that the experience of 1882 may be renewed. In that year, after having been given up for dead under almost exactly similar circumstances, she was

found safe under the care of a faithful subject. That person, however, is reported to have been the first to perish in the late disturbance, and later intelligence, the *Nichi Nichi* regrets to say, tends to discourage any hope of the royal lady's safety. Should her death be a fact, our contemporary has no doubt that the perpetrator of the heinous crime will be speedily brought to justice. In that matter, it may not be necessary for Japan to interfere, but the Japanese Representative must not fail to offer suitable advice to the Korean Government. As to the political bearings of the *émeute*, the *Nichi Nichi* does not think it at all necessary for Japan to step in, so long as peace is not prejudiced, and so long as her rights and interests remain secure from violence.

Writing on the question of national defence, the *Fiji Shimpö* complains that the Navy is still regarded in this country as of secondary importance, the Army virtually monopolizing the attention of both the public and the Government. Such a mistaken idea about the relative importance of the Navy and the Army is to be attributed to mental habits contracted during ages of national seclusion when there was no scope for the development of a Navy, and war was always limited to land operations. The inherited conception makes even the Japanese of the present day believe that martial honour is to be won only on shore. The comparative unpopularity of a Naval career is proved by the fact that a deficiency is sometimes apparent in the number of applicants for admission to Naval Colleges, whereas the entrance examinations for Military Colleges draw thousands of eager aspirants. Official nomenclature, moreover, shows that the Government has hitherto attached more importance to the Army, for whenever the two departments of national defence are spoken of together, the phrase used is invariably *Riku-kai-gun* and not *Kai-riku-gun*, though the latter order of syllables is dictated by euphony. Such an abnormal state of things in a country naturally a sea Power should be remedied without delay.

In another article, the same journal urges the importance of employing a squadron to cruise round the principal countries of the world once in two or three years. The *Fiji* recommends the immediate despatch of such a squadron, the present being a unique opportunity for the purpose. That the Japanese Navy is not to be despised, has now become known all over the world, but the impression will be appreciably increased when Europeans and Americans have looked with their own eyes on Japanese war-ships, and their crews. The cruise of such a squadron would also be advantageous for extending the country's trade and carrying on business in foreign parts. Some people recommend that the squadron should include one or two ships captured from the Chinese fleet, but the *Fiji* objects to that as an act of discourtesy to a now friendly neighbour.

As to the question of a foreign alliance, it seems to be undeniable that the number of persons advocating coöperation with Russia has of late greatly increased. Concerning many of these persons, it should be noticed that they entertained some such opinion before the late war, but were prevented from expressing their views by the general indignation prevailing against Russia and her two associates on account of the Liaotung intervention. Consequently, it may not be quite right to conclude that there has lately been an absolute increase in the number of advocates of a Russian alliance. But this much may be taken as a fact, that the recent conduct of Russia on the Liaotung question has not alienated any persons previously in favour of close friendship with her. On the other hand, it is also a fact that the feeling toward England is improving, as is evidenced by the increasing popularity of the study of the English language and literature.

Alluding to the keen competition for Japanese orders taking place between the shipbuilding

companies of different countries, the *Mainichi Shimbun* calls upon the Government to exercise judgment in making a choice between the competing applicants. It is proper for these companies to compete, but the Japanese Government is answerable to the country for the decision it makes. Blunders have been committed in the past, but the *Mainichi* is not disposed to recall them. Want of experience may be pleaded in extenuation. But the Naval Authorities can no longer be permitted to have recourse to such a plea. The *Mainichi* does not express any opinion as to the relative merits of the different ship-building companies, but merely advises the Government to place its orders wherever the best and most serviceable ships can be had, irrespective of the question of economy. If economy and excellence be both attainable, so much the better, but when the question lies between the two, there should be no hesitation about sacrificing economy.

The *Fiji Shimpö*, meanwhile, is indefatigable in pointing out the advantages of an alliance with England. Alluding to the attempt made by a certain school of writers to belittle England and represent her as an effete Power, our contemporary points out the error of such views, and declares that, so far from being on the decline, England is still the leading Power of the world. Not prone to take any hasty steps she considers well before committing herself to a decisive course. When, however, she has once made up her mind to adopt any resolute measure, she carries out her purpose in a determined and irresistible manner. The course she is now pursuing in connection with the Kucheng massacre is cited as an example in point. It shows that England's policy in the Far East is not negative. On the contrary, in order to preserve her vast possessions in Asia, England must necessarily adopt an aggressive policy, and Japan, on her side, must not be contented with a purely defensive attitude. Such being the case, our contemporary is firmly convinced that events will necessarily throw these two countries into each other's arms.

Discussing the question of national expansion, the *Kokumin Shimbun* laments the Japanese nation's deficiency in the spirit of individual enterprise. It refers to the history of French colonization, and points to the same shortcoming on the part of that great people. Military power is of course essential to the sway of a country, but national expansion depends upon the capacity of its people to colonize new countries by individual effort. Manchuria, even when returned to China, will still be open to the enterprise of individual Japanese, but nobody seems to bestow the least attention upon that fertile district. At present, there is considerable enthusiasm for the opening of Formosa, but the *Kokumin* fears that the feeling may soon cool down. If the Japanese hope to become a great nation, they must correct this conspicuous defect in their character.

EDITORIAL NOTES.

"ABANDONING SHIP."

In a remarkably interesting dispatch, the *Standard's* correspondent, who was on H.M.S. *Empress of India* in the recent naval manoeuvres, describes the exercise of "abandoning ship," which he remarks will probably be remembered in these manoeuvres as one of the most striking incidents not only by reason of its pathetic nature, but also because of its extreme utility. When the signal was made all on board prepared instantly to quit their vessel. Rapidly the process of lowering the boats was proceeded with, and the men not actually employed fell in abreast of their boats waiting to go into them, and at once the abandonment of the ship began. The last to leave the ship was the captain in his gig, taking with him the chaplain and the surgeon. "All this had been executed within something like a quarter of an hour, and in that short space of time the whole of the vast fabric had been divested of her full complement,

namely, 47 officers, 682 men, the admiral and his staff, four visitors, and she was left alone. Meanwhile, every other ship had performed the same exercise, the whole of the waters round our anchorage being swarmed with innumerable boats of all kinds, and presenting a scene of animation such as has probably never been witnessed before. Then suddenly the signal of recall was given, and back to each of their vessels went all the boats laden with their crews. The sides of the ships swarmed with all returning to their abandoned posts, and in a few more moments the latter teemed with fresh life. To show with what rapidity so useful an exercise as this can be performed, I should not omit to mention that it had occupied no more than thirty minutes from the sounding of the first bugle. A battle-ship, therefore, which is in a sinking condition, even from stress of weather, or collision, or explosion, can be quitted, we have learned, in less time than—except in a rapid and disastrous calamity—she can sink, or is likely to sink."

THE CRICKET WEEK.

THE Shanghai visiting eleven arrived on Tuesday evening by the *Ernest Simons* and were received by the Hon. Secretary of the Y. C. & A. C., Mr. E. O. Kenyon and others. The team comprises:—Messrs. R. C. Farbridge (Capt.), H. Adams, J. U. Buchanan, W. B. Cheetham, W. E. Inglis, A. E. Lanning, R. Macgregor, W. A. C. Platt, E. W. Sharples, R. Sale Hill; and A. P. Wickham (as extra man) Cornish (umpire) accompany the team. At Kobe the Eleven had a royal reception, being met by almost all the members of the Kobe Interport Team, while the Town Band was in attendance. In the afternoon the visitors were escorted on board the steamer in triumphal procession, the Kobe Band again heading the files. After a little practising on Wednesday, most of our visitors left for Miyanoshiba till Saturday. We understand that W. D. S. Edwards will be in the Kobe team, a fact or that will lend additional interest to the matches; while there is a possibility of Dickinson only being able to play for Yokohama in the Shanghai match: Harries may not be able to play at all, and Murray in but one match.

* * *

It is now settled, says the *Hyogo News*, that the Team for Yokohama will leave this almost complete by the noon train on Saturday; two of its members—Abbott and Pakenham—are expected to be detained until Monday night. The latter has consented to go in place of Ross; the question is still open whether or no W. Braess will be numbered in the Eleven. Now that the matter has been brought back into the regions of doubtfulness every one must hope the decision will be in favour of his going; unquestionably Walter Braess is a very valuable member of the strongest team Kobe can select. The list then looks remarkably well—Abbott, G. & W. Braess, Duff, Edwards, Lightfoot, Lucas, Pakenham, Scrymgeour, Tate, and Wilkinson. It is nice to see the ex-Captain in the ranks once again. Hellyer goes as umpire and Curtis as scorer. The authorised list of the Yokohama players has not yet been published, but the following will no doubt be the eleven for the Shanghai-Yokohama match:—Messrs. Walford (Captain), Crawford, Dickinson, White, Murray Kenyon, Lias, Denne, Edwards, Libeaud, and E. R. Morris.

MR. LABOUCHERE AS A THEATRICAL LESSEE.

MR. HOLLINGSHEAD in his recently published book tells the story of Mr. Labouchere's connection with the stage. He was practically the first tenant of the Queen's Theatre in Long Acre, built by Mr. Lionel Lawson of the *Daily Telegraph*, who was also Mr. Hollingshead's landlord at the Gaiety. Having a little misunderstanding with his landlord about the latter's rights and privileges, Mr. Labouchere went further and bought the theatre right out. But he treated his responsible position as manager with characteristic levity. Says Mr. Hollingshead:—"He had treated diplomacy as a joke, and he treated theatrical speculation in the same spirit. The man who sent his tavern and 'seeing the

world' bills in New York to the Foreign Office, because Governments and Departments are very fond of vouchers; the man who arrived two months late at St. Petersburg to join his Ambassador, and defended himself on the ground that he had walked all the way because the 'despatch' said nothing about 'travelling expenses,' was not likely to treat the direction of a theatre very seriously. He gloried in stating the amount of the receipts, when they were excessively small, to humble the pride of certain members of his company. He said he used to placard these receipts in the green-room, to show the real 'drawing' power of his authors and artistes. He went to America on business, and laughed at telegrams telling him the box-office results in London, when he was supposed to be making the amount a thousand times over by an hour's attendance in Wall-street." Yet Mr. Labouchere's companies were excellent, and, thanks largely to Miss Henrietta Hodson (now Mrs. Labouchere), his management was at least a *succès d'estime*. Mr. Irving, Mr. Toole, Mr. Wyndham, Mr. Lionel Brough, Mr. John Clayton, and Miss Ellen Farren were among his stars, and the great Mrs. Rousby came out there. Mr. Irving played Bill Sykes to support Mr. Toole as The Dodger in a defiant performance of "Oliver Twist."

COLLAPSE AT KOBE.

THE site of an old rice-pond in the Nakayamatedori, Shichome, Kobe, has been filled up in a perfunctory manner, says the *Hyogo News*, and handed over to the builders. Two foreign-style houses, with two storeys, are being erected there, to the order, so it is reported, of foreign residents. The framework of the western residence was completed on Sunday, and was soon observed to have a perceptible tilt seawards. A number of men were at work there on Monday morning, and efforts were seemingly directed to correcting the level. About ten o'clock the whole structure collapsed. There was a wonderful escape for nearly everybody, the worst injuries being inflicted upon a carpenter's assistant, a lad of 14 years of age, who was caught by the falling timbers. Some others were slightly injured.

FIRE AND DISORDER AT KOBE.

ON Tuesday night, about half-past eight o'clock, a fire broke out near the offices of the *Yushin Nippo*, between Sakaimachi and Motomachi, Kobe. The alarms brought a great crowd to the spot, and a disorderly scene occurred which old men among the spectators declared could not be paralleled in the whole of their experience. Two soldiers were assisting the police with drawn bayonets to keep back the surging crowd, who nevertheless pressed closely in upon the firemen. When the soldiers and the police remonstrated the crowd jeered at them, shouting all manner of provoking remarks, punctuating them with boisterous laughter. Additional police were summoned to the spot, and put an end to the struggles which had meanwhile been taking place between the officers and the crowd. The firemen got complete control over the fire in half-an-hour, and the destruction was confined to a tea-godown. —*Chronicle*.

THE COLLIERY EXPLOSION NEAR HANKOW.

THE *N.-C. Daily News* give some particulars of the explosion at the Makiesan mine, that is situated about 60 miles from Hankow, and news of which has already been given in our columns. It says:—"The mine is one of Chang Chih-tung's enterprises and has not been long opened. The coal from it is used for the manufacture of coke to be employed in certain iron smelting works. It is said to be well suited for this purpose and a number of coke-ovens had been erected, but in consequence of the accident the smelting furnace which had just been started will have to be blown down again. There is little doubt that the explosion is due to the Chinese authorities not acting upon the advice of the foreign experts they had employed. The mine is worked by a shaft of moderate depth, but very little attention has been paid to the matter of ventilation. The

foreign overseers advised the establishment of a proper system by means of a fan, or else of fires at the bottom of a ventilating shaft, but instead of this an antiquated plan of pumping air in from bellows was employed. Altogether some 200 men were employed in and about the mines, and at the time of the explosion some 60 men were in the workings, of whom all are presumed to have perished by the explosion of firedamp. The occurrence has created considerable excitement, but as it happened in connection with an official undertaking every effort is being made to minimise it. The men seem disinclined to do anything, and but few of the bodies have been recovered.

GERMAN MISSION BAZAAR.

WE draw attention to a Bazaar which is to be held on Wednesday and Thursday next at the Theological School, 39, Kamitomisaka, Koishikawa, Tokyo, under the auspices of the German Mission. The articles for sale were made by friends in Germany. The proceeds of the Bazaar are for the benefit of the school for poor children, founded by the Mission, which now has 83 scholars.

ART EXHIBITION IN YOKOHAMA.

AN exhibition of art objects is now taking place at the Kaiko-ro, Aioicho Sanchoe, Yokohama. The exhibition is well worth a visit, the large majority of the articles on show and for sale being exquisite pieces of workmanship; and as the prices are marked in plain figures, intending purchasers will be freed from the usual haggling that disfigures these affairs.

DECORATIONS.

MARQUIS TOKUDAIJI, Grand-Chamberlain to H.I.M. the Emperor, and Count Inouye were yesterday decorated with the Grand Cordon of the Order of the Rising Sun in recognition of their services during the past war. Viscount Hijikata was promoted to the rank of Count.

THE WAR-SHIPS ON THE YANGTZE-E.

THE steamer *Fuhwo*, which arrived at Shanghai from Hankow on the 4th inst. reports having passed H.M.S. *Eolus* at Kiukiang, H.M.S. *Spartan* at Wuhu, H.M.S. *Rainbow* and *Pigmy* at Nanking, and H.M.S. *Alacrity*, with the Admiral on board, anchored at Chinkiang. H.M.S. *Plover* and U.S.S. *Machias* were passed bound up-river.

SHOOTING LICENSES.

WE understand that, contrary to the system in vogue last year, applications for shooting licenses this year must be accompanied by cash instead of stamps.

MR. DUNCAN MC'NEILL.

MR. DUNCAN MCNEILL, barrister-at-law, late of Yokohama, has been admitted to practise at the Shanghai bar by His Honour Mr. Acting Chief Justice Jamieson. He was introduced by Mr. H. S. Wilkinson.

TSUKIJI LITERARY AND MUSICAL SOCIETY.

THE first regular meeting of the Society for the season will be held at the residence of Mr. and Mrs. Gardiner, No. 40, Tsukiji, Tokyo, next Monday evening, 14th inst., at 7.30 p.m.

ROBBERY ON THE BLUFF.

THE residence of Mr. G. W. Bramhall, No. 244-E, Bluff, was broken into on Sunday night and a considerable quantity of property removed. The burglars, so far, have not been arrested.

FUJI-SAN.

SNOW was first seen on Fuji for the year on the 3rd inst. This is eleven days later than last year, and one day later than the average date.

THE NEW PRESIDENT OF THE N.R.C.

H.R. Britannic Majesty's Minister, Sir Ernest Satow, K.C.M.G., has accepted the position of President of the Nippon Race Club.

EARTHQUAKE.

AT 3.13 p.m. on Friday a short but very sharp earthquake shock was felt in Yokohama.

CURRENT TOPICS.

Having referred in previous issues to rumours current in the capital about probable Cabinet changes, we think it advisable to reproduce all the predictions published on the subject. The latest story is that, for the present, Count Inouye will not enter the Cabinet, but will accept a Privy Councillorship, or a nominal post in the Court, as an Attendant in the Musk Chamber. It is added that, even if it should become necessary for him to enter the Ministry, he will probably take a portfolio having a minimum of immediate connection with troublesome political questions.

Count Okuma's conversation on the subject of the future government of Formosa is published by Tokyo papers, to which it has evidently been supplied by one of the news agencies. The Progressionist leader is opposed to the idea entertained by some persons that Formosa should be governed as a colonial dependency. He admits that, like Hokkaido and Okinawa, the island will have to be treated in some respects as an exception to the general administrative system of the Empire. But after its complete subjugation, he would not place it under the control of a Governor-General invested with almost vice-regal powers. Measures should rather be taken to assimilate it to the rest of the Empire, instead of governing it as a remote dependency, after England's fashion of governing India. In order to attain that end special attention should be paid to education and police administration. By a thoroughly Japanese education, the rising generation of new subjects, aboriginal and otherwise, should be converted in sentiment and language into complete Japanese. A rigorous system of police administration is essential for rooting out vices and habits peculiar to the Chinese, such as opium eating and gambling. By these means, as well as by the immigration of Japanese and by intermarriage between the latter and the natives, Count Okuma thinks it possible, in course of time, to effect a thorough Japonization of the island and its people. The *Kaishin-to* leader seems to labour under a misunderstanding. So far as we know, there is no intention, in any responsible quarter, of governing Formosa as a colonial dependency.

Mr. Inouye Kakugoro, the most eloquent member of the House of Representatives, is to be engaged in drawing up a question, or series of question, to be addressed to the Government in the next session of the Diet on the subject of the Liaotung Peninsula. Rumour represents him as opposed to the policy pursued by the Cabinet in this matter. The views ascribed to him are said to be identical with those of Count Goto, though exactly what the latter's views are, the public has no information beyond the bare fact that they are unfavourable to the Government.

Thirteen Koreans that came to Japan in the train of Count Inouye, are staying at the Keio-Gijuku. They are said to be men not only of good family but also of official status, some being of even higher rank than their Representative in Tokyo. They have been placed, by special request of the King, under the direction and supervision of Count Inouye. On the 2nd instant, the Count visited Mr. Fukuzawa and conferred with him for several hours as to the manner in which their education should be conducted. They are to be taught Japanese conversation and reading, after acquiring which they will be distributed among the different Departments of State to receive practical training in the conduct of official business. The number of Koreans staying at Mr. Fukuzawa's College, is now nearly two hundred and thirty.

A destructive fire broke out on the 5th inst. in the prostitute quarters at Yanagimachi, Hakata, Chikuzen Province. The flames burst out in a brothel shortly after four o'clock in the morning, and eleven large buildings were destroyed in a little over two hours, three others being damaged.

ECONOMICAL AND INDUSTRIAL.

That business is reviving in Japan has been noticed in these columns more than once. The observation had immediate reference to Tokyo and the adjacent localities. But the *Chugai Shogyo Shimpō* now tells us that the same is true of Osaka also and of the localities south of it. At Osaka, for instance, prices are said to be steadily rising, cotton goods being sold there more than 10 per cent. dearer than a month or so ago.

The rewards to be bestowed upon officers and men for services in the late war are to be given in the form of War Bonds, where the amount is upward of 50 yen; but under that amount will be credits of the savings book issued by the Government Postal Savings Bureau. As to the War Bonds, it was at first the intention of the Treasury to cause the Bank of Japan to buy up the necessary amount of Bonds; but the transaction involving much difficulty, the idea was given up, and it has been decided to issue new Bonds to the amount required from time to time, the aggregate being 10 million yen. The War Bonds are now quoted at about 3 per cent. premium, but they are to be distributed at their face value. This mode of rewarding the officers and men is thus of advantage both to the Government and to the fortunate recipients of the rewards, for it saves the former the trouble of handling money, and secures the latter the benefit of whatever premium the War Bonds may happen to command in the market.

Some persons ascribe the present appreciation of prices in general to the increased volume of currency in circulation. In order to expose the fallacy of this explanation, the *Chugai Shogyo* publishes statistics showing the state of the circulating media during twenty months:—

	Government Paper Money.	Bank Notes.	Convertible Notes.	Total.
	Yen.	Yen.	Yen.	Yen.
January, 1894.....	12,779,279	22,532,900	145,484,948	280,797,127
February, 1894.....	12,077,058	22,267,588	143,350,151	277,724,797
March, 1894.....	11,700,462	22,264,451	138,926,564	272,891,479
April, 1894.....	11,505,298	22,277,479	136,78,499	271,801,274
May, 1894.....	11,255,310	22,276,045	136,101,285	269,632,640
June, 1894.....	11,024,313	22,268,381	137,487,353	270,779,067
July, 1894.....	10,841,205	21,788,637	139,200,575	271,830,417
August, 1894.....	10,733,189	21,788,637	139,330,846	271,852,672
September, 1894.....	10,631,170	21,788,637	140,107,766	272,527,573
October, 1894.....	10,496,075	21,783,271	138,210,688	270,490,034
November, 1894.....	10,349,236	21,783,646	130,495,106	262,628,088
December, 1894.....	10,221,483	21,783,405	142,290,177	274,305,065
January, 1895.....	10,111,760	21,301,224	144,702,668	276,115,652
February, 1895.....	9,985,205	21,302,224	137,883,327	269,170,756
March, 1895.....	9,798,524	21,300,224	133,331,790	264,430,538
April, 1895.....	9,526,024	21,300,224	131,388,514	262,204,762
May, 1895.....	9,377,235	21,294,488	128,671,927	259,343,650
June, 1895.....	9,149,712	21,294,488	132,403,283	262,847,583
July, 1895.....	9,004,075	20,801,447	141,525,802	271,331,324
August, 1895.....	8,969,392	20,801,447	149,834,909	279,545,748

From these figures, it will be noticed that the volume of currency has not reached a point calculated to affect prices. It has in general remained stationary during the period under consideration.

According to the report of the Department of Agriculture and Commerce, the yields of the principal agricultural products, besides rice, barley, and wheat, for 1894 were as follow:—

	Area under Cultivation. Cho.	Yield. Koku.	Yield per tan. Koku.
Daizu (large beans)	435,852.3	2,943,478...	0.675
Azuki (small beans)	96,428.9	560,277...	0.581
Millet	235,164.2	2,144,839...	0.912
Hiye (Panicum crus-coroi) ..	84,144.4	999,209...	1.189
Kibi (Panicum miliaceum) ..	26,286.9	250,474...	0.953
Buckwheat	172,334.0	1,202,372...	0.698
Cotton	60,564.01	12,572,971...	20.760
Hemp	20,948.6	3,224,094...	15.390
Sweet Potatoes.....	238,942.9	495,948,701...	207.560
Potatoes	23,103.8	49,738,587...	215.283
Indigo	46,851.7	16,087,377...	34.337
Tobacco	35,694.2	9,451,304...	26.479

The reports obtained by the Department of Agriculture and Commerce from Tokyo and fifteen other localities noted for the production of rice, are very satisfactory. Only in three localities, Yamanashi, Toyama, and Miyazaki, is the harvest expected to be poorer than usual. In eleven localities the yield is believed to be nominal, namely, Tokyo, Niigata, Saitama,

Ibaraki, Fukushima, Aomori, Ishikawa, Tottori, Okayama, Kochi, and Kumamoto. In Oita and Yamagata the crop is expected to be above the average. According to these reports, the crop for the whole country will not be inferior to that of an average year.

There has been a rumour, especially on the Exchange, that a fresh War Loan will be issued to meet the expenses of the operations in Formosa, but the story has no foundation. The expenses incurred in the subjugation of Formosa are being met by funds in the Treasury and temporary loans from the Bank of Japan, it being the Government's object to redeem these disbursements out of the instalment of the war indemnity due from China in November next.

LITERARY NOTES.

Some time ago a story went the rounds of the vernacular press that the celebrated writer, Mr. Fukuchi Genichiro, had been charged by Marquis Ito with the task of writing a history of the recent Japanese-Chinese War and the diplomatic complications connected with it, the remuneration agreed upon being 10,000 yen. Mr. Fukuchi was taunted by some papers as a servile flatterer of those in power. Somebody mentioned the matter to him, when he replied smiling:—"The story is a likely one, I own, but the simple fact is that it has not a particle of truth in it." He is now busily engaged and throwing all his energy into a play for the Japanese stage from Victor Hugo's "*Les Misérables*," so that even if he were offered such work as the History referred to he would be unable to accept it however tempting the proffered reward.

Prefessor Shigeno is one of the leading authorities on Japanese history. Such is his zeal for historical studies that he does not rest until he has probed to the very bottom whatever subject he undertakes to investigate. As the result of his incisive criticism, he has rejected as mythical many of the most picturesque episodes in Japanese history, such, for instance, as Kusunoki Masashige's last meeting with his son, Kojima Takanori's romantic loyalty to the Emperor Godaigo, and so forth. His thorough-going methods have offended Jingoism, and he goes by the name of Dr. Effacing (*Massatsu Hakase*.) In some instances, we are inclined to believe that the indefatigable historian goes too far in the iconoclastic direction, but on the whole the methods of investigation followed by him are sound and rational. At all events his fearless criticisms and the violent controversies to which they have given rise, have had a most powerful influence in stimulating historical studies. We are rejoiced to hear that the veteran historian is now engaged on a voluminous history of this country. Its appearance will create a great stir in literary circles.

It is a pity that Mr. Taguchi Ukichi allows himself to drift deeper and deeper into the vortex of the political whirl-pool. He is a great loss to Japanese literature, for undoubtedly his mission lies in the field of historical research. He made his reputation by his economical writings and by the publication of that excellent journal the *Keisai Zasshi*. But he is incomparably more at home in the domain of history, his essays in the *Shi-kai* (Ocean of History)—another journal edited by him—being masterpieces in point of style and general treatment. Such is the popularity of these essays that the back numbers of the magazine have been reprinted several times, and the demand for them is still increasing. The editor's unhappy entrance into political life has led to the suspension of his literary labours, and the *Shi-kai* did not appear for a space of a year and a half. But suddenly it has just made its re-appearance, and promises to come out regularly once in two months, instead of monthly as before. Let us hope that Mr. Taguchi may now return to a sphere of usefulness more congenial to his genius and to his character.

KOREAN NEWS.

Min Yong-chun's return and his position form the principal subject of discussion in the latest letters from Japanese correspondents in Sōul. Arriving at Ninsen on the 23rd ultimo, he passed that night at the villa of Mr. An, then Minister of War, in the vicinity of the port. The following day, he went over-land to Sōul, but instead of entering the city, he remained at the house of a certain ex-official, named Pak, outside the West Gate. There he was visited by a large number of friends, including most of the Cabinet Ministers and the principal court officials. In the course of conversation with some of these visitors, he is reported to have made the following statement:—"During the summer of last year, I was for a long time flying before the Japanese troops. From Ph्यों-yang I escaped to Chiu-lien, whence I made my way to Yingkow. On the fall of that place I went to Tientsin, where I was surprised to find the inhabitants in a state of great confusion and excitement. Finally I proceeded to Chefoo, where I stayed until my return home. During these wanderings I was everywhere impressed with the impotence of the Chinese soldiers and their utter inability to cope with the brave and daring Japanese. While at Chefoo I took a short trip to Nagasaki, where I saw something of the wonderful progress Japan is making in civilization. Experience has thus made me a thorough admirer of Japan, upon whose assistance we may rely with perfect security." How far his conversation is accurately reproduced by the Japanese correspondents, we have no means of ascertaining, but it seems certain that the Min politician professes friendship and admiration for Japan. On the 25th, he is said to have left for Chhunchhōn in Kang-wōn-do, where his parents are living. The *Kokumin's* correspondent states that his alleged journey to Chhunchhōn was simply a ruse to divert public attention, and that he is staying secretly at a friend's house in the capital. But this report stands unconfirmed, all the rest of the correspondents agreeing that Min Yong-chun has really gone to visit his father in the country.

How his return will affect the political situation in Sōul, is a question on which the correspondents as yet refrain from pronouncing any definite opinion. The unique position that he holds among the politicians of the Min faction as their acknowledged leader, induces us to believe that sooner or later his influence will be felt in Korean politics. That for the present, however, he will remain quiet, seems to be the opinion of the majority in the Korean Capital. It is also rumoured that he will probably come to Japan to qualify himself for the task of assuming the direction of his country's affairs; that such is the wish of the Queen; and that before his return his Japanese tour had been agreed upon between Her Majesty and the former Japanese Minister, Count Inouye. Rumour further alleges that he will be appointed either Minister of Home Affairs or a Privy Councillor. Whatever may be his ultimate course, Min's return to Sōul is believed by the Japanese correspondents to be prejudicial to the influence of the small and fast dwindling faction of the so-called Independents, led by Kim Koshu, the present Minister President of State.

Another Min politician of influence is Min Yong-ik, the able rival of Yong-chun. Yong-ik's return to Sōul would still further complicate the situation, but he does not seem to entertain any idea of going home, for the present at all events. It is also stated that these two rivals, having lately been fellow-refugees in China, have become reconciled. When Yong-chun left Chefoo, he was accompanied to his ship by Yong-ik, and the two bade farewell to each other apparently in a very friendly manner.

The *Nichi Nichi's* correspondent states that the city of Sōul was recently disturbed by rumours of a plot to assassinate the Prime Minister, Kim Koshun. The correspondent considers it a baseless story circulated by crafty intriguers as a sort of feeler. But although no faith can be placed in the rumour of an actual

plot, the fact that such stories are circulated, shows that the political world of Sōul is far from being in a state of tranquillity.

Simultaneously with the revival of Min influence at Court, some of the abuses that had for a time been restrained are said to have again become rife. One of these is the sale of official positions. Of late it has very often been noticed that officials appointed on one day are released from duty on the morrow. These mock appointments are a device of the courtiers to replenish the impoverished coffers of the Royal family. A man appointed to an official post is allowed to use a certain kind of ribbon for tying his hat, a mark of distinction that well-to-do people are willing to purchase for from ten to twenty dollars. The resurrection of this evil practice at Court is, however, effectually restricted, says the same correspondent, by the feeling of awe with which the present Japanese Minister, Viscount Miura, is regarded by the Queen and her minions.

The resignation of An, Minister of War, seems to have been the outcome of fierce rivalry between Min and Chin Sokun, Minister of Finance. Chin is known to enjoy the confidence of the Queen, and this circumstance explains the easy victory that he has obtained over his wary antagonist. But the ostensible cause of the latter's resignation seems to have been inability to comply with the King's pleasure concerning the retention of cavalry and engineering corps, the disbanding of which had been decided some time previously, on account of insufficiency of funds.

Mr. Kamada Eikichi of the Keiwo-gijuku, who went to Sōul some time ago to arrange with the Korean Government about paying the expenses connected with the education of the Korean students at that institution, is still staying in the Korean capital. It is stated by the *Kokumin's* correspondent that his sojourn has been prolonged owing to the fact that the funds set aside to defray the expenses of the students at the Keiwo-gijuku had been arbitrarily applied by the Minister of Education to meet the cost of bringing out two American instructors whom he engaged without consulting his colleagues. The Minister is said to be in an awkward position, having to answer for a double irregularity, misapplication of state funds and unauthorised engagement of foreigners.

The report that the right of working the mines in Ph्यों-an-do had been ceded to a certain American company was recently denied. But the *Nichi Nichi's* correspondent, writing under date of the 30th ultimo, states that the news is true. Neither the Foreign Office nor the Department of Agriculture and Commerce has had any part in the transactions, which were conducted directly by the Court. Mr. Stevenson of Ninsen, General Le Gendre, and Mr. Greathouse are said to be connected with the enterprise.

On Tuesday afternoon, the following official telegram was received in Tokyo:—

The second battalion of the newly trained Korean soldiers, being alarmed by a rumour of their approaching disbandment, and the punishment of their commanding officer, broke out of their barracks at about 3 o'clock on the morning of the 8th instant. They went to the house of the Tai Wōn-kun, and taking him as their leader, proceeded to the Palace and forced their way in, the Palace guard offering only slight resistance. The King and the Crown Prince are reported to be safe.

This telegram is dated at Sōul, 11 a.m. Somewhat different intelligence was published by the *Nichi Nichi Shimbun*. It ran thus:—

Sōul, October 8th, 7.30 a.m.

At 5 o'clock this morning, the Tai Wōn-kun, giving out that he proposed removing evil officials from the Royal service, placed himself at the head of the second battalion of the newly trained troops, and forced an entry into the Palace, killing the captain of the Palace Guards, O Kei-kun (?). The Japanese Representative visited the Palace at 6 o'clock the same morning.

The former version, being official, and having been despatched from Sōul 3½ hours later than the latter, must be taken as the more trustworthy. From each alike it appears that the Tai Wōn-kun was at the head of the disturbance, though the official despatch represents him as a somewhat involuntary leader. The impression con-

veyed, it must be confessed, is that the ex-Regent has been making one bid—a desperate bid—for power. That perfect tranquillity can ever be established in Korean politics so long as he remains in the field, seems questionable.

The *Yomiuri Shimbun's* version tallies with that of the *Nichi Nichi*, so far as concerns the part played by the Tai Wōn-kun. It adds, however, that the Queen has probably been assassinated. This telegram further states that Lieut.-General Miura's visit to the Palace was in response to a summons from the King, and that the Tai Wōn-kun's enterprise was undertaken in consequence of the Queen's resolve to place the political power in the hands of the Min family. Truly it seems as though Count Inouye's presence in Sōul were the only means of preserving peace and good order.

The following telegrams have been published by the *Asahi Shimbun*:—

Sōul, 7.12 p.m., 8th October.

On entering the palace, the Tai Wōn-kun at once deposed the Queen, and what has become of her is a mystery.

Sōul, 3.55 p.m., 8th October.

Ko Keikun, commander of the newly organized troops (*Kunrentai*) and a partisan of the Queen, was killed during the confusion. It is rumoured that a similar fate befell Li Koshoku, Minister of the Household.

Sōul, 7.55 p.m., 8th October.

An Keiju, Minister of War, and Li In-yo, Police Inspector General, have been dismissed. Cho Giyen has been appointed Minister of War, with the additional post of Police Inspector General *ad interim*. Li Saiben has been appointed Minister of the Household, and Kim Sokan, Vice-Minister of the Household. It is reported that the King will probably order Kim Koshu, Gyo Inchu, and Kim Inshoku to organize a new Cabinet.

Sōul, 9 p.m., 8th October.

It is stated the Tai Wōn-kun will not interfere in politics, but will confine himself to directing the affairs of the Court. An Edict will be issued concerning the changes in the Government.

Sōul, 9.40 p.m., 8th October.

The Edict has been promulgated about Government changes. Its purport is that all matters of State shall be discussed by the Ministers of State, and that the Cabinet and the Household shall each observe the limits set to their functions by the Official Organization recently promulgated. Li Kan-yo, Minister of Education, and Li Hanshin, Minister of Agriculture and Commerce, have been dismissed. Jo Kohan, Minister of Justice, has been entrusted with additional post of Minister of Education *ad interim*, and Tei Heika has been appointed Acting Minister of Agriculture and Commerce.

According to information obtained by the *Asahi*, the disturbance at the Palace occurred at about 5.50 on the morning of the 8th, and the Japanese Minister repaired thither with troops fifteen minutes later. The Russian and American Ministers are said to have presented themselves at the Court a little past ten in the morning.

As to the cause of the *émeute*, the same journal's information indicates a probability that the immediate occasion was the Cabinet's decision on the preceding day to disband the newly trained troops. The soldiers hearing of this, hastened to the Tai Wōn-kun's residence, and carried him to the Palace, the object of their vengeance being the Queen.

Such is the latest explanation. It represents the Tai Wōn-kun in the light of a passive, if not altogether unwilling, agent in the whole affair. But without fuller information than we now possess, it is impossible to pronounce any definite opinion on this point. Judging from what has taken place since the entrance of the Tai Wōn-kun into the Palace, and from the state of affairs in Sōul immediately previous to the *coup d'état*, it seems highly probable that some sort of intrigue had been going on for some time. The *Hochi Shimbun's* correspondent for instance, observes that the Tai Wōn-kun's prolonged stay at his country villa and his persistent refusal to return to his city residence, was regarded with strong suspicion and doubt by the Queen. The ex-Regent, on the other hand, is said to have suspected the Queen's motives in urging him to return to the capital. Such being their mutual attitude, the Queen is believed to have taken special precautions to

have a large number of constables and detectives posted in the vicinity of her enemy's mansion. It was also rumoured at Söul, some time ago, that a certain officer in the army had been thrust into prison on the ground of paying frequent visits to the Tai Wön-kun. Thus there seems to be reasons for assuming that the ex-Regent and his clever grandson had for some time been organizing an outbreak, and that they availed themselves of the opportunity afforded by the excitement caused among the troops in connection with the ill-timed decision of the Cabinet to disband them.

Whatever may have been his methods and motives, the Tai Wön-kun's restoration to power must seriously affect the position of the newly returned Min Yong-chun and the other politicians of the Min faction.

According to an official telegram, it appears that immediately after the entrance of the discontented soldiers into the Palace, with the Tai Wön-kun at their head, the Japanese troops hastened to the Palace and maintained order there, and it was owing to their presence that the collision between the palace guards and the *Kurentai* soldiers was stopped after the exchange of only one or two shots.

The following telegram has been received by the *Nichi Nichi* :—

Söul, 9.55 p.m., 8th October.

The *Kurentai* soldiers that broke into the Palace, shot down two of the guards and two court ladies. Nothing is as yet known about the whereabouts of the Queen. But there being no indication of her having left the Palace, she must be in hiding somewhere within its precincts. The Japanese troops are guarding the Palace. Things are now quiet.

No further news of importance has been received from Söul concerning the late *émeute*. The fate of the unfortunate Queen still remains uncertain, and apprehensions gather strength that she has probably met with foul play. Indeed, one telegram plainly states that, according to rumours in Söul, she was dead before noon on the day of the disturbance. As for the *Nichi Nichi*'s telegram, to the effect that Her Majesty had not left the precincts of the Palace, it is difficult to understand how, in that case, her whereabouts could remain a mystery for even a couple of hours. What renders her death probable is the fact that, in addition to one or two courtiers, two ladies were killed during the confusion, whereas the collision between the Palace-guards and the *Kurentai* soldiers is said to have been stopped after the exchange of a few shots. Under these circumstances the inference is almost irresistible that special measures were taken to reach the inmates of the Palace, and that Her Majesty has met with a violent death.

According to all appearances, the *émeute* is not likely to lead to any further trouble, for the present at least. The Cabinet, after the dismissal of a few partisans of the Min faction, appears to be conducting the ordinary business of state, as though nothing unusual had taken place.

A few words about the *Kurentai* troops may not be out of place. This body of men owes its origin to the bitter experiences garnered by the Söul Government last year, when the absolute worthlessness of an army trained under the old system was clearly demonstrated. The creation of the nucleus of a new army was decided upon last December, but not until February of this year were the newly levied recruits called out for drill. At the request of the Korean Government, the organization and training of these troops were undertaken by a few Japanese officers. At present there are two battalions of *Kurentai*, each consisting of 420 men. They form a regiment and are stationed in Söul. Another battalion was levied, some time ago, in Ph्योंg-yang, but lack of arms and accoutrements still prevents its being called out for drill. The present instructor to the *Kurentai* battalions in Söul is Major Umayabara, commander of the Japanese troops quartered there, and he is assisted by his subordinate, Captain Murai. From the first, the Queen seems to have regarded the new troops with strong dislike and even sus-

picion, though on what ground we have no information. Whenever the Cabinet suggested the advisability of replacing the Palace Guards by these well-trained troops, Her Majesty used every means in her power to prevent the consummation of the proposal. Ultimately this question became the cause of a sharp quarrel between the Queen and the Cabinet, resulting in the overthrow of Pak Yong-ho, the powerful Minister of Home Affairs. After the flight of Pak from the country, the Queen placed her own nominees at the head of the *Kurentai* battalions, and thus endeavoured to win the troops to her own side. But as her efforts proved unavailing, she is said to have resolved to get the troops disbanded, and through her partisans in the Cabinet, she prevailed upon the latter to adopt that measure, with disastrous consequences. The number of the troops organized under the old system in Söul is said to be about 15,000, of whom some 1,200 used to be quartered in the Palace, the rest being at liberty to live where they pleased in the city.

PEKIN NEWS.

At the date of the latest Japanese correspondence from Peking, namely the 23rd ult., it was not yet certain who was to be China's Plenipotentiary in the negotiations about to be opened for the conclusion of the Treaty of Commerce and Navigation between Japan and China. All the Ministers of the Tsung-li Yamên are said to have shown extreme reluctance to assume the responsibility of the task. About the date of these letters, the Japanese Minister was negotiating with the Tsung-li Yamên about the rate at which Kaiping taels should be converted into Japanese yen in the payment of the war indemnity. On the Japanese side, the subject had been thoroughly investigated by Mr. Nomura of the Finance Department then in Peking, and a proposal based on his researches had some time previously been forwarded to the Tsung-li Yamên. The latter, however, had not yet made any reply on the subject.

A new Chinese journal, *Man Kuo Kung-pau* (the World Gazette), published every alternate day, is said to have greatly improved since it first appeared some fifty days ago. It is a little affair of seven pages containing only some 1,700 words in all. The essays it contains deal with the political, social, and industrial institutions of the West; and the needs and faults of China are said to be discussed in a manner at once intelligent and fearless. The *Nichi Nichi*'s correspondent expresses wonder at the freedom with which all the abuses and evils connected with Chinese administration are pointed out and criticised. The editor's name is not known, but, according to the above mentioned correspondent, he must be a man that has studied and travelled abroad. The correspondent even suspects that probably the real editor is an official of some rank, or at least that the inspiration must emanate from an influential quarter. Otherwise it is difficult to account for the impunity with which the journal is allowed to expose the shortcomings of the existing political system. The appearance of such an organ of reform at the seat of Government is justly regarded by the Japanese correspondents as a sign that the beating administered to China by her progressive neighbour has had some effect.

Cholera is said to have abated much of its virulence in Peking, as is attested by the greatly decreased number of funerals.

HONOURS.

The *Official Gazette* announces that Viscount Hijikata, Minister of the Imperial Household, is raised to the rank of Count, in consideration of distinguished services, and that the Grand Cordon of the Rising Sun has been graciously conferred by His Majesty on Marquis Tokudaiji and Count Inouye.

THE AWOMORI ASSASSINATION.

Further particulars have reached us bearing on the crime perpetrated in the house of Miss Suthon, a lady missionary belonging to the American Episcopal Church, who has been carrying on work in Awomori for some years past. Miss Suthon resides in a two-storied building formerly used as a bank. The compound in which the dwelling stands is surrounded by a fence and the house is reached by passing through a gate and following a footpath. This gate Miss Suthon has been in the habit of leaving open at night. In the lower storey of the house were several rooms occupied by Japanese, and on the night of the assassination a catechumen named Oyu Heizo, aged 19, who had been burnt out a few days before, was occupying one of these rooms. Opposite was Miss Suthon's dining-room, in which a lamp was burning the whole night. At a little distance off were quartered the cook and his wife. Miss Suthon sleeps upstairs, and on the night in question retired to rest at about 11 o'clock. After sleeping soundly for several hours, she awoke and distinctly heard the creaking of a board in the veranda below. Recognising someone was moving, she struck a light and listened for further sounds, but hearing nothing, thought there was no cause for alarm and went back to bed. In the morning, when the young student's door was opened, he was found lying stretched on the bed saturated with blood and with his throat cut from ear to ear. The police were at once communicated with and, owing to a heavy fall of rain in the middle of the night about the time of the murder, they were able to trace the footsteps of the assassin in and out of the premises. They also discovered that he had entered the house by cutting a hole in a paper sliding door, which enabled him to reach to a little bolt, slide it back and let himself in.

Up to the 2nd instant, the police had not succeeded in discovering any clue to the motive of the assassin. Various explanations have been given, but none of them seem altogether free from difficulties. It is said that by some means or other the robber may have got to know that there was a considerable sum of money in the house—which we are informed was a fact, and that the only person in the house likely to interfere with his plans would be the young catechumen, since the cook, it seems, was ill and unfit to render any assistance. Hence he, perhaps, thought it best to settle Heizo before commencing operations. After the murder, he doubtless heard Miss Suthon's movements in the upper part of the house, possibly saw the light and decided to make his escape while he could. This explanation seems to us very unsatisfactory; for if the robber was so bent on plunder as not to shrink from murdering any person that had the power to frustrate his designs, it is scarcely to be supposed that he would be cowed by the footsteps of a woman in the upper storey. The second explanation given us attributes the murder to fanaticism. As our readers are doubtless aware, a catechumen is a person undergoing preparation for baptism. The murdered man was a most ardent advocate of Christianity, and had made many enemies in the town. His parents, relations, and friends were very much opposed to his entering the Christian Church, and it is surmised that among these there may have been one sufficiently bigoted to prevent the consummation of his design by killing him. Although cases of persecution carried to such a length are very rare in Japan, the theory that the catechumen in the present instance was the victim of religious zeal seems to be a plausible explanation of the catastrophe. It is worth mentioning, however, that the parents cannot be supposed to have given their consent to the foul deed, for since the young man's death they have shown a certain amount of sympathy with the course he followed by allowing his remains to be interred in accordance with the rites of the Christian Church. It is neither impossible nor improbable, however, that some relation or former friend of the young man may

have been moved by fanatical frenzy to commit the dire act.

A third explanation is suggested. It seems that, some little time ago, a girl that had been attending Miss Suthon's classes fell in love with a *soshi* actor. Miss Suthon, suspecting that the girl's relations with the actor were not of a creditable character, dismissed her from the class. The local papers, always eager to pander to the depraved tastes of a scandal-loving public, regarded the story of the Bible student's connection with the *soshi* actor as a god-send, and made it the basis for a novelette. It is asserted that Seizo supplied the papers with details bearing on the career of the young girl, and that this so enraged her relatives that they determined to punish his effrontery with death.

The police, who after all are the best judges of the probable motives of the crime, being in possession of all the facts bearing on the case, are said to regard the affair as an unsolved mystery, and to be still in search of some clue to guide their inquiries. The assassin is at large.

The latest news from Awomori respecting the assassination in Miss Suthon's house is that the Mission Catechist and Bible-woman have been arrested on suspicion and removed to a gaol 2 *ri* distant from the town. This action on the part of the police has naturally caused a great stir in the neighbourhood, and consternation in the Mission. Miss Suthon and her fellow workers are of opinion that the course followed by the police is without justification, and the services of a lawyer have been secured. He has been instructed to watch the case on behalf of the Mission, and also to do his best to discover the real criminal. The grounds for the action of the police are only partially known. Report gives the following account of the Catechist's alleged guilt:—He and the murdered Catechumen are said to have had a quarrel, the latter having accused the former of improper relations with the Bible-woman.

The Catechist, it seems, has served in the army and is an expert swordsman. He is said to have been so enraged by the accusation of the Catechumen that he decided to take the latter's life. This purpose he was able to carry out without hindrance, being well acquainted with the structure of the house in which his enemy slept and with the habits of its inmates. The Bible-woman, who is accused of being accessory to the crime, slept in the house, in a room in the upper storey near that of Miss Suthon, on the night of the murder. The Catechist was domiciled elsewhere, and hence must have entered the compound during the night without leaving any traces of his movements, for the police have come to the conclusion that the footprints seen on the wet mud the next morning were certainly those of a woman. The whole affair is justly regarded by the American Episcopal Mission as most serious, and Archdeacon Page, accompanied by a Japanese pastor, has already gone up to Awomori, as representative of the Mission, to make a thorough investigation. It is thought that the police are in possession of information that they are not disposed to make public till the regular preliminary inquiry takes place. The local papers assert that the authorities have no doubt of the Catechist's guilt. But how the Bible-woman can have become implicated is a puzzle to everybody. Those professing to know her well say that she could never have been induced to give her consent to the perpetration of such a crime. Moreover, on the night of the murder she could not have left her room and returned to it without Miss Suthon's knowledge.

The Catechist attended the murdered man's funeral, but before and after the ceremony begged to be excused from his duties on the plea of illness. He was in bed when the constables entered his house to arrest him.

The epidemic inspection offices established at Yokosuka, Kitayama, Odawara, Ofuna, and other towns in Kanagawa Prefecture were closed on the 10th inst. with the exception of Yokohama Railway station. It is said that the Nagahama Quarantine station will also be closed at no distant date.

THE POLITICAL ASSOCIATION CASE.

The political association case, as our readers may remember, arose out of the celebrated Atago-kan conferences, at which the Opposition politicians of different sections discussed the question of the Liaotung peninsula. The authorities regarded these conferences as the organization of a new political association, and the politicians that had taken a leading part in the proceedings were arraigned before a law court on the charge of violating the Law of Political Associations, which requires that the fact of the formation of such an association shall be reported to the police within a stated period. At first the accused were Messrs. Suzuki Shigetoo, M.P., Kudo Kokan, M.P., Ozaki Yukio, M.P., Shiga Shigetaka, Taguchi Ukichi, M.P., and Suyeshiro Shigeyasu. Their counsel argued that the Atago-kan conference had no reference whatever to the formation of a political association, but on the strength of evidence supplied by the police, the court pronounced judgment against them, and sentenced them to a fine. They appealed to a higher tribunal, where the original court's decision was upheld in so far as it related to Messrs. Suzuki, Kudo, and Ozaki, but the three other appellants were acquitted on the ground of insufficient evidence. The case was then carried to the Tokyo Court of Cassation, where the decision of the lower tribunals has now been reversed and it is ordered that the case be re-tried by the Yokohama Local Court.

The prisoners in this case are undergoing daily examination by Judge Iida of the Tokyo Local Court. On the 9th instant, four or five friends and acquaintances of Watanabe were cited as witnesses. Watanabe is reported to be conducting himself in a rather creditable manner. He does not speak much, what he says is to the point, and his statements are singularly consistent and straightforward. He has some taste for national poetry, and diverts himself, while in confinement, by composing verses in the popular styles called *haikai* and *kyōku*. On the afternoon of the 9th, he was observed writing verses on white paper by means of the yolk of an egg. The other prisoner, Shinozaki, is more obstinate than his younger accomplice. He refuses to answer nearly all the questions put him by the Judge, and is undergoing solitary confinement.

INSURRECTION NEAR CANTON.

Rather vague telegrams were received in Shanghai from Wangpo on Saturday, September 29th, stating that an insurrection had broken out in that vicinity, which the *North China Daily News* takes to be at a spot estimated at about forty miles distant from the city of Canton, the provincial capital of Kuangtung. As Wangpo—where is also situated the Naval College—is the headquarters of the Triad, or *Samhop* Society, a revolutionary organisation established by old Taiping adherents, and with ramifications throughout the two provinces of Kuangtung and Kuangsi; and furthermore, although a small town, Wangpo has always borne the reputation of being the home of sea-pirates who carry on their depredations hundreds of miles away from the place, but never harm the people in the vicinity of their homes, there is every reason to believe that the present insurrection has been organised by the leaders of the Triad Society, assisted by the large gangs of sea-pirates brought over from their hunting grounds in the vicinity of Hainan island and the West Coast ports. Further particulars report that the insurgents number some 4,000 men, all pretty well armed and "inured to fighting,"—a description further corroborating the supposition above. Meanwhile, the insurrection which began near Swatow over six weeks ago is not yet suppressed, but on the contrary has since spread to the borders of Fukien and Kiangsi.

THE KOREAN ÉMEUTE AND THE JAPANESE PRESS.

The *coup d'état* by which the Tai Wōn-kun has made himself once more master of the situation in Sōul has been a complete surprise, but unexpected and sudden as it is, it has not produced any deep sense of astonishment among the journalists of Tokyo, for they consider the event to be in complete keeping with the political methods traditionally familiar in the ill-fated peninsula. The comments that the affair has elicited, in so far as concern its bearing upon the general situation in the East, are various and characteristic.

The *Nichi Nichi Shimbun* approves the conduct of the Japanese Minister, who, while observing strict neutrality in the internal feuds of the Korean Court, took effective steps to preserve order and tranquillity at the Palace and in the city. "The fact seems to be that the Tai Wōn-kun was forcibly carried to the Palace by the *Kunrentai* soldiers. But as a deadly feud exists between him and the Queen, there is no knowing what may take place hereafter. If the Japanese Minister and the Japanese troops suffice to preserve order in the Korean capital, well and good. But should a further collision take place between the contending factions, and the public peace be thus disturbed, Japan ought to be prepared to adopt a resolute line of action, and, in concert with the friendly Powers, to maintain the peace not only of Korea but also of the East. Such is the responsibility that Japan has incurred toward Korea. Concerted action is of urgent importance on the part of the Powers that have with Korea treaty relations similar to those of Japan. We trust that Russia and the other Powers will not hesitate to coöperate with this country in the task of preserving peace in the Orient."

The *Yomiuri Shimbun* is not at all surprised to learn that the Tai Wōn-kun, in order to recover his prestige *vis-à-vis* the rival faction, has resorted to methods common enough in Korea. His obvious opportunity was to strike before the Min family had completely re-established itself. Our contemporary faintly censures Count Inouye, who in its opinion, ought to have taken some steps before his departure from Korea to obviate such a *coup d'état*. At the same time, the *Yomiuri* acknowledges that, in the existing state of affairs in the peninsular Kingdom, it is impossible for anybody, however able and powerful, to prevent the occurrence of events like that first reported. "The uncertainty of the situation in Korea is a logical consequence of the uncertainty of the situation in the East generally. Should the general situation be settled once for all, there need be no apprehension of further surprises in Korea. Would that such a day may not be far distant!"

The *Mainichi Shimbun* has no doubt that the steady revival of the Queen's power and the return of the great Min leader, Min Yong-chun, induced the Tai Wōn-kun and his grandson, Li Shun-yo, to strike a desperate blow for power. As to the future of Korea, our contemporary regards it with doubt and misgiving—misgiving not on account of Korea alone, but also on account of Japan.

The *Kokumin Shimbun* dismisses the subject with a short leader from which the following may be quoted:—"These waves of disturbance and these political surprises result from the modification of the Shimonoseki treaty. We are not, nay, we have not the right to be, surprised at any event, however untoward, that may take place. No incident ever occurs quite independently; one thing always leads to another; we are only reaping what we have sown."

The *Chuo Shimbun* counts it very singular that the success of the Tai Wōn-kun's daring *coup d'état* should have been followed by the ascendancy of Kin Koshu, Gyo Inchu, and Kin Inshoku, who are all in favour of reform and progress, and who, moreover, are generally believed to be favourably disposed toward Japan. What surprises our contemporary still more is that the Tai Wōn-kun, if report be true, should behave with moderation after he has become

master of the situation. The *Chuo* does not of course approve the method by which he recovered the ascendancy, yet it hopes that, since what has been done can not be undone, the new possessors of power may so shape their policy as to promote the cause of reform and progress.

The *Choya Shinbun* is reminded by this occurrence of the enormous influence that Count Inouye's presence in Söul exercised over Korean politicians. So long as he remained there, they all continued quiet and gave little trouble. Had his stay lasted a month longer, our contemporary thinks that the present disturbance would probably have been averted. The *Choya*, however, reposes complete confidence in the ability of the present Japanese Minister to cope with whatever new difficulty may present itself in Söul.

EARL LI AND DR. SATO.

The following is the translation of a letter received by Dr. Sato from Earl Li in reply to his own, in which he acknowledged the receipt of the decoration that His Imperial Chinese Majesty had been pleased to confer upon him, and the valuable presents that had been sent him by the Viceroy:—

DEAR SIR,—When I was wounded at Shimono-seki, you were so good as to visit me and by your exceptional skill to cure me of my injury. Such was your proficiency in your art, that I was surprised to see my wound heal in a little more than ten days. My gratitude to you is so profound that words cannot adequately express it.

You have now placed me under a fresh obligation by favouring me with an epistle overflowing with sentiments of the warmest friendship. In it you acknowledge the receipt of the things forwarded to you through the kindness of Plenipotentiary Ito (Baron Ito Miyoji). Out of respect to my Imperial Master, you have been so kind as to say that these trifling presents will be preserved by you as a treasure. At the same time you are pleased to express thanks to me which I do not at all deserve.

Since my voyage home, I have kept very quiet, and my health and spirits have steadily improved so they are now in a normal condition. Even a rainy season lasting fully a month did not produce the slightest pain in the part where I was wounded. I beg you therefore, to be at ease about my wound, especially as I mean to take all possible care of my health.

Your country abounds with good physicians, but a proficient like yourself is not only to be rarely found in China but also is equal to any even in the West. A good physician is like a good statesman, for it is the aim of both to alleviate the miseries of earthly existence. Let me hope with you that peace and tranquillity may last forever, and that people may be spared from sickness and wounds alike. Do not believe that in expressing this hope any selfish motives enter my mind.

Yours respectfully,

LI HUNG-CHANG.

To His Excellency Dr. SATO SUSUMU.

COUNT DE BYLANDT.

Count de Bylandt, Minister Resident of the Netherlands in Tokyo, is about to proceed to Europe on leave of absence, and will start, we understand, in the beginning of November. It has been publicly stated that Count de Bylandt has been appointed to represent his country at Bucharest, but though such a nomination is not impossible, there are no grounds for regarding it as an accomplished fact. We may therefore be permitted to hope that the Court of Japan will not lose an official so thoroughly versed in Japanese affairs and so universally popular as Count de Bylandt. At all events we trust, in the interests of Holland, that the Count will take the opportunity of his return to impress upon the Government at the Hague the anomaly involved in the present status of the Dutch Legation in Tokyo. Considering Holland's relations with Japan in the past, and, above all, the extremely important crisis of its international history through which this Empire is evidently destined to pass during the next two or three years, it seems only appropriate that the Netherlands should be represented by a Minister Plenipotentiary.

HORSE BREEDING.

The Horse Breeding Investigation Committee recently appointed by the Government, is to commence its conferences from the 10th inst. The topics on which it is requested to deliberate are as follow:—First, the general policy to be followed in the improvement of horses, especially with regard to the choice of sires to be used for stud purposes. Secondly, the establishment of Breeding Pastures and Stables. The Committee is required to express its views as to the general management of these establishments, their number and locations. Thirdly, the selection of brood mares. On this topic the Committee are given to understand that, as far as possible, Japanese full-breeds and half-breeds are to be used; but should it be deemed necessary to import foreign dams an opinion is to be given with regard to the most desirable breeds. Fourthly, the examination and general control of breeding places in private possession. The importance of this matter having been recognized by the Government long ago, a notification was issued by the Department of Agriculture and Commerce in 1885, authorising local Governors to appoint proper officials for the examination of private breeding studs. But the system did not work well, and it is deemed necessary to remodel it completely by enacting uniform regulations applicable throughout the country. Fifthly, guilds of private breeders. The existing guilds do not work smoothly, and the Committee are asked to suggest a scheme of reform. Sixthly and lastly, the encouragement to be given to horse-breeders. This subject includes the bestowal of rewards upon deserving breeders, the holding of competitive exhibitions, and so forth.

"ADVANCE JAPAN."

Mr. J. Morris, formerly of the Imperial Public Works Department in Japan, has compiled a work entitled "Advance Japan." It is illustrated by Mr. R. Isayama, and being excellently brought out, in the matter of typography, paper, and general technique, makes a very attractive volume. Mr. Morris writes simply. His purpose, he tells us, is "to draw attention to some of those characteristics of the Japanese and their undertakings which have tended to make of them, at this hour, a nation to be honoured." This purpose he achieves satisfactorily by judicious selections from books and records which, though already accessible to the public, can not always be easily consulted. He has added little that is original, so far as we can see, and his account of the recent war and its origin, though dispassionate and correct, might have been extended with advantage. It is probable, however, that he aimed chiefly at putting into succinct and readable shape such knowledge of ancient and modern Japan as is required, and likely to be sought, by persons whose interest in her story has been awakened by recent events.

REVOLT IN TIMOR.

The steamer *Menmuir*, which arrived in Hongkong on the 30th Sept., from Australia and Timor, brought news of the revolt of natives in Timor. The trouble arose on account of the Governor having tried to compel the people to pay taxes and furnish men for forced labour. The natives obstinately refused to obey the regulations, and the Governor then ordered that all their villages should be destroyed. Upon this the natives rose in rebellion, killing Captain Canara, the Government Secretary, Lieutenants Lagos, Mendes da Silva, Bettencourt, Ensign Flores, four sergeants, twelve soldiers, and one hospital warder. The native soldiers who were in the Portuguese Government service joined the rebels and took part in the sedition. Lieut. Mendes da Silva was murdered, but the others were killed in the fighting. Captain Claudio da Silva and wife, two sergeants' widows, and a few soldiers arrived in Hongkong by the *Menmuir* and went on to Macao. All the officers above referred to were married in Macao.—*Daily Press*.

THE NEW MINISTER OF COMMUNICATIONS.

The new Minister of Communications, Mr. Shirane Senichi, is one of the ablest clan statesmen of the younger generation. He is of Choshu extraction. After distinguishing himself as a successful local Governor, he was appointed Vice-Minister of Home Affairs in 1890 under Marquis (then Count) Saigo. He continued to occupy that post until the Summer of 1892, under three successive chiefs, Marquis Saigo, Viscount Shinagawa, and Count Soyejima. During that time he proved himself the possessor of rare administrative qualities. Indeed, such ability and energy did he display that he was generally regarded as the real head of his Department. He distinguished himself conspicuously under the Premiership of Count Matsukata, especially during the stormy winter session of 1891-2 and the equally eventful extraordinary session in the Spring of 1892, when he was universally believed to be one of the principal springs of action in the Government. Twice during his tenure of office as Vice-Minister of Home Affairs he was set up as candidate for a Ministerial post, and twice the well deserved reward failed to fall to his lot owing to considerations of policy. On the fall of the Matsukata Cabinet, he was appointed President of the Treasury Bureau in the Imperial Household, and for a time kept himself aloof from politics. But even during that period of comparative inactivity, he was not wholly forgotten by the public, for whenever there occurred a vacancy in the Cabinet, or whenever changes in its personnel were talked about, his name inevitably figured in the papers as a probable and proper candidate for a portfolio. He is a young Minister even in Japan, being only a few years past forty. His entrance into the Cabinet is regarded by some as a conclusive proof that the National Unionists are disposed to support the Government in the coming session of the Diet, for he is generally considered to be the leader of a large section of that Party. No doubt this phase of the matter irritates the Opposition organs that had some faint hope of gaining converts from the ranks of the National Unionists. In their despair we find these journals turning to the Satsuma men and trying to incite them against the so-called domination of the Choshu statesmen. The success of this manoeuvre would, of course, produce a split in the Government's ranks, but it is a game that has been played more than once by the Progressionist organs, and there does not appear to be much prospect of its producing any effect on the present occasion.

THE IMPERIAL EDICT EXACTED BY ENGLAND.

The result of the decisive measures adopted by the British Government in the matter of the Szechuan outrages is that the ex-Viceroy Liu has been cashiered and disqualified for any official employment hereafter. The Imperial Edict announcing the fact was issued on the 29th of September, and ran as follows (we take the translation of the *North China Daily News*):—

"On repeated occasions have Edicts been promulgated directing the Governors General and Governors of all the provinces to issue strict injunctions to the territorial officials that especial care must be exercised in the protection of the Mission Stations established by the various nations, in the hope that the people and the Christian converts may live at peace the one with the other.

"It came to our knowledge in the 5th moon of the present year that a disorderly mob had created a disturbance in the provincial capital of Szechuan, and destroyed Mission property near the East Parade Ground. This outbreak was followed by several others throughout the province, directed against Missionaries, all of which are to be attributed to the fact that in the ordinary course of things the territorial officials did not know how to admonish the people, and trouble consequently arose. Moreover, when the agitation had subsided, prompt measures were not taken to punish the offenders, and Liu Ping-chang, the Governor-General of the province in question, displayed

none of the qualities expected from an officer holding the position he did. The blame attaching to him is therefore very great.

According to a memorial presented by the General Wu Kuang-kuei impeaching his conduct, Liu Ping-chang at the commencement of the outbreak in the capital took no notice thereof, nor did he send any soldiers to repress the mob. Such inaction resulted in the continual reinforcement of the ranks of disorderly vagrants, and in the increase of the number of attacks on Mission Stations at other places in the province. In consequence of this culpable negligence on the part of the Governor-General, and his abuse of the trust reposed in him, he is, as a warning to others, at once to be deprived of his rank, and is never to be again employed in the public service.

"As regards the other officials who failed in their duty, the Taotai, the Prefect, etc., Lu Ch'uan-lin is hereby directed in each individual instance to make the strictest enquiry into their conduct, which having been done he is to impeach and punish them."

It is to be observed that no mention is made of the British Representative's action in connection with the punishment of the ex-Viceroy. But that could scarcely have been expected. When an Emperor announces by edict that he degrades one of the highest officials in his realm at the instance of a foreign Minister, his imperialism becomes a vanishing quantity in the eyes of his subjects. Great Britain does not seek to weaken the authority of the Emperor of China; she only seeks to secure the lives and properties of her subjects. We can not but recall, in this context, the invidious comparisons that were drawn by certain journalists, a month ago, between the methods of the French and British Representatives in Peking. M. Gérard's vigorous diplomacy was contrasted with the spiritless methods of Her Majesty's Minister, and Englishmen were told to hang their heads in shame. But the tables are turned now. There is no rational comparison possible between mere pecuniary compensation and the degradation of a Viceroy.

CHINESE COMMERCIAL MORALITY.

We hear so many compliments paid to the commercial morality of the Chinese as compared with that of the Japanese, that a piece of evidence furnished by Mr. Vice-Consul Scott's report on the Shanghai Mixed Court for 1894, is worth quoting:—

CIVIL CASES.—Compared with 1893, the list of civil cases set down for hearing at the Mixed Court during 1894 shows a large increase, being 92 against 76. Considering the unsatisfactory condition of trade during the past year, this increase in civil causes need excite no surprise. Chinese dealers have suffered heavily from the fall in exchange, for as business is now conducted nearly all contracts are on a sterling basis, and with the outbreak of war between China and Japan trade was completely disorganised. The claims thus entered in the Mixed Court represent but a small proportion of the losses incurred by English merchants in the course of their Chinese business. Time after time my good offices have been invoked to assist in arranging compositions out of Court; and it is only as a last resort that the foreign merchant has been compelled to summon the native dealer before the authorities.

A few firms engaged in the import of miscellaneous articles are constantly bringing claims in the Mixed Court; they have been giving credit to certain brokers who, possessed of no capital, were merely speculating for a rise in prices. In dealing with these cases the magistrate has repeatedly urged the necessity of caution on the part of the foreign merchant, and especially the necessity of obtaining bargain money, which can always be paid by respectable firms on signing contracts. Attempts have been made to repudiate agreements on the ground that no bargain money had been deposited. With Chinese dealers as between natives such payment is essential to validity, and otherwise it is important as determining the liability of each of several hong who may have entered into a joint agreement with a foreign merchant; each Chinese dealer, party to the contract, can be assessed for any loss only *pro rata* to the amount of his bargain money.

This account of the state of affairs existing in Shanghai certainly does not indicate any freedom from the failing so often laid to the charge of the Japanese importer. Indeed it appears that, even taking into account the much larger volume of the trade, there were far more cases of broken contracts proportionately in Shanghai than in Yokohama during 1894.

CABINET CHANGES.

The speculations so freely indulged in by journalistic politicians during the past month as to probable changes in the constitution of the Cabinet, have been partially justified by events. The portfolio of Communications has been given to Mr. Shirane Senichi, who held the position of Vice-Minister of Home Affairs in the Matsukata Cabinet three years ago. Viscount Watanabe becomes Minister of State for Finance, the duties of which post he was already discharging. Mr. Shirane, previously to this promotion, was director of the Imperial Treasury Bureau in the Household Department, as well as a Court Councillor. He is succeeded in the former office by Mr. Watanabe Chiaki, now Governor of Kyoto, the latter's place being given to Mr. Yamada Nomumichi, Governor of Osaka, and Mr. Uchiumi Tadakatsu being appointed Governor of Osaka.

STEAMSHIPS IN JAPAN.

The outlines of the Government Bill for the encouragement of maritime enterprise have already been reproduced in these columns. Details relating to the subsidies for new lines to be opened to America, Australia, Europe, Vladivostok, and the China coasts, are said to be under discussion between the authorities and the Nippon Yusen Kaisha. Meanwhile, it may not be uninteresting to reproduce some figures from the *Nichi Nichi* bearing upon the number and tonnage of the Japanese steamers capable of engaging in foreign navigation. At the end of May last year, the number of sea-going ships registered was fifty-six, with an aggregate displacement of 97,286 tons (60,473 tons register). The outbreak of the war and the necessity of transporting troops, arms, ammunition, and provisions, led to a sudden and large addition of ocean-going steamers to the mercantile marine of the country. The number of steamers newly purchased on that account from abroad during the twelve months ending June last was forty-six, with an aggregate displacement of 121,346 tons (77,515 tons register), thus bringing up the total of ocean-going steamers to 102, and their aggregate displacement to 218,630 tons (187,988 tons register). As to the age of these ships at the end of June last, twenty-five were above twenty years, forty-seven between ten and twenty years, and thirty under ten years. Of the steamers purchased during the war, twenty are above fifteen years and twenty-five under that age.

THE ELEVENTH CENSUS OF THE UNITED STATES.

The Rev. Dr. Cochran, lately of Tokyo, recently contributed an excellent article on the above theme to an American paper, some items from which may be of interest to our readers. In the United States the list of separate religious denominations is very large. Almost every sect known to other countries is to be found there, including a few peculiar to the Union, as well as two original bibles, the Mormon and the Oahspe. If one desires to be a pagan, a Jew, or a Christian, he has the opportunity. If a pagan he may worship in the temple of Buddha; if a Jew, he may be orthodox or reformed; if a Christian he may take his choice of 125 or 130 different kinds. If none of these suit him, he still has a choice among 150 separate and independent congregations which have no denominational name, creed, or confession.

All these fall naturally into three great divisions. Christian, Jewish, and miscellaneous. The Christian group may be divided into Catholic and Protestant, evangelical and non-evangelical. Under the head of miscellaneous may be included Buddhists, Theosophists, Ethical Culturists and Communistic societies. These constitute a very small division—apart from the Chinese, they are less than 6,000. The Jewish division embraces simply the orthodox and reformed Jews—in all 130,496. The Christian division contains, of course, the great bulk of the population, over

20,500,000 communicants, besides adherents. Those who belong to the non-Christian organizations, such as Jews, Buddhists, etc., are less than 2 per cent. of the population, and except the Jews they are decreasing rather than growing.

The Christian forces are very large. They represent, in the first place, 111,036 ministers, the vast majority of whom give their whole time to pulpit and pastoral work, and are supported by the churches they serve. There are 165,297 organizations or church societies, and of these 23,000 own no church edifices but meet in halls or private houses. The services, including Sunday School sessions, amount to nearly 20,000,000 a year, with 10,000,000 of sermons. Add to this the activity of the Christian press, weekly, monthly, and in the form of books, and we have an aggregate of tremendous significance in the propagation of the Gospel.

There are 142,000 church edifices open to the public, with seating accommodation for 43,000,000 of worshippers—affording room for all who are free to attend worship once a week to do so. The aggregate value of these churches is \$670,000,000, which has been freely invested for the public use and the public good. Nearly one person in every three of all ages is a Christian communicant.

The Christian population of the United States stands thus—Protestant communicants and adherents, 49,630,000; Catholics, 7,362,000; a total of 56,992,000. As the population, according to the census, is 62,622,250, it appears there are 5,630,000 who are neither Christian communicants nor Christian adherents; that is, one out of every 12 persons is either an active or passive opponent of the Christian religion. Out of the 49,630,000 of the Protestant communicants and adherents, the Methodist population alone numbers 13,794,000. Take the six largest Protestant denominations for the decade ending with 1890, and their increase amounted to more than 42 per cent., while the increase of the Roman Catholics during the same period was but about 30 per cent. As to the value of church property, the Methodists are assessed at \$130,000,000; the Roman Catholics at \$118,000,000. In comparison with the Protestant denominations in the United States, Roman Catholicism is small both as regards the number of communicants and adherents, and also in number and wealth of churches. M.

THE KYOTO CELEBRATION.

The date for the celebrations in connection with the eleven hundredth anniversary of the transfer of the Imperial Court to Kyoto has at length been fixed. Three days are to be devoted to the affair. Invitations have been issued by the Governor of Kyoto and by H.I.H. Prince Konoye, President of the Industrial Exhibition Committee. The Governor's invitation is for 9 a.m. on the 22nd, at the Heian Jingu, and the *invités* are requested to appear in frock-coats or corresponding uniform. Prince Konoye's invitation is for an evening party on the 23rd at 8 o'clock, the place being the Exhibition building and the dress evening costume. In each case persons attending are requested to present their cards with their invitations.

FLOATING OF THE "BELGIC."

The O. & O. steamer *Belgic* came off the beach at Suno-saki on Thursday at 12 o'clock, helped by a heavy sea. She passed Sagami at 3.10 p.m., under her own steam, and reached Yokosuka safely the same afternoon, where she will be docked. Captain Forbes and Captain Hardy are to be heartily congratulated upon the success attending the salving operations. We understand that the *Belgic* is the sixteenth vessel which Capt. Forbes has extricated from difficult positions on the shores of Japan, and the record of only one failure out of seventeen operations of a similar kind is one of which he may be justly proud. The *Belgic* went on the sand on the 8th September last. Captain Hardy conducted a survey of her bottom on Friday.

CHINA NEWS.

The net result of the abortive Sikkim-Tibet Boundary Commission, according to a Shanghai contemporary, is that some knowledge has been acquired of the mountain ranges guarding the approaches to Tibet from India, and a small amount of surveying has been done.

The average gambler when driven to bay by the too frequent attentions of the police is capable of doing desperate things in the West. The Li Hongkew gamblers of Shanghai also, it appears, do not like the ever-recurring raids on and arrests of members of their fraternity, so last week when a Sikh policeman caught a gambler, he was attacked by a crowd armed with sticks and bamboos. The Sikh held on to his man, and though considerably bruised, took him to the station with the assistance of a Chinese constable. At the Mixed Court the gambler was sentenced to 300 blows and one week's cage.

The *North China Daily News* translates the following for the information of would-be purchasers of land at the new treaty port of Shashi on the Yangtze:—The Chinchou Taotai, Hupeh, issued recently a proclamation to the effect that he and the Commissioner of Customs of Ichang had just finished their labours in selecting a suitable spot for government offices at the new treaty port of Shashi opened by the Treaty of Peace with Japan on the 8th of May last. The Shashi Customs and the Bureau of Foreign Affairs will occupy the new government land which contains a river frontage of 160 *chang* (about 2,000 English feet) in length and from 30 to 40 *chang* (about 500 English feet) in depth. The boundary stones are to be put up at once commencing on the west at the branch office of the Ichang Likin Customs stretching eastwards through Huangchiat'ai, Wangchiat'ai, and Wanchiat'ai, as far as the highroad named Huangchia Talu, or Highroad of the Huang Clan. T'aichou Talu highroad forms the northern boundary and the Yangtze makes the southern boundary. No one, continues the proclamation, will be able to buy any portion of the land within the above boundaries, as the original owners thereof have already been notified to proceed to the Chianglin magistrate's *yamen*, where they will be given a liberal price for the land which is to be specially devoted to government offices. Foreigners desiring to buy land at Shashi are to settle with the native owners themselves.

H.E. Wang Chih-ch'un, special envoy to Russia last year, has, we learn, arrived at Tientsin by the China Merchants' steamer *Hsinyü en route* for Peking, and in the train also travelled Liu Taotai, ex-acting Taotai of Shanghai and Director of the Kiangnan Arsenal. The latter official was called to Peking upon handing over the seals of office in Shanghai to the present Taotai, presumably for examination as to his qualification for the post of Minister to a foreign country.

The *North China Daily News* of the 28th ult. says:—A private letter from Lanchow, the capital of Kansu, *via* Hsianfu, which latter place it left about three weeks ago, brings news agreeing with that in the telegram we published on Thursday morning. It states that the Mahomedans would not make a definite move until the 8th or 9th moon (September-October-November). Their intention is to set up a separate Kingdom in Kansu. It would seem from the *Kolao Hui* backing the Mahomedans, and Imperial troops (of whom the majority doubtless belong to the *Kolao Hui*) deserting to them, there is an arrangement that the Mahomedans shall have Kansu, and shall in return assist the *Kolao Hui* to oust the Manchu Government from Shensi and beyond.

According to an Indian contemporary, the trade of Burma with Western China is now making good progress. The advance is attributed in the report just issued to a slight relaxation of the exorbitant dues exacted by the Chinese officials. It is rather doubtful whether this relaxation will be permanent, as it is put down to a desire on the part of the Chinese officials to foster overland trade, owing to commerce from the coast ports being greatly hampered by

the late war with Japan. Although the total figures show an improvement, the import trade in merchandise from Western China declined to the extent of two lakhs, due principally to lessened transactions in raw silk, silk piece-goods, and apparel. The amount of treasure imported and exported was very nearly the same, and the compiler of the report expresses his inability to see the reason for this apparently useless conveyance of treasure, unless bullion is brought, and coin taken back. The increase of the trade registered in Upper Burma, was to some extent minimised by the falling off in the transactions of Lower Burma, with Zimmé and Siam. In 1893-94 the trade showed an increase of 21.63 per cent., because international troubles between Siam and France interrupted dealings with Bangkok, and a portion of the traffic was diverted to Moulmein. Last year business returned to its normal channel, and consequently the Burmese trade was much smaller. The chance given in 1893-94 to obtain a surer footing beyond the border doubtless would have been much better utilised, if the communication between Moulmein and Chiengmai and the cost of transport had compared less unfavourably with those of the Bangkok route. The British Vice-Consul at Chiengmai has expressed his opinion that if the communications with Moulmein were improved, a good deal of business could be diverted from Bangkok, and that a new class of goods would be introduced, which are now unobtainable in the Shan States or not in general use because of their cost. While the British trade of the district has greatly increased in recent years, there has been a still larger development of French traffic and this is entirely due to the fact that nothing at all has been done to improve communications from Lower Burma, while the cost of transport has if anything risen owing to the general rise in wages. The British Vice-Consul at Chiengmai is of opinion that if railway communication with some seaport was established, or even if the existing routes were improved, British trade would be given an impulse and find an outlet in Northern Siam and the Southern Shan States that would well repay any initial outlay. "It is regrettable," he says, "that while complaints are rife of losses suffered by British trade, and of the effects of competition in other countries a promising field like this should be neglected." The question is one which should be pressed on the attention of the Government of India by the Chief Commissioner of Burma and the Chambers of Commerce.

Writing on the 23rd September, the Foochow correspondent of the Shanghai morning journal said:—In consequence of the hitch in the proceedings as to the Taotai's power to execute, of which you have been informed, the Commission of Enquiry did not sit for some days, but my information is to the effect that the list of murderers was almost complete by the 15th. To Chio-hi, the standard-bearer, had been captured and was expected to arrive there that day. Ho Tiek (the "Butterfly") is supposed to have committed suicide whilst in custody by jumping over a bridge into a deep ravine in the Pingang district. The American Consul had received a telegram approving his action, but no instruction had come from Peking. On the morning of the 17th seven of the murderers were executed at the South Gate of the city. All the members of the Commission were present with the exception of Captain Newell and the Rev. W. Banister. The scene was a most gruesome one, only one head being severed at the first blow, the others being chopped and the unfortunate wretches left to die. The seven men were:—Ting Huang-kiang, who stabbed Mr. Stewart, and Lung Nang-ming, who did the same, as well as assisting in the murder of Mrs. Stewart; Ling-seng, who helped to kill the ladies after the flag came; Lang Tau-kiang, who attempted to kill one of the children; Yek Ming-nik who boasted he had killed a little one about 7 years old, and also assisted in the murder of the ladies; Ting King-sük, who helped to kill the sisters; Sai Nu-long, who confessed to have stabbed two persons (a native of Hingsangpang, where the first trouble with Vegetarians took place). The executions took place quite suddenly, the

Taotai on the previous day announcing that he had received a telegram from the Viceroy authorising the executions. Since then the names of sixteen more criminals have been communicated to the Viceroy for execution. Some difficulty was anticipated with regard to the procedure at the other trials, as the Consuls wanted to make it clear that the commutation of any sentence should rest with them, and be in accordance with their recommendations. A proclamation has been arranged with the Taotai, which it is hoped will set things right with the people and undo the mischief done by the one issued by the district magistrate some time ago. The British Consul insists that all the prisoners should be examined and he will doubtless carry his point, in which event the commission will take another month or six weeks, unless the Chinese authorities see the futility of obstruction and assist the enquiry more than they have been doing.

A correspondent of the *N.-C. Daily News*, writing from Moukden says:—Among the enquiries addressed to the foreigners on their return to this city the most frequent was this:—"Is the Treaty of Peace settled?" And another question immediately followed:—"Why do the Japanese not withdraw their troops?" Meanwhile the Amur and Kirin contingents are still quartered in the rich villages on the south of Liaoyang, and even the return of the prisoners who were interned in Haich'eng has not been sufficient to quell, though it allayed, the rumours persistently spread that war will again break out. A conversation reported between soldiers and a farmer, their involuntary host, may throw some light on the history of the late war. "When the war is resumed," they said, "we will let you know, and you must remove at once your family and what you can take with you. We don't mean to fight, and why should we? If an officer is killed, his name is held in honour; but if we fall, even our families never hear of it, and if we are wounded we are left to lie on the battle-field, and our pay is stopped." Again: "In time of peace there are officers and men, but on the battlefield we are all alike. We will first shoot our officers and then mount our horses and go; and of course a man must live, so we will turn robbers, but we will give you notice in time to escape." Till recently the front was guarded by the Ch'u division of the Huai army under Hsü Pang-tao; but after the death of their commander, orders were issued to disband them. The men, however, refused to lay down their arms until they received their arrears of pay and they showed such a united front that the authorities had to make a compromise. It was agreed to give them one-third of their pay in Moukden, one-third in Shanhaikuan, and the rest in Tientsin. One effect of the war has been to bring into relief the contrast between Chinese and Manchu troops. There is much jealousy both among the men and between the officers of the two classes. Thus it is asked why General Nieh is sent to the Board of Punishments to be condemned for the retreat from Siuyen, while General Fêng, who shared his guilt, is allowed to escape. The former is a Chinese, while the latter is a Manchu.

The Peking correspondent of the same journal throws some light upon the inner history of the Tsung-li Yamén in a recent letter written from the capital. He says:—

Coming closely on the receipt of the news of the Kucheng massacre, it is some consolation to be able to report that a great change has taken place in the Tsung-li Yamén. Your correspondent has more than once called attention of this Yamén and even gone the length of advising that the Foreign Representatives should altogether ignore it. The crash has at last come. H.E. Sun I-wen has resigned, hounded out of place and power by the anti-Japanese party. H.E. Liao Shou-heng has been made Grain Commissioner at T'ungchow, near Peking. But it remained for the arch-enemy of progress H.E. Ysü Hung-i to be dismissed. He was said to be an honest and capable official. For many years he has drafted all the despatches of the Yamén and only last year he was promoted to be member of the Cabinet, which was considered a great mark of honour. He still continued, however, to hold the pencil at the Po-

reign Office. He had formerly been one of the Cabinet secretaries. Your correspondent has had lying in his desk for years an *exposé* of this official's shortcomings but out of regard to the Powers that he, had refrained from giving publicity to his views. He may, however, say that he (the Minister) was the thorn in the side of the late Marquis T'eng, and his political murderer. He opposed every reform in the country, Tsung-li Yamên, and Tung Wen College, which the late Marquis proposed. He has long stood in the path of the adoption of Western medicine in the College. He refused the Korean reforms demanded by Japan and hence precipitated the war. He has had to do with the Russian loans, (we refrain from quoting the rumours that are afloat in this connection) by which the independence and dignity of this country have been sadly sacrificed, or at least placed in great jeopardy, and he has last of all been intimately connected with the Sino-Annamite convention which is just beginning to play its rôle on the stage of public events. The great Minister has been dismissed from the Tsung-li Yamên and the Cabinet, although he still holds the post of Left Vice-President of the Board of Civil Office. The Foreign Ministers have demanded, and rightly demanded, to be brought face to face with the responsible advisers of the Emperor, and not be obliged to carry on diplomatic work with a parcel of ignorant, powerless, and irresponsible officials. The two Imperial tutors to the present and late Emperors respectively, Weng Tung-ho and Li Hung-tsao, have been appointed Ministers of the Tsung-li Yamên. We shall now have a strong Yamên—the leading minds being Prince Kung, Weng Tung-ho and Governor Yung Lu. H.E. Weng was formerly a bitter antagonist to foreigners, and thoroughly conservative, but has now become Liberal and Progressive. We shall see what transformation will take place upon these two men when they are brought into direct contact with foreign relations. If we had telegraphic communication with the spirit world it would be gratifying to forward a telegram to the spirit of his Excellency the late Marquis Tseng, of the overthrow at last of his great antagonist—the opposer of all reforms. If the Government will only take up other matters in this spirit and make sweeping reforms, there may yet be hope for China, even at the eleventh hour.

The latest news regarding the new scholastic institution started in Tientsin by the Taotai Sheng is that Mr. Tenney, the President, has been holding examinations in Shanghai recently, and is now going on to Hongkong for the same purpose. The new institution is to be divided into a preparatory school and a collegiate department, with which special departments in law and engineering will ultimately be connected. The preparatory course and the advanced course will each be for four years. Mr. Tenney has been collecting students for the fourth class of the collegiate department and for the first, second, and third classes of the preparatory school. There were over ninety candidates for examination in Shanghai of whom about fifty have been accepted.

The *China Gazette* records with deep regret the death of the Mother Superior of the Convent of the Helpers of the Holy Souls, Sicawei, which occurred at the Institution of St. Joseph, French-town, Shanghai, on the 28th ult. The lady, who was known in religious circles as Mother Marie Emmanuel, was a Belgian by birth and 54 years old, 28 of which she had spent in China, having been Superior of the Convent for the past 13 years. She was an accomplished Chinese scholar, and was deservedly loved and respected by all who came in contact with her during her useful and self-devoted career in China.

The Chinese Telegraph Administration has recently laid a cable across the Yangtze to Tsungming, and telegraphic communication with that important island will shortly be opened to the public.

H.M.S. *Alacrity*, flying the flag of Admiral Buller, left Shanghai on the morning of the 2nd Oct. for the Yangtze, Mr. J. W. Jamieson of the British Consulate-General, going as interpreter to the Admiral. By the same tide H.M.S. *Firebrand* left for Wenchow.

Eleven robbers were decapitated on the Parade-ground at the Old North Gate of the native city of Shanghai on the 2nd October. They were concerned in a robbery at Singyanghsien, and the value of their booty was placed at Tls. 3,000. Over 10,000 people are said to have witnessed the execution.

The *Sinwanpao*, a Chinese paper published in Shanghai, prints an article on the wisdom of giving way with a good grace in connection with the British Minister's ultimatum. It says that it was most unfortunate that the Emperor's advisers did not counsel his Majesty to give way from the first to Sir N. O'Connor's demands with reference to the degradation of Liu Ping-chang, knowing as they did the impossibility of resisting, and that they were bound eventually to accept whatever the British Minister at Peking demanded. Had his Majesty been advised from the beginning to degrade Liu Ping-chang, the former would doubtless have received praise from the Western people represented by their Press, for his good sense and clear appreciation of what was just, "whereas," asks the editor of the paper, "what has been the result of the whole thing? The Tsung-li Yamên sternly refused the British Minister's demand for the instant degradation of the ex-Viceroy of Szechuan; the British Minister then gave an ultimatum, and finally scared by the warlike demonstration of the British fleet in the Yangtze, the Emperor surrenders and issues the edict demanded by the British Minister. What 'face' has the Chinese Government gained by this way of doing things? We shrink from going into details. It should, however, be a lesson which our chief rulers would do well to take to heart, for what with the disastrous results of the late war, China can scarcely afford to lose any more 'face' without seriously damaging her future prospects and losing the respect of the world."

Miss Codrington, who was so severely injured at Whasang, has gone home in the P. & O. steamer *Manila*.

Reports were received in Shanghai on the 3rd inst. announcing a rising in the prefecture of Kaochou, Kuangtung, and another, under the auspices of the *Pakua Hui*, in the prefecture of Tingchou, Fukien.

The sum of one hundred and thirty-two dollars has been contributed to the Hwasang Memorial Fund by the Tientsin and Taku communities.

H. E. Li Hung-chang has presented several deer and storks to Victoria Park, Tientsin. The gift, which was made through the Hon. Li Ching-mai, was accompanied by a very kind message from His Excellency, appreciative of the pleasant relations so long existing between himself and the foreign community of Tientsin.

Says the *Peking and Tientsin Times*:—Mr. F. D. Cheshire, who has been so long attached to the U.S. Legation in Peking as Chinese Secretary, left Peking for here on the 25th instant, for the purpose of joining the U.S. Cheng-tu Commission. Mr. Cheshire has been appointed by the Washington Government to take the place of the missionary originally intended to join the Commission, which is now only waiting the arrival of the naval officer to start overland for the seat of inquiry. The journey is some 1,700 miles. The members of the Commission are to be congratulated on having associated with them so accomplished a Chinese scholar and pleasant companion as the genial Mr. Cheshire. Many a mile will be the shorter for his company, and when the Commission starts business his experience of the wily Chinese official will simply be invaluable.

The situation is said to be very serious in the disturbed district near Swatow, remarks the *Hongkong Daily Press*. Minor outbreaks have occurred in a number of the districts surrounding the one in actual rebellion and the officials are taking the usual steps for suppressing the disturbance, namely, wholesale decapitations and the sending of the heads around the country for exhibition. One of the leaders who was arrested is described as having been a remarkably fine man, and it is said that when he was executed he would not kneel but had his head hacked off standing. It is reported at Canton that the rebels are being supplied with money and arms by Chinese in America, the Straits Settlements, and Australia.

The *Foochow Echo* of the 21st September says:—The anti-Christian rioting lately reported at Hok-chiang has spread to the Hiuwha district. The mob has attacked two churches at a

place called Sieng-In, doing them some damage, and the houses of the native pastors and teachers were plundered. A catechist was severely beaten. In these cases, at Hok-chiang, the magistrate took no notice, but allowed the rioters to have their way. It would appear that the mandarins are acting on some general plan of allowing the Christians to be persecuted. We hear from Kien-ning-foo that the hospital there has been threatened and that anti-foreign placards have been, extensively posted about all over the city and country. The authorities at Kien-ning-foo have sent some soldiers to protect the hospital, which it is to be hoped may result in its remaining untouched.

The new British dollar, says the Hongkong morning journal, is rapidly coming into general circulation. In payments made in silver almost as many of these coins will now be found as of Japanese *yen*, while the unsightly chopped Mexican is gradually disappearing.

ARMY RETURNS.

An interesting table, showing the number of officers in the various grades of the Japanese Army, is published by the *Fiji Shimpō*:—

Field-M Marshals	4
Lieut.-Generals	12
(including one on the Retired List.)	
Major-Generals	30
(including one on the Retired List.)	
Inspectors-General	2
Inspectors-General of Hospitals	3
Colonels and officers of relative rank	106
Lieut.-Colonels and officers of relative rank	148
Majors and officers of relative rank	376
Captains and officers of relative rank	1,555
Lieutenants and officers of relative rank	1,295
Ensigns and officers of relative rank	1,629

Total 5,160

The total number on the 1st of July, 1894, was only 3,718, so that the increase caused by mobilization has been 1,442. The four Field-M Marshals are H.I.H. Prince Akihito, Marquis Oyama, Marquis Yamagata, and Count Nodzu.

WEI-HAI-WEI.

Correspondence from Wei-hai-wei published in the *Fiji Shimpō* states that the Battalion of Infantry despatched there from Port Arthur for the purpose of acting as a guard to the parties engaged in the erection of barracks, landed at Matakai on the 21st ult. The head-quarters of the Battalion were established at that place, while a Company was marched to a point outside the East Gate of Wei-hai-wei, where they are encamped for the present. The number of hands to be engaged in the construction of barracks will be 2,300 Japanese and 2,800 Chinese. Four hundred Japanese artisans and labourers arrived there on the 25th, and the rest are to follow soon. These barracks will be located at Matakai, Wei-hai-wei, and other places within a circle of several miles. The lower order of Chinese are said to be well affected toward the Japanese, and to be obedient and humble in their attitude. But men of the higher classes, namely, those that do not derive any profit from the presence of the Japanese, seem to entertain more or less hatred for the invaders. A Chinese official from the Prefecture of Tung-wen is said to be busy-ing himself affording all possible facilities to the Japanese. The engagement of coolies, the hiring of ground for the barracks, and other business transactions are conducted by the Japanese through the agency of Wang, a rich merchant of Wei-hai-wei. There is a scarcity of food stuffs for the Japanese troops, who are, consequently, compelled to fall back upon preserved meat and fish. Cases of dysentery were prevalent some time ago, but the disease is said to have almost completely disappeared.

Telegraphic instructions were issued by the Foreign Department to the Japanese Minister in Seoul on the 9th inst. to make inquiries as to the whereabouts of the Queen, who is said to be missing since the recent *émeute*.

"THE JAPANESE IMBROGLIO."

II.

BEFORE considering the gist of the remarkable essay in *Blackwood's Magazine*, it seems worth while to continue our examination of the details, because, by his accuracy or inaccuracy in the setting of his picture the truth of a writer's portrait may generally be discovered.

Great Britain, in fact, betrayed her anxiety to purchase China's friendship at any price, apparently forgetting the teaching of history and the lessons of worldly experience, that it is strength and not weakness that commands influence all the world over.

This paragraph, though conveying an explicit impression, is so vaguely phrased and covers such a large area of assertion, that to deal with it exhaustively would require a thesis on the whole of Great Britain's policy in China during the past ten years. The salient idea, however—namely, that Great Britain adopted the attitude of a suppliant for China's alliance—can be disposed of in a very few words. Great Britain never made the slightest overture in that sense. It was with China that the conception of an *entente* had its origin. After the Franco-Chinese struggle, from which China emerged with a fictitious halo of prestige, due not to her own merits but to the *insouciance* of her enemy, Viceroy LI's ambition became fired with the project of recovering the Amur provinces, the cradle of the Manchu Dynasty. To that end—an end the consummation of which would have raised him to the highest possible pinnacle of reputation and reward in his country—he devoted, for a time, all his energies, and employed agents whose zeal often outran their discretion. England received these overtures with her wonted deliberation. Not even by her most callow statesman does the phantasy of an actual alliance with China seem to have been entertained. But there could be little question as to the advisability of strengthening any bulwark calculated to improve the stability of her position in Central Asia, and to assist in shoring up the barrier that it had always been her traditional policy to construct against Russia's southward aggression. To that extent she encouraged China's attitude, but that the Cabinet in London ever sacrificed the rights of a single British subject on the altar of a Chinese alliance, or exposed the nation's honour to humiliation in order to preserve an *entente* with Peking, is a fiction worthy only of outport jingoism. The fact is that during the past decade the gun-boat element has been dropped out of British policy in the East. It is a change dictated, not by any desire to conciliate foes or to win friends, but by the spirit of the time. If England's treatment of Japan since 1885 be read by the light of immediately antecedent records, there will be found a thousand evidences of good-will and confidence such as have no place, comparatively speaking,

in the story of Anglo-Chinese relations. That the time was not ripe even for a tentative degree of kid-gloved intercourse with China has unfortunately been demonstrated by a series of terrible events, and, curiously enough, the demonstration has been almost synchronous with a still more striking object lesson in China's utter worthlessness for fighting purposes. If England erred as to China's military value, she erred in common with all the Western world; if she extended even to China the higher canons of international intercourse prescribed by nineteenth century civilization, she set an honourable, though unhappily a premature, example to the rest of the Western world. But the point that no careful student of contemporary history can overlook is the consistency of her procedure in the Orient. Toward Japan her courtesy and amity have been even warmer and more progressive than toward China, but Japan, living up to this refined treatment, has not offered any shocking evidence of its incongruity, whereas China's conduct has been a chapter of proofs that the gun-boat was prematurely eliminated. Our faith in Great Britain's capacity to re-adjust her policy to any circumstances, and in her ability to practically enforce the re-adjustment, is too strong to permit any apprehension that she has permanently forfeited her leadership in the East, and should circumstances compel her to adopt a programme of coercion and force in the future, she will be justified by the patience and conciliation of her attitude in the past.

We pass now to the essayist's account of the DETRING mission, certainly not the least naïve and curious of his descriptions. He attaches great importance to the mission, declaring it to have been "the turning-point in the relations between Europe and China." He tells us that it was undertaken at the instance of the Foreign Powers, but is careful to add that "no consultation respecting the constitution of the mission appears to have been had with the Foreign Representatives in Peking." That, indeed, was most improbable. It is easy to conceive what opinion the Foreign Representatives would have expressed had they been asked to endorse the choice of a foreign *employé* of the Customs Service as Envoy of the Chinese Empire to the MIKADO, and had they been told that his credentials were to be signed, not by the SOVEREIGN, but by Viceroy LI. As to the "objective points" of the mission, we are informed that they were three. First, "to probe the Japanese, whether they were open to treat for peace, and thus to give the cue to China and her friends." Secondly, "to open the way to peace negotiations should the Japanese prove accessible." Thirdly, "to enable LI HUNG-CHANG to weather the storm which was expected to burst on him when Port Arthur should fall, an event then daily expected. Having been

named in the Imperial Decree constituting the mission as the medium of communication between the Envoy and the Throne, the Viceroy was secured in his position as long as the mission was *in esse*." These objective points repay careful perusal. They constitute the best possible justification of Japan's refusal to treat with the DETRING mission. For they show, in the clearest manner, that the mission had no plenipotentiary powers whatever, but was merely a pilot balloon sent out to discover how the wind blew in Japan: Its purpose was simply to test Japan's mood, to obtain some indication of her demands, and to play the part of a political instrument in the interests of Viceroy LI. Such is the character given to the mission by one professing full knowledge and writing in defence of Chinese procedure! It is precisely what the most violent organs of the War party in Japan said of the mission at the time of its coming, except that they failed to detect its third function as a buttress of the LI fortunes. Looking back calmly at the incident, and accepting implicitly this account of it from the pen of a thoroughgoing advocate, we are compelled to endorse the view taken by certain Japanese journals at the time, namely, that the mission was little short of an insult to Japan. But the writer in *Blackwood's* criticises Japan severely for not receiving and treating with Mr. DETRING. Would any self-respecting Power have received such an Envoy with such credentials? The writer in *Blackwood's* alleges that when the Japanese Ministers assigned the insufficiency of the Envoy's credentials as a reason for not negotiating with him, "they had not even seen his credentials." It is difficult to believe that such an allegation is made seriously. Not only had the Japanese Ministers seen the credentials, but the text of them had been telegraphed to Tokyo and thence to London. Unless we are greatly mistaken as to the identity of the author of "The Japanese Imbroglio," he must be well aware that, on the evening of the mission's arrival in Kobe, its members dined at the house of a certain foreign merchant; that they were there waited upon by a Japanese with whom they had been in telegraphic communication for months before leaving China, and that through him an account of their powers and credentials was immediately wired to Hiroshima. If any justification were needed of the attitude assumed by the Japanese Cabinet toward the DETRING mission, it is furnished by this extremely ingenuous account of the mission's powers and purposes. What follows is even more curious. For, having told his readers that the mission was intended only "to open the way to negotiations," and that its rejection by Japan disclosed "the large aims and inexorable temper of the Japanese," he proceeds to catalogue the terms that Japan might have

obtained had she received the mission and opened negotiations with China in its sequel. She might have had ceded to her "Korea and the whole southern coast of Liaotung, including the naval stations of Port Arthur and Talien-wan;" she might have obtained Formosa, and she might have had "an indemnity as large as that ultimately secured by the Treaty of Shimonoseki." But, as a matter of fact, she never asked for more. She never asked even for so much. After she had taken Weihaiwei and destroyed or crippled the Peiyang Squadron, she demanded only Formosa, Liaotung, and an indemnity, leaving Korea independent. So, then, the proof of her "large aims and inexorable temper" was that, before her final and conclusive victories, she declined to formulate demands more extensive than those put forward by her after her victories! The writer leaves us to find out for ourselves how Russia could have been induced to consent, at the time of the DETRING mission, to the cession of Korea and Liaotung to Japan; Russia who, "a month before the outbreak of the war," had made "representations of such a nature that no doubt could have been left in the mind of the MIKADO'S Ministers as to the part which she must eventually play in any re-adjustment of the balance of power in the Far East."

To continue the story, however. The DETRING mission was rejected, and "what actually resulted from its rejection was that the interested Powers were apprised that the reticence of Japan concealed inordinate pretensions and unfathomed schemes of aggrandisement with recklessness of the consequences of the overthrow of order in the Chinese Empire." By what possible process of reasoning Japan's refusal to formulate her terms to a German *employé* of the Chinese Customs, accredited by a Viceroy, could be construed as evidence that she entertained inordinate pretensions and unfathomed schemes of aggrandisement, with recklessness as to the fate of the Chinese empire, the bewildered reader is left to imagine. But can anyone be deluded by such writing? Because Japan did not, in January, ask for and obtain much more than she demanded in April, and much more than the European Powers could possibly have sanctioned, she stood convicted of inordinate pretensions and unfathomed schemes of aggrandisement! And is it not clumsily disingenuous to pretend that the European Powers drew any such deduction from her refusal to treat with such an envoy so accredited? Every interested European Power knew perfectly well before Mr. DETRING landed in Kobe that Japan would not ask for more than Formosa, Liaotung, an indemnity, and the independence of Korea. There was no mystery at all, nor could anybody acquainted with the most rudimentary proprieties of diplomatic procedure construe

the Japanese Government's natural attitude toward a flagrantly unqualified envoy in the extravagant sense suggested by *Blackwood's* correspondent. Then came the CHANG mission. If there be one thing more clearly demonstrated than another about the CHANG mission, it is that the Envoy's credentials were inadequate. The credentials have been laid before the world, and no publicist has ever ventured to suggest that they were such as could have been considered satisfactory. They conferred no plenipotentiary power whatever, but merely constituted CHANG and his colleague channels for communicating the proposals of Japan to the Chinese Government; commissioned them, in short, to act as a superior kind of telegraphic clerk. The United States Representative in Peking frankly acknowledged the fact. By him a very different form of credentials had been drafted. Mr. FOSTER, who accompanied the mission, made the same acknowledgment. The Envoys themselves acknowledged it, and offered to have the credentials corrected by telegraph. Corrected by telegraph! Conceive the fatuity of consenting to such flagrantly irregular and untrustworthy procedure with China for *vis-à-vis*; China that had made Japan pay dearly for a much smaller exercise of credulity in 1881! Remember, too, that the eminently doubtful element of the affair was China's sincerity. Was she earnestly suing for peace, or did she merely seek to gain time? That was the great question. She answered it by neglecting to comply with the recognised forms of international negotiation. Years previously, when the same reason to doubt her sincerity did not exist, credentials of precisely the same character carried by one of her envoys, had been rejected by a British Plenipotentiary as altogether inadequate. The world does not contain any ordinarily prudent statesmen that would have negotiated with CHANG on the strength of the credentials he carried, or would have consented to their amendment by telegraph. Noting all these things, what shall we say of the assertions in *Blackwood's* that "the second mission was treated more roughly than the first, and for the self-same reason, immaturity;" that "the Chinese at once offered to put themselves in order and to satisfy every exigency with regard to their credentials;" that "the mission was really wrecked because it did not suit Japan then to engage in negotiations for peace," and that "had the MIKADO'S Government desired a settlement, a word would have removed all the verbal obstacles behind which they were hiding their unreadiness to treat?" Surely it is more reasonable to say that had the Chinese Government desired a settlement, they would not have neglected the universally recognised forms of international procedure, would not have flouted the technical advice given to them by their own chosen intermediary, the Re-

presentative of the United States in Peking, and would not have sent to Japan an Envoy carrying credentials that conferred upon him no higher functions than those of a mere channel of communication.

III.

It is unnecessary to continue our examination of the errors and misconceptions that disfigure the details of the narrative in *Blackwood's*. We pass to the gist of the story, namely, that the pressure ultimately put upon Japan by Europe was due entirely to Germany; that whatever advantage China gained from that pressure, she owes to Herr VON BRANDT and Mr. DETRING, and that Great Britain's policy in not joining the triple alliance was suicidal.

The steps by which Germany's part was worked out are very clearly indicated. "China," we are told, "defeated in the arena of public opinion as well as on the field of battle, cast about for a champion, and her choice fell on Herr VON BRANDT." It appears that although the very remarkable activity displayed by this diplomatist in the interests of individual German merchants during his representation of the Fatherland in Peking, often involved considerable inconvenience for China, his firmness and thoroughness won the respect of Chinese officials, and indicated him as a fitting person to fight the battle of the Middle Kingdom in a difficult crisis. He was invited to accept the post of "Ambassador Extraordinary charged to represent China at the various Courts of Europe." The honour was declined, but from that time Herr VON BRANDT began to "render China a greater service as confidential correspondent and adviser, to keep her informed of the state of opinion and of political currents in Europe, mayhap to give these currents a slight bias in Chinese favour." To impute motives is a miserable task, but how are we to close our eyes to the significance of this very injudicious revelation as to the main-springs of Herr VON BRANDT'S action? We had hitherto regarded him only in the light of a publicist whose very conspicuous propaganda during the latter half of the war was attributable solely to zeal for German interests and to a conviction, sincere if mistaken, that Japan's preëminence would entail injury to his country's commerce. But we are now instructed by his panegyrist—who speaks with assumption of absolute knowledge—to recognise in him a "confidential correspondent and adviser" of the Chinese Government. What the change of character means, our readers may estimate for themselves.

This "confidential correspondent and adviser" of China was thenceforth found "ventilating his opinions more and more freely in the German press, showing how the upheaval in the Far East was likely to imperil the interests of European commerce and upset the political equilibrium."

His "clear sight did not long escape the notice of German statesmen, eventually reaching the KAISER himself." "In the earlier stages of the war the EMPEROR had been enthusiastically Japanese, and it was only new light that caused HIS MAJESTY to veer round." That light emanated from VON BRANDT, and "the hand of the ex-Minister became distinctly visible in the direction of German policy in all its later developments." Such, succinctly, is the account given of Germany's conversion, or perversion. Other causes co-operated—we shall presently consider them—but the *fons et origo* was the "confidential correspondent and adviser" of the Chinese Government.

Now, as to the other causes that helped to metamorphose Germany's mood. The first was Japan's treatment of the DETRING mission.

Among the uncalculated effects of the mission was the growth of German sympathy for China. The attacks on the Envoy in the French and English press, on the *mot d'ordre* from Japan, set up a certain reaction in the German papers in favour of their countryman thus unfairly attacked. The Envoy had travelled to Japan in a German steamer, which was treated during his stay in Kobe harbour in a way by no means complimentary to the flag. All this, together with the daily vituperation in the Japanese press, the offensive espionage of the police, and other annoyances, could not but make a certain impression on the German representatives in Japan, whose reports to Berlin may very well have helped to swell the slowly rising tide of German sympathy with China.

What is the meaning of this paragraph? Its writer must know perfectly that no journalistic attack was ever made, either in Japan or in Europe, upon Mr. DETRING as Mr. DETRING. A foreign employé of the Chinese Customs, his unfitness to be accredited as China's peace envoy to the EMPEROR of Japan at a great crisis of the two empires' destinies, was freely pointed out. The man himself and his capacities did not enter into the question at all. Are we to suppose the German nation so hysterically sensitive as to resent criticism of a gross blunder perpetrated by China because the agent employed by her happened to be one of her German *employés*? With regard to the facts of the treatment received by the steamer that carried Mr. DETRING, it will be observed that the writer, so careful to expose details in other matters, preserves a discreet silence. The steamer was a vessel chartered by China for a Chinese purpose. The accident that it flew the German flag could not entitle it to any privileges incompatible with the character of the service upon which it was engaged. Germans have too much intelligence to betray such a lack of discrimination as the writer in *Blackwood's* attributes to them.

The second co-operative cause had to be introduced to German sympathy by Herr VON BRANDT. It was nothing more or less than Russia's dilemma. "The fundamental law of nature, self-preservation," compelled Russia to set her face against the overflow of an active military race into the territories along her Chinese

frontier. She could not allow Japan to become dominant there. It might be supposed that the leader of the Dreibund in Europe would not leap at an opportunity to secure the leader of the Zweibund against such a peril. But Herr VON BRANDT thought differently. "In short, he saw his chance to extract much advantage for his country by helping Russia in time of stress."

From the German side here was a really providential opportunity of purchasing the lasting friendship of Russia by rendering a service which would cost next to nothing. By a single stroke the greatest results for the German empire might be attained; the sentimental alliance between Russia and France emasculated; possibly the door opened for eventual reconciliation even with France herself, and, as a consequence, Germany relieved of the crushing weight of the defence of both her frontiers.

But though statesmen might appreciate these things, they could not give concrete expression to their views without the pressure of public opinion behind them. To develop that pressure became, accordingly, the next problem demanding solution. It was solved thus:—

The manner in which industrial, commercial, middle class Germany was brought round to the Chinese side is so illustrative of the world-wide question of German competition that it forms one of the not least interesting features in the whole movement. The German merchants in China were well aware that their interests lay in the cultivation of the China field, and that the most formidable opposition to their industries was threatened from the competition of Japan. To preserve their China markets became thus a definite object of German commercial policy. Machinery was set in motion to bring these views home to the commercial community in Germany. The Hanse towns, led by Hamburg, opened their eyes and took up the cause warmly. Their Chambers of Commerce made the strongest possible representations to the Government, urging the special advantages which would accrue to German commerce from the peaceful development of China. The great Krupp was enlisted in the propaganda, and he took up the matter energetically. The Essen factory had profited much by the Chinese demand for guns, and as of all the material supplied little remained save the portrait of the late Frederick Krupp in oils, presented by him to Li Hung-chang, there was a capacious gap to be filled by "repeat orders." Herr Krupp moved actively in financial and Government circles in Berlin, where his influence is great. Various other agencies were set to work, all directed to the one object of protecting the integrity of China. The effect of this converging fire was to reduce the fortress already disposed to capitulate; to bring, in short, the German Government and people into line, and to enable Germany to pronounce the decisive word.

It will be observed that in this analysis, on the whole explicit and detailed, an impersonal and mysterious element occasionally crops up. "Machinery was set in motion;" "the great KRUPP was enlisted in the propaganda;" "various other agencies were set to work," and so forth. In the gap thus left we have of course to place the hand of the confidential correspondent and adviser of China, Herr VON BRANDT.

Let us recapitulate the mainsprings of Germany's interference on China's behalf as set forth by the writer in *Blackwood's*. First, Herr VON BRANDT, who for 18 years had presided at the German Legation in Peking, becomes "the confidential correspondent and adviser of China" in Europe, and in that capacity inaugurates a pro-Chinese propaganda in the press and in official circles. Secondly, the same VON

BRANDT, having "as clear a perception as any Russian" of the danger that Japan's military expansion involves for Russia, persuades the KAISER and the Berlin statesmen to seize this "really providential opportunity of purchasing the lasting friendship of Russia" by forbidding Japan to retain any of her continental conquests. Thirdly, the merchants of Germany invoke official aid to save them from the peril of Japanese competition in the markets of China, Herr KRUPP conspicuously fomenting this agitation for the sake of getting "repeat orders" to replace the war material expended by China in her struggle with Japan. It does not fall within the range of our intelligence to comprehend how Japan's possession of the Liaotung Peninsula and the northern littoral of the Yellow Sea would interfere with Herr KRUPP's chances of selling guns and ammunition to China, unless, indeed, the fact be taken into account that no re-armaments would then be needed for Port Arthur, Talien, and Yingkow. But we are not concerned to elucidate this point. The essayist's general *resumé* of Germany's motives subjects our reasoning powers to such a heavy strain that we have no residuum of strength to dwell upon a mere detail. It only remains to add that Germany, shaping her policy by such principles and directing her diplomacy to such ends, is held up as a splendid contrast to the invertebrate *laissez-allers*, somnolent attitude of Great Britain in the East. Accepting the essayist's analysis as it stands, we do not find that the contrast brings any flush of shame to our brow. In fact, it produces an entirely different sensation. But at any rate, justice demands that note be taken of the harshness shown by the fates toward England in this matter. For her no such happy factor operated as a "confidential correspondent and adviser of China," expounding *la haute politique* in the press, and clarifying the vision of Court and Cabinet. To her no "providential opportunity of purchasing the lasting friendship of Russia" presented itself. To her Japanese competition in open Oriental markets did not suggest any terrifying contingencies, since to compete fairly and squarely in all markets has always been an essential condition of her commercial supremacy. To her the notion of checking a nation's industrial expansion by military and diplomatic barriers did not commend itself, for experience had taught her the mischievous futility of such devices. In her case no KRUPP, inspired by a longvista of "repeat orders," brought strong influence to bear upon "financial and Government circles," to secure China's integrity. If, lacking all these advantages, Great Britain did not rise to Germany's level of international sagacity and commercial shrewdness, is she to be greatly blamed?

IV.

OFFICIAL and public opinion in Germany having been persuaded of the importance of preserving Manchuria intact for China, we now find an account of the methods by which this change of sentiment was practically utilized. But first it must be noted that, according to *Blackwood's* essayist, Germany's unfriendliness to England was as consistent as her mood toward Japan was capricious. When Great Britain, at China's instance, originally sought to avert war by substituting European mediation, Germany not only refused to coöperate, but also "took the opportunity to administer a rather tart snub, by asking point blank what ulterior action England was prepared to take in case of the advice of the Powers not being followed by the belligerents." That silenced Lord ROSEBURY, and "the subject of mediation was dropped." When it was revived at the final stage, this is what we are told about Germany's attitude toward England:—"The Berlin Foreign Office was predisposed towards the new imperial policy * * * by the smouldering ill-feeling of the department towards England which had been engendered by the friction connected with Samoan and African affairs. It was undoubtedly this official irritation which lent its sting to the surly answer which was returned to the British proposal for mediation in October last. Thanks chiefly to Germany, Great Britain was isolated whether in her policy of defending the integrity of China, or of seeking through the friendly offices of neutrals to put an end to the war." Then follows a *resumé* of "the illusions in England about Japan," and we are finally told:—"Such indications might easily suggest to any one viewing the matter from across the North Sea that, in this Far Eastern question, England might be safely left out; which brings us at last to the point of our argument, that the Berlin Foreign Office saw no great difficulty in a second time compassing the isolation of England. Nay more, she might be reviled in the Continental press for her egotistical abstention from the coercive coalition which was suddenly sprung upon her." Thus, in a word, the German statesmen deliberately defeated Great Britain's attempted mediation to avert war, and with equal deliberation contrived that she should be excluded from the coalition to preserve China's continental integrity. It must often have occurred to readers of journals and magazines that there prevails among some English critics a singular tendency to hold up British diplomacy to scorn, and to represent their country as the victim of constant international slights induced by her own ineptitude and flaccidity. One imagines that before undertaking a task naturally repugnant to patriotic sentiment, these critics would assure themselves of the accuracy of the facts forming the basis

of their charges. But if they do devote any labour to research, the results must come to them through an extremely refractive medium. It is true that Germany declined to second Great Britain's efforts in the cause of peace before the war broke out. But it certainly is not true that the statesmen in Berlin, by virtually defying England to convert her amicable mediation into armed intervention, "snubbed" Lord ROSEBURY into silence. At that time Germany's sympathies being with Japan, it is very possible that she found Great Britain's methods insufficiently appreciative of Japan's claims. But there is no foundation for the statement that the Cabinet in Berlin treated Lord ROSEBURY'S proposals in the brusque, unfriendly manner described by the writer in *Blackwood's*. Still wider of the truth is the assertion that the Berlin Foreign Office deliberately "compassed the isolation of England" in connection with the Liaotung question. On the contrary, the Berlin Foreign Office frankly and earnestly invited Great Britain's coöperation, and expressed, with regard to her refusal, sentiments bearing no manner of resemblance to the superficial criticisms penned by a section of the German press. As for Great Britain, her chief reason for declining to join the Triple Alliance was simple: having laboured from the first with the object of averting war, she had no disposition to interfere with a settlement for restoring peace.

The European combination having been formed, mainly through the efforts of Herr VON BRANDT, a connecting link between it and China was found in Herr DETRING. The latter laboured in Tientsin and Peking to keep erratic China in touch with Germany; the former toiled in Berlin to make Germany secure China's continental integrity for the sake of conciliating Russia. Here a chronological difficulty presents itself. We know, as a matter of history, that the Triple Alliance was not formed until after Japan's terms had been stated at Shimonoseki. *Blackwood's* essayist declares that it was "in due process of crystallization" at least two months earlier, namely, when LI HUNG-CHANG accepted the mission to Japan, and proceeded to Peking to receive instructions. It is essential for the sake of his story that the date assigned by him should be correct. For the sake of Germany's fair fame, however, we note the discrepancy, and shall refer to it later on. LI HUNG-CHANG, though he did not receive any "specific promises" before setting out as to the contemplated action of the European coalition, "was undoubtedly given in a general way to understand that anything like dismemberment or other outrageous demand would be opposed by force." Thus fortified, he approached the negotiations. In describing these, *Blackwood's* essayist betrays the same flagrant bias that disfigures all his writing. He is

most reluctant to admit that in granting an armistice to China without conditions, Japan was really moved by the attempted assassination of the Viceroy, and he endeavours to discount the value of the armistice by alleging that "it reserved full liberty to the Japanese to carry on the War in Formosa, the only place where the season was favourable for operations." Now the period covered by the armistice was March 30th to April 20th. Every person acquainted with the topographical and climatic condition of Pechihli knows, none better than the writer in *Blackwood's*, that April and May are the very best months in the whole year for moving an army from Shanhaikwan or Taku against Peking. Such an operation above all others China wished to prevent, and precisely for such an operation Japan was preparing when the Shimonoseki conference opened. Hence it is impossible to be more disingenuous than a writer pretending that the armistice was of little value because it did not suspend insignificant operations against a distant island which China was perfectly willing to cede to Japan, while it did suspend the only really fatal blow from which China was shrinking in affright, the capture of her capital. Similar injustice is observable in the writer's allegations that "the Japanese delayed delivering to LI HUNG-CHANG the particulars of their demands, notwithstanding his repeated applications to be furnished with them;" and that "as soon as they had communicated their terms they began to hurry him for his final answer, a full week before the expiry of the armistice." The dates are these:—On March 24th, when the preliminaries of the conference had been barely arranged and the Japanese Plenipotentiaries had definitely announced their intention of stating their terms on the following day the Viceroy received a wound, and became incapacitated to continue the sittings. On March 30th, the armistice was signed. On April 3rd, the Viceroy was able to leave his house in a palanquin. On April 1st, the Japanese terms were explicitly formulated, and on April 10th the Conference was formally re-opened. There was not so much as one hour's unnecessary delay. As for the charge that the Japanese pressed for an answer "a full week before the expiry of the armistice"—namely, after the terms had been under consideration by the Viceroy for 10 days—what if they did? We lay no stress on the Viceroy's repeated fixings, and repeated postponements, of a day for giving his answer. We lay no stress on his requests to have the time of the armistice extended, in the face of Japan's emphatic declarations that extension could not be considered for a moment. We simply accept the explanation advanced by the writer in *Blackwood's*:—"Following the advice given him, LI HUNG-CHANG was delaying his final submission to the

Japanese terms until he should hear positively what had been determined in Berlin." Could any admission be naiver? Li dilly-dallied and shilly-shallied until some sign came from Berlin that he might solemnly sign, on behalf of his EMPEROR, promises that he knew would never be fulfilled! Against this miserable trickery on the part of the Chinese Envoy the writer in *Blackwood's* has not a word to say. All his indignation is reserved for the Japanese Plenipotentiaries who, by refusing to submit to the Viceroy's iterated procrastinations, tried to save their country from becoming the victim of his shameless chicanery. This part of the story is so striking that we quote it in full:—

During the negotiations the anxiety in Peking was intense, for, following the advice given him, Li Hung-chang was delaying his final submission to the Japanese terms until he should hear positively what had been determined in Berlin. The foreign Ministers in Peking were slow to believe in a coalition at all, although the efforts of at least three of them had contributed materially towards it; and they were candidly sceptical as to the possible influence of a retired official on public affairs. The Chinese Ministers, it would seem, in their flurry, had let out what had been till then a secret, that Herr von Brandt was behind the scenes and virtually managing the play. The Tsung-li Yamên was, on the one hand, warned against indulging in false hopes of assistance, and, on the other, it was supported by the confident assurances conveyed through Mr. Detting. The negotiations were going on daily at Shimonoseki, the days of grace were running out, and nothing tangible yet forthcoming. It was no wonder that the nervous ministers at last yielded to pressure and forbade Mr. Detting to occupy himself further in the affair. Whether the message conveying this instruction was "delayed in transmission," or whether the receiver put his blind eye to the telescope, makes no matter, for it fell out that the official announcement that the three Powers had decided to save Liaotung was made to the Yamên very soon after. The deed was done. The word was given to Li Hung-chang at Shimonoseki to sign, and he signed the treaty, well knowing that so far as the territory on the mainland was concerned it was but a Platonic exercise.

Little need be said to emphasize the turpitude of the scandalous transaction here recorded. If LI HUNG-CHANG signed the Shimonoseki Treaty with the certainty that he was pledging his country to a pretence; if, in the name of his EMPEROR, he purchased peace by paying for it in coin that he knew to be spurious, by ceding Liaotung after the Tsung-li Yamên had received an official announcement that the Three European Powers would save the peninsula—if he did these things, he added to the annals of his country the most disgraceful chapter that has yet disfigured them. But can we believe the tale? Observe what it involves. In the first place, it involves the hypothesis that Germany, Russia, and France officially conveyed to the Chinese Government a promise that they would guarantee China against the consequence of a deliberate act of the grossest perfidy toward Japan. In the second place, it involves the hypothesis that Germany, Russia, and France, by intimating their resolve to China and concealing it from Japan, contrived the conclusion of a treaty which they had fully resolved to destroy. In the third place, it involves the hypothesis that Germany, Russia, and France wilfully

regulated their action so as to cause a maximum of embarrassment and humiliation to Japan, inasmuch as they could have informed her of their Liaotung resolve before the signing of the Treaty, but withheld the information until after not only the Treaty's signature but even its ratification by the MIKADO. Not one of these hypotheses is tenable. We have thought that Germany adopted a mistaken line of policy with regard to Liaotung, and recent events have not shaken our conviction. We have thought, and do think, that the exigencies of her position in Europe induced her to perform, last March, another of the *volte-faces* by which her international policy as an empire has been disfigured. We have thought, and do think, that before she emerges from the unnatural boat in which she has now embarked, she will find her hands blistered by the oar. But that there has been so much as a shadow of double-dealing on her part, or on the part of either of her associates; or that she has not shaped her policy so as to do the least possible violence to her friendship for Japan, we do not for an instant conceive. The three Powers did not officially communicate to the Tsung-li Yamên, before the signature of the Shimonoseki Treaty, their resolve to erase one of its clauses, and their reason for not making the communication was that no such resolve had yet been definitely taken. They did not convey their resolve about Liaotung to Japan until after the Treaty's ratification by the MIKADO, and their reason for not making the communication sooner was that the resolve had only just been arrived at. They had no hand, act, or part, directly or vicariously, in the wretched trick ascribed to LI HUNG-CHANG by the writer in *Blackwood's*. It is very possible that Herr VON BRANDT, the "confidential correspondent and adviser" of the Chinese Government, keeping keen watch over the progress of events in Berlin, and probably furnished with some instrument to catch the echoes of official doings, was able to predict with practical certainty the *entente* finally established between the three Powers, and to interpret its exact significance. It is also possible that Viceroy Li had been placed in possession of VON BRANDT'S prediction and interpretation before he perpetrated the sham of signing away Liaotung. But that is a mere question of astuteness and contrivance on the part of China's secret agents and of chicanery on the part of her statesmen. To confound it with the acts of great, self-respecting Powers like Germany, France, and Russia, is an outrage.

v.

If the political insight of *Blackwood's* essayist were equal to his literary ability, and if his historical accuracy were on a par with his elegance of diction, his work would excite very much greater interest.

At any rate, his appreciations as to England's present position are worthy of consideration. She has lost her leadership in the East, he tells us, by refusing to join the coercive coalition of the three Powers. How are we to reconcile that assertion with the fact that the invitation to join came from Germany? Had Russia, France, and Germany any intention of placing themselves under England's leadership—Russia, whose sole purpose was to free her frontiers from obstructions such as England has always tried to place there; Germany, whose policy was simply to placate Russia by furthering her projects, and to dilute the Franco-Russian *entente*; France, whose aim was to establish a fresh lien upon Russian friendship that she might utilize it against Germany and England? It seems to us that to ally herself with such a triplet of partners would have been England's most emphatic method of surrendering her leadership in the East. She retains her independence, and with it she retains her leadership, for to suppose that even the Triple Alliance is competent to control the destinies of the Orient in defiance of England, is an assumption that no open-eyed publicist can accept.

But we are told that "the net outcome of Great Britain's action and inaction has been to place China under a Russian protectorate." In a sense that seems true, but it is a superficial sense. France has lent money to China on the security of a bill endorsed by Russia. Germany, though a member of the alliance, has been carefully excluded from the arrangement. Would England's membership have guaranteed her against similar exclusion? And even as things stand, what is the prospect? It is safe to assume that to the endorser of the bill is reserved the privilege of recovering from the debtor. One of these days, therefore, we may see Russia driven to exact in kind an equivalent for what has been lent in cash. But England is the financial centre of the world. If British material interests in China are exposed to any serious danger in connection with a financial problem, the solution will be found in London, not in St. Petersburg. Again, Russia's expansion in districts that invite civilized control concerns Great Britain chiefly in the fact that it signifies the spread of a policy of commercial exclusiveness. If Russia is to expand territorially into China, England's acquiescence will simply mean that she finds a full equivalent. That may be a bad day for China, but England certainly will not emerge second-best from the complication. We do not see how Great Britain's association with Russia, Germany, and France at the present juncture could facilitate her proceedings at that other time. What we do see is that she could never have become China's creditor after the manner adopted by France and Russia. The British Government no longer plays the part of money-lender to foreign na-

tions. In that field, it does not compete, and whether the alliance had been triple or quadruple, the official financing of Russia and France could scarcely have been prevented if China were a consenting party.

Another count upon which England's sagacity is arraigned is this:—"If it should hereafter turn out that after being disappointed in the Chinese, she should be now making the greater mistake of relying on the Japanese, to keep Korea, she will neither receive nor be deserving of sympathy for a second time building on the sands a house which it is too late to think of building at all." The "greater mistake of relying on Japan" can mean only that Japan is less trustworthy than China for such a purpose. That is obviously untrue. Japan's military potency was not less clearly demonstrated by the recent war than China's impotence. As to which of the two Powers is the more capable for belligerent purposes, there can not be a moment's doubt. Japan represents, even to-day, a growing force that any European Power would hesitate to defy. Five years hence, she will be able to take the field with a thoroughly equipped, well disciplined, and high-spirited army, a quarter of a million strong, and to put to sea with a navy more formidable than any Western State could easily assemble in these waters. China, on the other hand, represents an effete cripple that the pettiest Power in the West need not fear to encounter. This difference acquires no elaboration: it is self-evident and universally admitted. To talk of building a house on the sand because Japan is preferred to China for a foundation, is mere audacity.

Let us pass from the vague, if pretty, verbiage of the writer in *Blackwood's* to the practical question, against whom is Korea to be kept? Against Russia, will be the immediate answer. Listen, however, to what this same writer tells us elsewhere about Russia:—"In this connection it is important to note that the views of Russian strategists respecting the occupation of Korea have undergone considerable modification in recent years. They have, in fact, arrived at the conclusion that, having regard to its numerous harbours, the peninsula could not be defended against a strong naval Power, and that it would be impolitic for Russia to compromise herself by attempting to hold the country." If that be so, then England need not give herself any concern about the contingency of Russia's seizing Korea, and since she certainly would not object to Japan's occupation of it, all source of trouble seems to be removed. But *Blackwood's* essayist must not be held fast to each and every one of his dicta. His essay is, in fact, a compilation of separate propositions, individually logical and consistent enough, but collectively incongruous and conflicting. If he tells us, in one place, that Russia has abandoned all

idea of aggression in Korea, he bases his arguments in another on the assumption that to keep her out of it should be a guiding purpose of British diplomacy. It is important to consider, then, whether that purpose was really impaired by the action of the Triple Alliance, or by England's "isolation."

In advising Japan to surrender Liaotung, the main contention of the three Powers was that, if the Peninsula of the Regent's Sword and the northern littoral of the Yellow Sea were incorporated in the dominions of Japan, the independence of Korea would become illusory. An alliance, the alleged object of which is to preserve the independence of Korea, cannot, of course, survive any violation of that object by one of the allies, and it thus appears that if England has anything to gain by the conservation of the Korean peninsula, the three Powers are working in her interests so long as they remain united. As for the contingency of the union's dissolution owing to a departure of one or more of the units from the *raison d'être* of the combination, it will scarcely be pretended, we imagine, that the independence of action reserved to herself by Great Britain can impair her ability to control the results of such a contingency. Thus the position is this:—Russia, in order to avert the danger of Korea's absorption by Japan, has secured the aid of two European Powers, and has constructively pledged herself with them to maintain Korea's independence. To Great Britain the main desideratum in this particular field of her foreign affairs is that the Korean peninsula should not fall into Russia's hands, its absorption by Japan being a conjuncture that she certainly would not regret. Thus, whether the Triple Alliance fail or succeed in its purpose, England's interests are equally served, and should the alliance be dissolved owing to Russia's passage from a conservative to an aggressive rôle, England will be free to adopt whatever course the circumstances dictate.

As we read *Blackwood's* essay we are forcibly reminded that any stick does to beat a dog. The writer has set himself the task of administering a drubbing to British diplomats, and it matters not a whit to him how ill-assorted may be the clubs that he collects for the operation. He maintains that "it ought to have been the constant aim of our political strategy to win China to a common purpose with ourselves," that purpose being to dam the tide of Russian aggression; but he denounces the unwisdom of "purchasing the good-will of the newly-arisen Japan, and encouraging her to become the barrier against Russia at the price of alienation from the Christian Powers." Is China then among the Christian Powers, and has her attitude toward foreigners and Christianity, or her display of military prowess, entitled her to be preferred to Japan as a friend or an ally? Again, *Blackwood's*

contributor, in solemn language, adjures his country's statesmen to reflect whether in their recent conduct, "they have been influenced by present convenience, or whether they have duly considered the day after to-morrow;" yet in condemning them elsewhere for not averting the war by joining with Russia to neutralize Korea, he says:—"However much opposed the ultimate views of Russia and England might be, 'sufficient for the day is the evil thereof' is a maxim of wisdom which fitted the circumstances exactly." He is quite content, in short, that the policy he advocates should be disfigured by precisely the ephemeral and temporizing blemishes on account of which he condemns the policy to which he is opposed. Yet again, while noting that "Japan can not help being a barrier to Russia," he declares the valuelessness of all "vicarious barriers which depend either on autocratic caprice or national fortune over which we have no control;" thus admitting, in one breath, that Japan possesses the very element on which the trustworthiness of a barrier depends, and, in the next, decrying vicarious barriers generally, Japan included, because they lack that element.

From all these confused criticisms, however, the charge that England has blundered in her Oriental policy emerges clearly enough. She has stood aloof from an alliance formed, according to the appreciation of the writer himself, chiefly for the sake of Russia: an alliance to which Germany and France belong, the former, because she wants to placate Russia by serving her in opposition to what Great Britain has always regarded as her interests; the latter, because she hopes by Russia's coöperation to force England's hand in other quarters; an alliance from which its leader deliberately worked to exclude Great Britain; an alliance the purpose of which is, first, to check the expansion of a Power that has given evidence of great military capacity and is naturally destined to stand with England across Russia's southward path, and secondly, to preserve the integrity of an empire that has been convicted of utter military impotence and is obviously doomed to fall to pieces. Such is the blunder perpetrated by British diplomacy; the blunder that has procured for England the honour of being "reviled by the continental press for her egotistic policy of abstention."

There remains one disaster resulting from England's refusal to join the Triple alliance: "German commerce has been given an incalculable advantage" in China. Here at last we seem to be on tangible ground. If Germany's commercial position has been "incalculably" bettered in comparison with England's, there should be no difficulty in explaining how such a result has been brought about. The discussion of trade affairs belongs to the solid ground of sober common-sense, not to the nebulous region of political theories.

In what respect has German commerce been given an incalculable advantage in China? Two motives, and two only, are assigned by *Blackwood's* contributor for the anti-Japanese movement among the trading classes of Germany. The first is that "the most formidable opposition to German industries was threatened from the competition of Japan." Such is the statement that business men are asked to accept as a rational and comprehensible *exposé* of the situation! But how in the name of the commonest sense would Japanese competition be assisted by the occupation of the Liaotung Peninsula? So far as the inhabitants of the Peninsula are concerned, they might in time come to purchase their imports entirely from Japan. But that could not matter one mark to Germany. She sells nothing to the Manchurians, and has not the remotest prospect of ever selling anything to them. Certain writers have been so thoughtless as to pretend that if Japan held Liaotung, she would command the Gulf of Petchihli, and could therefore close China's markets to the outer nations. It is unnecessary to pay serious attention to such silly chimeras. In any case, where is the "incalculable advantage" that German commerce has gained? If Japan's industrial competition in Chinese markets is checked by depriving her of the Liaotung Peninsula, Germany will enjoy no monopoly of the advantage. The absence of a new competitor must be alike beneficial to all China's foreign purveyors in proportion to the volume of their sales, which means that it must benefit Great Britain above all others. But the whole hypothesis is ridiculous. To allege that level-headed German merchants were carried away by the vertigo of imagining that Japan plus Liaotung would be a more formidable industrial competitor in Chinese markets than Japan minus Liaotung, is one of the most comical romances conceivable. If any shallow apprehension ever tormented a German merchant lest Japan's victories over China might be employed to obtain special commercial privileges for the victor and to hamper her competitors by conventional disabilities, he might have learned in a moment at the Berlin Foreign Office that between him and such an alarming contingency there stands the impassable barrier of a most-favoured-nation clause. Finally, we are not entirely dependent upon abstract reasoning for our conclusions in this matter: we have some concrete facts to guide us. We see that the first effect of the Shimonoseki Treaty has been to provide a large market for the employment of British—not German—capital in the field of industrial enterprise in China. We see that its second effect has been to open to foreign trade several new centres of consumption and production, and experience justifies us in predicting that whether the benefits thus conferred on commerce be many or few, the share reaped by England will

certainly not be second to that of any Power. Hence, from every point of view, "the incalculable advantage" conferred on German commerce in China by Great Britain's abstention from the Triple Alliance is so illusory that no sane person can be suspected of honestly crediting it.

There remain always Herr KRUPP and his "repeat orders." But need such things be counted among incentives to national action? Besides, it does not seem so certain that even Essen will have "an incalculable advantage" in commerce. China had large supplies of German arms and German ammunition during the recent war. The result was that at the end she set herself to manufacture jingals after her own old fashioned types, alleging that she could, at all events, trust these weapons to go off. Germany's commerce cannot owe much of its "incalculable advantage" to the advertisement it received in China last year.

PASTEUR AND THE THEORY OF FERMENTATION.

THE name of LOUIS PASTEUR is indissolubly connected with one of the greatest advances of nineteenth century science, the modern theory of fermentation. The enormous importance of the results of the application of this theory to the arts and manufactures and to medicine and surgery justifies a short review of the nature of his discoveries and of their practical results. At the outset it may be well to give some idea of what was understood by fermentation before the days of PASTEUR. Two of the oldest arts of practical life are the baking of bread and the manufacture of intoxicating liquors. Constant familiarity with the processes of these arts had, to most people, deprived them of their singularity; but to many thoughtful minds the peculiar changes that were summed up under the name fermentation were always a source both of interest and perplexity. The illustrious LAVOISIER was one of the first to undertake accurate chemical researches into the nature of the fermentative process, and two other distinguished French chemists, THENARD and GAY LUSSAC, followed in his footsteps. In this way, with the light of the chemical knowledge of the time, a fairly accurate understanding was obtained of the changes that fermenting substances undergo; but the true cause of those changes remained entirely unknown prior to the researches of PASTEUR. In order to get an exact idea of the views respecting fermentation that prevailed in pre-Pasteurian days, we have referred to the third edition of URE'S well-known Dictionary of Chemistry, published in 1827—when PASTEUR was five years old. We quote from the article "Fermentation."

"When aqueous combinations of vegetable or animal matter are exposed to ordinary atmospherical temperatures, they

speedily undergo spontaneous changes, to which the generic name of fermentation has been given." (The writer then alludes briefly to the two principal varieties of fermentation—vinous and acetous,—and continues.) "An ulterior change to which all animal and vegetable matter is liable, accompanied by the disengagement of a vast quantity of foetid gases, is called the putrefactive fermentation." (The writer next describes the general character of the vinous fermentation, showing that the principal change is that sugar is split up into alcohol and carbonic acid. He then proceeds to speak of the properties of the yeast that is added to a saccharine solution to excite fermentative changes.) "Boiling water speedily deprives yeast of the power of exciting fermentation. . . . By that heat, the ferment does not appear to lose any of its constituents, or to acquire others. . . .

From THENARD'S researches, the fermenting principle of yeast seems to be of a caseous or glutinous nature. . . . It is not clearly ascertained what the yeast or ferment performs in this operation. It seems probable that the fermentative process in considerable masses would be carried on progressively from the surface downwards; and would, perhaps, be completed in one part before it has perfectly commenced in another, if the yeast, which is already in a state of fermentation, did not cause the process to begin in every part at once."

What the writer meant by this cryptic utterance with which he concluded his article, we must leave to the ingenuity of our readers to determine. We doubt if he himself knew clearly what he meant. It was left for PASTEUR "to ascertain clearly what the yeast or ferment performs in this operation."

Briefly stated, the discoveries of PASTEUR in connexion with vinous fermentation amount to this. The yeast or ferment is a living organism. When it is added to a saccharine solution it grows and multiplies, and the decomposition of the sugar into alcohol and carbonic acid is a manifestation of its vital activity. It may be said roughly (for the comparison is not exact), that the sugar is the food of the yeast, and that the alcohol and the carbonic acid are excrementitious products. When the percentage of alcohol in the solution rises beyond a certain point, the growth of the yeast plant is inhibited by the product of its own activity, and it passes into an inactive condition. In the dried state it may be preserved indefinitely, to renew its activity when it once more finds itself in a suitable medium. It would require a large volume merely to summarise all the fruits of this discovery. We can here do no more than allude shortly to two departments of knowledge in which its developments have been more especially striking. It is hardly too much to say that medicine and surgery

have been revolutionised by applications of PASTEUR'S theory of fermentation.

That the changes known as putrefaction were of essentially the same character as those of vinous and acetous fermentation had been recognized long prior to PASTEUR'S discovery of the organized nature of the yeast ferment. The relation is clearly pointed out in the article in URE'S Dictionary from which the above quotations were made. Before PASTEUR'S day also it must have been noticed by all observant surgeons that putrefactive changes in operation in accidental wounds were associated with serious illness and frequently with the death of the patient. It was, however, reserved for LISTER to determine the true nature of these conditions, and to show how they may be prevented. LISTER'S work was an extension of that of PASTEUR. He established that putrefactive processes in a wound are caused by the development in it of minute organisms; that these organisms are in most instances introduced into the wound from without the body, and that, were they not introduced, these putrefactive changes would not occur; that there are means at our disposal by which the vitality of these organisms may be destroyed, and their entrance into a wound in an active state effectually prevented, or their influence combated if they be present; and finally, that the dangerous local and constitutional complications of wounds may thus be entirely prevented. The conclusions of LISTER, and the practice he based upon them, have now been almost universally accepted, with beneficial results that no one but an expert is in a position fully to understand. The antiseptic system has served, not merely to mitigate the suffering and danger of ordinary injuries and operations; it has further rendered all kinds of pain-preventing and life-saving operations possible that the older surgeons would never have dreamed of attempting.

The application of PASTEUR'S theory of fermentation to medicine has been no less fruitful. The resemblance of the morbid processes of certain diseases to the process of fermentation had long been the subject of comment and speculation; and when a knowledge of PASTEUR'S researches became diffused among pathological investigators, it naturally occurred to many that the contagion of such diseases as small-pox and relapsing fever might also be of the nature of a living organism. The truth of this hypothesis has in recent years been proved beyond dispute; and though the practical applications of what is currently known as "the germ theory" have been hitherto less valuable in medicine than in surgery, the future in this direction is full of promise, and new and interesting fields of investigation are continually being opened up. In several diseases that were hitherto the reproach of therapeutics, valuable methods

of treatment have been obtained; and in several other diseases, methods based on applications of the germ theory are still in the experimental stage. In this country the very latest of these methods has been put in practice during the last few months. We refer, of course, to KITASATO'S inoculations for cholera.

Much, then, as the present generation owes to PASTEUR, there is no doubt that posterity will owe far more; and his name will always be one of those most highly honoured by students of the history of science. Yet PASTEUR himself, we suppose, at the time when he undertook his researches on the nature of fermentation, can not have foreseen to any appreciable degree the vast importance of the results to which those researches would lead. How trifling they must have seemed to many of his friends! "Of some theoretical interest," they may have said, "to a brewer, though hardly likely to help one to brew better beer, your investigations appear unworthy to engage the serious attention of a man of science." In our own generation, indeed, which has seen so many great results from small beginnings, it is hardly necessary to insist upon the fact that no investigation should be condemned as trifling simply on the ground that no one can see how it can be of any practical benefit; but earlier investigators suffered much from the ill-concealed scorn of their more "practical" contemporaries. It is recorded that one of FARADAY'S friends once found him in his laboratory, hard at work on a complicated piece of mechanism. After the investigator had explained the nature of his machine, his friend said, "Yes, it's very pretty; but of what use is it?" "Use," replied FARADAY, "of what use is a baby? It is only of use for what it will grow to!" Students of electrical science are all familiar with the somewhat formidable adults that have grown out of FARADAY'S babies. An investigator in another branch of knowledge, KANT, the originator of the greatest reform ever effected in philosophy, must have been suffering from similar ignorant criticism when he wrote: "Nothing would be more prejudicial to the advancement of knowledge than that curiosity which, before entering on any researches, wishes to know beforehand the advantages likely to accrue from them, though quite unable as yet to form the least conception of such advantages, even though they were placed before our eyes."

The promoters of a railway between Kokura and Kumata, via Yobuno, Kanabe, and Kabaru, Fukuoka Prefecture, have petitioned the Authorities for permission to establish a company with a capital of yen 1,500,000. The head office is to be established at Kokura. It is stated that the project will prove a success as the line will skirt a number of coal mines owned by Messrs. Mitsui, Furukawa, Hara, and Fukita. The total length of the line is 29 miles and 4 chains.—*Fiji Shimpō*.

THE CHRIST ACCORDING TO PROPHECY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is astonishing in these days of inquiry and investigation to find any one as far behind the age as Mr. J.M. McCaleb, who, in a letter contributed to your columns on the 27th ultimo, endeavours to show that the coming of Christ was predicted in the writings of the Old Testament. Every one of the references which he quotes as "predictions" of Christ have been dealt with repeatedly for the last hundred years, and their futility as predictions exposed, until the more wary among the clerical members of the Christian Church have come to carefully avoid the subject of prophecy. What are the facts of the case with regard to the Messianic ideas which we find in the so-called prophets? Whenever the Jews, as was so frequently the case with this divinely protected people, were in bondage in another nation, there were always found some among them who did not lose hope, and who predicted that a deliverer should arise, a Joshua who should restore their ancient glories, and, coming of the line of David, raise the nation again to the pinnacle of glory and prosperity which it was supposed to have originally occupied. In the days when the Christ legend arose, and gathered materials from various sources as it grew, Judea was again in bondage to another nation—this time to the Romans—and there were many Jesuses besides the Gospel Jesus, for whom in each case it was claimed that he was the coming deliverer of the nation—the Messiah who should establish his kingdom upon the throne of David "even for ever." Naturally it was endeavoured by the adherents of each sect to show that the "coming" of their leader had been predicted in the sacred writings of the Jews; and so passages were wrested from their context, vague poetical allusions were credited with specific meanings, and the most astonishing interpretations were given to the plainest language. In days when an intimate acquaintance with the sacred writings was confined to a few, these fraudulent attempts met with success. But they never imposed upon the mass of learned Jews, who refuse to-day to accept the Gospel Jesus as the Messiah on the trivial grounds advanced in the "argument from prophecy."

To-day it is possible for each to examine and test the so-called "predictions" for himself, so that it is simply extraordinary that the most ignorant of Christian advocates can still attempt to maintain the thesis which imposed on the early Church. Let us examine one of these so-called predictions as offering an example of the folly or worse involved in the "prophetic" argument. Mr. McCaleb quotes the famous passage of Isaiah (vii. 14) which reads: "Therefore the Lord himself shall give you a sign; Behold, a virgin shall conceive, and bear a son, and shall call his name Immanuel." He says this is a prediction of Christ. Has Mr. McCaleb ever read the context of this passage? Does he know anything of the history of Judea and Israel during the time of Isaiah? It would seem not. If, then, he will refer to the headings of the chapter in which the above-quoted passage occurs, obligingly supplied by the translators and therefore not "inspired," he will find that Ahaz, then reigning over Judea, was troubled with fear of Rezin (King of Assyria), and Pekah (King of Judah). On reading the complete chapter, it will be found that Ahaz is represented as refusing to ask a sign of the Lord that he would be victorious in the impending conflict, "therefore," says Isaiah, "the Lord himself shall give you a sign; Behold a virgin shall conceive, and bear a son, and shall call his name Immanuel. Butter and honey shall he eat, that he may know to refuse the evil, and choose the good. For before the child shall know to refuse the evil, and choose the good, the land that thou abhorrest shall be forsaken of both her kings." And yet, in face of such a distinct limitation of the "prophecy" to a certain brief period, Mr. McCaleb and his like profess to regard these words as a prediction of Christ, who was not even called Immanuel by his mother, and to whom the words in italics can have no reference by any process of straining whatever. Fraud or folly could not go much further. Of what possible benefit to Ahaz, as a sign that he would be victorious in the impending struggle, could have been the birth of a child 742 years later? Again, if Mr. McCaleb will take the trouble to read the next chapter (Isaiah viii. 1-4), he will find the "sign" once more referred to in such a way as to support the contention that the

word translated "virgin" in the previous chapter should properly be translated a "young woman." The passage is of such a nature as to be unfitted for public quotation outside religious circles, but on reference it will be found that an account is actually given of the conception and birth of the child which is to prove a sign to Ahaz. The child's name is now given not as Immanuel, however, but as Maher-shalal-hash-baz, and is the subject of the prediction: "For before the child shall have knowledge to cry, my father, my mother, the riches of Damascus and the spoil of Samaria shall be taken away before the king of Assyria" (Isaiah viii. 4). The "prophecy," therefore, clearly has reference to an incident which should occur in the prophet's own time, and yet it is calmly quoted as predicting an event which, according to Biblical chronology, occurred 742 years later!

Such is one example of the fashion in which words are torn from their context and rendered unmeaning in order to support the contention that Christ "came in fulfilment of a certain line of prophecy that had long since gone before upon him."

It is difficult, as I pointed out some years ago in the columns of the *Japan Mail*, to decide how far the attitude of those who revive these long-exploded contentions, outside the narrow limits of religious sects, is due to sheer ignorance or to a deliberate attempt to throw dust in the eyes of the unthinking, and I regret that in the case of Mr. McCaleb there should be evidence which raises serious doubts as to his controversial integrity. In his recent letter, not content with attributing such names as "Wonderful," "Counsellor," &c., occurring in the Old Testament, to Jesus Christ, he adds the actual name "Christ," thus implying that the alleged founder of Christianity was predicted even by name. It is difficult to characterise such a statement in language which shall not exceed the limits known as parliamentary, as Mr. McCaleb, if he knows anything of the subject of his letter, must be aware that it is untrue. The word "Christ" nowhere appears in any book of the Old Testament.

There is, however, no necessity to examine Mr. McCaleb's contentions further in detail. It is surely superfluous to refer to the absurd contradiction involved in the assertion that Christ was born of a virgin, and that he was nevertheless (by two inconsistent genealogies) of the House of David; or to do more than point out that Christ never sat on the "throne of David," and that it is not true that "of the increase of his Government and peace there [has] been no end." "It need hardly be added," says Mr. McCaleb, referring to a passage in Daniel, "that in prophecy a day is taken for a year," and with this delightful insight into the fashion in which language is dealt with to suit preconceived opinions, Mr. McCaleb on prophecy may be dismissed. The mere statement of his contentions is indeed sufficient confutation, and his letter is interesting simply as showing the methods by which it is sought even to-day to establish the doctrines of Christianity.

Enclosing my card, I remain, Yours faithfully,

SECULARIAN.

Kobe, October 2nd, 1895.

"CHINESE CHARACTERS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you please allow me a final word in reply to a letter to the *Japan Mail* of the 26th inst. I am glad to find that the critic admits that his first letter was not free from errors and misprints. But his admissions might have been a little more candid. He begins by saying: "I admit that the author is right as to 策—this form being better than 策." As I pointed out in my previous letter, my form is not "better than 策." It is the only correct one, 策 being another character with a totally different meaning.

卐 he says is not a Chinese character. Williams says it is. The critic says that 卐 is "the swastika." Williams says 卐 is the "swastika." My form is on p. 73 of the *Man-tsu-ji-in* Gioku-hen (萬通字林玉編).

My work was compiled almost entirely from Japanese sources, but when the critic produced his arguments about "original" forms, I referred to Williams and found that he agreed with my Japanese authorities, as stated before. If he will not acknowledge the authority of the Kōki-jiten, Gioku Hen, and other Japanese dictionaries I have quoted, there is nothing further to be said.

He says that 汙 was a misprint. But misprints on the part of such a capacious critic are inexcusable, especially when the result is that one character is transformed into another of entirely different meaning. I see he likewise, but only in a foot-

note, admits that he was wrong as regards 忍 and 忍. He says they appear in his first letter to have been "inverted by accident." A little more care might have prevented such inversion.

His remarks about the Radicals I have already fully discussed, so will not repeat them. I notice that, though he makes the admission, "it is true that in most dictionaries 渠 is placed under 渠," he still says that it more naturally belongs to 木. This is only his opinion. I prefer to follow "most dictionaries."

"Our ideas of what are worthless and what are valuable *Yomi* differ widely." They do, nor do I see reason for regret in such difference. My own ideas of *Yomi* are founded upon my reading. On this, as on other points, I refer him to my previous reply.

But to come to the principal part of his letter on the subject of the "on" of several characters, upon which he flatly contradicts me. "I know of no 'example where 差 is read shi.'" Perhaps not, but it is not a question of his knowledge or ignorance, but of fact. I propose to give examples of the use of the disputed "on" in each one of the characters he mentions. Extension of reading will enable him also to meet with them.

"差 never read shi." He is wrong. I have before me a long list of *jukufi* in which this character is read shi, but will only give one or two examples. Examples:—差殊, shu-shu, 差差 shi-shi. Authority, 頭字韻. "And so on." I say "and so on," because I could give numerous examples besides. 差 is rarely read sha, see Gubbins' Dictionary, p. 776. *Shabetsu* is colloquial for *sabetsu*, as *samisen* is colloquially read *shamisen*.

"惻 not read chū." Wrong. Example 惻悵, chūchō, kanashimi nageku.

"拐 never read kai." Wrong. Examples 拐帶 kai-tai, mochinige, 拐騙 kai-hen, tobinoru.

"旁 not read hō." Wrong. Examples 旁午 hō-go, kuichigai irikumu. 旁脉 hō-rai, amaneku mitu.

The authority for the examples to the last four characters is 大増補漢語解大全 (*Tai-sō-ho-Kungo-kai-daizen*).

牀 is read shō. Examples 牀蓐 shō-joku, 牀座 shō za. Authority 頭字韻.

竄 is read san. Examples 竄匿 san juku, nigeakuru, 竄殛 san kioku, korosu.

"曩 not read dō or nō." It is read both dō and nō. The former is the *Kan On*, the latter the *Go On*. Examples 曩昔 nō seki or dō seki 曩者 nō sha or dō sha. Authority.—*Tai-sō ho Kungo-kai-daizen*.

稔 is read shin. Examples 稔熟, Shin-juku, 登稔 tō-shin.

箴 is read ha. Examples 箴筴 ha-ki, 箴揚 ha yō.

播 is read ha. Examples 播穀 ha koku, tane-kasu, 播棄 ha-ki, suteru. See 頭字韻.

符 is read shū. Examples 巡符 Junshū, 冬符 tōshū. Authority for the above, 韻府一隅.

I have already given an example of the use of the remaining character, 撤.

He makes the remark, "Then some dictionaries are wrong," in connection with the character 旁. I prefer, however, to "err" in the company of dictionaries than to be "right" with this critic. Perhaps he proposes himself to bring out a standard dictionary.

He admits the serviceability of my selection of *nanori* after all. He says, "setting apart this suggestion, I do not find fault with the list in question." Acknowledging, as he does, the fact that if a student can read my list, he can read most Japanese *nanori*, such an admission seems made somewhat grudgingly.

Yours truly, A. H. L.
Yokohama, September 30th, 1895.

AUSTRALIA AND JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have the honour to inform you that, attracted by the enormous expansion in the trade of the Japanese Empire, the Government of this country has considered it desirable to take steps to increase the commerce between Japan and South Australia, and with that object in view have secured from our Governor a Commission authorising me to visit the Japanese Empire on their behalf.

The Mercantile community here, seeing what mutual benefit direct commerce would be to both countries, have heartily entered into the project,

and have entrusted me with trial shipments of Wool, Wines, Brandy, Flour, Jams, Dried Fruits, Preserved Fruits, Canned Meats, Bacon, Hams, Butter, Biscuits, Honey, Cordials, Eucalyptus Oil, Olive Oil, Hay, Chaff, Tallow, Soap, Hides, Leather, Bones, Wattle Bark for tanning, Cement, Ostrich Feathers, &c., for the purpose of introducing South Australian Products and Manufactures into the markets of Japan, and in return I shall endeavour, whilst in the country, to select local products for the purpose of introducing them to the notice of my countrymen.

I intend to leave Adelaide in a few days and hope to arrive in Japan shortly after your receipt of this. I shall esteem it a favour shown to the Government which I am representing if you will be good enough to refer to the purpose of my journey in your newspaper, in order that manufacturers and others among your readers may have an opportunity of entering into commercial negotiations with me on behalf of the South Australian merchants and producers.

I have the honour to be, Sir, your obed. servant,
JOHN LANGDON PARSONS.

COLONEL COCKERILL AND THE MISSIONARY QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR.—In your issue of the 2nd inst., you reprint from the *New York Herald* a letter by Colonel Cockerill on the subject of missionary enterprise, and those who disapprove of it on broad grounds of principle and expediency will alike regret the appearance of a letter dealing with the subject in which generalities are neglected in favour of idle little tattle. It is unwise to treat of such a question as missionary enterprise "without thorough investigation." More especially is it unwise and likewise unjust without thorough investigation to make such charges as those contained in the following paragraph.

At Newchwang last winter, when the United States gunboat *Petrel* was there, the missionaries, who were forced to take refuge there on account of the war, made themselves very obnoxious by their querulousness and constant complaining. After the fighting in that vicinity they all went to work diligently, so an officer informs me, to hunt up "atrocities," and many of the unfounded stories sent out about the cruelty of the Japanese were traced to these people who were inflamed against the Japanese because they had pushed the war to their abiding places, thereby discomforting them.

Colonel Cockerill himself tells us, in the paragraph immediately preceding that just quoted, that a specific accusation of drunkenness against the officers and men of an American men-of-war was based on the statement of a missionary woman, who had heard from one of her servants, who had heard from another servant, that she had seen two men-of-war's men of unknown nationality drunk in a shop. Colonel Cockerill immediately follows the example of the missionary woman by making a serious accusation against a large body of persons on the ground "so an officer informed him." It did not appear to occur to him that in a case of this kind the need for verification was just as urgent as in the case of a charge of drunkenness against the officers and men of an American men-of-war. Tastes differ, but for my part I should prefer to be accused of drunkenness than to be accused of a petty spitefulness that led me into a deliberate attempt to blacken by false or ill-proved charges the character of the Japanese army. Yet this latter accusation is one which, "without thorough investigation," Colonel Cockerill has thought fit to record against the missionaries resident in Newchwang last winter.

The conduct of these missionaries is a matter concerning which I am in a position to speak with some authority, since, in the capacity of Special Correspondent of *The Times*, I was in Newchwang from March 9th to April 25th. Prior to March 9th, the missionaries may, for aught I know to the contrary, have "made themselves very obnoxious by their querulousness and constant complaining;" but if so, it is a very remarkable fact that subsequently, when the Japanese, against whom, according to Colonel Cockerill's informant, "they were inflamed," occupied the city, these same missionaries should have become as cheerful and good-humoured a set of people as it has ever been my good fortune to meet.

The statement of Colonel Cockerill's informant that after the fighting in the vicinity of Newchwang, the missionaries "all went to work diligently to hunt up 'atrocities,' and many of the unfounded stories sent out about the cruelty of the Japanese were traced to these people," I can only characterise as a disgraceful falsehood. In my intercourse with missionaries whom I had the pleasure of meeting at Newchwang, I was particularly impressed with the manner in which they tried to see the best qualities of the combatants of both sides, and refrained from unjust condemna-

tion of either belligerent. A few of the missionaries, as well as some of the officers of the two merc-of-war in the port, and also certain other foreign residents of Newchwang, visited the field of Tien-chwang-tai shortly after the battle. These gentlemen in conversation described what they saw there, and some of them from what they saw drew inferences somewhat to the discredit of the Japanese; but that there was any attempt on the part of any foreign resident in Newchwang, missionary or other, to "hunt up atrocities," I categorically deny. To the best of my knowledge, only three detailed statements regarding the alleged "atrocities" committed by the Japanese in the neighbourhood of Newchwang have appeared in print. One of these was from my own pen, and was published in your own columns. Another appeared in the *North China Daily News*. It was written by a resident of Newchwang whose guest I had the honour to be at the time. In it he described what he had seen at the battle-field of Tien-chwang-tai, and also, if I remember rightly, a few facts reported by others that had not come under his own immediate observation, and proceeded to draw certain inferences unfavourable to the humanity of the Japanese. Of this writer's own facts there can be no doubt whatever. He is a man of unimpeachable honesty, and a trained observer. With his inferences I myself did not wholly agree. But the most important point, with regard to the accusation contained in Colonel Cockerill's letter, is that this gentleman is not a missionary. The third published statement concerning the alleged "atrocities" appeared also in the *North China Daily News*. It was an editorial article modifying the condemnation that had been pronounced by the paper on the strength of the letter previously published from its correspondent in Newchwang. The article was based on information given personally to the editor by a British Naval officer who was in Newchwang at the time of the Japanese occupation, and was one of those who visited the field of Tien-chwang-tai shortly after the battle.

It will be seen that the statement in Colonel Cockerill's letter to the effect that the missionaries in Newchwang set to work to hunt up "atrocities," and circulated unfounded stories regarding the cruelty of the Japanese, entirely breaks down. It is Colonel Cockerill, on the contrary, who, by way of showing his sympathy with the missionaries, circulates unfounded stories with regard to their conduct in Newchwang. If I have written at considerable length, it is because I hope to convince him, as well as your readers, of his error.

I am, Sir, yours truly,
MAURICE EDEN PAUL.
Nagasaki, October 5th, 1895.

FILICES AT KYOTO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Several of your readers have inquired about my list of Filices at Kyoto, and as I am on the verge of departure from Japan I venture to send you the list for wider circulation. With the exception of a very few species which were found somewhat beyond the limit, it contains ferns occurring within a radius of ten miles of the city. Species in my herbarium as yet undetermined are excluded.

- Gleichenia Glauca, Hook.
- Gleichenia Dichotoma, Hook.
- Onoclea Germanica, Wild.
- Onoclea Orientalis, Hook.
- Woodsia Manchuriensis, Hook.
- Hymenophyllum Polyanthos, Swartz.
- Hymenophyllum Bubatum, Miq.
- Trichomanes Pavonulum, Poir.
- Trichomanes Japonicum Frauch. et Sav.
- Dicksonia Scabra, Wall.
- Davallia Bullata, Wall.
- Davallia Hirsuta, Sw.
- Davallia Marginalis, Baker.
- Davallia Strigosa, Swartz.
- Davallia Tennifolia, Sw.
- Cystopteris Japonica, Luer.
- Adiantum Monochlamys, Eaton.
- Adiantum Pedatum, L.
- Onychium Japonicum, Kunze.
- Pteris Cretica, L.
- Pteris Semilata, L.
- Pteris Quadrifurcata, Retz.
- Pteris Aquilina, L.
- Lomaria Nipponica, Kunze.
- Lomaria Euphlebia, Kunze.
- Woodwardia Orientalis, Swartz.
- Asplenium Trichomanes, L.
- Asplenium Normale, Don.
- Asplenium Resectum, Sw.
- Asplenium Ruta muraria, L.
- Asplenium Pekinense, Hance.

- Asplenium..... Varians, Hook. et Grev.
- Asplenium..... Incisum, Thunb.
- Asplenium..... Wardii, Hook.
- Asplenium..... Rutae-folium, Kunze.
- Asplenium..... Spinulosum, Miq.

- Lygodium..... Japonicum, Sw.
- Botrychium Ternatum, Sw.

Yours truly,
ARTHUR WILLIS STANFORD.
Kyoto, October 8th, 1895.

YOKOHAMA LITERARY SOCIETY.

Owing no doubt to the inclemency of the weather the annual general meeting of the Yokohama Literary Society, which was held in Van Schaick Hall on Friday evening, was but poorly attended. Mr. J. T. Griffin presided.

In presenting the report the Chairman commented on the number of original papers which had been contributed by members during the last session. A few years back the Society had been content with readings merely, but last session 16 meetings were held and 15 original papers read. In addition to this the services of Mr. Meakin had been secured for a lecture, and this meeting was thrown open to the public, proving highly successful and very interesting.

On the motion of Mr. Booth, seconded by Mr. WILKIN, the following report was taken as read and adopted.

TENTH ANNUAL REPORT, SEASON 1894-1895.

Again the Committee have the pleasure of announcing a prosperous session; the membership having grown to 170 and the Cash-balance to \$304.89.

In accordance with suggestions made at the last Annual Meeting, the subscription was reduced to \$2 for Lady Members. The roll to-day contains the names of 84 Ladies and 86 Gentlemen.

The work of the Society has also been satisfactory. Sixteen Meetings have been held at which fifteen original papers, essays, and lectures, have been given. The Committee also engaged Mr. J. E. Budgett-Meakin to give a lecture on Morocco, which drew a large audience, on 7th December, 1894.

Our Secretary, Mr. Sargent, left us for a trip home, and his position was ably filled by his son, Mr. N. J. Sargent. The remaining members of Committee now tender their resignation with best wishes for the continued prosperity of the Society.

JOHN GRIFFIN,
President.

Yokohama, September 30th, 1895.

LIST OF MEETINGS SEASON 1894-1895.

- No. 143—Oct. 5—Annual Meeting. Election of Officers, &c.
- No. 144—Oct. 19—Essay: "Flowers" Dr. Meacham.
- Address: "Mrs. R. Swain"
- No. 145—Nov. 2—Address: "The Art of Lying" Mr. A. P. Waugh.
- Musical Selections.
- No. 146—Nov. 16—Paper: "Reminiscences of the Indian Mutiny" Col. J. C. Hill
- Paper: "A Night in a Casual Ward" Mr. Tennant.
- No. 147—Nov. 30—Lecture: "Money" Prof. T. H. Terry.
- Address: "Ca Early days in Japan" Dr. Greene.
- No. 148—Dec. 7—Lecture: "Men and Manners in the Sunset Land" Mr. J. E. B. Meakin.
- No. 149—Dec. 14—Paper: "Newspaper Advertisements, Quaint, Curious, and Humorous" Mr. W. F. Page.
- No. 150—Dec. 28—Paper: "Village Choir Minstrelsy" Mr. W. F. Page.
- Special Musical Programme.
- No. 151—Jan. 11—Lecture: "Fiji and its People" Mr. G. H. Seidmore.
- No. 152—Jan. 25—Recitations Mr. H. J. Sharp.
- Instrumental and Vocal Programme.
- No. 153—Feb. 8—Readings Messrs. Tennant, Sargent, Morphy, and C. Griffin.
- No. 154—Feb. 22—Address: "George Washington" Rev. J. H. Ballagh.
- Original Poem: "Fifteen" Mr. F. Staniland.
- No. 155—Mar. 8—Paper: "Oliver Wendell Holmes" Mrs. Rice.
- No. 156—Mar. 22—Lecture: "The ubiquitous Microbe" Dr. Eldridge.
- No. 157—Ap'l. 8—Paper: "The brightest and blackest thing on Earth" Mr. A. J. Wilkin.
- No. 158—Ap'l. 19—Readings (Mr. Page). Recitations Mr. H. J. Sharp

R. & O. E.

Yokohama, September 30th, 1895.

WALTER S. YOUNG, Hon. Treasurer.

Mr. GRIFFIN was then re-elected President; Mrs. MORRIS, Vice-President; Mr. A. H. Lay was elected Secretary; and Mr. F. J. Lias, Treasurer. The Committees were elected as follows:—Literary—Mr. W. F. Page and Mrs. H. Loomis; Music—Mrs. W. W. Campbell, Miss Thomas, Mr. F. Schmid, and Mr. H. M. Arnould; Refreshments—Miss Wilkin, Miss A. Page, Miss K. Page, and Mr. R. S. Sale. Twenty-five new members were then elected on the roll.

During the course of a general discussion, Mr. BROWN proposed that, in view of the flourishing state of the society's finances, Family tickets should be issued at \$10, which should include five members and upwards of a family. Such tickets were issued by similar societies in England and were a great success.

The Rev. E. S. BOOTH seconded, and the resolution was carried unanimously.

The Rev. E. S. BOOTH next moved that, as the Society had now reached a size which told severely on the seating accommodation of the Hall in which it gathered, the membership be limited to 200.

Mr. WILKIN seconded.—Carried.

The Rev. E. S. BOOTH then moved that the alterations in the Constitution of the Society, necessitated by the resolutions carried that evening, be made, and a revised set of rules be printed and circulated, the work of revision being entrusted to Messrs. Page and Wilkin.

The CHAIRMAN seconded.—Carried.

Other suggestions for the well-being of the Society were discussed and the meeting separated.

CRICKET.

BLUFF GARDENS AND TOKYO V. THE WORLD.

The match on Saturday was between teams representing the Bluff Gardens and Tokyo against the World. The weather was perfect for both players and spectators, but the Autumn Regatta naturally had an effect upon the attendance. The World had to go out to field first having lost the toss, and the Revs. Tyng and Chappell went out to bat, facing the bowling of Edwards and Denne. Thirty-eight runs had been placed to the credit of the two first players ere a separation took place. The next few wickets fell rapidly, five being dismissed for 49. After this White and Dickinson were paired and a stand was made, the score being raised by them to 92. Dickinson's total included a five and 4 threes, and White's a five and 3 threes. Bugbird was the only other man on the side to get into double figures, 15. On the whole the fielding was very lifeless and the bowling far from brilliant. The World in their innings did nothing extraordinary.

Denne made 15, which included 2 threes, Libeaud 16, Edwards 13—very quickly compiled—and Johnson 11, not out. Failing light brought the match to an undecided close about half past five, the World having still three wickets to fall. Scores:—

THE KOBE ELEVEN V. THIRTY.

On Saturday afternoon Mr. Hellyer got together thirty men to play the Eleven which is to represent the Model Settlement during the Yokohama Cricket Week. Says the *Kobe Herald*:—The fielding of the Eleven, on the whole, was decidedly good. One or two misses were noticed, but in those cases it was by no means difficult to find an explanation for the seeming fault. As play was not commenced till 2.30, it was rather late when "the crowd" were disposed of and the eleven had consequently to bat in a steadily failing light. Tate and Lucas opened the innings for the Eleven, Pakenham and Chesai bowling. Most of the batsmen went out with the avowed intention of "hitting out," and possibly in consequence of this in a measure several made, but a short stay at the wicket, both Pakenham and Marshall being in very good form. Edwards, from whom much was expected, was unfortunate, Marshall taking his stumps with a ball which was anything but difficult to play. Wilkinson put together 26 before he was caught out by Chesai. Lightfoot, the last man to go out, fell to a ball from Marshall after making things lively for a time by the smart way in which a few runs were snatched. At 5.50 time was called, it being too dark to continue playing. Duff was then nicely set and was hitting out freely. The Thirty made 103; Edwards took 15 wickets for 42 runs; G. Braess 8 for 34; and W. C. K. Lucas 5 for 17. The Eleven scored 85; Tate, 24; Lucas, 11; W. Braess, 2; Wilkinson, 26; Edwards, 6; Duff, 11; Lightfoot, 2; Ross, Scrymgeour, and G. Braess did not bat.

THE JAPANESE IN SIAM.

We have received the following from the *Bangkok Times*, and reproduce it for what it may be worth:—

About February last the Japanese residing in Siam had become so numerous that, with interests likely to increase, they decided on having some kind of consular representation. Chevalier Keun de Hoogerwerf (H.I.N.M. Consul-General) was finally selected and, having consented to act, a petition was sent to the Japanese Government for the necessary authorisation. M. Pavie had just at this time returned to Bangkok and, contriving to meet a leading Japanese resident at the house of Chevalier Keun, next day sent an intimation, through the medium of a certain newspaper office, that he would like an interview with him. On arriving at the French Consulate this gentleman was informed by Pavie that if the Japanese wanted protection he was prepared to give it to them at once; they had simply to go and register themselves. The Japanese representative thanked M. Pavie and informed him that a petition had already been sent to the Japanese Government, and that they could not go back upon what had been done. Subsequently, M. Pavie visited another Japanese and stated that he was willing to register him. He also seems to have, at once, telegraphed to Paris to the effect that it would be

of great political importance that France should undertake the protection of Japanese in Siam; and the Quai d'Orsay seems to have lost no time in telegraphing to its representative in Japan. Meanwhile, M. Devés, of the Bakanon Mine, asked the representative of the Japanese Immigration Co. to supply him with a number of labourers, and, after inquiries, Japanese coolies were recommended to accept his terms. The contract was signed at the French Legation, and there the labourers, 17 in number, were asked to register themselves as French protégés. This they did, and it is thought probable that it was taken advantage of by the French Minister in Japan to represent that Japanese were already registering themselves as French subjects. However this may be, M. de France last Saturday, sent for the leading Japanese here and informed him that France, at the request of the Japanese Government, had consented to represent Japanese interests here, and had instructed him accordingly. The reply to this was that it was incredible that the Japanese Government had made such a request, in view of the indignities France had heaped upon Japan. The Japanese representative also asked M. de France to show him any communication received on the subject. M. de France objected to this as unnecessary, and added that he had already written to the Siamese Foreign Office that he had assumed the protection of the Japanese in Siam. On Saturday the Japanese held a meeting, at which it was decided to petition their Government to send out a duly accredited agent, and a resolution was passed expressing regret and surprise if it should prove true that the French Consul had been appointed to represent them.

Now for the history of those Japanese who had already enrolled themselves as French protégés before going to Bakanon. According to the contract M. Devés was bound to supply them with medical assistance and medicines in case of sickness, and if any one died notice was to be at once given to the Japanese Emigration Co., in Bangkok, so that the remains could be brought here, cremated, and sent back to Japan in accordance with Japanese custom. It was also agreed that a certain percentage of the miners' wages should be paid to the Japanese Emigration Co. These conditions were never complied with. Fever and cholera broke out but all assistance was refused, and 12 of the 17 died, while one of the survivors was a five month's old infant both of whose parents had died. Even quinine was refused the sick people, and the Japanese tramped the surrounding country for long distances in search of Europeans from whom they could obtain it. Eventually one of them, almost dead from fatigue, crawled to an Englishman's residence and there begged piteously for quinine. To his honour be it said, the Englishman provided a full bottle of medicine, refusing any payment, though the poor Japanese pressed upon him the whole of their wealth. The Englishman has since visited Bangkok and made a statement on the subject to Chevalier Keun. Eventually M. Devés was attacked by fever and at once started for Bangkok; but the similarly afflicted Japanese were left behind. The following day the Siamese interpreter accompanying the Japanese told the latter they could return to Bangkok, as there would be no need for their services during Mr. Devés' absence; and without money they started on their long journey. Meanwhile the Directors of the Emigration Co., having heard something of the state of affairs, at once left Bangkok to fetch back their compatriots, whom they found on the way in an almost dying condition. One poor woman had then, for two days, through rain and knee-deep mud carried on her back the corpse of her husband, who had died from exhaustion and neglect. As for the surviving remnant of the party, they reached Bangkok mere skeletons and with marks of privation which will be life-long. The wages due have since been paid, but no redress has been made to the sufferers by the "protectors."

And now for a sequel. M. Jourdan, on behalf of the Wattana Mining Co. subsequently applied to the Directors of the Japanese Emigration Co. for 400 coolies. He was met by a blank refusal, supplemented by the statement that the Bakanon experience would suffice the Japanese for a lifetime. M. Jourdan, we hear, is leaving for Japan in a few days to recruit these 400 labourers, with what chances of success we leave our readers to judge. When the story reached Japan the *Fedilio* was on the point of leaving with about 200 labourers on board, to the order of the Japanese Emigration Co., but the Government at once prohibited their departure and the labourers returned to their homes.

The Japanese in Bangkok, under these circumstances, resent most bitterly having been placed under protection of the French Consulate, especially because of the reflection this appears to cast upon the Siamese Government, from whom they say

they have only received the kindest treatment, particularly so from Phiyas Bhaskarawongse and Surisak, Educational and Agricultural Ministers.

AUSTRALIA AND JAPAN.

Sydney, September 31d.

Yet another Australian commissioner is to visit Japan. If the efforts now being made to promote commercial intercourse between Australia and Japan do not result in the anticipated success, it certainly will not be from a want of special commissioners from the colonies. This time it is South Australia that is moving, and in selecting the Hon. F. S. Parsons as its honorary representative, the Government of that colony has acted wisely. Mr. Parsons is an able and experienced man and evidently entertains an extremely high opinion of the Japanese nation. In the course of an address delivered in Adelaide some little time before the departure of the *Menmuir* from Sydney, Mr. Parsons told his hearers that a large new market for Australians in wool was opening, and they should be ready for the opportunity. Continuing, he said:—Sheep did not thrive in Japan, and as the natives were going in extensively for fabrics the Australians should be alive to the situation. The indigenous fruits were poor, but foreign fruits had been introduced with some success. The Mikado had made a speech in which he stated that if the Japanese were to become competitors with outside countries they must become meat-eaters. That opened up a grand market for the stockowners, especially in the Northern Territory, for frozen meat and mutton. Up to the present, so far as his reading had gone, he had found no trace of any agitation in favour of the single tax or of the progressive land tax, nor had he met with anything that led him to suppose that they had had to resort to village settlements as a solution of any unemployed difficulty, or that it had been found necessary to propose such a measure as the State Advances Bill to relieve embarrassed and over-borrowed producers. No doubt those were among the economic luxuries of a more advanced civilization and of communities that had gone the pace of development too rapidly. A large and profitable market was also being opened up for breeders of Australian horses through the demand for horse coaches instead of the jinrikisha—the hansom of the East—which was drawn by the natives. Railways, telegraph stations, telephone services, and post-offices showed that the people were educated up to the use of those triumphs of science with which the world had become familiar only during the last few years. When they heard some audacious stump orator or some ambitious place-hunter like Sir Henry Parkes raving about inferior Asiatic races, it was well to bear those things in mind, and, except where racial conceit blinded the judgment utterly, some difficulty would be experienced in discovering where, with all those results of advanced invention and science in full activity, the inferiority came in. No man, at any rate, who was not hopelessly blinded by skin antipathy would withhold his respect and admiration for a people that in less than a generation had carved their way from feudal ignorance and backwardness to the full blaze of nineteenth century civilization. He quoted figures regarding the trade of Japan, which had been gathered by Victorian Commissioners. He concluded by saying that the true answer to the question of what Australia's policy should be towards those new wonders of the East was expressed in the motto "Advance Australia."

Mr. Parsons, who leaves Australia in the *Menmuir*, is in charge of an extensive shipment of produce made with a view to testing the Japanese and Chinese markets. It includes flour, chaff, compressed hay, preserved meat, soap, preserved fruit, jam, honey, ale, wine, brandy, olive oil, leather, bark, bacon, biscuits, and salt, the whole amounting to about 120 tons, and the costs of forwarding the same being defrayed by the South Australian Government. On arriving in Sydney, Mr. Parsons was interviewed by a reporter of the *Sydney Morning Herald*, who enquired:—"What first drew the attention of the South Australian Government to the matter of trade with Japan and China?" "Well" (Mr. Parsons replied), "having visited the Far East I was convinced that, especially in wool, Japan intended to compete with European manufacturers, and I placed myself in communication with the Pastoralists' Association of South Australia and the West Darling, and they commissioned me to give them a full detailed report upon the exact conditions and prospects of the woollen industry both in China and Japan. I then had an interview with the Hon. C. C. Kingston, Premier of South Australia, and informed him it was my intention to visit the East, and the Government gave me special commissions to Japan, China, and the Philippine Islands to inquire into the conditions

of trade and commerce there, with a view to the extension of business between those countries and South Australia, because this is purely a South Australian affair. Then the Government, in order to call public attention to the matter, made it known by advertisements that they were prepared to pay all shipping freights and charges on trial shipments of South Australian staples, the products of the colony. In response a number of the leading producers, manufacturers, and merchants replied, and they have entrusted me with trial shipments."

After Mr. Parsons had repeated many of the details given in his Adelaide address, the interview proceeded as follows.—"What is your opinion as to the prospects of trade with the East?" "Well, the Japanese, it is well known, intend to carry out the manufacture of wool with the same energy that they have that of cotton. There are 10,000,000 of *yen*—equal to dollars—invested in cotton mills in Japan, and the Japanese are able to produce cotton fabrics cheaper than Bombay, whilst Bombay can produce them cheaper than Lancashire. Therefore, a good market ought to be obtainable for South Australian wool. The Japanese must purchase all the wool they require for manufacturing purposes. Sheep are not only not indigenous to the country, but a sheep-farming experiment that was carried out not far from Tokyo, the capital, although at first promising to be successful, ended in complete failure, as the sheep gradually died. The native *kayr* grass and stunted bamboo, which is common in the open and pastoral lands, are fatal to sheep." "What about the other samples you have with you?" "There are many articles which will undoubtedly be a good deal sought after. There is no doubt that the Japanese will be large importers of tallow, and they will be manufacturers of soap and candles of which, in the meantime, they are already considerable importers. There is another probable line of business, both with the Philippine Islands and Japan, and that is in live cattle. It may not be generally known that the South Australian Government subsidises a steamer at Port Darwin to the extent of £5,000 a year, which carries live cattle to Singapore and Batavia, and those who are well acquainted with conditions in the East are of opinion that a new market may be found for fat stock. As far as Japan is concerned, although a large quantity of beef is exported from Kobe, the Emperor has informed his subjects that if they are to compete with Western nations as producers and manufacturers, they will require a more generous diet than rice and condiments, and will have to become meat eaters." "What is the chief competition you fear?" "Our chief competition will be with California, as the shorter distance, the lower freights, and the general American policy of unloading in foreign markets will necessitate South Australia's fighting for a portion of the trade. As the trend of custom and fashion in Japan is to imitate European manners, it should be an increasing trade. As far as my knowledge of Asiatic nations is concerned, I am convinced that there are few articles of food which are palatable to Europeans which are not also palatable to Asiatics, and all that is wanted on their part is the money required to purchase them." "Is the South Australian Government likely to offer other assistance?" "No; I cannot say that it is. The expenses are being paid of this trial shipment, but after that the trade will have to rest on its own foundation. I am chiefly representing commercial houses in South Australia. My object is to collect all the statistics I can, to visit the different manufacturing centres, to go into the country and see the conditions of cultivation, and to acquire such information as will be a guide to producers and to commercial people of the colony generally. What the Government are doing is to give a little assistance with the object of finding out whether a profitable trade can be opened up."

While Mr. Parsons is thus active in one direction, Mr. Richard Synnot, of Victoria, who recently passed several weeks in Japan, is equally vigorous in another. Writing to the Editor of the *Melbourne Age*, he says:—"Recognising the great interest you have always shown in the extension of the markets for Australian products, I have much pleasure in advising you that arrangements for the wholesale export of wool and skins to the manufacturers of Japan approach completion. By a happy coincidence at the very time my overtures were under the consideration of the Japanese merchants, Mr. A. Marks, H.J.M.'s consul to Melbourne, was visiting the empire, and was called into counsel on the subject of importing raw wool from Australia. By supplying technical information as to our commercial usages, and various other data in connection with shipments from Melbourne, Mr. Marks tendered our wool-growers very valuable service by demonstrating the natural possibilities for the establishment of a considerable system of exchange between the 'England of the East' and these colonies."

Despite the depth of water in which the ill-fated *Catterthun* lies, the underwriters have not abandoned all hope of securing £10,000 on board. Mr. Briggs, the diver who ascertained the position of the sunken vessel, being interviewed by a newspaper reporter, said in reply to a question as to whether it was possible to recover the lost treasure:—"Oh, yes; I think it can be got; but I really can't say when we will be ready to begin. What's wanted is new gear—brand-new gear—and it must be a particular make. Then in the proper season I think we can manage it."

"The vessel being in 29 fathoms, the deck would be in about 25, so that you landed on the deck when you went down?"—"Oh, no. You see, in order to land on the vessel, you must be right over it when you start. You must go down on the line, and if it happens to be two or three fathoms away you would not land on it. The depth has been mentioned as 29 fathoms, but it is really more than that. When measured exactly it was found to be 18m. short of 30. I was level with the deck, but I did not touch it; as I was two or three fathoms away from it. I did not consider it necessary to do any more, for we couldn't work with the gear we had." "What did you actually see, Mr. Briggs?"—"I saw a ship—a mast, and rigging, and a deck; I suppose anybody who was not used to it would not have known what it was just like seeing a ship in a fog the way it was at that time." "Where is the treasure stored?"—"In a strong-room built under the chartroom. You had to get into it from the chartroom, which was on the bridge." "Would a diving-bell be of any use?"—"No; they would never get down 25 fathoms with a diving bell. I do not know the exact distance it would be possible to get down with a diving-bell, but I do not suppose it would be more than 40ft. or 50ft.—in fact, it would be impossible to use one in the open sea." "Do you think electric light is necessary?"—"It is not necessary—not exactly so; but it is very good. I could see; but it was like being in a fog. It was new moon at the time, and in the spring time there is always a little thickening in the water. In the neap tide the water is perfectly clear, especially with westerly winds. At a depth like that, though, it is always gloomy. The sun cannot penetrate so far." "What is the pressure at 25 fathoms?"—"Just about 65lb. to the square inch. Just a fraction over." "Is it true that if the gold is in 25 fathoms no man could stop down long enough to get it?"—"No; that is all rubbish. It is possible to get down, and to get it too. I guarantee it can be got. We would have had it if we had had the gear we needed for that kind of work. They call 25 fathoms the limit; but some men have been down more than that. I have been down 26 myself; and I dare say I have walked through deeper water than that; but for doing any work that is the limit. Up in Torres Straits I have done it, and outside the Heads here looking for the *Duckenfield* about six years ago. We can only wait till the underwriters have obtained the new gear, and when the westerlies have set in some time early next year. We could not lift the vessel into less water. It would cost too much."

The Commercial Treaty between Great Britain and Japan continues to be discussed in Australia. In the New South Wales Legislative Assembly, the Colonial Secretary was asked:—"What action has been taken by the Government in respect to the commercial treaty entered into between Great Britain and Japan last year, establishing reciprocal trade relations between the countries named and their dependencies and possessions?"; to which he replied,—"This treaty was entered into on 16th July, 1894, and contains a provision to the effect that certain colonies named, New South Wales being one, could come within the operation of the treaty upon notice given within two years from the date of exchange of ratifications. This Government does not propose to take any steps to bring New South Wales within the operation of the treaty. I may point out that those countries joining in the treaty with Japan engage that the Japanese shall have full liberty to enter, travel, or reside therein." It is almost certain that the other colonies, with the exception, perhaps, of South Australia, will follow the example of New South Wales. The *Melbourne Age*, alluding to the subject, says:—"The opportunity given of entering into trade relations with Japan involves considerations of another kind. Under the provisions of the Imperial treaty wherein the colonies may participate if they intimate their desire before August next, a reciprocity of privilege is arranged for. As far as Great Britain is concerned an undertaking of this sort can be accepted without any difficulty. The islands in the northern seas have nothing to fear from any invasion of alien immigration. The position of Australia is very different. These colonies are situated at no great distance from Japan, and its excess of population

might readily seek an outlet on this continent. The prediction that Australia might be turned into a Japanese province is not inherently devoid of possibility. The objections which are raised against the influx of Chinese apply with equal force to their more enterprising and spirited conquerors. In numbers and in frugality they represent a similarly dangerous form of competition, and should their intrusion assume alarming proportions the destiny of Australasia might become imperilled. We should be chary of introducing racial problems if this difficulty can be avoided. The introduction of Japanese labour into northern Queensland may become a source of future peril, and it will not be wise policy to offer encouragement to any course which will enlarge the area of contention. The trade benefits arising from the adoption of the Japanese treaty should be dearly purchased if we had to abandon our power of regulating alien immigration." The *Rockhampton* (Queensland) *Bulletin*, commenting on the action of the Brisbane Chamber of Commerce, in passing a resolution to the effect that Queensland be included in the Treaty, says,—"If there were no clause in the treaty about the free admission of the subjects of the contracting Powers, nothing but approval could be expressed of the resolution come to by the Chamber, and of the reasons advanced in support of it. But there is this clause, and it is an extraordinary fact that no mention whatever was made of it in the discussion. Members either forgot or ignored it. But neither the Government nor Parliament will follow them in this. The prime question in considering this matter will be, Is Queensland to be thrown wide open to the Japanese, to come in, buy land, engage in industries and trade, become naturalised, and in time be admitted to the voter's roll and the full privileges of citizenship? That is the question which the Government and Parliament will have to consider, and it is one of such vital importance to this colony that it ought not to be left over till the last moment. Queensland, it must be remembered, is the nearest of all the self-governing colonies to Japan. There are a good many Japanese here already, and a strong disposition has been shown by others to come. If they come in under this treaty, they will come as Frenchmen or Germans would, with the full privilege of becoming British subjects whenever they wish. Are the people of Queensland prepared to agree to this even for the advantage of securing the Japanese market for their products? One of the arguments always used in favour of Kanaka immigration is that the Islanders, from their limited mental development and power of improvement, could never enter into competition with white men in the callings which the latter follow. But this could not be said of the Japanese. On the contrary they have shown a remarkable power of mastering European trades and avocations, and if they came here in large numbers, as they would be free to do under this treaty, they would soon be found competing not only with white workmen but with white employers. The question of whether or not Queensland will remain outside the Japanese treaty is one of prime importance, and is not to be settled by such a perfunctory discussion as took place in the Brisbane Chamber of Commerce." J. P.

YOKOHAMA CHIHO SAIBANSHO.

(CRIMINAL SECTION.)

Before Judge TAKAHASHI BUNNOSUKE, President; and Associate Judges HARA SEIICHI and OHASHI JUTARO.

WEDNESDAY, 9th October, 1895.

THE "EMPRESS OF INDIA" MURDER CASE.

Iida Tsunekichi, a coolie, was charged with having cut and wounded and thereby caused the death of a Chinese ship's cook on board the British steamer *Empress of India* on the 13th of September last, while she was lying in the port of Yokohama.

The prosecution was in the hands of Public Prosecutor Miyakoshi Shinjiro, the prisoner being defended by Mr. Anzai Rimpachiro.

In answer to questions put by the Judges, the prisoner stated that he went on board the C. P. steamer *Empress of India* on the 12th of September last to seek employment as a coolie. From 50 to 60 other coolies were with him. They reached the ship at 10 a.m. Shortly after noon, when he was taking the midday meal on deck, a quarrel took place over the loss of a pair of trousers. A certain Chinese resident of Yokohama had gone on board the steamer that day to sell some clothes, which were displayed on the deck. A coolie threw a pair of trousers overboard, and was discovered by a Chinaman named Wong Yow Fook, who gave the alarm to the owner. The Japanese coolie, who threw the trousers overboard, then pursued Wong Yow

Fook, and the latter escaped to a small room. At this time Iida declared that he was eating his food some distance away. Hearing the disturbance on the board, he went in the direction of the noise and therefore followed the Japanese who was chasing Wong Yow Fook. Arriving at the small room into which the Chinamen had fled, Iida discovered about six Chinese and three Japanese fighting. He, therefore, entered the chamber to separate the men and to quiet the disturbance. While doing so one of the Chinamen assaulted Iida with a stick, and he sustained a slight wound above the eye. Iida then ran out of the room, but at the door was caught by another tall Chinaman. He succeeded in escaping from him and jumped over the ship's side into the *daruma* (the lighter), where he washed his face. He carried no knife. He denied being the murderer of the Chinese.

After further evidence, Public Prosecutor Miyakoshi argued that the evidence given by the Chinese crew of the steamer clearly indicated that Iida was the murderer, and that the wound on the right arm of the Chinaman Chen Sung was also given by him. The Public Prosecutor believed the statements of the Chinese witnesses, who had recognized the prisoner as the man who had stolen the trousers and had assaulted Chen Sung on the right arm, and fatally wounded Lee Sing. The Public Prosecutor drew the attention of the Court to the fact that prisoner was found in hiding when the lighter was searched, which was another circumstance that told against the credibility of his story. The Public Prosecutor urged that the punishment to be meted out should be in strict accordance with the law, as he feared that unless persons of the lower classes were taught that they must respect the persons and property of Chinamen, a state of things might be brought about which would tend to endanger the friendship now existing between the two Empires. The Public Prosecutor desired that prisoner be sentenced in accordance with Article 100 of the Criminal Code.

Advocate Anzai, in defence, said that the evidence given in connection with the murder was very weak, and asked that punishment be moderated, as the act was done by a reckless person, when his angry feelings were not under control.

The Court gave judgment as follows:—The accused, Iida, on the 12th of September, on board the *Empress of India*, stole a pair of trousers from a Chinese clothes' dealer, and threw them into the sea. The matter was discovered by a Chinaman, who told the owner. Strongly excited at hearing this, Iida pursued the Chinaman, but the latter ran into the Chinese smoking-room. On the way Iida was interfered with by Chen Sing, and Iida cut him with a knife upon the right arm. Iida afterwards assaulted Lee Sing, who was on the deck with the other Chinese, and who had inquired what he was doing. Lee Sing was cut in the neck and from the effects of the wound he died shortly afterwards. Iida then fled to a lighter, where his arrest took place. The facts have been proved by the evidence given by the Chinese and Japanese witnesses, and the report of the constables. The prisoner's action in stabbing Chen Sing is an infringement of Clause 2 Article 301 of the Criminal Code, and the wounding of Lee Sing, which resulted in death, is an infringement of Article 299 of the same Code. As the two crimes were committed at the same time, the prisoner will be punished in accordance with the more serious offence, and is sentenced to nine years' penal servitude with hard labour.

FOREIGN MISSIONS IN JAPAN.

The following letter appears in the *North China Daily News* of the 28th inst:—

SIR,—My attention has been called to a communication in your issue of the 27th of August signed "Observer," and dated, "Yokohama, 15th August."

In common with other missionaries I have not hitherto noticed any of the vague rumours in regard to missionary work in Japan which have found their way into the local press. The pseudonymous letter above referred to ought perhaps to be treated in the same way, but the charges it makes are so sweeping that I cannot remain silent. I wish therefore for my immediate colleagues and myself at least, in the most unequivocal manner to pronounce the main assertion of that letter mistaken, and to declare several of its insinuations to be entirely unwarranted. The main assertion referred to is as follows:—

"Every missionary who has gone outside of Treaty limits to propagate his faith has done so under a false pretence, and by the practice of deception, in connection with some Japanese friend, who has pretended to employ the mis-

sionary as a teacher in his family, or under a bogus contract in some school."

This is a false statement. Not being omniscient I cannot and do not say that no missionary has taken such a course, and I am not in any way authorised to speak for the whole body of missionaries in Japan. But I do positively assert that some, and to speak in a concrete way I myself, have not done so.

I have lived in Kyoto fifteen years on a contract to teach in the Doshisha School. This contract has not been a "bogus" one, for I say it boldly, that I have been a hard-working teacher all these years. And I could speak in still stronger terms of my colleagues. It is true that our salaries have come ultimately from America, but this has been concealed from no one. We have been known as Christians and Christian missionaries by the successive governors of Kyoto and by the leading officials of the Central Government. The late Dr. Neesima, the founder of the Doshisha, was for a time connected with Prince Iwakura's Embassy which visited America and Europe in 1872-3, and with this introduction to official circles he became the intimate personal acquaintance of Marquis Ito, Counts Inouye, Okuma, and other statesmen. They thoroughly understood his loyal Christian character and the high Christian aims which he cherished for the school, as well as the source of the school's support. They visited the school again and again. They had interviews with the president and the teachers, foreign and Japanese, and they continued year after year to approve the school and grant permits to live in the interior to its mission teachers. One of the three noblemen mentioned once spoke in my presence of the high reputation of our students for morality, attributed it to Christianity, and gave the fact as one reason why he was ready to see Christianity propagated in the empire. More than this. Two of the statesmen mentioned, thoroughly conversant with the character of the school, the aims of its teachers and the source of its revenues, as I have already explained, not only subscribed a thousand dollars each to its endowment, but they also interested their friends to contribute nearly thirty thousand dollars more.

These facts—unquestionable facts—are the ample justification of my absolute denial that my colleagues and myself are here "under a false pretence," "under a bogus contract," or "by the practice of deception."

Again, so far as the Doshisha is concerned, the implication that the Trustees purpose to take the school property which was theirs only nominally and make it their "own absolutely" is untrue. The Doshisha school property has not been held by the Trustees in a merely nominal way. It has been a gift outright, and the American Board has never expected to have it returned. The Trustees hold the property in trust for a Christian school, and there is not the slightest anxiety lest they make it their "own" absolutely in the sense of appropriating it for their private ends. As showing the falsity of the insinuation that these trustees are a set of grasping rogues, I will mention the fact that one of them resigned his seat in the first Imperial Diet that he might come over to Kyoto and without salary devote himself to the interests of the Doshisha.

Turning now from the Doshisha, it is well to remember that the holding of property off the concessions has not been and is not confined to missionaries. Honourable men in other walks of life in Tokyo, Kobe, and elsewhere have done so, as has been well-known to the highest officials. Indeed, it is commonly said that men in high official positions have been parties to such arrangements. As is well-known the stricter enforcement of the treaties under a feverish public sentiment in 1893-4 brought considerable anxiety to both parties in those arrangements, but so far as my knowledge goes there is only one case in which mission property has been taken from the unwilling hands of missionaries and diverted to other purposes; and in this case, where the action meets the general disapproval of the Japanese Christians, the property is still said to be used for the benefit of a school and not for private ends. There may be other cases to an equal or greater degree regrettable, but I do not know of them.

It is not denied that the past two or three years have been trying ones to the missionaries in Japan and that questions of the gravest nature now confront them. It is not denied that some Japanese Christians have shown antagonism to missionaries, that some have lost their faith and done things not consistent with the highest sense of honour. But it remains true that these are a very small minority, that there are many more who are showing that they possess a living faith by their better lives, and by their zeal in religious and humane work, and who are manifesting the most friendly spirit towards the missionary from abroad. Speak-

ing for myself, I can say that some of the warmest expressions of appreciation of missionary service which I have known in a residence of twenty-three years in Japan have come during the past six months.

Asking your pardon for trespassing so greatly upon your space and patience,
I am, etc., M. L. GORDON.
Doshima University, Kyoto, Japan,

TO THE CHESS EDITOR OF THE "JAPAN MAIL."

SIR,—So much comment has been made on the statement of the Secretary of the Yokohama Chess Club that "he had not been informed of the Tokyo team's inability to come together," that I beg you will be good enough to give publicity to the following letter,

Yours truly, W. B. MASON.
Tokyo Chess Club, Oct. 8th, 1895.

[Copy.]

Tokyo Chess Club, Jan. 26th, 1895.

J. DAVISON, Esq.,

Secretary,

Yokohama Chess Club.

DEAR SIR,—I am requested by the Committee to inform you that owing to the inability of several of the most prominent players to take part in a match, they much regret that, for the present, they cannot forward a challenge to your club. It is hoped, however, that circumstances may, later on, admit of their again taking the matter into consideration.

Yours faithfully, W. B. MASON,
Secretary.

HASTINGS CONGRESS.

We have not yet received a fresh instalment of games, but we publish the following note from our esteemed contributor "Digamma":—

"At the banquet in honour of the players, Mr. John Watney, President, proposed the toast of 'The Masters.' Messrs. Lasker, Steinitz, Tarrasch, and Tschigorin responded. Mr. Tschigorin (whose remarks were interpreted by Mr. Hawkes of Newcastle) said that a match of five Masters, including Mr. Pillsbury, was contemplated during the autumn, every competitor to contest three or four games with each of the other entrants. The match to be held in St. Petersburg. Prizes ranging from £100 to £30 and all expenses paid by the St. Petersburg Chess Club."

We give one or two of the earlier games from rounds V. and VI. while waiting for later information.

| 33—Q to Q Kt 8 | 33—R takes P |
| 34—R to R 8 ch. | 34—K to Kt 3 |
| 35—R to K B 8 | 35—R to K Kt 4 |
| 36—R (B 8) to B 3 | 36—P to Q 7 & wins. |

(a) P to Q B 3 to keep knight out and preserve the king's bishop is preferable.
(b) To prevent Kt to K 5 White doubles his pawns awkwardly.
(c) It is clear that time is lost by the queen moves.
(d) Preparing well for the strong advance of the pawns which ultimately proved irresistible.
(e) The exchange is thus well surrendered for the pawn and position. The game is really won now, and the only interest is in the method by which Black concludes.

GAME No. 365.

GIUOCO PIANO.

- | WHITE. | BLACK. |
|-------------------|------------------------------------|
| Fucini. | Olivari. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—P to Q 3 | 4—Kt to K B 3 |
| 5—Kt to Q B 3 | 5—P to Q 3 |
| 6—Castles (a) | 6—B to K Kt 5 |
| 7—P to Q Kt 3 (b) | 7—P to Q R 3 |
| 8—P to K R 3 | 8—P to K R 4 |
| 9—P takes B (c) | 9—P takes P |
| 10—Kt to K Kt 5 | 10—P to K Kt 6 |
| 11—Kt takes K B P | 11—Kt takes K P (d) |
| 12—Kt takes Q | and Black mates in four moves (e). |

(a) Too early in the Giuoco Piano. It is well known that in opening early castling is not good generally.
(b) This is not commendable either.
(c) And the capture of the piece is altogether wrong.
(d) Threatening in any case R to R 8 ch, followed by Q to R 5 ch and mate next move.
(e) 12—P takes P ch; 13, R takes P, B takes R, ch; 14, K to B sq, R to R 8 ch; 15, K to K 2, Kt to Q 5 mate.

GAME No. 366.

LATEST COMMERCIAL.

IMPORTS.

Active market all round and prices advancing. Yarn—Large business at much better prices all along the line. Single and Doubles, fine counts, doing extremely well. Grey Cloth—g/b. doing well and active at an advance in prices. Some enquiry also for 8½lb. Fancy Cottons—Outlook rosy with business doing. Woollens—Strong advance in Italians with stocks low and market almost bare of supplies. Blankets—Sold to a good tune, but Cloth quiet.

- 29—Q to K 3
30—Kt to K 5
31—Kt to Q 7
32—R to K B 2
33—R takes P ch.
34—Q to Kt 3 ch.
35—Q to Kt 8 ch.
36—Kt to B 6 ch. and mates next move.
- 29—R to K 2
30—K to B sq.
31—Kt to Kt 7 (f)
32—Q to Kt sq. (g)
33—K takes R
34—K to Q sq.
35—B to B sq.

- (a) Not good in the Fianchetto generally. P to Q 4 and Kt to Q B 3 are preferable.
(b) He should have gone to B 3 at once.
(c) The objection to White's B to B 4 now becomes apparent.
(d) Preparatory to Kt takes Q P.
(e) He should now have played P to Q B 4.
(f) Better, because R takes Kt is answered by Q to B 8 ch followed by Q takes R.
(g) It was better to play Q to Q sq. Now a pretty sacrifice concludes the contest.

GAME No. 367.

FOUR KNIGHTS' GAME.

- | WHITE.
P. K. Traxler. | BLACK.
Jan Hamr. |
|-----------------------------------|---------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |

| 4—B to Kt 5 | 4—B to Kt 5 |
| 5—Castles | 5—Castles |
| 6—P to Q 3 | 6—P to Q 3 |
| 7—B takes Kt | 7—P takes B |
| 8—Kt to K 2 | 8—P to K R 3 |
| 9—P to B 3 | 9—B to R 4 |
| 10—Kt to Kt 3 | 10—Kt to R 2 |
| 11—P to Q 4 | 11—Q to K sq. |
| 12—Kt to R 4 | 12—P takes P |
| 13—P takes P | 13—B to R 3 |
| 14—Kt (R 4) to B 5 | 14—Kt to K B 3 |
| 15—Q to B 3 | 15—B takes R |
| 16—Kt takes Kt P | 16—Q to K 2 |
| 17—B takes R P | 17—B to Kt 3 |
| 18—Kt (Kt 3) to B 5 | 18—Q takes P |
| 19—Kt (Kt 7) to R 5 and wins (a). | |

(a) Delightful. There is mate in two if Q takes Q.

GLIMPSES OF GREAT PLAYERS.

The comportment of these two famous men of chess when contending with each other is said to have presented a striking contrast.

McDonnell, lymphatic of temperament, was dignified and composed in demeanour—vigilant, resolute, and self-possessed. He sat at work, maturing his conceptions with a patience and tenacity of purpose nothing had power to disturb.

Labourdonnais, who had a full share of the excitability of his nation, would jest and laugh with the gallery, puff his cigar, and hum his favourite airs. This was when fortune smiled benignant on him. But when she shook her swift wings and fled he fumed and fretted, rapping out maledictions with surprising rapidity. He was much quicker in his play than his antagonist, whose tardy strategy exercised him not a little, and made him give vent to his dissatisfaction in open grumbling and frequent elevation of the shoulders.

Paul Morphy.—I had the gratification of witnessing some of Morphy's games, which I reckon among the white stone occasions of my chess experiences. I have now before my mind's eye the aspect of the youthful American chess chief as he sat, cool as a cucumber and grandly calm, before his game. So still was he that but for the searching intellect which glittered in his full dark eye you might have taken him for a carved image as he pondered his moves. His bearing was mild and that of a refined gentleman; and he dealt the most crushing blows on his adversary with an almost womanly ease and grace.—*Weekly Times*.

No. 168, Bombay	—

METALS.

Good trade with better prices. Business done includes both "spot" and "to arrive."

	PER PICUL.
Flat Bars, 4 inch	\$3.25 to 3.30
Flat Bars, 1 inch	3 20 to 3 25
Round and square up to 4 inch	3 20 to 3 30
Iron Plates, assorted	3 50 to 3 65
Sheet Iron	4 30 to 4 50
Galvanized Iron sheets	9 00 to 9 50
Wire Mesh, assorted	5 60 to 6 00
Iron Plates, per box	5 75 to 6 00
Co. Iron, per box	1 65 to 1 70

RUBBER.

Demand is good, but values do not improve owing to competition. Buyers, expecting lower prices, continue to operate from hand to mouth. Stocks do not exceed requirements, and under ordinary conditions prices would be moving up.

American	\$1.95 to 1.97 1/2
Russian	1 95 to 2 00
Langkat	1 90

SUGAR.

Brown—Buyers have come with a rush, clearing the market of Formosa at a smart advance in price. Manilas and Chinas have also been heavily sold at much better figures than for a long time past. Stocks much reduced. White—Steady trade and market firm at last rates.

	PER PICUL.
Brown Takao	\$4.40 to 4 50
Brown Manila	4 40 to 4 75
Brown Daitong (New)	3 60 to 3 65
Brown Canton	3 60 to 3 90
White Java and Penang	6 40 to 6 50
White Refined	6 25 to 6 50

EXPORTS.

RAW SILK.

Small business, and prices must come down if holders want to move their stock to any extent. Supplies ample, and the stock has increased to about 14,000 piculs. Quotations more or less nominal. The rising exchange must pull them down if nothing else does it.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9 11, 10 12 den.	Nom \$970 to 980
Filatures—Extra 13 15, 14 16 deniers	970 to 980
Filatures—No. 1, 10 13 deniers	Nom. 940 to 950

Kibiso—Filature, Best	100 to 105
Kibiso—Filature, Seconds	90 to 95

TEA.

A fair amount of business continues. Latterly the settlements have been of the better grades, but Common Teas are in request also and command relatively good figures. Supplies are good for the time of year, and stock fairly ample for all requirements. Settlements to date 227,000 piculs against 217,000 last year. Export 27,000,000lbs. against 26,000,000lbs. last year.

	PER PICUL.
Choicest	\$30 to \$32

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN FORM.

THE "Proceedings" include EPITOMISED
DEBATES, Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of
the Session.

PRICE \$1.

To be obtained at the Office of the Japan
Mail, No. 51, Main Street.

THAMES ELECTRIC & STEAM LAUNCH CO.

ELECTRIC LAUNCH "GLOW-WORM," 53ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings
and Specifications for Launches in Wood, Steel,
Delta Metal, or Composite, either with Steam or
Electric Power—Speed from 6 to 20 miles per hour;
—also Tugs, and Stern Wheelers, which, if required,
will be prepared and constructed in Sections.

Launches of specially Light Draught constructed
for Shallow Waters.

Electric and Steam Pinnaces for Harbour or
Ferry purposes.

Builders of Electric Charging Stations, Floating
or Stationary; and makers of all required fittings
and equipments.

A selection of Electric Launches always ready
for prompt delivery, of which particulars will be
forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID

BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

YOKOHAMA: SATURDAY, OCT. 19TH, 1895.

BIRTH.

At No. 10, Bluff, Yokohama, at 10 a.m. on the 14th October, the wife of VALDEMAR BLAD, of a Son.

DEATH.

At 61-D, Yokohama, on the 16th inst., at 9.50 a.m., ALXANDER BIELFELD, of Shanghai, aged 56. China papers please copy

SUMMARY OF NEWS.

THE Black Flags have surrendered unconditionally.

MR. SAITO MATSUZO has been elected Assistant Mayor of Yokohama.

THE *Kokkai* was suspended on the 11th inst. for the usual offence.

MR. SAITO KAN was appointed, on the 11th inst., Japanese Consul at Tacoma.

THE amateur theatricals at the Public Hall on Tuesday were a great success.

SHANGHAI was beaten by Kobe in the Kobe-Shanghai match by an innings and 125 runs.

COUNT HINO, a Chamberlain to H.I.H. the Crown Prince, has been released from the post.

MR. WAKAMIYA SEION, Chief of the Trade and Industry Bureau in the Agricultural and Com-

mmercial Department, was placed on the Retired List on the 10th inst.

THE repairs of the *Iwaki Kan* have been completed, and she left Yokosuka on the 11th inst. for Sasebo.

THREE houses were destroyed by fire at Uramachi, Akasaka, Tokyo, on the 14th inst., two others being damaged.

KIM KA-CHIN is appointed Korean Minister to Japan. Prince Wi-hwa is to make a tour through Europe.

A STATUE of the late Dr. Müller has been erected in the compound of the College of Medicine in the Imperial University.

THE butchered body of the late Queen of Korea is said to have been found in a well in the compound of the Royal Palace.

A CARRYING company to be named the Shiba Kwabutsu Unyu Kaisha will be established in Tokyo with a capital of yen 300,000.

THE Government has decided to establish meteorological observatories in Formosa, and the work will be commenced at no distant date.

MR. LAFFIN's yacht *Mary* beat Mr. Weston's *Zori* in a private match for \$100 a side, on Saturday. She had about five minutes to spare.

CAPTAIN VISCOUNT DE LABRY, Military *Attaché* of the French Legation, has been appointed to the Legion of Honour, for services during the late war.

FIRE broke out at Shioiri, Yokosuka, shortly after midnight on the 12th instant, and nineteen houses, occupied by thirty-six families, were destroyed.

MR. HOZUMI NOBUSHIGE, Director of the College of Law in the Imperial University, has been released from his post at his own request, and Mr. Tomii Masakichi succeeds.

THE funeral of the late Colonel Nakaoka, Commander of the Third Regiment of the Imperial Guards Division, who died in Formosa recently, took place in Tokyo on the 12th instant.

H.I.H. PRINCE KANIN, who lately received a decoration from the French Government, gave a banquet on the 12th inst. at the Akasaka Detached Palace to celebrate the event.

COUNT OKUMA gave a garden party to his friends on the 18th inst. in commemoration of the sixth anniversary of his escape from assassination while acting as Minister of Foreign Affairs.

THE British steamer *Isis* attempted to cross the bows of the *William H. Macy* in the Uraga Channel on Monday night and a collision resulted. The *William H. Macy* has been beached. The *Isis* is seriously damaged.

IN the first match of the Yokohama Cricket Festival, Shanghai made 254 and Yokohama 20 for no wickets. Stumps were drawn for the day, and on Tuesday the match was abandoned owing to heavy rain.

MR. OI BOKUSHI and over twenty other leading capitalists of Osaka have agreed to organize the Japan Coal Mining Co. with a capital of yen 500,000. The object of the company is to engage in mining operations in Kushiro, Hokkaido.

FIVE hundred and fifty officers below the rank of Lieut.-Colonel, belonging to the Second Army, were decorated on 12th inst. in recogni-

tion of services rendered during the past war. One hundred and six received decorations of the Order of the Golden Kite.

THE King of Korea has assumed the title of Emperor.

THE Odawara residents propose constructing water-works at Odawara with Hakone Lake as the base of supply. It will be remembered that cholera was very prevalent in the district this year, the spread being assisted by the impurity of the water.

THE receipts of the following private railway companies during the ten days ended the 10th inst. were:—Sobu Railway Co., yen 7,054.480, a daily average income of yen 22.394 per mile; Osaka Railway Co., yen 12,779.240, a daily average income of yen 25.102 per mile; Chikuhō Railway Co., yen 18,743.470, a daily average income of yen 39.490 per mile. During August last the Hokkaido Tankō Railway Co. received yen 40,057.173 on the Horonai line, a daily average income of yen 21.184 per mile; yen 6,954.659 on the Sorachi line, a daily average income of yen 6.598 per mile; yen 28,432.693 on the Muroran line, a daily average income of yen 8.272 per mile.

REUTER TELEGRAPHS:—Constantinople is now becoming quiet. The Armenian churches in the city are crowded with women fearing fresh massacres. The horrors in the streets on Monday and Tuesday were beyond description. The Viceroy Chang Chih-tung has declined on the plea of sickness to receive a visit from Admiral Buller, at Nanking, and the British ships have left their anchorage. All the Great Powers have presented a Collective Note which demanded a vigorous enquiry, the release of innocent prisoners, and the taking of adequate measures to preserve order in Constantinople. An official note from Great Britain, France, and Russia, states that these Powers will not allow disorders to impede the negotiations, the object of which is to procure peaceable reforms in Turkish rule and the security of the Christians. The Sultan accepts the reforms [for Armenia] in principle, but declines to promulgate them forthwith, because that course would make it appear that he was yielding to pressure. The outlook generally is regarded as much more hopeful at Constantinople.

IN the Import trade, though business is quieter, prices are strong and the outlook is good, and the latest turn in silver will induce buyers to come on, especially for the purchase of Textiles. There has been a fair enquiry in the Metal market, and a moderate amount of business has been put through. There is no change in the Kerosene trade, and transactions have been only on a scale to fill immediate requirements. The Sugar trade is not brisk, though there have been fair sales of Browns other than Formosa at late rates, the latter being neglected. Whites are quiet, but the market is steady. Through a small demand for Raw Silk, and fairly good arrivals, stock is increasing, and is now fully 15,000 piculs, with a certain tendency to pile up unless quotations are lowered. There has only been a small daily business in Waste, but this is the fault of holders, who will not be current. Supplies are large and increasing daily. There is less doing in the Tea trade, and the long run upon the commoner grades has reduced them to a scarcity, and the stock of leaf now on the market—about 5,000 piculs—consists mainly of grades Medium to Fine, and these will be sure to find buyers if offered at anything like a reasonable figure. Exchange has been fairly steady, but declined at the end of the week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Korean *émeute* has naturally occupied a leading place in journalistic discussion during the week. The news of the disturbance did not at first seem to produce any feeling of astonishment in the minds of the metropolitan journalists. They did not detect in the whole affair anything incongruous with the methods usually pursued by Korean politicians. But the aspect of the affair was entirely changed by an apparently well founded suspicion that a number of Japanese *soshi* were implicated, and that they took upon themselves the execution of the most execrable part of the tragedy. Papers of all parties unite in deploring the incident, and calling upon the Government to inflict exemplary punishment upon every Japanese criminally concerned in the affair. We have already reproduced some articles on the subject, but reference may here be made to a few that have since been published.

The *Nichi Nichi Shimbun* deeply regrets to have to acknowledge that according to latest reports, a number of Japanese *soshi* were connected with the *émeute*. In this connection, the Diet can not be entirely absolved from blame, for it appears that the presence of political fanatics of the *soshi* type in Seoul is due in some measure to the refusal of the people's representatives last year to approve, and thus continue in force, an Urgency Ordinance issued for the purpose of preventing the influx of men of that class into Korea. What has been done, cannot be undone. Our contemporary hopes, however, that the Diet will be wiser next session when the Urgency Ordinance just promulgated comes to be laid before it for approval. The *Nichi Nichi* goes on to criticise severely those Japanese in Korea, who, from misguided notions of national interest, do not scruple to meddle with party politics there. Japan's policy, as the protector of Korea, should be to keep herself above the petty faction strifes that divide the Court there, and consistently to maintain her neutrality, which ever party may happen to be in power. Past experience sufficiently proves how little reliance can be placed on the constancy of a Korean political party. The only wise course left for Japan is to keep herself strictly aloof from the internal politics of the peninsular kingdom. As to the ignorant adventurers that have jeopardised the Empire's interests in Korea, the *Nichi Nichi* urges their speedy and signal punishment.

The *Nippon* agrees with other journals in deploring that any Japanese should have been concerned in the disgraceful *coup d'état*. Profoundly as it regrets this, our contemporary cannot regard either the Japanese Minister or the officers of the Japanese troops in Seoul as in any way blameworthy on account of the conduct of their misguided countrymen. The *soshi* that are reported to have taken part in the recent drama did not act under Japanese direction or even inspiration, but placed themselves for the time being under the authority of the Korean authors of the disturbance, whoever they may have been. For what they may have done, nobody but themselves and their employers can justly be held responsible. They are like those Europeans and Americans that fought on the Chinese side in the late war. Because a few Germans and a few Americans took up arms against Japan, nobody would think of connecting their action in the slightest degree with their respective countries; they personally had identified themselves with the Chinese cause and in that respect cast off their original nationality. Similarly the Japanese *soshi* that are said to have been mixed up in the recent *émeute* in Seoul, were in the service of a Korean party, and anything done by them in that capacity does not constitute a reason for blaming Japan or her Representative.

The *Mainichi Shimbun* is shocked to hear of the crimes said to have been committed by

some of its countrymen in Korea. These offenders should be speedily brought to justice in an exemplary manner. In no other way can Japan show how profoundly she feels on the subject, and how strongly she abhors such acts of violence and inhumanity. At the same time, our contemporary exhorts the Government not to commit the error of supposing that the country's rights and interests are in any way affected by the actions of a few misguided adventurers. Should an attempt be made to pervert this incident into a pretext for diplomatic action prejudicial to the interests and rights of Japan, a resolute attitude must be assumed by the Japanese Government. Our contemporary criticises in another article the strictures passed by the *Nichi Nichi* upon the Diet on account of its having rejected, last session, the Urgency Ordinance restricting the passage of the Japanese to Korea. In the *Mainichi's* opinion, the rescinding of that Ordinance had nothing to do with the presence of *soshi* in Seoul. The Japanese Consuls in Korea are invested with power to deport any of their nationals whose presence in the peninsula they deem undesirable. This power ought to be amply sufficient for the purpose. Moreover, the scarcity of men of standing among the Japanese going over to Korea is attributable to a sense of insecurity engendered by the irresolute and inconsistent policy pursued by the Government toward Korea. In the present state of affairs, men of substance are naturally reluctant to make investments in the peninsula, and, *per contra*, the very conditions that discourage business men, attract those that have nothing to lose and everything to gain. Thus the presence of Japanese *soshi* in Seoul is due to the mistaken policy pursued by the Government toward Korea.

Next to the Korean question, public attention has been directed to the alleged meeting between Marquis Ito and Count Okuma at the latter's residence. That the two statesmen met seems to be an indisputable fact, but the conjectures made about the object and results of the conference seem, for the most part, to lack value. Important results may or may not follow from the meeting, but for the present it seems premature to hazard any prediction. The Progressionist organs preserves silence on the subject. The *Yomiuri* alone has taken the trouble to deny that the Premier's visit to Count Okuma had any political meaning. Our contemporary states, however, that the conversation between the two greatest of Japan's present statesmen was of the most friendly and intimate character, recalling the happy days in the early years of the present era when they were bosom friends, supporting each other in the task of inducing reforms and improvements. The *Fiji Shimpō*, the well known editor of which is considered to have been the mediator between the two statesmen, urges the appointment of Count Okuma to the post of Minister of Foreign Affairs. It looks as though Mr. Fukuzawa's favourite theme of reconciliation between the statesmen of the elder generation has now a fair chance of a partial success. But nothing definite can now be stated on the matter.

Writing under the heading "China," the *Fiji Shimpō* regrets that politically she is of little assistance to Japan, not only on account of her weakness but also because of her known duplicity and utter untrustworthiness. Our contemporary reviews the diplomatic history of China to illustrate the truth of the above statement. In consequence of the worthlessness of her neighbour, Japan is forced to seek coöperators among Western Powers in order to settle what might otherwise be better arranged between the two Oriental States without any reference to other countries. From a commercial point of view, however, China offers a vast field for the extension of Japanese trade. The *Fiji* deplores that its countrymen are very slow in availing themselves of their unique advantages as compared with Western people in trading with China. In this respect both Government and people are alike blamable, for if the latter lack enterprise, the former do not pay sufficient at-

tention to the selection of Consuls at the Chinese ports. The Government should send to China Consuls possessing proper qualifications for the post, and business men should travel in China and see for themselves what can be done for the extension of trade there.

The *Kokkai* reviews the present situation in China and expresses its conviction that, unless a chivalrous benefactor comes to her assistance, China is doomed to fall a prey to the rapacity of Western Powers. It is a great mistake to suppose that Russia, France, and Germany are the only Powers whose aggressive designs on China are to be feared. England will not be slow to put in her claim for a large share of the spoil. The *Kokkai* does not seem to have any faith in the possibility of a chivalrous benefactor's coming to rescue China from the clutches of the Western robbers.

EDITORIAL NOTES.

THE KOBE CRICKETERS "SEND OFF"

FROM the *Hyogo News* we gather that the smoking concert given in honour of the departure of the Kobe Interport team was one of the best of a long series of now famous entertainments. The programme, it remarks, can hardly be treated in detail; an iteration of items and the publishing of so many stage-names could convey no idea to those who were not present. But we may say that the Ebony Boys gave a series of Christy Minstrel choruses and solos and banjo selections and "gags" in a manner fully in keeping with the reputation earned by their earlier appearance. And after them came a succession of star artistes in song and dance. The Sisters Giggie made an immense hit, the Dazzler carried the house by storm, the Royal Submarine Band played as no earthly orchestra has played before, and Harro Enoski, M'ddle Gusto, and Mr. Amstead Eath, to mention a few striking personalities, continued and varied the proceedings with contributions often suggested by their cognomens. The wild fun and fury of the final tableau, an Indian dance, can be remembered as a fantastic dream but cannot be reduced to plain words. Many popular compositions were levied upon in the course of the evening to provide so much good music. Proceedings closed with rousing cheers for the artistes, including Mr. H. Grimbale the indefatigable accompanist, and with "God Save the Queen" by the Town Band, which had rendered some capital selections at intervals during the evening.

UNIQUE CRICKET MATCH.

THE sequestered village of Thornton Heath was the scene of a cricket match which, a Surrey paper remarks, appears to be almost unique in the annals of cricket. Mr. Bacon, one of the oldest and most respected tradesmen of Thornton Heath, who is a postman and pursues the business of a shoemaker in the High Street, with his ten sons challenged eleven of the postmen of the place to a cricket match on the Recreation Ground. The "Men of Letters" were victorious, but we hope that this will not be the first and last appearance of old Mr. Bacon and his ten athletic sons upon the ground. We cannot at present recall another instance in which an eleven has been represented entirely by the members of one family, sons of the same mother and father. Some of our readers, says the *Kobe Chronicle*, will doubtless recall the days when Mr. A. P. Lucas formed his invincible Lucas eleven, but that illustrious team was composed of Mr. Lucas's cousins as well as his brothers. Dr. W. G. Grace—when his brother, Dr. E. M. Grace, was the finest point in England, and his brother, G. F. Grace, the most brilliant field the world had ever seen—formed, with his cousins, the Gilberts, what he called the Grace family eleven, and challenged the Gloucester county eleven.

THE AUSTRIAN CRUISER "AURORA."

THE Austrian cruiser *Aurora*, now in port, says the *Hyogo News*, is to make a stay of about ten days in Kobe, and during that time an oppor-

tunity will, we hope, be afforded us of hearing something of the rich musical talent that we understand abounds on board. The reputation of Captain Constantin Edler von Pott and his staff of officers—Lieutenants Anton Vertovetz, R. Skingass, C. Kailer, R. Graubner; Naval Ensigns A. Lernet, A. von Khuepach, E. Bulla, Alois Schusterschitz, Emil Wilde; Dr. Casimier Microszewsky, Chief Engineer Johann Seifriedsberger, Second Engineer H. Knisch, and Paymaster Wilhelm Senautka—has preceded them to Kobe, and an opportunity of judging for ourselves will be most welcome. The *Aurora* is a vessel of 1,370 tons, with engines of 1,000 horse-power; she carries three machine-guns, and six breech-loading guns; her crew numbers 223 all told.

THE GRACE SHILLING TESTIMONIAL.

THE *Daily Telegraph* National Shilling Testimonial to the well-known cricketer, Dr. W. G. Grace, now amounts to 91,183 shillings. Amongst recent subscriptions received from abroad is one from the Hongkong Cricket Club, the hon. secretary of which, Mr. Ed. A. Ram, writes:—"I have the pleasure to forward you a draft upon the Hongkong and Shanghai Bank for £10 (200 shillings), which you will be so good as to accept as the slight but sincere tribute of admiration from 200 members of the Cricket Club and community of Hongkong." There is also a subscription from Bangkok amounting to thirty-six shillings forwarded by Mr. Harry Hillman, editor of the *Siam Observer*, who writes:—"Bangkok is not a very big place as regards Europeans, and although English predominates, a large proportion of the small European community is non-English. I was consequently somewhat doubtful when some local cricketers suggested the opening of a fund. However, I expected thirty, and got thirty-six, in which are included the British Chargé d'Affaires, the Consul, the Anglican priest, and even a few Siamese."—*L. and C. Express*.

MRS. BROWN POTTER.

THE Melbourne *Punch* says:—The American paper tide which turned so suddenly for Mrs. Cora Urquhart Potter last season has become a flood, and she will in the fall be the prominent figure in the theatrical world. She has been taken up by Augustin Daly, who, having brought out the finest comedienne America has had in Ada Rehan, proposes now to turn his attention to the tragedienne. Mrs. Potter owns the French play "The Queen's Necklace," in which Marie Antoinette is the leading character. But it is likely that Mr. Daly, having an actress who can realise high tragedy, will do for the classic play of that kind what he has done for the highest comedy. Mrs. Potter will justify all he can undertake for her, for she would have been the leading female star on the stage long ago had she had proper management. In the meantime, a noted sculptor is doing a bust of her, a well-known artist is painting her picture, and as Mr. Daly is the best stage manager in America and has a theatre in London, Mrs. Potter will benefit largely by both advantages.

WARSHIPS ON THE YANG-TZSE.

THE French cruiser *Duguay Trouin* arrived at Woosung on Saturday, October 5th, from Yokohama, and the Italian cruiser *Umbria* arrived at Shanghai the same day. The U.S.S. *Machias* was recently at Hankow, but was leave in a day or two. The *Æolus* was at date of latest advices at Kiukiang, the *Rainbow* and *Spartan* at Wuhu, the *Alacrity*, flying the flag of Admiral Buller, is on her way to Wuhu, the *Plover* is on her way to Hankow, and the *Caroline* and *Edgar* are at Woosung. H.M.S. *Daphne* left Shanghai on the 7th inst. under orders for Swatow. H.M.S. *Caroline* will probably remain at Shanghai during the winter.

CHANGING SERVICE.

THE *Straits Times* says:—We understand that Messrs. G. T. Hare, R. J. Wilkinson, and G. J. L. Litton, at present members of the Civil Service of the Straits Settlements, have telegraphically received permission from the Secretary of State to leave their present appointments and

enter the Consular service in China. Dissatisfied with their prospects in the civil service, these gentlemen applied some time ago for the permission they have now received with unexpected celerity. They are disbelievers in the Straits; they are optimists regarding the prospects in the diplomatic field of the Far East. They prefer to sacrifice their years of labour here, their pension qualifications, their seniority, all in fact, to enter what to them appears a far easier and more rapid route to distinction and substantial remuneration. It is a serious step to take, some may call it rash, but these gentlemen are men of erudition and common sense, and we wish them success in their undertaking, if they undertake it—but there is yet time for repentance.

PERSONAL ITEMS.

THE Russian Minister received a long telegram from the home Government on the 16th inst. It will be remembered that the appointment of Li Hung-chang as Chinese commissioner to discuss the Liaotung question, took place the same day. On the following day, the 17th, the Russian, French, and German Representatives proceeded to the Foreign Office, and had an interview with Marquis Saionji for two hours. Marquis Ito called on Marquis Saionji on the 18th inst. at the Foreign Office, and the British Minister visited the Foreign Office about the same time. Count Okuma's garden party, which was given on the 18th inst., was attended by over one hundred guests, but no Cabinet Ministers were present. Mr. Komura, Chief of the Political Business Bureau in the Foreign Office, is gazetted to-day Japanese Minister Resident in Seoul, and Mr. Motono is commissioned to act as chief of the same Bureau. Viscount Minra, Japanese Minister to Korea, and Mr. Sugimura, Secretary of the Japanese Legation in Seoul, have been recalled. This matter is published in to-day's *Official Gazette*.

A FORMOSAN REFUGEE.

THE *Chinese Mail* (*Wah Tsu Yat Po*) says that General Woo Kwong Liang, who effected his escape immediately after the evacuation of Chang-hwa by the Chinese soldiers in Formosa, is now residing in a lodging-house in Canton. Our contemporary adds that probably the escape of this general gave rise to the report that Liu Yung-fu, the Black Flag General, had abandoned Formosa and had crossed over to the mainland of China.

COMMANDER BARBER.

THE *N.-C. Daily News* learns that Commander Barber, U.S.N., fearing that his health would not support the 1,700-mile land journey from Tientsin to Chéngtu, has resigned his post on the Chéngtu Commission, and Admiral Carpenter has appointed Lieut.-Commander John P. Morrell, of the U.S.S. *Baltimore*, in his stead.

VISCOUNT DE LABRY.

WE learn that the French Government has conferred the Legion of Honour on Captain Viscount de Labry, Military Attaché of the French Legation in Tokyo, in recognition of his services during the recent War between China and Japan.

SIR NICOLAS O'CONOR.

SIR NICHOLAS O'CONOR, the British Minister to Peking, says the Shanghai morning journal, has been down to Tientsin to meet Lady O'Conor, who returned from Chefoo in a Russian gunboat. Sir Nicolas proposes to leave his present post at the end of this month.

NEW SPANISH GUNBOAT.

THE Spanish gunboat *General Noval*, Commander Guillermo de Avila, arrived at Singapore on the 27th ult. from Glasgow and anchored in the roads. The vessel is of 906 tons, 72 horse-power, and carries a crew of 72 men. She is on her maiden trip to the East and goes on to Manila.

WATERWORKS FOR ODAWARA.

THE Odawara residents propose constructing water-works at Odawara with Hakone Lake as the base of supply. It will be remembered that

cholera was very prevalent in the district this year, the spread being assisted by the impurity of the water. In consequence of the unfortunate outbreak of the epidemic the number of visitors to the district was considerably decreased, and the residents feel the importance of water-works.

PEKIN NEWS.

Concerning the appointment of Earl Li as Plenipotentiary for negotiating the new Treaty with the Japanese Minister, the Japanese correspondents mention a rumour prevalent in Peking, to the effect that the Grand Secretary's position is very unenviable. He has been appointed, it is said, to this difficult duty not because he is of all Chinese statesmen best qualified to discharge it, but principally because he is regarded as the sole cause of China's recent humiliating defeats, and is consequently held responsible for settling all affairs connected with the war. Under such circumstances, his powerful enemies promise themselves a unique opportunity for attacking him in the sequel of the negotiations, and they will seize every pretext to impeach him to the Emperor. Such is the rumour widely circulated among the Chinese. Information obtained by the correspondents from another source, however, indicates that the Peking Government had at first resolved to associate with Earl Li one or two other negotiators, but that everyone to whom the offer was made declined to accept it, and it was next decided that all the Ministers of the Tsung-li Yamên should be appointed Plenipotentiaries. That plan, also, proving impracticable, the Chinese Government was already beginning to think that the best course would be to entrust the task to Earl Li alone, when its idea was strengthened by suggestions in the same sense from the foreign Representatives, including the Japanese Minister. According to this view, Earl Li's position, though not completely re-established, is less insecure than some people seem to imagine.

The question of the rate of exchange between the Ku'ping tael and the British pound sterling took more than a month to settle. Receiving no reply from the Tsung-li Yamên after the lapse of a month from the time of communicating his proposal on the subject, Mr. Hayashi is said to have addressed, on the 25th ultimo, a vigorous note to the Chinese Ministers of Foreign Affairs, remonstrating against their incomprehensible delay, and telling them that, should they continue undecided, he must withdraw his proposal and demand the payment of the indemnity in coin in Peking. This brought them to their senses, and on the 27th ultimo, Wang, Chang, and two other Ministers visited the Japanese Legation. After expressing regret for their inability to give a more speedy answer, they produced a counter-proposal based on the views of Sir Robert Hart. The *Kokumin's* correspondent states that between the two proposals there was a difference of about 4 grains per tael. So the matter was not settled at that day's conference.

On the above occasion, after the immediate business had been concluded, Wang Tung-ho is said to have asked Mr. Hayashi various questions about the state of things in Japan, especially education and civil service examinations. Mr. Hayashi willingly afforded all the information required. The aged Chinese statesman evinced lively interest in everything that he heard from the Japanese Minister. Perceiving the sincere desire of his guest to learn all about Japan, Mr. Hayashi is said to have recommended him to instruct the Chinese Minister in Japan to collect all desired information. The Japanese correspondents are glad to observe that Yang, hitherto regarded as a most bigoted opponent of modern civilization, has at last opened his eyes, and is now in a fair way to be converted into an enthusiastic advocate of reform and progress. This is an encouraging sign for all well wishers of China. It seems probable that the rumoured reconciliation between Wang and his old antagonist Li Hung-chang, is not a baseless story.

KOREAN NEWS.

SATURDAY, OCTOBER 12.

The situation in Korea remains unchanged so far as our information goes. The impression grows stronger that the Queen has fallen a victim to the resentment of her enemies. A few Japanese war-ships were to have been despatched to the peninsula, but things having resumed their ordinary aspect, the order has been rescinded. A telegram mentions that some adherents of the Tai Wön-kun wore Japanese clothes when they forced their way into the Palace, for the Japanese being greatly feared by the Koreans, it was supposed that such a disguise would disarm resistance. This circumstance is said to have occasioned no small annoyance to the Japanese, who are naturally indignant at a cowardly artifice tending to implicate them in an affair with which they had no connection.

One correspondent wires a rumour that Her Majesty is hiding in the Russian Legation, but this telegram is not credited.

MONDAY, OCTOBER 14.

The Edict deposing the Korean Queen, already referred to in our telegraphic column, runs as follows:—

Our reign has already lasted two-and-thirty years, and yet it grieves Us to think that the country has not been sufficiently benefited under our sway. Our Queen, of the Min family, collecting around Our throne a large number of her relations and partisans, has obscured Our intelligence, robbed the people, confused Our orders, bartered official rank, and practised all sorts of extortion in the provincial localities. Bands of lawless robbers roamed in all parts of the country, and the dynasty was placed in a perilous situation. That We have not punished her, though knowing her wickedness, may perhaps be ascribed to Our lack of wisdom, but it is principally owing to the fact that she surrounded Us with her partisans. In order to impose restraints upon the evil, We made a vow to the spirits of Our Ancestors in December last, to the effect that the Queen and all her blood relations should henceforth be prohibited from meddling with State affairs. It was Our hope that the Queen would repent of her errors. But instead of repenting, she continued to favour her followers and to keep at a distance those of Our own family. She also prevented the Ministers of State from directly approaching the Throne. She further conspired to cause a disturbance by falsely making it known that it was Our wish to disband Our troops, and when the disturbance arose, she left our side, and following the method pursued by her in 1882, she hid herself beyond the reach of Our search. Such conduct is not only inconsistent with her rank as Queen, but is the acme of crime and heinousness. We therefore, in pursuance of Our family precedents, are compelled to depose Our Queen and to degrade her to the level of the common people.

The date of this Edict is not known, but from telegraphic communications bearing on the subject, it appears that it was issued on the 11th instant. It is mentioned in a later telegram that, out of sympathy with the Crown Prince, the Queen was allowed to retain the rank of Royal Mistress.

According to a telegram, dated Söul, 12th inst., 10 p.m., published in the *Asahi Shimbun*, the following Edict is said to have been issued to ease the minds of the Min faction, who are supposed to be in grievous dread of persecution:—

"We regard all Our loyal subjects with equal benevolence and unbiassed humanity. Neither Our rewards nor Our punishments shall be influenced by party considerations. We therefore enjoin upon Our subjects to forget their private feuds, and in view of the difficult position in which their country is now placed, to unite their efforts harmoniously with Ours for the furtherance of the great task of reform."

A Fusan telegram, dated 12th inst., 8.15 a.m., published by the *Nichi Nichi*, states that the foreign Ministers at Söul have been holding

frequent conferences at Chon-don since the *émute* of the 8th instant, and that the Japanese Minister does not seem to have attended any of these meetings.

Another telegram from the same place announces that various rumours are circulated in Söul, the alleged sources being General W. McE. Dye and a Russian architect. These two live in the palace, and are consequently credited with having been eye-witnesses of the occurrences on the 8th instant.

Concerning the Japanese troops that assisted in restoring order at the Palace, it is stated that they were withdrawn as soon as the disturbance subsided, and as soon as it was seen that no apprehension of further trouble need be entertained. That was about 9 o'clock in the morning.

A Ninsen telegram, dated the 11th instant, says that it is very generally rumoured among the Koreans that the Queen is still safe in a private house. But the sender of the telegram places little confidence in this rumour.

The news of the disturbance has produced various impressions upon the Korean students staying at the *Keiwo Gijuku*. Those that had been sent to Japan while Pak Yong-ho was in power, did not show any sign of alarm, but the report produced great excitement among those that had come subsequently under the patronage of the Min faction. Among the latter, the most seriously alarmed are the forty-five brought over in the train of Count Inouye. Five of them tried to escape from the College on the night of the 9th instant, but were prevented from doing so by the College authorities. Hearing of this incident, Count Inouye invited the students to his residence and pointed out to them the inadvisability of taking any hasty step. He earnestly advised them to stay quietly at the school. But having become possessed of a strong desire to return home, they refused to avail themselves of their refuge in Japan. Count Inouye then requested them at least to wait until he should have communicated with their King, but this, too, they declined. Thus there remained no alternative for Count Inouye but to let them have their own way. He exacted from them, however, a written acknowledgment that the course taken by them was in opposition to their guardian's explicit recommendation. Thirty-six of these students left Tokyo for home on the evening of the 10th instant. Five have gone to their Legation, but the rest are quietly pursuing their studies at Mita.

TUESDAY, OCTOBER 15.

The latest Söul correspondence, dated five or six days previous to the *coup d'état*, makes it tolerably clear that, although the citizens were not prepared for an event of such a character and such importance, intelligent observers of passing events had ample reason to suspect that some sort of crisis was at hand. The *Nippon's* correspondent, for example, wrote that "a strange drama was about to be enacted." Among the circumstances that seem to have suggested misgivings to the representatives of the Japanese press, the foremost place must be given to an extraordinary revival of the influence of the Min politicians, and of the abuses and corruptions historically associated with that faction. The Queen, confident in her re-established power, not only began to recall to office many of the Min politicians dismissed when the programme of political reform was adopted, but even authorised the sale of official rank to anyone that could afford to pay twenty or thirty dollars for the privilege of increased social status. Min Yong-chun, who had recently been recalled by the Queen, was to be appointed Minister of the Household. It was further rumoured that the Queen meditated the revival of the *Shosei-in*, a sort of inner Cabinet in the Court, the offices in which would be filled no doubt with politicians of her own faction, slowly and cautiously. Her Majesty seems also to have set about eliminating all alien elements from the Government. The first that fell a victim to her policy was Yu Kitsu-ei, Chief Secretary of the Cabinet, who had proved himself a consummate intriguer in the interests

of the party opposed to the Min. He was transferred to the comparatively insignificant post of Governor of Wi-ju. These events could not fail to cause uneasiness to Kim Koshu, Minister President, the leader of the independent faction. He had promised Count Inouye never to leave his position unless under compulsion. But he is said to have been greatly shaken in his resolution and to have begun to think of resigning a post the real power of which he was not allowed to exercise.

An Keiju, Minister of War, also tendered his resignation because he found himself the object of profound resentment on the part of the Queen in consequence of his share in introducing Japanese soldiers within the Palace grounds last year. Kim Kachin, Minister of Agriculture and Commerce, was also directed by the King to tender his resignation, the Queen entertaining against him the same prejudice as against An.

Mention is further made of the growing ill-feeling between the Palace Guards and the *Kunrentai* troops. It is stated that an officer of the latter was publicly insulted by two privates of the Guards in the streets of Söul. Quarrels were also frequent between the *Kunrentai* soldiers and the police constables. Recently a drunken private of a *Kunrentai* battalion was rebuked by a constable for his rudeness to civilians. The soldier quietly went back to the barracks, where he was joined by a number of his comrades, and the party marched to the nearest police station, attacked the constables, smashed furniture, and inflicted severe wounds on two police sergeants and three constables. The infuriated soldiers then proceeded to a prison where they committed wanton acts of violence.

Such was the state of affairs in Söul a few days previous to the recent disturbance. It is evident that the position of the section devoted to the policy of reform and progress had become extremely perilous. In fact, the correspondents plainly express their conviction that a crisis of a grave nature was impending. Kim Koshu and his followers must have felt that all was over unless some desperate *coup* were resorted to. It is now believed in Tokyo that Yu Kitsu-ei was the prime actor in the daring plan executed on the morning of the 8th. How far he and his chief Kim Koshu, were directly concerned in the ghastly details of the affair, we shall probably remain always in ignorance. But from the past history of Yu, as well as from the extraordinary smoothness and absence of confusion with which the reorganization of the Government was effected immediately after the entrance of the Tai Wön-kun into the Palace, it seems probable that everything had been previously arranged and agreed upon between the King's father and his friends in the Cabinet.

The following Imperial Ordinance, restricting the passage of Japanese subjects to Korea, was published yesterday in the *Official Gazette*:

IMPERIAL ORDINANCE.

We, judging that urgent necessity exists, and acting with the advice of Our Privy Council and in accordance with the provisions of Article VIII. of the Imperial Constitution, do hereby forbid that, with the exception of Civil and Military officials, or persons under instructions from the heads of Departments, no Japanese subject shall travel to Korea with obtaining permission from the Local Governor within whose district he resides.

[Imperial Sign Manual.]

[Great Seal.]

[Signatures of Minister of State.]

IMPERIAL ORDINANCE No. 144.

With the exception of Civil and Military officials or persons under instructions from the heads of Departments, Japanese subjects are hereby forbidden to proceed to Korea without obtaining permission from the Local Governor within whose jurisdiction they reside. Any one violating this order shall be liable to major confinement of from one month to one year, together with a fine of from 20 to 200 yen.

This Ordinance shall take effect from the day of its promulgation.

In the *Nichi Nichi Shimbun* we find the following:—"In the disturbance on the 8th instant in Söul, a party of rioters broke into the Queen's apartments, dragged out three females, apparently ladies in waiting, slashed them to

death, and taking their corpses out the castle, burned them. One of the murdered ladies appears to be undoubtedly the Queen. Such is the rumour circulating generally in Söul. The former Minister of the Household is said to have been killed at the same time. Who these assassins were, is not known, and as they were foreign costume and carried Japanese swords, there is no discerning whether they were rioters who took advantage of the confusion caused by the military *émeute*, or whether they were actually soldiers. It appears that some Japanese loafers entered the Palace at the same time as the troops, and the Japanese residents in Söul are consequently in great trouble."

The above intelligence is in the form of a telegram from Ninsen, dated 8.50 p.m. on the 13th instant. If its worst construction be confirmed, a very evil impression will be created. People will naturally say that the Japanese, whose pretext for being in Korea is to civilize the country, have themselves set a flagrant example of lawlessness and barbarism. But of course it does not follow that because a party of rioters wore foreign costume and wielded Japanese swords, they were necessarily Japanese. There is another, not unreasonable, hypothesis, namely, that if any Japanese had contemplated taking part in such an affair, they would have been more likely to disguise themselves by wearing Korean costume than to court identification by wearing foreign clothes. At all events, we must await farther evidence before forming a definite decision. It is known that many Japanese of the worst type, including unscrupulous adventurers and *soshi*, flocked to Korea after the expulsion of the Chinese, and after the restrictive measures adopted by the Japanese authorities ceased to be operative. Those measures are now again put into force, and we may at least be confident that, under the circumstances, any lawless part played by Japanese adventurers during the *émeute* will be exposed and punished. Meanwhile, it will be seen from the information furnished by the Japanese correspondents quoted above, that the *coup d'état* of the 8th instant was obviously the climax of a rapidly developed struggle between the party of progress and the conservative relatives of the Queen.

WEDNESDAY, OCTOBER 16.

Later letters from Söul, dated only two or three days before the disturbance of the 8th instant, run in the same strain as those quoted in our last issue. One or two fresh facts are narrated showing to what lengths the Queen had carried her disregard of the functions of the Cabinet. An Edict reviving the system of distinguishing personal ranks and social classes was promulgated over the countersignature of the Minister of the Household Department, which procedure was a flagrant violation of the official regulations. The Queen also took her own way of late in the appointment of military and civil officers of the higher ranks. Whenever the Cabinet ventured to question the propriety of any appointment proposed by the Court, the King became highly indignant and did not hesitate to apply very strong epithets to his refractory Ministers. In such cases the appointments were effected in entire disregard of the Cabinet's remonstrances. Recently, the Queen wanted to have an impotent official of *Hannin* rank transferred from the Household Department to be Director of a Bureau. The position carried with it the rank of *Chokunin*, the highest grade in officialdom. Apart from any question as to the personal qualifications of the candidate, a sudden leap from the lowest to the uppermost step in the ladder of promotion was against all precedents and rules. The Cabinet remonstrated, whereupon the Queen withdrew the proposal, and three days afterwards the appointment was announced in the *Official Gazette*. From that time, official nominations were made without the slightest reference to the Cabinet.

Another irregularity alluded to is the fact that, while the law of official organization limits the number of officials in the Household Department to 600, including court ladies, the Queen arbitrarily increased the actual number to more

than 2,000, exclusive of ladies. It being impossible to support such a crowd of officials out of the civil list, the Minister of Finance was requested several times to appropriate money from the Special Reserve Fund. It was probably with a view to such requisitions that Her Majesty took care to appoint to the Ministry of Finance, Chin Sokun, one of her most trusted partizans.

The Queen and her followers do not seem to have had the slightest suspicion of the conspiracy that was secretly hatching in the suburbs of the capital. But Her Majesty appears to have been aware that the policy she was pursuing could not fail to drive the Reform party into an alliance with the Tai Wön-kun. It was some faint apprehension of this danger that induced her recently to cause the King to send a secret messenger to his father at his country seat of Kong-tök-ri, summoning him to return to his place in Söul, where he could be watched with greater ease and might even be kept in a kind of custody. The Japanese correspondents attach great importance to this incident.

These correspondents, throw out, here and there, mysterious hints about an impending political crisis, but none of them seems to have had any clear idea as to the manner in which the event was to occur. They make no attempt to be explicit.

THURSDAY, OCTOBER 17.

Letters describing the Korean *émeute* on the 8th instant have just been published in the vernacular press. From them it appears that, although the *coup d'état* of the 8th was a sudden and complete surprise to those not directly concerned in it, the situation had been gradually growing critical. From the way in which the Queen and her partisans behaved, it had been clear for some time to all intelligent observers in Söul that things must sooner or later culminate in serious trouble. But none except those immediately involved in the plot had the least idea that the issue would arrive so soon and in such a decisive manner.

The apprehended danger was precipitated by the supposed intention of the Queen's party to disband the *Kunrentai* troops. These, having been organized by the reform party, were regarded with special aversion by the opposite side. In order to constitute a pretext for their meditated disbandment—that is to say, the breaking up of the only body of fighting men worthy of the name in the whole peninsula—the Queen's partisans are stated to have contrived repeated collisions between these soldiers on the one hand and the police and palace guards on the other. Allusion has already been made in our columns to these disturbances. Having thus created a fair pretext for their long meditated move, the Queen's partisans are said to have decided to take all the arms from the *Kunrentai* troops and disband them, except the officers, who should be punished according to their supposed guilt. This was on the afternoon of the 7th. The opposite party seems to have had a spy at Court, for the news of this intended move on the part of the Queen's party soon reached the ears of Her Majesty's enemies. When the *Kunrentai* officers heard what was impending, they saw that their only chance lay in a decided counter-move. They at once appealed to the Tai Wön-kun for his countenance, and if possible, for his active leadership in the meditated *coup d'état*. Whether this was the first appeal for the aid of the King's father, or whether the plot had included him for some time, none of the correspondents can say for certain. Be that as it may, it seems unquestionable that the Tai Wön-kun suffered himself to be escorted to the Palace at the head of the discontented troops.

At 2.40 a.m. on the 8th—so explicit is the correspondent of the *Kokumin Shimbun*—the Tai Wön-kun left his country seat of Kong-tök-ri, about two miles and a half from the capital. It had been arranged—so says the same writer in the *Kokumin* from whom we proceed to quote the principal events of the day—that the Tai Wön-kun should be met on the way by a party of the *Kunrentai*. But he and his suite proceeded some distance along the principal road toward the south gate of the city without

meeting the expected detachment. The little party arrested their advance and waited for about an hour in great doubt and misgivings, when a man on horseback approached and dispelled all anxiety by reporting that the troops sent for their escort had proceeded by a different road, but that, finding out the mistake, they were now waiting for the royal party at the Western Gate of the city. When the King's father and suite approached that place, they were saluted by the 1st Battalion of the *Kunrentai* which was drawn up there. It was then 4 a.m. The whole party thereupon proceeded at a rapid pace towards the Kwang-hwa gate of the Palace. When they presented themselves there, the guards discharged a few shots and fled. At this moment a small party of about twenty men who had appeared in front of the Home Office close by fired at the Tai Wön-kun's escort, and about thirty or forty shots had been exchanged when a man rushed from the ranks of the small party of assailants. But before he could reach the Tai Wön-kun's men, he was shot down. The assailants then took to their heels. The fallen man was found to be Ko Kei-kan, one of the Queen's sworn followers, who had but recently been appointed commander of the *Kunrentai* Regiment. Entering the Palace grounds without further resistance, the Tai Wön-kun stopped at the Thai-hwa Palace. Meanwhile, the *Kunrentai* troops possessed themselves of all the principal gates of the palace. After a short rest in the above mentioned building, the Tai Wön-kun proceeded to the Kang-nyöng Palace, where His Highness asked for an audience with the King. Having waited a short time, he was shown to the King's apartment. It was then about 5.30 a.m. What passed at the interview between the father and son, the correspondent does not profess to know. But he states that during the conference the Crown Prince was by the side of the King. Great confusion prevailed among the court ladies, who soon assembled in one room in a state of surprise and consternation. As to the Queen, it was not known what had become of her. A tumultuous scene is said to have taken place between her personal attendants and the *Kunrentai* soldiers who approached her Majesty's chamber to protect her—so says the correspondent.

The *Fiji Shimpō's* correspondent is informed that the Queen fell a victim to foul play.

At seven in the morning, says the *Nichi Nichi's* correspondent, the Japanese Minister repaired to the Palace in response to a summons from the King, and immediately afterwards the Japanese troops, at the request of the King, mounted guard over the principal gates of the palace.

The Russian and American Ministers called at the Japanese Legation, but finding that Viscount Miura had already repaired to the palace, they, too, followed him thither. It was then about nine in the morning. In the afternoon, the same Ministers again called at the Japanese Legation, and had a conversation with Viscount Miura, asking for information about the *coup d'état* of the morning.

Among the Korean Ministers of State, An Keiju, Minister of War, is said to have been the first to repair to the palace. He was soon followed by Kim Koshu, the Premier, and Kim Sushoku, the Minister of Foreign Affairs.

These things took place while the citizens of Söul were yet sound asleep in bed. When they awoke, they found a proclamation posted at various places in the streets, calling upon them to keep quiet, inasmuch as a party of patriots, no longer able to remain inactive while the safety of the country was being endangered by wicked people that swarmed in the Palace, were engaged in purifying the Court and inducing the Tai Wön-kun to assist the King in the administration of the kingdom. A short time later in the morning the following proclamation was posted at the principal thoroughfares of the capital in the name of the Tai Wön-kun:—"Of late a gang of perfidious courtiers have surrounded the throne to obscure His Majesty's natural wisdom and induce him to turn from the prudent and favour the wicked. They have thus rendered the great work of reform impos-

sible, and placed in serious danger the foundations of the Royal dynasty laid during the past five centuries. Born in the Royal family, I cannot sit still under the circumstances. I am therefore determined to enter the Palace and assist His Royal Majesty in eliminating from the Court this gang of traitors, thus rescuing the dynasty from the imminent peril that threatens it, and thereby ensuring peace and tranquillity to the people. I enjoin upon you, all classes of the people, to pursue each his own vocation and avoid from all riotous conduct. Be it known to you all that any breach of this injunction will be instantly and signally dealt with."

The letters just published in Tokyo are all dated on the day of the *coup d'état*, so that further and more accurate details may be looked for by next mail.

COUNT OKUMA INTERVIEWED.

The *Mainichi Shimbun* publishes an account of an interview that its representative had with Count Okuma. When the interviewer was ushered into the room, the Count was conversing with a certain business man on industries in Hokkaido. The conversation then turned on the foreign trade of the country, and the Count dwelt with satisfaction on the rapid rate of its growth. Now that the war with China has revolutionized Japan's relations with the outer world, Count Okuma cannot but think that the growth of trade in the near future will be still more rapid than heretofore. Nevertheless, he reminds the business men of Japan that much depends upon their energy, their judgment, and their prudence. Especially ought they to be aware that their most formidable antagonists in the field of commerce are not Europeans and Americans but the people of China. Impotent as they are in real war, the Chinese are dangerous competitors in commerce and industry. The Count at the same time hopes that the Government will take all necessary steps for the extension of Japanese trade in China. These steps are, to select for Consular positions men of practical capacity, with knowledge of commercial affairs; to establish Consulates at all important places; and to determine and publicly announce the policy to be pursued toward China. After sundry other remarks on the general position of Japanese trade, Count Okuma again returned to the subject of trade with China. He was glad to learn that the industrial department of the Mitsui firm had decided to start a cotton mill in Shanghai. He welcomed this new departure because he thought that it would serve to stimulate the industrial and commercial classes in Japan. But as to the question whether the Mitsui Firm had acted wisely or unwisely, the distinguished statesman seemed to hesitate about pronouncing an opinion. He observed, however, that Shanghai was not the best place for the Japanese to establish manufactories. It would not be easy—at least not so easy as in Japan—to obtain the necessary female hands in China. Moreover, the necessity of employing interpreters and sending inspectors would involve much trouble and expense. This outlay and trouble could be avoided by locating the mill at Moji, or some other place in Kyushu, where there is plenty of cheap coal and cheap labour, and where excellent shipping facilities are obtainable. The Count was therefore disposed to consider it a mistake to start factories in China.

FORMOSA NEWS.

The *Nichi Nichi Shimbun* says that important news has been received at Amoy by the steamer *Harold*. It is to the effect that the Black Flags in Tainan have surrendered to the Japanese Squadron, through the intervention of the British Consul, and that measures have been taken to preserve order in the town and protect the lives and property of the inhabitants. A condition of the surrender was that the lives of the Black Flag soldiers should be saved, and that they should be sent back to China. It seems strange that, if this be true, some intel-

ligence of it should not have been conveyed direct from the Japanese head-quarters in Formosa, but there is of course a possibility that as the surrender was made to the Navy, no opportunity of communicating overland may have been immediately available. We have never anticipated any very serious resistance on the part of the Black Flags, and their surrender, as described in the above telegram, would not surprise us.

Another telegram, published by the *Hochi* and the *Mainichi*, says that Liu Yung-fu with the troops under his command, has surrendered to the Japanese, but gives no particulars whatever.

The *Nichi Nichi Shimbun* attributes the absence of any direct news from Head-quarters at Taipei to the fact that the telegraph is interrupted between Tamsui and Amoy.

The same paper informs us, on authority said to be trustworthy, that the Second Division, which left Kelung under the command of Lt.-General Takashima, arrived at the Pescadores on the 8th instant, and was to proceed thence, southward, in two sections on the following morning, one to land at Tang-kang and the other at Pau-tai-chi. It was expected that the landing would be completed on the 12th inst. If this programme was adhered to, the surrender of the Black Flags must have anticipated the landing of the Division.

The first batch of telegrams relating to the movements of the Japanese troops in the south of Formosa has just been received. The delay is accounted for by an interruption of the cable between Tamsui and Amoy.

The following telegram from the Staff at the Governor-General's Office, is dated Tai-pei October 13, 1.43 p.m.:

"According to a telegram from the Guards Division, the right column of that Division effected a junction with a company of the Fourth Mixed Brigade at Ku-sui-kang at 8 a.m. on the 11th instant. It is reported that the landing of the principal part at the above mentioned Brigade was to have been completed on the 11th.

The Second Division commenced disembarkation on the sea shore west of Fang-liao at 8.45 a.m. on the 11th. It encountered no resistance from the enemy nor any climatic inconvenience.

According to the captain of the *Toyohashi Maru*, which left the last mentioned place at 4 p.m. on the 11th, the advance guard of the Second Division came into collision with a hostile force, four or five thousand strong, at Fang-liao and its vicinity, about noon on the day of debarkation. The enemy having gradually retreated, it was expected that the greater part of the Division would be landed in the course of that day."

Concerning the landing of the Second Division, alluded to in the above telegram, Lieutenant-Colonel Mikami telegraphs as follows from Fang-liao, the message being dated Tamsui, 6 p.m., 13th instant:

"Disembarkation was commenced at a place opposite Ban-si-lin (?), north-west of Fang-liao, at 8.45 a.m. on the 11th. There being no resistance from the enemy nor any wind, everything goes on well."

The following from Major Nishiyama dated Pau-tai-chi, was transmitted from Tamsui, at 6 p.m. on the 13th instant:

"The transports carrying the Fourth Brigade commenced landing troops at 3 p.m. on the 10th. The boats have to be rowed for two hours over a distance of more than three miles against strong and high waves, their size increased by the rapid current at the mouth of the river. Weather remaining unchanged, the landing will be completed on the 14th. At the landing place, there were posted about seven battalions (500 each) of the enemy, who, after offering slight resistance to a party of marines, set fire to the village where they had been posted and beat a retreat. The village was completely burnt down. Yesterday afternoon a junction was effected with the Imperial Guards Division."

The following telegram, dated Tang-kang, 8 a.m. on the 14th instant, is from Lieutenant Kuroi of the Navy:

"Leaving Ban-si-lin on the forenoon of the 12th, the transports steamed to Tan-kang. Of

our two months' supply of provision and fodder, a quantity sufficient for five days is to be landed at Tan-kang, while the rest is to be discharged at Takao. This change of arrangement has necessitated a delay in the departure for home of the transports. The ships that have already left for home after discharging their cargoes are the *Satsuma*, *Niigata*, *Fusan*, and *Sendai*. For the purpose of a second shipment, the *Toyohashi* and *Sakura* have been sent back to Kelung; the *Kyoto*, *Fukuoka*, and *Yamaguchi* to the Pescadores; the *Seitoku* and *Suma* to Pau-tai-chi. The *Tairen Maru* is shipping the wounded and sick. Tan-kang is not a good shipping place, so that disembarkation there is attended with serious inconveniences."

THE KOREAN AFFAIR AND THE JAPANESE PRESS.

The latest intelligence from Korea indicates a strong probability that some Japanese *soshi* were implicated in the affair of the 8th instant. In what spirit this feature of the matter is discussed by the Japanese press will be apparent from the articles quoted below.

The *Nichi Nichi* writes in this strain:—"From the latest telegrams from Korea, it appears to be true that the Queen met with a violent death under the sword of an assassin. It seems also beyond doubt that, during the confusion of the *émeute*, some persons clothed in European fashion and armed with Japanese swords entered the Palace. Whether these men were Koreans in disguise or whether they were Japanese desperadoes, we are not in a position to say. But judging from the circumstance that an American officer and a Russian architect, happening to be at Court, were eye-witnesses of the horrible scene, it must be acknowledged that the men attired in European clothes and carrying Japanese swords, whoever they may have been, were the perpetrators of the heinous crime. It is sincerely to be hoped that they are not Japanese, but considering the way in which they were accoutred it is natural that suspicion should attach to Japanese—a suspicion certainly not allayed by the fact that the Cabinet organized under the new state of things is composed of statesmen popularly credited with pro-Japanese sympathy. We are grieved to confess that counter-proofs are not forthcoming to remove this injurious suspicion. We doubt not that Mr. Komura's mission will succeed in probing the matter to the bottom, and should it become clear, as a result of his investigations, that the criminals were Koreans in disguise, then it would be Japan's duty to advise the Korean Government to deal with the offenders in a proper manner. But if it turn out that any Japanese were criminally implicated in the matter, the delinquents, whosoever they be, should be brought to justice without the slightest scruple. Is not our object in Korea to realise her independence, reform her administration, and lead her into the path of civilization? Have we not proclaimed this fact to the world, and has not our position in Korea been tacitly recognized by the Powers? How great, then, would be our dishonour, should it turn out that our own countrymen have been participants in criminal Korean intrigues? Isolated acts of violence attempted by individuals like Tsuda Sanzo and Koyama Rokunosuke, were a disgrace to the country. Much more would it be a stain on the country's reputation should it be proved that a number of Japanese acted in concert with the Korean troops on the 8th instant. Since the Pak incident, our authorities have increased their vigilance in watching the Japanese residents in Korea, and the Government has just issued an urgency Ordinance imposing restraints upon Japanese going to Korea. Under such circumstances, it should be a matter of no small difficulty for a number of Japanese to coöperate with Koreans in a treasonable scheme. But if unhappily such coöperation has occurred, the only course for Japan would be to show no mercy to these offenders. And if it be discovered that there has been neglect of duty on the part of Japanese officials, they, too, ought to be dealt with

properly. The Korean Government, it is true, has made public the deposition of the Queen, but has not proclaimed her death. According to the edict of deposition, Her Majesty must still be considered living. But facts do not warrant such a conclusion. Should it appear that any Japanese were connected, in the slightest degree, with her death, we repeat our earnest wish that no leniency should be shown. It is Japan's duty as a civilized State and as Korea's guide in the path of civilization to sift the mystery to the bottom and to bring to justice whomsoever may have been implicated in the criminal proceedings. Nothing would be more fortunate for her than conclusive proof that none of her subjects had the slightest connection with the affair."

The *Fiji Shimpō* writes in a similar strain. The whole truth, it says, is not yet known about the affair, for the reports thus far received are in many respects open to the charge of exaggeration. But there is no escaping a strong suspicion that some of the Japanese residents in Seoul were more or less implicated in the treasonable tragedy. As a result of the violent political convulsions that shook the country from end to end and led to the Revolution of 1868, there have grown up a peculiar class of political fanatics that do not think it a dishonour to murder public men for the supposed benefit of the State. To this category belong the assassins that have stained the annals of the *Meiji* era. Even at the present moment men of this type are in prison charged with a plot to kill the Minister President of State. The *Fiji* is sincerely sorry that such persons should be numbered among its compatriots. They have of late regarded Korea as a field specially reserved for practical applications of their dangerous creed. The Government has taken every possible measure to prevent them from crossing the sea, and to deport them as soon as they are found on Korean soil. But in spite of all official vigilance, a large number of these desperadoes have found their way to the peninsula either in the character of peaceful traders or as apparently inoffensive deserters from service in steamers plying between Japan and the Korean ports. Under such circumstances, the report that some Japanese were connected with the tragedy just enacted in Korea, is highly probable. Should it be true, the *Fiji* hopes that the facts will be made public without the slightest concealment or reservation, and that the offenders will at the same time be visited with the most signal punishment. Nothing could be more grievous for the sake of Japan than that the acts of ignorant and misguided fanatics should furnish foreign nations with a pretext for questioning her civilization.

STATUE OF THE LATE DR. MÜLLER.

The ceremony of unveiling a statue of the Dr. Müller in the grounds of the Imperial University took place on the 13th instant. Dr. Müller was the first German professor at the Tokyo Medical College, the embryo of the present College of Medicine in the Imperial University. He came to Japan in 1871, when few even among the Japanese professors of the College could speak German. In spite of serious difficulties, he patiently laboured to impart his knowledge to his students, and thus laid the foundation of modern medicine in this country. Hearing of his death in January, 1894, his former pupils including Surgeon-General Dr. Ishiguro, Professors Miyake, Taguchi, and Adachi, and a large number of other well known Japanese, decided to erect a bronze statue of their esteemed master in the compound of the university. The work has been executed by Mr. Fujita Bunzo, the same sculptor that earned a reputation by casting the statue of Dr. Aoyama. The statue represents the German Professor in his military uniform.

JAPANESE EMIGRANTS TO HAWAII.

The *Nichi Nichi Shimbun* has a note on the above subject, based on a report by Mr. Shimizu, Japanese Consul in Hawaii. According to Mr. Shimizu, public opinion in Hawaii with regard to Japanese immigration is divided. These are, first, the view of the traders, who are deriving great profits from the sugar and coffee plantations on which Japanese labour is employed; secondly, the view of the politicians who are in favour of American annexation and who regard with disfavour the large influx of Asiatics that is taking place. The traders maintain that the prosperity of the Sandwich Islands is principally owing to the fact that planters having been for many years supplied with cheap labour, have been enabled to grow sugar and prepare it for export at a cost that leaves a good margin of profit. But if the Hawaiian Government were to place any obstacles in the way of the planters' utilising the facilities offered to them by such countries as China and Japan, the consequence would be a general collapse of the whole trade from which the revenue of the country is now derived. Among immigrants, the planters prefer the Japanese to the Chinese and Portuguese, on the ground that they are easily managed and that they do more work in proportion to wages paid them than labourers of any other nationality. Hence if the planters have their way, Japanese immigrants will always be welcome in Hawaii. But there is no disguising the fact that the Hawaiian Government are implacably opposed to the policy of the planters, and regard with some apprehension the presence of a multitude of Asiatics in the islands. The objections that these politicians have to the employment of Eastern labourers are the stereotyped arguments so often urged in America and Australia; arguments which, when closely examined, are found to depend upon nothing but race prejudice. In these days of keen competition, it is little likely that politicians influenced by such prejudices will be allowed to place serious obstacles in the way of the further development of an industry to which Hawaii owes all its importance and prosperity.

ONE OF THE RESULTS OF CHEAP LABOUR IN JAPAN.

The *Fiji Shimpō* furnishes an account of an interview held with Mr. Hanbury—an American gentleman who had been superintending the erection of a clock and watch factory in Osaka—prior to his departure for the United States at the end of August. The following are the opinions said to have been expressed by Mr. Hanbury. The Japanese have made the most wonderful progress in the manufacture of clocks and watches, and are now able to sell for 50 *sen* a clock that will keep time, and thus answer the purpose of the ordinary Japanese purchaser. The Japanese artisan is a capital imitator. He takes in an idea as quickly as an American, and in many cases he improves on what he learns, originates skilful adaptations of old methods to new requirements. Clock-makers can be obtained at 12 cents a day, and such men will do as much work in a day as the American, who is paid \$1.50 for the same time. If in America two men by hard application can make a clock in a day, two men in Japan will do the same work. There is not the slightest doubt that before very long, instead of, as heretofore, importing clocks from America, Japan will be exporting her timepieces to that country and, unless some special protective measures are inaugurated, America will have to close her clock factories and allow Japan to supply her people with time-keepers. Though originally an ardent supporter of free trade, Mr. Hanbury is stated to have become a rabid protectionist before leaving Japan, and to have gone back to the United States to urge on his fellow-countrymen the importance of taking immediate steps to prevent the country being supplied with Japanese cheap clocks and watches.

Although agreeing with the general tenor of the remarks put into Mr. Hanbury's mouth by the *Fiji's* interviewer, we are sure that no one having a practical acquaintance with the watch-making business would be rash enough to say that a Japanese artisan of the class required for this delicate workmanship can be obtained for 12 cents a day. That the Japanese, however, are making wonderful strides in all classes of manufacture, and that they seriously intend to come into competition with the Western world wherever any prospect of success offers, is a fact inviting the earnest attention of all business men. Publicists like Herr von Brandt think that the movement can be stopped by official interference, or by limiting the area of Japan's territorial expansion. The unsuccessful attempts made by the whole world to check England's industrial development ought to teach the futility of such devices.

THE "KOKUMIN-NO-TOMO."

The *Kokumin-no-Tomo*, hitherto published three times a month, has been converted into a weekly journal and is now issued every Saturday. Its first issue appeared in February, 1887, and inaugurated a fresh epoch in the history of Japanese periodical journalism. Its extraordinary literary success is well-known and needs no comment. Of even greater interest, perhaps, is its equally extraordinary financial success—extraordinary when compared with the general unprofitableness of journalism in Japan. The *Kokumin-no-Tomo* demonstrated for the first time that a periodical magazine might be made to pay. Its success in this respect has no doubt induced the exuberant growth of periodical Japanese journals that has characterised the past seven or eight years. In the opening number of the new series of the paper, the editor remarks that it had long been his ambition to publish a weekly journal of the type of the *New York Nation*. He set about his task in a very prudent manner, first converting his monthly magazine into a fortnightly journal, then increasing its publication to three times a month; and finally attaining his original object, weekly publication. The principal reason why the achievement of his aim has been so long deferred is to be ascribed to the publication of a daily newspaper, the *Kokumin Shimbun*, which for a time demanded the principal share of the attention of Mr. Tokutomi and his staff. Now, however, they have more time and energy to spare for the periodical magazine.

The present number contains two interesting articles, one of which deals with Satsuma men. The general opinion prevails that the Satsuma clan produces soldiers, not statesmen. In the late war for instance, the men that most distinguished themselves in the Army and the Navy were generally of Satsuma extraction, as, for example, Field-Marshal Oyama and Nozu, Lieut.-General Kawakami, Admirals Saigo and Kabayama, and Vice-Admiral Ito. In political circles, our contemporary observes, Satsuma influence is steadily dwindling. Count Kuroda is entitled by his position and past career to be regarded as the leader of the Satsuma statesmen; but he is said to be no longer what he was in former years. The only statesman of the Satsuma clique in whom the *Kokumin* reposes confidence is Count Matsukata. That the finances of the country were maintained in a condition to meet the demands of the expensive war, is said to have been chiefly due to the wise administration of the ex-Minister of Finance. It deeply regrets that circumstances have made it necessary for him to leave the Cabinet, and the regret is embittered by the thought that his fall might have been prevented, had his fellow clansmen been in a better state of discipline and harmony. Under such circumstances, the present Cabinet, though nominally a combination of Sat-cho elements, is really a Choshu Administration, or a Ministry of Choshu men and naturalized Choshu adherents. Marquises Oyama and Saigo, and Count Kuroda together are not equal to Count Mutsu in political influence. In our contemporary's opinion,

the Government should be called the Ito-Mutsu-Ito (Miyoji) Cabinet. The *Kokumin-no-Tomo's* object is not to set the Satsuma men against the present Cabinet, but simply to state facts, and induce them to unite either in opposing or supporting the Cabinet. Notwithstanding the obvious fact that the Satsuma influence is at present almost *nil* in the Government, the writer of the article cannot think that the days of Satsuma influence have altogether passed away. On the contrary, a clan that has produced statesmen like Shimazu Narihisa and Okubo Toshimichi, is surely capable of producing men worthy of its traditions. There are already men of great promise among the rising generation. These younger Satsuma men are in sympathy with the political parties outside the Government. This phenomenon is regarded as a sign that the Satsuma influence, though dying away in the Government, is increasing in another and better sphere, namely, among the friends of the people and constitutional government. The *Kokumin* urges the elder Satsuma men to join their younger clansmen in the new path to political greatness, and in combination with the Opposition parties, regain elsewhere the power they have lost in the Cabinet.

Another article of interest is entitled "Japan, England, and Russia in the Far East." After observing that in whatever form complications may hereafter arise in Korea and China, the ultimate contest will be between England and Russia, the *Kokumin* argues that the issue entirely depends upon the attitude of Japan. First as to Russia: she is naturally an aggressive Power, and cannot be otherwise. Her immediate concern is to find an ice-free terminus for the Siberian railway either in Korea or Manchuria, but her ultimate object lies in acquiring an absolute ascendancy in the East by constituting herself the sole executor of the Sick Man of the Orient. Now in attaining this object, it is necessary for Russia to secure the friendship, if not alliance, of Japan. Should Japan be opposed to her, she must be prepared to be stoutly resisted by Japan at every step of her southward march. Not only has she to expect violent opposition from Japan, but, should England range on the same side with Japan, it must even be apprehended, says the *Kokumin*, that the gallant soldiers of the Island Empire might threaten the frontiers of Russia in Europe. Japan is not afraid of becoming Russia's opponent; but she is not irrevocably determined upon taking a belligerent attitude. Consequently, Russia is told that her attitude towards Japan in Korea and China will determine whether or not she obtains the friendship and even alliance of Japan in the Orient. With regard to England, she is said to be in yet greater need of Japan's friendship than Russia. Of late, England's weak and vacillating foreign policy has produced an impression that she has attained the limits of her expansion and is on the road to decline. The *Kokumin* thinks otherwise, and advises England to adopt a strong and unequivocal policy against Russia, with a view to keeping that Power within proper limits. Had she always been so disposed, she might have contributed to the erection of a strong barrier against the southward advance of Russia by rendering effective assistance to Japan when the three Powers objected to her permanent occupation of Liaotung. Had England known how to utilize her unique situation in China, she could at least have prevented her from falling into the clutches of Russia and preserved her closely linked to Japan in combined opposition against the Northern Power. But extreme caution and hesitation prevented England from availing herself of either of these splendid opportunities. The wisest course for the English Government to pursue under the present circumstances is, in the *Kokumin's* opinion, to maintain friendship with the Dreikund in Europe, and to combine with Japan and China in the Far East. So far as her situation in the Far East is concerned, the *Kokumin* is convinced that the loss of Japan's friendship would be the death-blow to England. The *Kokumin* does not mean to infer that Japan is ready to form an alliance

with either Russia or England, but has discussed the subject entirely from the standpoint of England and Russia. What policy then should Japan pursue toward these two Powers? Our contemporary's advice is that she should aim at following an independent policy, by providing herself with armaments sufficient to defy Russia on land, and on sea to guarantee the result of any encounter with England.

ECONOMICAL AND INDUSTRIAL.

According to the *Chugai Shogyo Shimpo*, there has taken place an enormous appreciation of prices in Tokyo, the rise being in some cases as much as 50 per cent. Silk goods are among the commodities in greatest demand, and in their case prices have gone up more than 40 per cent. The other articles chiefly in demand are cotton goods, cotton yarns, muslins, shirtings, velvets, satins, toilet articles, and things included in the term *komamono* (both Japanese and foreign), umbrellas, foot-gear, sugar, *saké* soy, vinegar, timber, iron wares, and so forth. The quantity of these commodities carried over the principal railways, as the Tokaido, the Nippon, the Koku, and the Sobu lines, has of late increased by from 15 to 40 per cent., and is steadily growing. Similar reports are obtained from the Nippon Yusen Kaisha and other shipping firms. To give a concrete example: cotton goods transported during the season over the Nippon Tetsudo line alone show an increase of 160,000 pieces as compared with the corresponding season last year. This remarkable prosperity of trade in the capital is caused chiefly by increased purchasing capacity among the farming class.

The Finance Section of the Tokyo Chamber of Commerce met, on the 10th instant, to consider to what extent applications for the establishment of private banks in Tokyo might be safely granted—a question on which the Chamber's views had been asked by the Governor of the city. There were present Messrs. Oye, Yoshida, Kitani, Tokuda, and Sekine. After various expressions of opinion, the Chamber finally decided that it was impossible to fix any safe limit for the expansion of private banking business in the capital. The matter is to be debated at a general conference of the Chamber on the 14th instant.

The new Chinese open ports are to be shortly visited by a large number of Japanese officials and business men. The official section includes Messrs. Ariga Nagabumi, Shimura Gentaro, and Eguchi Komanosuke, of the Department of Agriculture and Commerce, Mr. Narahara Chinsei, of the Foreign Office, and Mr. Chinda Suteimi, Japanese Consul in Shanghai. The business men of the party, numbering in all about thirty, represent chiefly Chambers of Commerce in large cities like Tokyo, Osaka, Kyoto, Nagoya, Kobe, and so forth. The officials have already left for Shanghai, where they are to be joined by the business men about the 20th instant. Thence the whole party will start on their voyage up the river by a specially chartered steamer.

Among the projectors of the Nippon Shogyo Ginko (Japan Commercial Bank) of Hyogo there is a section in favour of increasing the capital of the bank, now fixed at 1,000,000 *yen*. It appears that when the scheme was first floated, some of the projectors invited their commercial clients in the interior to take shares, and the invitation was answered by applications to the extent of nearly half a million *yen*. But 850,000 *yen* of the capital having been taken by the projectors and the remaining 150,000 *yen* by other business men of the locality, there remained not a single share for the provincial applicants. In order to "save their face," and gratify their clients, the projectors that had issued the above invitations, are canvassing their follow-projectors to join in increasing the capital.

Messrs. Otani Kahei, Asada Matakichi, and Minoda Chozaburo of Yokohama, and Mr. Nagai Rehei of Tokyo, applied, on the 9th instant, for a licence to establish a company called Taiwan

Boyeki Kabushiki kaisha (Formosa Trading Company, Limited) with a capital of 300,000 *yen*. The object of the projectors is to engage in the export trade of the island. The company will be located in Yokohama with a branch office in Formosa.

Mr. Funakoshi Mamoru, a member of the House of Peers, is reported to be endeavouring to interest capitalists in the establishment of a large iron foundry in Hakodate.

A railway project of considerable importance is reported from Kyoto. The idea is to connect Tsuruga on the Japan Sea with Kyoto by a line along the western shore of Lake Biwa, that route being shorter than the existing Government road, which makes a detour along the eastern shore. The whole distance is 65 miles, and the estimated capital of the company, 3,200,000 *yen*. Among the projectors we find most of the names of the principal business men in Japan, including Messrs. Shibusawa, Okura, Yasuda, Nakamigawa, and Yonekura of Tokyo; Messrs. Isono and Abe of Osaka, and Messrs. Okamoto Jisuke, Iwai Hachibei, and Mori Ichibei, and Viscount Yuri of Kyoto.

The projectors of the above line have also applied for a charter to construct another line connecting the two cities of Kyoto and Osaka. This second road is to start from the Kyoto terminus of the above-mentioned Kyoto-Tsuruga line at Okazakicho, the site of the recent domestic exposition. Thence passing through Fushimi, Yodo, Yawata, Mokigata, and Morikuchi, it will have its terminus at Noda in Osaka. This means that it would run at some distance to the east of the existing Government railway. The length of the line is 29 miles, and the capital is estimated at 2,200,000 *yen*. Should both these lines be permitted, the projectors' intention is to amalgamate the two under one company.

The Asahi Cotton Spinning company contemplates increasing its capital by 350,000 *yen*, and adding 15,000 new spindles to its factory. An extraordinary general meeting of the shareholders was to have been held on the 12th inst.

The newly organized Ise Cotton Spinning Company has been prevented from opening its factory on account of delay in the arrival of a part of the plant. But the machines having now come to hand, it is expected that the mill will commence operations by the end of next month.

A REMARKABLE CORRESPONDENT.

During the war between Japan and China, one of the most striking journalistic features of the time was the correspondence from Korea published in the columns of the *N.-C. Daily News*. It was scarcely possible to conceive a more gullible or less discerning person than the correspondent. Each of his letters tended to increase our doubt whether he really expected to be taken seriously, or whether he even took himself seriously. It might have been supposed that after inevitable and repeated exposures of his blunders and exaggerations, he would have been denied further access to the columns of the leading Shanghai journal. But we find him still continuing to flourish like the green bay tree of the Psalmist. His latest is this:—"The new Minister Miura has brought over to Korea with him three million *yen* as Korea's share of the indemnity, part of which sum is to be distributed amongst the districts which suffered. I also hear, but whether true or not I am unable to say, that one of the conditions of the present of this three million *yen* is that two millions are to be spent on railways." Imagine a writer so ignorant of the methods of financial administration in Japan, and of the general relations between Korea and her protector, as to suppose that a sum of three million *yen* could be calmly handed, without parliamentary consent, to General Miura to convey as a gift from Japan to Korea! The thing is really too silly to justify specific comment. And by such writers grave contributions are made to contemporary history.

EUROPEAN INTERVENTION IN JAPAN.

Under the above heading the *Berliner Tageblatt* recently published a letter from its Tokyo Correspondent, dated June 18, from which we reproduce the following:—"The high waves of excitement in the Japanese press, with regard to the intervention of Germany, France, and Russia have subsided to such an extent that the number of suspended papers now scarcely reaches a dozen, among which there is but one metropolitan paper of Chauvinistic Nippon. In place of a glossary, as to the motives that actuated the Powers to interfere, the question with reference to the diplomatic skill of the respective statesmen of Japan and China has now come to the front, and the once roundly abused Chinese Viceroy, Li Hung-chang, of whom one could hear the children sing songs of contempt on the streets, is now praised as a diplomat, who has proven himself as much superior to Count Ito and Viscount Mutsu, as the Japanese military power has proved itself superior to the Chinese on land and sea. The anger, because Japan gave up one-half of the fruits of her victory, is now directed against the statesmen who, it is alleged, did not see in advance the coming danger of intervention, and when it came did not take a sufficiently firm stand to save, at least, the important harbour of Port Arthur for Japan. Li Hung-chang's apparently important concession of the peninsula, with its valuable situation for China and with almost four million of inhabitants, is said to have been granted only because he saw beforehand that it would have no practical consequences, but would serve him to keep the war indemnity at such a low figure. For even the Japanese can scarcely expect that China will subsequently increase her money indemnity because Japan gave back her Continental acquisition, not of her own accord, but in obedience to European pressure. But notwithstanding the secrecy in diplomatic affairs, as it obtains in this country, and the seemingly indignant ado of the official *Japan Mail*, there is nothing serious in the alleged surprise of the Japanese statesmen because of the intervention of the Powers. The preliminaries of peace were signed at Shimonoseki on the 17th of April, and three days later, April 20th, they were ratified by the Emperor of Japan and were at once made public, although the Japanese Plenipotentiary, who was to take them to Chefoo, did not have to leave until fourteen days later. Why this haste? The answer is, that in giving the Official reply to the expected, and confidentially intimated, intervention, a very difficult backward step could thus be pleaded in excuse. The three Powers, of course, took no note of this artificial difficulty. Three days after the ratification they presented to the Vice-Minister of the Foreign Office, Mr. Hayashi, in Tokyo, the document in which they recommended the retrocession of the Peninsula to China. That this intervention met with success is due to Russia, which had shortly before made ready for war. Not less than 31 men-of-war, among them 6 iron-clad cruisers, and the much admired battleship *Rurik*, had in quick time come together in East-Asiatic waters. Don Cossacks were on their way to the Pacific Ocean, ostensibly for the purpose of guarding the Siberian railway. The Harbour of Vladivostock was obstructed by torpedoes. Japan might, of course, in the event of war with Russia, reckon on the friendship of England. But even here in the far East, where English interests are greater than those of all other Powers put together, her desire to take action under serious circumstances is very faint. America, which on account of her geographical situation would have a stronger claim than we to participate, is for the present still sleeping on her Monroe Doctrine. Thus the intervention passed off successfully and without opposition. On the 10th of May, the Emperor of Japan proclaimed to his people that he had accepted the "friendly advice" of the three Powers without hesitancy. . . . Thus the agreement of the great European Powers has proved itself an important determining factor in

this East-Asiatic question and the attending political situation. It is an important precedent for the future, and is all the more important because England, which stood aside, could not hinder its success. Germany had her full share in this diplomatic success, although she had, at the time, only two cruisers on the spot, the *Irene* and *Marie* of 4,400 and 2,162 tons respectively, while France had here 14 ships at her disposal."

This question of the intervention of the Three Powers will long constitute a topic of discussion, the noise to which it gave rise in the East being echoed in Europe and re-echoed back to Japan. We are still so near the event that to speak of it without rousing passions that tend to confuse reason, is scarcely possible. There is one point, however, in the *Tageblatt's* correspondence that deserves brief notice. It is the credit assigned to the Viceroy Li. Here in the East, where the German newspaper's correspondent asks the public to believe that every one agrees as to the complete out-manceuvring of Marquis Ito and Count Mutsu by Earl Li, we have not ourselves seen evidences of such a conclusion. Certainly it is not the conclusion that would suggest itself to any one reading the minutes of the Shimonoseki Conference. The claim of superior wholeness advanced on behalf of Earl Li rests wholly on the assumption that when he signed away the Liaotung Peninsula, thus obtaining a substantial reduction of the indemnity, he had already received assurances from his agents in Europe that the great Powers would intervene to save the Chinese continent from all alienation of territory. Knowing that, he is supposed to have signed the Treaty, and the act is accounted unto him for diplomatic ability. We can only say that it was a kind of ability perfectly consistent with the worst traditions of Oriental guile, and that to find Western critics applauding it is somewhat surprising. The correspondent of the *Tageblatt*, however, seems to have devoted himself to making a case. He actually contrasts the extraordinary delay shown by the Chinese in ratifying and exchanging the ratifications of the Shimonoseki Treaty with the by no means extraordinary promptitude of the Japanese. The Treaty was signed on April 17th, the agreement being that the ratifications should be exchanged at Chefoo by May 9th at latest. Thus Japan had to despatch to China an envoy bearing the ratified Treaty and everything had to be concluded within three weeks. We can not see that the Emperor showed any precipitancy in signing on April 20th, but we can and do see that the Chinese showed most remarkable procrastination in deferring the exchange of ratifications until midnight on the 8th of May. Their tardiness was plainly inconsistent with good faith, and it is their tardiness, not Japan's reasonable celerity, that we should expect to find an honest critic condemning.

A DYNAMITARD IN AKITA PREFECTURE.

The vernacular press reports the arrest of a dynamitard in Akita Prefecture. The man's name is Nomura Kibun, and he is a member of the Chiusei-ha, an association about which we have no special information. Some excitement was recently caused among local politicians in the Prefecture, in connection with the election of Mr. Hatayakeyama to the presidency of the Prefectural Assembly, it being supposed that the Governor, Mr. Hirayama, had exercised undue influence to bring about that result. Nomura, presumably a person of the *soshi* class, resolved to kill the Governor with a dynamite bomb, but the police obtained intelligence of his scheme and arrested him in his own house. A Justice of the Preliminary Court then proceeded to the place and caused an examination to be made, with the result that some dynamite and apparatus for the manufacture of bombs were discovered. It was further found that Nomura had two accomplices, but they effected their escape at the first news of the arrest, and remain still unapprehended.

"NOTES ON HABITUAL MISTAKES MADE AND COMMON DIFFICULTIES MET WITH IN SPEAKING ENGLISH."

Any one undertaking to teach the English language to Japanese students soon becomes conscious of a tendency on the part of his pupils to commit errors for which he is entirely unprepared and against which he has naturally made no provision. The fact, at first perplexing, is easily understood when one remembers the radical difference existing between the idiom of the Japanese and the idiom of any Western tongue. The whole group of European languages may be said to form one family: its members are bound together by numerous affinities of structure and syntax. Each, of course, has its own peculiarities and each presents special difficulties to the learner. But a common spirit permeates them all, so that a student having acquired Italian and French, for example, does not, when he approaches English and German, find himself confronted by a large number of essential stumbling-blocks such as his previous lessons have in no way led him to anticipate. Should he attempt to master Japanese, however, he quickly discover that his only hope is to divest himself as rapidly and thoroughly as possible of all his old forms of speech and methods of marshalling words, and to bow implicitly to the spirit of the Eastern tongue. The same experience awaits a Japanese attempting to learn English. He falls into countless sloughs of error, as novel as they are disheartening to his instructor, who, unless he recognises the origin of these obstructions, can never hope to remove them successfully. Did ever a foreign teacher, for example, compass the feat of inoculating his students with a really working capacity for using the article? There is no article in Japanese. There is a demonstrative qualifier that occasionally does duty for it, but, speaking generally, the article is a *terra incognita* to every Japanese, and how to set about familiarizing him with its employment is a grievous puzzle. Other cognate, though less extensive, sources of error might be copiously enumerated. Were they all systematically catalogued, and embodied in a series of lessons for the guidance of students, the acquisition of English would be immensely facilitated. We have before us a work inspired by that idea. The author is Mr. F. Muller, and the book was prepared for the use of cadets in the Imperial Naval College. It is a work inviting many comments, but we are not justified in criticizing it, since Mr. Muller explains that a few copies only have been printed—apart from those used by his own classes—for distribution among persons interested in the teaching of English, and that if a sufficient demand be discovered, a re-arranged and revised edition will be published for general use. In fact, the work is still in a rudimentary stage. We confine ourselves, therefore, to offering a very few suggestions. One is that some effort be made to rescue Japanese students from the almost-universally-prevailing confusion between "which" and "that." The two forms being essentially different, are by no means interchangeable as the great majority of writers seem to think. Mr. Muller himself says:—"There are a number of mistakes which are repeatedly made," and, "Across is a preposition which is often misused," two sentences indicating that if he have due theoretical cognisance of the difference in question, he does not apply his knowledge in practice. Again, has he not recognised the besetting sin of English-speaking Japanese when they attempt to employ "shall," "will," "should," and "would" in oblique narration? And does he not observe that their perplexities about the article and the present perfect are altogether too large to be resolved by the trifling keys he furnishes? Besides, in a work intended to correct errors, faulty English ought to be most carefully avoided. For example, such a phrase as "there are a number of mistakes the incorrectness of which is obvious," is as inadmissible as it would be to speak of "an incorrect mistake." Yet again, there is no such verb in English as "to prac-

tice." On p. 9 we find a long paragraph on the use of this verb, the writer misspelling it throughout. But if the work shows a few blemishes and some omissions, it gives evidence, at the same time, of much research and attention, and its conception is so admirable that we sincerely hope to see it ultimately published in a revised and greatly enlarged form.

POLITICAL GOSSIP.

There is talk of Count Okuma's joining the present Administration. The *Chugai Shogyo Shimpō*, which is reputed to possess special facilities for obtaining political news, was the first to publish a report that a meeting had recently taken place between Marquis Ito and Count Okuma. The *Nippon* now prints an account of the circumstances connected with the alleged conference between the two statesmen. The meeting, according to our contemporary's story, took place on the 8th instant. But long before that—about the end of June last—certain well-known persons in business circles had tried to effect a reconciliation between the Premier and the Progressionist leader. With that view they first waited upon Marquis Ito, represented to him the evil consequences of separation from Count Okuma, and ventured to hope that the pernicious party strife then threatening to disturb the public mind might be avoided by a happy reconciliation between the two leaders. The Premier expressed his appreciation of their motives, and told them that no personal disagreement existed between himself and Count Okuma, and that so far as he was concerned, he would be delighted to talk over public affairs with the Progressionist leader and even to share political power with him. Encouraged by this auspicious beginning of their mission, the interceders, whoever they were, next called upon Count Okuma, and informed him of the result of their conference with the Premier. But they were surprised to find the Count in no way disposed to trust the friendly professions of Marquis Ito. In short, he rejected the well meant offer of mediation, and the matter was dropped for the time. Another mediator, however, began to busy himself in the beginning of the present month. Mr. Fukuzawa is said to have been the person, but the *Nippon* is not positive on that point. At all events, the second mediator carried a verbal message to Count Okuma from Marquis Ito, desiring a meeting. Count Okuma answered that, sincerely desirous as he was to have an opportunity of meeting the Premier, he was afraid that, in the present state of political discussion, especially with regard to the question of the Liaotung Peninsula, the meeting might suggest undesirable inferences. The Marquis, however, replied through the same channel, that as to the Liaotung question, he was perfectly willing to have his policy freely discussed, and that his object was not to talk about such political matters at the proposed meeting. No longer able to decline the desired conference, Count Okuma consented to receive the Premier at his residence on the afternoon of the 8th instant. The meeting took place on the appointed date, and the two statesmen conversed together for a space of two hours, nor did the visitor leave until he had dined with Count and Countess Okuma. The fact of the meeting was at first kept secret, but somehow it began to be whispered about in official circles. Some critics say that Marquis Ito has surrendered to Count Okuma, while others say that the latter has been once more persuaded by the former. Looking at the matter without partiality—so writes the *Nippon*—Marquis Ito is more likely to be benefitted by the alleged reconciliation than Count Okuma.

The *Naigai Tsushin* (Home and Foreign News Agency) is responsible for a report that Count Okuma's garden party to-day (Friday) will be attended by the Premier and other Ministers of State.

The *Chugai Shogyo* states in its latest issue that Count Okuma recently assured a certain visitor that he should not enter the Cabinet, for the present at all events.

Thus all kinds of stories are circulated in Tokyo. Some people attach significance even to Marquis Yamagata's journey to Kyoto, their only ground being that, on a former occasion, a similar movement on the part of the Marquis was followed by an important political change. But there seems to be no doubt that the Marquis's present journey is entirely for the benefit of his health.

Under these circumstances, the *Fiji Shimpō's* leading article on the 16th instant, urging Count Okuma's appointment to the Foreign Office, has attracted much attention. After alluding to the increasing difficulties of the situation in the East, our contemporary urges the importance of appointing a new Minister of Foreign Affairs. Not that Count Mutsu is unfit for the post, but his sickness does not seem to permit his resuming official duties for some time. Among the present statesmen of Japan, the *Fiji* cannot find a fitter man for the position than Count Okuma, who has prestige, influence, ability, experience, in fact everything that contributes to the making of a good Minister of Foreign Affairs. As to the question of personal considerations, always urged by men that do not like to see the distinguished statesman raised to power, the *Fiji* pooh-poohs all such ideas as entirely unworthy of attention at an important juncture in the nation's history. Though cognisant of the reserve that should be shown in discussing such matters in the columns of a newspaper, our contemporary says that the interests of the country prompt it to disregard any restrictions of that nature.

LETTER FROM KOREA.

(FROM OUR OWN CORRESPONDENT).

Sōul, October 8th, 7.30 p.m.

The Capital at this writing is in the throes of great excitement. Trouble has been brewing for some time. We have been hearing lately a good deal about a "Cabinet crisis," and for the past few days we have been treated to a feud between the soldiers and policemen, the object of which seems to have been to incite the soldiery against the King. About five o'clock this morning there was firing heard in the direction of the Royal Palace, and at once the streets were filled with anxious inquirers. From a great number of rumours afloat and by diligent enquiries, I have every reason to believe the feud between the thousand or more troops recently trained by the Japanese and the guards in the Palace was the immediate cause of the outbreak. It is well-known that the Mins have been gaining ascendancy for some time past, and it is alleged that an attempt was made by this party to remove those opposed to them. How true this is I cannot tell, but the report is very general to-day. The opposite party hearing of this, lost no time in bringing things to a crisis. A number of *soshi*, who by the way seem to be the convenient peg on which to hang unpleasant doings, went early this morning to the residence of the Tai Wōn-kun, the King's father, and either compelled him or persuaded him to enter the Palace and seize the reins of power. He was escorted, and when the company arrived at the Palace gates, they were challenged, but the troops recently trained by the Japanese being in sympathy with the Tai Wōn-kun's party, joined them and easily overcame the frightened guards, who, after firing a few shots, threw down their guns and made for the nearest place of safety. With but little opposition, they secured the person of the King. The cry war soon raised, "down with the Queen," and a madly savage rush was made for her quarters. Four ladies, I am informed, were killed, in the hope that one of them would be Her Majesty. One of these ladies, we are told, was beheaded and her body burned.

When the foreign representatives had audience with His Majesty early this morning, he told them he did not know where the Queen was. This afternoon the rumour gained currency that the Queen was among the ladies killed. If this should prove to be correct, it is the cul-

mination of a bitter feud that has been carried on between the Tai Wōn-kun on the one side and Her Majesty on the other for a long series of years.

Great excitement prevailed all day. The doings of to-day are more ominous of evil than any act during the past decade. What the outcome will be, where the butchering will end, what the Tai Wōn-kun will or will not do, no one knows, and no one ventures even a conjecture. The feeling, as the evening comes upon us, is not reassuring.

Wednesday, 8 a.m.

The night passed quietly without any disturbance. The mystery about the Queen's disappearance remains unexplained, but it is earnestly hoped that there will be no occasion to sound the bugle to-morrow morning from the mountain in the rear of the Palace to announce to the people the death of Her Majesty.

THE ORIENTAL ASSOCIATION.

The Tōhō-kyōkai (Oriental Association) recently held a public lecture meeting at which addresses were delivered by Messrs. Hashiguchi Bunzo, Shibusawa Eiichi, and Oishi Masami. Mr. Hashiguchi spoke on the subject of Formosa, where he holds the position of director of the Industrial Department in the new Japanese Viceregal Government. Much of what he said about the island, the people, and their manners is already known to the public. He laid emphasis on the necessity of perseverance and patience in developing the resources of the island, strongly deprecating any hasty attempts at assimilating the people and settling the country. The next speaker, Mr. Shibusawa, discussed the question of extending marine business. He commenced by pointing out the importance, as shown by the late war, of developing the country's marine business on account of the safety and prosperity of the empire. Then briefly recounting the history of the carrying trade in Japan, the speaker went on to expound the method and degree of development desirable under the present circumstances. After alluding to the education of officers and men and to the encouragement of the shipbuilding business, Mr. Shibusawa proceeded to consider the routes that should be newly opened. They are three, in his opinion, namely, the European, American, and Australian. In order to open these routes, he thinks it necessary to build five or six new vessels each costing five or six hundred thousand *yen*. He also alluded to the importance of constructing cruisers which, in time of peace, should be placed under the management of the private company running the lines upon which they were used. He thought that the execution of the plan proposed by him would cost the State about two million *yen* annually. The third and last speaker, Mr. Oishi, discoursed on the future of the Japanese people. Just as Russia's ambition is to bring the whole world under her sway, and just as England aspires to a monopoly in the world's trade, so Japan, said the lecturer, ought to have some grand object in view—an object which, though it may not be openly proclaimed to the world, shall be generally understood and always kept in view by rulers and ruled alike. In his opinion, Japan is now acting with regard to China as though she had forgotten the object for which she undertook the recent war. She may be compared to a surgeon who has cut open a wound, but, forgetting his duty, has stopped his operation at the critical moment, thereby affording opportunity to his more astute rivals in the profession to step in and take the patient from his charge. What then should be the national aim of Japan? Japan's aim, said the speaker, should be to become the preserver and promoter of peace and civilization. With this lofty purpose before her eyes, she should pursue an aggressive policy, not for the sake of aggression but for the sake of self-defence. In order to discharge her duty as the preserver of peace and civilization, Mr. Oishi thinks it absolutely necessary for Japan to keep neighbouring countries secure from the encroachments of European Powers. Should any of these countries find itself incapable of resist-

ing such encroachment, it would be Japan's duty to annex its territories without a moment's hesitation.

CHINESE NEWS.

A determined attempt is being made in China to show that Great Britain stole France's thunder in the matter of the degradation of Liu, ex-Viceroy of Szechuan. It is alleged that when M. Gérard, the French Representative in Peking, obtained the Chinese Government's consent to give full compensation for the destruction of foreign property by the Cheng-tu rioters, he also obtained a promise that the guilty officials should be punished, of which promise the subsequent degradation of the Viceroy is said to have been a direct result. But every one acquainted with Chinese methods knows that there is an immense interval between the giving of a vague pledge and its explicit fulfillment. The guilt of the officials had to be ascertained before they could be punished, and since M. Gérard left the Chinese to perform the task of ascertaining it, the officials might have lived in peace for an interminable period. At all events, the thunder from the Dragon Throne would not have struck the ex-Viceroy first. *Per contra*, the British Government's energetic display of force was so promptly followed by the ex-Viceroy's punishment that the two things stand plainly in the relation of cause and effect. Lord Salisbury's ultimatum seems to have been that Nanking and Wuchang would be taken and held by the British naval forces unless the ex-Viceroy was promptly and adequately punished. Thereupon an Imperial Decree degrading Liu was issued, and there can scarcely be any doubt as to the manner in which the incident will appear in the pages of history.

After the Chinese Government's acquiescence in Lord Salisbury's demands, a portion of the British squadron, which had assembled in the Yangtse, proceeded to Nanking, and Vice-Admiral Buller proposed to call on the great Viceroy Chang Chih-tung. It was purely a visit of courtesy, but the Viceroy pleaded indisposition, and his conduct has furnished cause for a fresh outcry on the part of persons disposed to construe everything as an insult to the flag of some country or other. Whether Chang was really sick or only sorry, he is not likely to have made any egregious departure from the etiquette prescribed on such occasions.

The intelligence recently circulated that some 89 of the Vegetarians concerned in the Kucheng massacre had been executed, proves erroneous. Such a measure would have settled the affair, whereas at present a satisfactory issue is not within sight. Briefly speaking, the situation is this. Originally some 60 arrests were made. After due examination of 53 of the prisoners, 13 were selected as unquestionably guilty of murder on the strength of their own confessions and of collateral evidence. Their capital sentence, approved by the local Prefect and the Foreign Consuls present at the investigation, was despatched to the Viceroy at Foochow for approval and confirmation. After a delay of over a fortnight, the Viceroy sanctioned the execution of 7, and they were decapitated on September 17th. The Consuls insisting that the death penalty should be carried out in the case of the remaining 6, their names were returned to the Viceroy. But to this day His Excellency has not appended his sanctioning signature. Meanwhile, some forty of the remaining prisoners have been released, despite the protests of the Consuls, who naturally claim that whether these men did or did not actually assist in cutting and hacking the unhappy ladies and children at Whasang, they have been convicted of participation, inasmuch as they belonged to the band that marched 15 miles from the Vegetarians' mountain fastness on an errand of murder. It is evident that every member of the band merits severe punishment. But the Viceroy at Foochow seems bent upon treating the affair as though it were a mere mob tumult, not a deliberately planned expedition by an organized body of assassins. The conduct of the Chinese offi-

cials is aggravated by proclamations that were issued in Kucheng itself. The first of these documents promised that members of the Vegetarian sect—the very sect whose leaders and most active members were then under trial for murdering 12 foreigners, and whose existence had been declared by the authorities to be a perpetual menace to peace and good order—would be admitted to the ranks of the imperial troops after apparent amendment. Against this public condonation of the Vegetarians' crime the foreign Consuls vigorously protested. They demanded that the proclamation should be replaced by one prohibiting the extension of any such privilege to the Vegetarians until a year should have passed without any disturbance, and adding other stringent conditions. The Prefect agreed, and instructed the District Magistrate accordingly. But the latter's writers made a convenient mistake, the result being that the old proclamation was re-issued virtually unaltered. Ultimately the desired changes were made, but not before the Vegetarians and the anti-foreign elements of the population had learned pretty clearly that by their own officials no very serious view is taken of such crimes as that of August 1st at Whasang. It seems inevitable that another display of foreign force will be made, this time at Foochow. The Foochow Viceroy has almost qualified for treatment similar to that received by his ex-colleague of Szechuan. But whatever punitive measure be adopted, the events of the past few months will bequeath a new legacy of anti-foreign and anti-Christian hatred to the masses in China.

Another flagrant instance of the anti-foreign feeling pervading the educated classes in China has been furnished by Yun Yen-pin, Chancellor of Education in Kwangtung province. He has issued a pamphlet inciting the literary men and students under his jurisdiction to show no favour to foreigners and Christians. Such acts are even more significant than the sanguinary doings of riotous mobs.

Intelligence from Chunking goes to show that when, in accordance with the Shimonoseki Treaty, the Japanese go to open the port, they may meet with a warm reception. In a city hundreds of miles up the Yangtse the people have not received a very clear perception of the results of the late war, and some of them are said to be only too eager to try conclusions with the Japanese.

With regard to the Mahomedan rebellion in Kansu, a Chinese paper published in Shanghai states that the Throne has recently appointed the Kashgar Commander-in-Chief General Tung Fu-hsiang to be Generalissimo of all the Imperial forces now present and about to arrive in Kansu. General Tung has also been authorised to brigade the train-bands and militiamen of the province into an army corps, and as a precaution against treachery he has been warned not to enlist Mussulmans in the new corps. Official despatches to the local mandarins received in Shanghai confirm the statement made above, says the *N. C. Daily News*, and also from the manner in which the Imperial Edicts on the rebellion have been issued, it is plain that the Emperor has been kept in ignorance of the fact of Mahomedans being backed up by the *Kolao Hui*, and that the numerous desertions to the enemy were mostly by troops of Hunan and Hupeh origin belonging to that revolutionary society.

A correspondent of the Shanghai morning paper, writing from Swatow under date the 2nd inst., states that the German man-of-war *Cormoran* arrived there on the 29th ult. direct from Singapore. She is a handsome third-class cruiser of 1,640 tons and 2,800 horse-power, steaming 16 knots, armed with eight 10½-centimetre quick-firing guns. She is constructed of steel throughout, teak-sheathed and coppered. The wood sheathing is carried high up the sides, which makes her a cool ship in the tropics. She, with her sister-ship the *Condor*, and the ironclad *Preussen*, came over from Zanzibar to remain some time on the China station. Everything was very quiet at Swatow on the 2nd, and very little was known of the reported troubles up-country.

SHIPPING DISASTER IN THE URAGA CHANNEL.

About twelve o'clock on Monday night the American sailing ship, *William H. Macey*, 124 days out from New York, was run into by the British steamer *Isis*, Captain Walker, bound in from Middlesboro', while the former was working up the Uraga Channel, on the port tack, heading for Sagami light. It appears that the sailing-vessel, which has been off the coast of Suruga for the last ten days, owing to contrary winds, had had several of her stays carried away and was therefore unable to beat up the Channel; the *Isis* endeavoured to cross her bows from the starboard and failed to work clear. The *William H. Macey* was struck a severe blow causing great damage to the starboard bow, and the water poured in. The master asked the steamer to stand-by, which she did for a while and then proceeded on her way up to Yokohama, her own damage being of a severe nature. Signal blue-lights were burnt all night, but no vessel came to the assistance of the damaged ship, and it was determined to beach her, the water coming in so rapidly. At five o'clock on Tuesday morning the *William H. Macey* was beached near Tateyama Bay, and there was then 10½ feet of water in her hold. She has 24,000 cases of petroleum and a general cargo on board. Mrs. Amsbury, the captain's wife, accompanies her husband on this voyage and she is at present down at Tateyama on the vessel. At the time of the accident a stiff breeze was blowing, but the rain did not come on for nearly two hours afterward. The *Isis* was struck on the port-side and many plates were fractured and knocked in between the boilers and engine-room. The davits and rails were snapped off, and the planking of the bridge deck ripped. Much damage was done inside and outside the engine-room, the comings and two ventilator shafts being knocked away, and many pipes bent. Indeed, looking at the locality of the principal damage, it seems passing strange that the main steam pipe was not broken. If this had happened, serious loss of life must have resulted. The sailing ship's bowsprit, which appears to have done most of the damage on the bridge deck of the steamer, was carried completely away. Captain Efford made a survey of the *Isis* yesterday, and this morning Captain Hardy and Mr. T. M. Laffin have gone down the Bay to assist the *W. H. Macey*.

COUNT OKUMA ON THE CONSTRUCTION OF WARSHIPS.

In a conversation with the representative of the *Hochi Shimbun*, Count Okuma is reported to have delivered his opinion on the question as to what countries should be commissioned to construct Japan's new warships. It is bad policy, he said, to place these orders with the ship-builders of any one country. Supposing that ten new vessels are to be constructed, he recommends that they should be ordered from England, the United States, Italy, France, and Germany at the rate of two ships per country. In this way he believes that competition between the builders of the different countries will be productive of most advantageous results. As to the propriety of placing orders with the Italian and American dockyards, the Count is said to have been very enthusiastic in extolling their skill and experience. He was particularly loud in praise of Italian builders, who were the first to conceive and carry out the construction of battle ships of upwards of 10,000 tons. He also referred to the extremely friendly relations existing between the two countries, and expressed his conviction that this circumstance was another reason why Italy should not be excluded from the advantages of Japanese orders for new ships. He urged similar reasons in favour of the United States, which are not only Japan's best political friends but her best commercial customers.

"Papa," asked Tommy Goodman, "who was Cain's wife?" "Caroline," said the Rev. Dr. Goodman, after an ominous pause, addressing his wife, "will you please hand me my heaviest slipper and leave the room? There is going to be a trial for heresy right here and now."

BISHOP CORFE ON KOREAN AFFAIRS.

IT is difficult to comprehend Bishop CORFE'S motive in seeking to bring ridicule upon all the attempts of the Japanese to introduce reforms in Korea. The Right Reverend gentleman is head of the Church of England in the peninsular Kingdom, and in that capacity he might be expected to observe the wholesome rule generally adopted by missionaries in the East, namely, to abstain from publicly meddling in politics. But we presume that he has special reasons for inserting over his own signature in the *Morning Calm* a species of running commentary on the relations between the Japanese and the Koreans, nor can it be denied that the results of his observations would be very welcome were they not disfigured by remarkable bias. Plainly if the choice lay with him, the Japanese would not remain an hour in Korea. Yet no one can doubt that the Japanese are thoroughly in earnest in their endeavours to introduce into the peninsula the civilization by which they have themselves so much benefited. It is their interest to do so. Unless they can educate some degree of capacity for self-defence among the Koreans, there is little reasonable hope of preserving the Kingdom's independence, and unless they can put a stop to the tumults and intrigues by which the Court and Officialdom are torn and the people perpetually disturbed, the country must continue to furnish constant incentives to foreign interference. These considerations effectually dispel all suspicion that the Japanese are merely playing at reform for purposes of show. They undoubtedly want to give to the Koreans the blessing of good government and secure life and property. Hitherto their success has been not very conspicuous. Individual Japanese subjects do not appear to second the laudable efforts of their statesmen. Their rough, imperious demeanour, that shocked intelligent observers before the war, has not improved since military successes gave them fresh material for arrogance, nor have the Japanese merchants and adventurers visiting the peninsula appreciated the fact that the readiness with which men accept any new system must depend largely on the popularity of its propagandists and representatives. But that is a mere incident of the story. Neither Bishop CORFE nor any other honest observer can doubt that Japan is doing everything in her power to correct the corruption, oppression, and disorder that have made Korea a by-word. Is not the Bishop in sympathy with that effort? Does he wish Korea to be left to itself in order that thieving, plotting, murdering, and oppressing may continue unchecked? In the *Korean Repository*, a magazine edited chiefly by missionaries, we find a tone diametrically opposed to that of Bishop CORFE. It is there fully admitted that Japanese statesmen are exhibiting

sagacity and patience in their reformatory programme, and that success seems likely to crown their work. But Bishop CORFE writes of them as though they were nothing better than truculent aggressors, hectoring it over the Koreans in the intoxication of newly acquired power, and dictating needless and vexatious changes merely for the sake of dictation. Writing recently of an officially ordered alteration in the unpractical and inconvenient costume of Korean men, he speaks of it as a "Japanese order;" compares it with the compulsory shaving of the heads of the Chinese after the Manchu conquest, and adds that "the poor Koreans, knowing that they have been made to look ridiculous by their enemies, appear crest-fallen enough." Bishop CORFE must be very well aware that any change of costume inaugurated in Korea at Japanese suggestion has nothing whatever in common with the tonsure-and-queue fashion dictated by the Manchus, but is designed entirely in the interests of practical usefulness. He must be equally well aware that the new sumptuary law was not promulgated in the form of a Japanese order. As for the good taste or tact shown by him in calling the Japanese the "enemies of the Koreans," and pitying the latter for having been "made to look ridiculous" by the former, we need not offer any criticism. Some time ago, Bishop CORFE denounced, as the very reverse of a reform, the removal of the oppressive disabilities under which Buddhist priests had laboured for many years in Korea. The Bishop is not in favour, it would seem, of freedom of conscience. Possibly, therefore, his estimate of what reforms should be, differs widely from that held by persons cast in a commoner mould. At all events, we should like to know the reasons of his marked hostility to the Japanese in their capacity of reformers in Korea, the motives that induce him to obstruct the working of the only instrument apparently available for the reformation of a depraved and emasculated nation, and the considerations that impel him, as a prominent Christian Minister, to play the part of a public and constant sneerer at the only Oriental people that have ever adopted Western civilization.

THE KOREAN AFFAIR.

THE recent occurrence in Korea, although it does not seem likely to produce any wide-spread disturbance at present, is of too grave a character not to suggest uneasiness. As to the aspect of the incident from a moral point of view, not much need be said. The assassination of a woman is always shocking, but when the victim is a QUEEN, and when the assassins are soldiers of her country led by the father of her husband, the affair presents itself in an appalling guise. Until reminded by such horrors, we are apt to forget that the

ethics of some nations are still on a mediæval level. Mob violence is incalculably cruel. The brutalities it achieves generally represent the aggregate of all the evil impulses working among the units of the mass. Hence no rational observer thinks of inferring the morale of individuals from their deeds in active combination. That a body of soldiers, believing themselves the victims of deliberate injustice at the hands of their royal mistress, should join in an assault on her Palace, and that some phrensied miscreant, of whom several are always to be found among such law-breakers, should turn his weapons against the QUEEN herself—these are incidents that can be matched from the history of most nations even in comparatively modern times. But it is our pride to believe that such events have ceased to be possible in the Occident of to-day, and when we are brought suddenly face to face with them in the Orient, the shock is rude. In the present case additional horror is lent to the affair by the issue of a royal edict, in which the KING, after ruthlessly cataloguing the misdeeds of his spouse, goes through the solemn farce of deposing the unfortunate lady, as though she were not already beyond the reach of all human arraignment or punishment. Putting aside these sentimental features of the story, however, we have to ask what the incident means for Korea herself, and how its influence upon her foreign relations is to be interpreted.

For the past twenty years Korea has been torn by the strife of two rival factions, one headed by the QUEEN, the other by the TAI WÖN-KUN. Tumults not visibly connected with these prime factors have varied the record, but in no serious case has the ultimate source of disturbance lain outside the families of the KING and QUEEN; that is to say, outside the partisans of the KING's father and ex-Regent, the TAI WÖN-KUN, and the QUEEN'S relatives, the MIN. For the purpose of a broad estimate, we have no need to enter into any detailed account of the struggle, or to consider on which side stands the blacker score of misdeeds. Of the TAI WÖN-KUN it may certainly be said that the man's first thought in any emergency runs on acts of violence and assassination. The vitality of his bloodthirstiness almost commands respect. He learns nothing from the times, nor have the changes coming in the train of foreign intercourse made any apparent impression on his obdurate faith in poison and the dagger. It seems necessarily fatal to the moral progress of any nation that such a man should have a controlling voice in its administration. On the other hand, nearly all the corruption and oppression that disfigure the reign of the present King of KOREA, are attributed to the QUEEN'S relatives, and from them has emanated the chief opposition to progress and reform. So long as the two factions retained any competence for strong rivalry,

it was impossible that the country should be at peace. The only hope of tranquillity seemed to lie in the annihilation of one side's capacity to struggle. That is what has now happened. The MIN family, just as they appeared to be on the verge of recovering political supremacy, have been crushed by the death of their source of influence; and the TAI WÖN-KUN, whose fortunes during the past few months had steadily ebbed, until any turn of the tide seemed hopeless, has suddenly become complete master of the political situation. Thus at length a fair chance of the full establishment of tranquillity is discernible, especially if, as is promised in the KING'S edict—translated elsewhere in our columns—the MIN family do not become the objects of ruthless persecution, or seek to avenge the murder of the QUEEN. Out of evil good sometimes comes. On the whole it seems reasonable to conclude that the bloody page now added to the annals of Korea may preface a happier and quieter era.

But from the point of view of the country's foreign relations the incident has a decidedly embarrassing aspect for Japan. We do not believe that the Tokyo Cabinet ever seriously contemplated the inclusion of Korea in this empire's dominions. But if such a dream occupied the mind of any Japanese statesman, he must have abandoned it incontinently when the command of the maritime and overland communications between the peninsula and China was wrested from the latter's conqueror by the intervention of three European Powers. Thenceforth Japan must have perceived clearly that her footing in Korea was only on temporary sufferance, and the Koreans must have apprehended the fact with scarcely less distinctness. A virtually impossible situation was thus created. Japan, when she drove the Chinese out of the peninsula, became responsible for the reform of the little Kingdom on the lines of Western civilization. To discharge that responsibility, it was absolutely unavoidable that she should exercise a controlling influence in the administration of public affairs. Any attempt to substitute upright government and the competent operation of good laws for the corruption, nepotism, oppression, and perversion of justice that reigned in every department of the State, must be unsuccessful unless supported by effective authority. But Japan had been indirectly though unmistakably forbidden by Germany, Russia, and France to exercise any controlling influence in the administration or to assume any effective authority. Recognising the *impasse* thus created, her wisest course would have been to invite the European Powers to push their interference to its logical sequel. They had placed an effectual barrier in the path of Korean reform under Japanese guidance alone, and since without reform the independence on which

they so peremptorily insisted could never be anything but a farce, it rested with them to devise some way out of the deadlock. Their action last April amounted to a declaration that the policy of the East was thenceforth to be directed from Europe. Unless Japan were prepared to defy that declaration, we do not see what practical programme was open to her, except to invite the coöperation of the Powers for the neutralization of the Peninsula, and to obtain their mandate for undertaking its civilization. Korea could never be a valuable acquisition to Japan. The temperament of the Japanese people does not adapt them for settlement in cold regions, and to take possession of the peninsula would be to do violence to the nation's innate tendencies as well as to abandon the immense advantages of an insular position. On the other hand, if Russia has a vital interest in preventing the overflow of an aggressive, warlike people into territories that border her own, Japan has precisely the same interest in averting Russian occupation of a peninsula within sight of her shores. The whole gist of Korea's relation to Japan seems to us to be summarized in that statement. It is the peninsula's destiny to be either a bone of contention or a neutral zone. If the latter—and surely little room for choice exists—then it is essential that means be adopted for correcting a state of national depravity such as must always be a source of friction to neighbouring empires. Japan, since April last, has been attempting the impossible task of directing Korean affairs without authoritatively interfering in them. The feat was not beyond the capacities of a statesman like Count INOUE, who has the rare power of exercising authority without wielding it, and directing affairs without stretching out a visible hand to guide them. Had Count INOUE remained in Söul, the recent horror would not have been perpetrated. But the supply of Count INOUE is limited, and so soon as it fails, the public at once becomes conscious of the impossible task that Japan is essaying in the peninsula. She abstains from controlling interference, yet attempts to accomplish results quite unattainable without interference, and while incurring all the risks of responsibility, she possesses no means of discharging it. Incidents like the TAI WÖN-KUN'S barbarous *coup d'état* will be counted to her discredit, and the sooner she places something more than happy chance between herself and their recurrence, the better for her fair fame. We do not see how anything but disrepute and disaster can result from the programme of drift that she is now pursuing.

Fair American (after listening to a graphic account of a fox-hunt in England)—“But I should think, Captain Fitzhugh, that you would be greatly hampered by lack of space. It is rather cruel to limit the chances of the fox to England alone. Does he go in circles round the island?”

THE RECENT WAR AS A TEST OF JAPANESE MILITARY CAPACITY.

NEITHER the Japanese themselves nor their foreign observers have fallen into the mistake of imagining that the recent war was a conclusive test of the victors' military capacity. With such foes as the Chinese in the field, fighting assumes something of a farcical element, and it would be extravagant to draw any hard and fast deductions as to the belligerent qualities of the Japanese from their successes against troops so deficient in everything that goes to make a formidable adversary. What may fairly be said, however, is that the Japanese evinced organizing capacities of a high class, and that their military system proved itself capable of supporting severe strains. They successfully accomplished a feat always and justly regarded as the most trying that a nation can undertake, the feat of carrying on a protracted campaign in a foreign country beyond the sea. In the face of strong resistance they might have broken down. As to that we can say nothing. But they did not break down, and it is only fair to give them credit for grappling with and overcoming a difficult military problem. We ourselves think that much more may be said on the subject of the pluck and endurance displayed by the troops, and the patriotism evinced by the nation. But these qualities also, not being altogether independent of the nature of the resistance encountered, can not be conclusively discussed in the present case. On the other hand, criticisms such as those recently published by the correspondent of *Le Temps* appear to be both superficial and biassed. He sets out by saying that “the Japanese owe a large part of their victories to strangers;” that “without the English captains of the vessels hired by the Government from the Nippon Yusen Kaisha, it would have been impossible to have made the movements which conduced to the victory at Ping Yang, the fall of Ching-chow, Chiang, Talién-wan, Port Arthur, and the capture of Weihaiwei;” and that “it is also due to them that the first and second armies did not die of hunger and cold in Manchuria, Liaotung, and Shangtung, as nearly all the provisions and necessaries had to be sent from Japan.”

There is, of course, no doubt that high credit is due to the captains of the transports engaged in the Japanese service. They achieved a remarkable record, for during operations extending over a period of ten months, they never lost a single vessel by faulty seamanship. But they were not all Englishmen, nor even all foreigners. They included men of several nationalities, and among them were some Japanese. Were it certain that without foreign officers a Japanese transport service could never be safely carried on, the comments of the correspondent of *Le*

Temps would be justified. But when we observe that the whole of the Japanese Navy—which had not so much as one foreigner among its officers or men—was engaged, throughout the War, in operations demanding the exercise of as great navigating skill as that required in the case of the steam transports, and that, from first to last, not a single collision occurred nor was a single ship lost, we can not avoid the inference that however useful the part played by foreigners in the transport service, they were an adventitious, not a radically essential, element of the situation. It is true that Japanese navigators competent to take their place were not immediately available, and from that point of view the transport service owed its efficiency to foreign aid. But the record of the Navy shows that there need not be any inherent impossibility in educating Japanese for the purpose. At all events, nothing could be less conducive to the interests of the foreigners engaged by the Nippon Yusen Kaisha than to belaud them at the expense of the Japanese in the shallow, thoughtless fashion adopted by the correspondent of *Le Temps*. Such writers simply help to impart a morbid value to independence of foreign aid, and to develop among the Japanese ideas more romantic than practical.

The same critic makes some other comments that we find difficulty in appreciating. Especially with respect to the intervals that separated the principal operations of the war, his strictures are emphatic, and as this phase of the fighting has attracted attention elsewhere, it deserves a moment's consideration. By way of preliminary, however, one point must be noted. "In the march on Mukden," says the correspondent, "which was afterwards renounced, the military operations were not conducted at all strategically." Condemnation couched in such general terms cannot be analysed without an extended examination of all the details of the campaign in central Manchuria, and since the correspondent of *Le Temps* was not with YAMAGATA'S army, is not a military man, and has neither special qualifications nor special materials for forming a conclusive opinion, we shall not pause to review his verdict, confidently as it is phrased. But his assertion that a march upon Mukden was intended and afterwards renounced leads us to think that he is not yet familiar with the general plan of operations mapped out by the Japanese Head Quarter Staff. Into that plan the capture of Mukden never really entered. The programme, as we understand, was to conduct the campaign beyond the Yalu on such a scale as to suggest a march upon Mukden, and thus draw off the Chinese troops from the position of prime strategical importance, Liaotung. No blow, nor series of blows, delivered in Manchuria could be decisive. The Chinese empire's articulation is not sufficiently perfect to

convey to the heart sensations produced at the extremities. Whether Pekin were attacked *via* Shanhaikwan or Taku, or the destruction of Weihaiwei and the annihilation of the Peiyang Squadron were objective points, Port Arthur had to be captured by way of preliminary. Hence the two problems that presented themselves to Japanese strategists for earliest solution were, to drive the Chinese out of Korea and to get possession of the Liaotung Peninsula. As to the former, a plain course offered. YEH'S intrenchments at Asan had to be assaulted, after which Pyöng-yang had to be reduced, and then, by a general forward movement of the Japanese army from the neck of the Korean peninsula—between Gensan and Phöng-yang—the Chinese had to be pushed across the Yalu. This last object effected, it seems, at first sight, that a corps of observation might have been posted on the Korean side of the Yalu, and that the main body of the Japanese army might have been launched directly at the Liaotung Peninsula across the Yellow Sea. But we must recall what kind of aspect the Liaotung Peninsula then presented to military men. It was believed to be virtually impregnable. At Port Arthur and Talien there existed magnificent fortifications, powerfully armed and supplied with all modern appliances for defying assault, while the topography of the Peninsula was such that a small body of resolute troops might have held the Chinchow isthmus against a host of invaders. We must guard against the mistake of allowing our review of the situation to be obscured by *ex post facto* knowledge. Liaotung proved a "soft nut" after all, but there was no reason whatever to anticipate anything of the kind last October. In truth the easy capture of the place took away the breath of the public. It was an almost incredible fiasco on the part of the defenders, and there is a certain measure of difficulty in recalling now the estimate that existed a year ago of the formidable task awaiting the Japanese army of invasion: Marshal YAMAGATA is said to have counselled the daring course of assuming a merely defensive attitude along the line of the Yalu, and striking immediately at Port Arthur with the First Army. Events would evidently have justified the brilliant insight of the Marshal's plan, but it involved such wholesale assumptions as to the worthlessness of the Chinese troops and the miserable state of their preparations, that its approval by the Head Quarter Staff would have been almost reckless. Hence the original scheme was pursued, namely, a demonstration in the direction of Mukden such as should induce the Chinese to concentrate their forces in the Liaoyang-Fenghwan districts, leaving the Liaotung Peninsula comparatively undefended. The correspondent of *Le Temps* is mistaken, then, when he talks of a march upon Mukden "afterwards renounced," and it may well be that his

strategical deductions, being based on that fallacy, are themselves equally fallacious.

We pass to his specific and principal allegations. He says that the Japanese "hesitated for a month, from Sept. 25th to Oct. 26th, as to the invasion of Liaotung, and afterwards for two months, from Nov. 21st to Jan. 10th in their attack on Weihaiwei, and up to the last moment an attack on Shanhaikwan was preferred." Let us see how these allegations correspond with the actual dates. Phöng-yang was assaulted and captured on the 15th and 16th of September. A short delay then became necessary to organise arrangements for an advance northward, and it was not until the 24th of the same month that the van of the First Army moved out of Phöng-yang. The distance to Wiju was 125 miles. The Brigade forming the van covered that distance in 17 days, being at the rate of over 7 miles a day. Wiju was occupied on the 17th of October, and by the 23rd YAMAGATA had massed his forces along the Yalu preparatory to forcing the passage of that river and assaulting the Chinese position at Chiu-lieng. It appears, therefore, that the month during which the Japanese are supposed to have "hesitated about the invasion of Liaotung" was a month of continuous operations in Korea; operations sufficient to tax the military capacities of many countries greater than Japan. Evidently no every-day standard is applied to Japan when it is counted a defect that she did not combine the operation of assembling and provisioning an army of from 30,000 to 40,000 men in Korea with the operation of simultaneously despatching another army in another direction across the sea. We now come to the second interval, nominally of two months—November 21st to January 10th—but in reality of 50 days. Apparently the correspondent of *Le Temps* regards the despatch of big armies over sea much in the same light as the discharge of pith pellets from a magazine pop-gun. He thinks that Port Arthur having been captured on November 21st and 22nd, three or four days should have sufficed to raise the Second Army's strength sufficiently for the garrisoning of Liaotung and for a fresh expedition to a new part of China. In point of fact, nearly one half of OYAMA'S Liaotung Army had to be detached for operations in the north of the Peninsula, and it became necessary to carry another large force from Japan to Talien before an expedition against Weihaiwei could be undertaken. Under any circumstances, seven weeks would not have been a long time to devote to transporting a *corps d'armée* from Hiroshima to Talien and collecting at the latter place all the equipment necessary for an expedition against a strongly fortified position in a hostile country. But when the feat had to be achieved simultaneously with two other campaigns in other regions, we are disposed to applaud its celerity

rather than to criticise its tardiness. It must not be forgotten that the number of steamers at Japan's command was limited, and that the duties devolving on them did not terminate so soon as they had carried a *corps d'armée* to its point of debarkation. On the contrary, the services of a steam fleet were continuously needed to convey re-inforcements and supplies, and generally to maintain communications between each *corps d'armée* and its base in Japan. So far as we can see, the only delay that can reasonably be charged against the Japanese occurred after the left wing of the First Army marched out of Söul *en route* for Ph्योंg-yang. Apparently the Japanese programme was then imperfect. It contemplated an immediate advance upon Söul by one Division only. Subsequently the plan was modified by the addition of a second Division moving from Gensan as a base, and this change involved a long halt of the Söul Division so as to synchronise the movements of the two bodies. But from the battle of Ph्योंg-yang no undue hesitation or delay seems chargeable against the Japanese military authorities. Four months (September 16th to January 20th) can not be regarded as a long time to devote to operations of such magnitude as the movement of one army from Ph्योंg-yang into central Manchuria; the transportation of another to the Liaotung Peninsula, and the carrying of a third to Shantung, the record including the reduction of three first-class fortresses.

We have devoted some space to this question because it has already afforded food for comment, independently of the shallow and inaccurate criticisms of *Le Temps'* correspondent.

THE PROBLEM OF HIGH CLASS EDUCATION BY MISSIONARIES.

(CONTRIBUTED).

IF America, as we now know it, had existed at the time when CHRIST and His Apostles, according to Biblical records, performed a series of miracles and founded thereon what is known as the Christian religion, the Americans, before committing themselves in any way to accept the new creed, would have despatched from New York or Boston a number of commissioners, with instructions to prepare a full report of the movement and its prevailing tendencies; and upon the nature of this report would have depended the attitude of practically the whole American nation toward the Christian faith. That is their way of doing business. For some time past certain American Churches, especially the Independents, have seriously questioned the wisdom of the educational policy pursued by Christian Missionaries in Japan, or perhaps it may be more correct to say, by a large and influential class of Christian Missionaries in Japan. These latter, regarding with alarm, natural to men of their creed, the exclusively

secular nature of Japanese national education, determined, some years ago, to compete with government high class institutions, and under the able leadership of the late Mr. NEESHIMA, established the Kyoto Doshisha. From its earliest infancy to the present time the Doshisha has received a large amount of support from the American Board of Foreign Missions, and has no doubt been regarded by the Missionaries connected with it and by home subscribers as a most important missionary agency. But the management of the institution has been in Japanese hands, and what is more, in soliciting pecuniary support from the Japanese public, members of the faculty have been careful to make it plain that high class education, and not propagandism, is the chief object of the school. On this understanding numbers of prominent men not Christians and entertaining no desire to be identified with the spread of Christianity, have allowed their names to be placed on the subscribers' list. When, some years ago, it was decided to make the Doshisha a University, it was plainly perceived by the Japanese promoters of the scheme that the adoption of this measure would involve the thorough secularisation of the education to be imparted in the institution. The forecast has been verified, to the satisfaction of the general Japanese public. But many missionaries, having watched with keen interest the transformation that the school has undergone, are extremely dissatisfied with its present character, and speak of the whole Doshisha enterprise as a failure, when regarded from a purely missionary point of view. News of this state of feeling having been conveyed to the American Board of Foreign Missions, commissioners were appointed and sent out to Japan to investigate the whole question of high class education as carried on by Christian Missionaries here, and with special instructions to report fully on the Doshisha. The commission consists of four gentlemen; Dr. BARTON, Foreign Secretary of the American Board of Foreign Missions; the Rev. A. H. BRADFORD, and Messrs. ELLISON and JOHNSON, who are now engaged in visiting different mission stations and conferring with the missionaries on the vexed question.

The view held by many missionaries, as we have stated above, is that the Doshisha has not fulfilled the object for which it was founded by the late Dr. NEESHIMA, and hence that it can no longer properly claim the support of the American Board of Foreign Missions. The money collected by missionary societies is subscribed, often by persons that can ill spare it, with the distinct understanding that it is to be employed in the promulgation of the Christian faith. If, say the critics whose opinions we are giving, it can be proved that high class education of a purely secular kind is conducive to the spread of Christi-

anity, then money granted to an institution like the Doshisha is not misappropriated. But if statistics show that even in the case of colleges where the curriculum is of a Christian character, high class education as an evangelising agency has yielded very meagre results, what justification can there be for applying mission money to the maintenance of a University like the Doshisha? Concerning the benefits to be derived from a liberal education the missionaries entertain no manner of doubt. But what they object to is the appropriation of money subscribed for a fixed purpose to agencies that do not in any way assist the attainment of that purpose.

Note must be taken of the fact that religion is taught in the Doshisha; but not Christianity alone. Buddhism has its share of favour. A Buddhist priest is allowed to address the same students that, an hour previously, were sitting at the feet of a Christian missionary. Religion is not a compulsory subject, and is, we are told, regarded with indifference by a majority of the students. While all the foreign professors and a certain number of the Japanese are paid with foreign money, the management of the Doshisha is entirely in Japanese hands. The faculty is in favour of the greatest liberty being given to students in the matter of religion. It is said by persons in a position to know, that the Japanese leaders of thought in the Kyoto University are either Unitarians or sceptics, in heart if not in profession.

The subject of missionaries' taking part in purely secular education has been frequently discussed. From the point of view of pure propagandism there is difficulty in perceiving what justification exists for the practice. Wherever missionaries are employed by the Japanese Government, or by large public schools like the Keio-gijiku, it is distinctly understood that they are not to make use of their position in an unfair manner as a means of gaining converts. We say in an unfair manner, because it would be impossible always to prevent the personal influence gained over students while teaching in a school from being subsequently used by the missionary to promote the cause of Christianity. But on the whole, results have apparently shown that purely secular teaching carried on by missionaries can not be counted a genuine missionary agency. The question is not whether such a system is a direct or an indirect agency, but whether it can be deemed an agency at all in Japan. We do not doubt that in many countries to which missionaries have been sent, Madagascar and Africa for example, the case has been different. There the natives have been wholly dependent on missionaries for even the most elementary education. But in Japan of late years hundreds of good secular schools have thrown open their doors to

eager searchers after knowledge. A Japanese youth is ready enough to be taught a foreign language by anybody that will teach, but in ninety-nine cases out of every hundred he resents any attempts at proselytism, and if such attempts be persisted in, he will quietly find instruction elsewhere. Within the last few years the feeling of antipathy to educational establishments wholly under foreign missionary control is said to have greatly increased. Perhaps that is to be regarded as part of the movement in favour of Japan for the Japanese. It seems to be a well established fact that when the management of any Christian educational institution is solely intrusted to the Japanese, there gradually ensues a laxation of discipline and Christian doctrine. That is not difficult to account for. The Japanese as a rule fail to see any desirable object in observing many of the old established rules of Western Christendom and are as a people singularly averse to dogmatism in matters of religion.

On the other hand, although secular education may not have great force as an agent of direct religious propagandism, its indirect effects must be apparent to every close observer. A school conducted by Christian teachers, above all by men whose lives offer a fine object lesson in the beauty of the faith they profess, is permeated by an atmosphere of Christianity, to breathe which daily at the most impressionable period of his life can not but affect the student's moral development. The professors and instructors at whose feet he sits to acquire the chief possession that a man can boast, remain with him, a revered memory, through all the years to come. Insensibly he models himself upon their methods and accepts their principles for his guidance. Christianity presented to him, however indirectly, through such a medium becomes a beneficent creed; a creed that he must always associate with the good it has conferred on him. Moreover, the fact that his *alma mater* wears the vestments of religion can not but awaken reflections to which he might otherwise have remained a perpetual stranger. The spiritual factor acquires practical vitality in his life. All these items have to be remembered in casting up the account. To those that discern no fitting instruments for propagating Christianity except the pulpit and the lectern, education must seem an unsatisfactory agent. But a different view will be taken by men sufficiently liberal and discerning to perceive that the seeds of Christian ethics may flourish in an intellectually cultivated soil as well as in an atmosphere of sentiment and supernaturalism.

If the arrival of the Missionary Commissioners from the United States may be regarded as an inclination that the American Board of Foreign Missions recognises the fact that the conditions of Christian propagandism in Japan are of a sufficiently exceptional character to demand a special

study, and if the delegates have resolved to accomplish their task in a thoroughly impartial manner, some very interesting information will be elicited, and we doubt not some far-reaching consequences will result from their visit. With regard to the Doshisha, its critics claim that the institution has assumed its present character owing to its exclusive Japanese management, and ask whether any other educational establishment organised by Christian Missionaries is not destined to undergo a similar transformation. If that danger actually exists, the question arises whether foreign Missions can subscribe largely to purely Japanese institutions, without being guilty of misappropriating Christian money. On the other hand, where the Japanese are not allowed to take the lead in the management of schools, it is alleged that the best class of students carefully avoid them. The subject is full of interest, and if the American delegates can throw any light on it, they will receive the thanks of the whole Missionary body as well as of Christian men and women generally.

LETTER FROM FORMOSA.

FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.

Changwha, Formosa, September 21st.

Although it is rather late to dwell on the subject of a battle that occurred on the 28th of last month, I wish to give a few details not yet published regarding the capture of this place, for it was effected by perhaps one of the cleverest bits of strategy displayed in the whole war; and as it was the first engagement in which the famous "Black Flags" had a hand, it may prove of interest to many that prophesied that in the "Black Flags" the Japanese would meet a real opponent.

Changwha, a big inland city, one of the most important on the island, lies three miles from the sea, on a plain scarcely above its level. To the East rises a range of hills, and crowning one of these overlooking the city, is a fort erected by the Chinese, protected by four 12-centimetre modern guns, with a great number of miscellaneous relics intended long ago for use, but now practically useless. To the North, about three miles distant, runs a mountain stream which at this time of the year is converted into a surging river. Upon the banks of this river we find the Japanese and Chinese troops on the 27th, the Japanese to the north, hidden by fields of sugar cane which covers the district; the Chinese to the south, partially protected by entrenchments newly built. It had always been the custom to ford the river at one point where it was known to be comparatively shallow, and here the Chinese had their force; for, as it "blong olo custom," the Japanese would certainly cross at the same point. But the Japanese have a reputation for dropping old customs, and they did so in this case. One detachment was left to engage the Chinese at this point, and one column of the main army very quietly crossed the river some 1,500 metres higher, about midnight, in the shadow of darkness. This column again divided, one detachment crawling along through the sugar cane to get to the rear of the fort on the hill, and the others following along the low land to place themselves between the Chinese troops guarding the river and the city. At daylight the Chinese were on the alert, and opened fire on the few troops left across the river as a decoy. At the first shot the Japanese troops that had crossed whose presence had not been discovered, rushed down yelling and shouting, to the great dismay of the Chinese, whose force numbered about a thousand. They fled, but many were killed as they retreated.

At the same time the column that had secured a position to the rear of the fort made a charge with fixed bayonets, to the astonishment of the garrison, who retreated by climbing over the walls and escaping down the hill towards the city. The retreating troops had now all gathered in the city, and as the Japanese gained possession of the fort

the former evidently came to the conclusion that it was time to escape, so fleeing through the city they were about to emerge through the south gate, when they were paralyzed with fear to find a detachment of Japanese troops closing in from the South. Many escaped, but others of the terror-stricken soldiers ran to and fro about the city, while the Japanese fired upon them from the fort above. The Japanese then reached the city and climbed over the walls, as the gates were barricaded, making their entrance without opposition. The streets were littered with soldier's uniforms and equipment, and three hundred and seventy dead bodies were found about the city and two hundred and fifty outside.

The Prefect and other Mandarins escaped during the early morning, but carried nothing with them, everything about the place giving evidence that defeat had not been thought possible. Many fled to the coast, and, taking possession of junks, made the rest of their journey by water.

After the occupation, a battalion of infantry and a troop of cavalry followed the retreating soldiers towards the South, being obliged to ford one stream of considerable size. The heavy rains had then commenced, and soon the stream was of such depth that they could not recross. The Chinese, re-inforced from the south, then returned and made an attack, but were defeated, although the Japanese did not dare advance, as all supplies had been shut off on account of the storm. As soon as the storm abated and the river had become fordable, they re-crossed, and took up a position to the north of the river where they now are. The place where the Chinese troops are now gathered is about 35 miles from Tai-nan-foo.

Here at Changwha two Chinese officers, who were captured, are living very comfortably and will be sent to the mainland on the first opportunity. They say that the force from the mainland taking part in the Changwha fight consisted of ten camps or 5,000 men.

After the taking of Changwha sickness increased to an alarming extent among the Japanese. Before reaching the city nearly seventy streams of different sizes had to be forded, and with insufficient food, as the supplies in many cases could not be forwarded, the troops were in a much weakened condition. As there had been heavy rains for several days, Changwha was almost flooded, and as no method of draining offers, the city could hardly be called a very healthy resort for soldiers already ill. Work was commenced at once to bury the dead Chinese, but it was necessarily slow, and a week elapsed before all were disposed of, many having been found concealed in the underbush and in the river. The stench from the dead bodies was terrible, and practically poisoned the air. The effect was quickly felt, for from the highest officer to the lowest coolie, all were effected, and one-third of the whole division were incapacitated. Only the very serious cases were taken to the field hospital, although these numbered 824, and of them 82 died. Of the hospital corps of 1 chief and 5 doctors, 3 were struck down, so that 3 were forced to look after the large number of cases; 16 out of the 41 nurses sickened and 4 died. But after the bodies were all buried and a few days of dry weather had driven away the dampness, this awful period of sickness passed away, and health improved, although now about 100 a day are being sent back to Taipeifu. The sick that are unable to walk are carried on a stretcher by three Chinese coolies with one noncommissioned officer with each squad, and one Japanese coolie with each ten stretchers. The Japanese dead are cremated and the ashes buried in graves marked with a memorial board. The Chinese were buried in large trenches holding twenty or thirty, but after the atmosphere had affected the bodies the remainder were cremated.

All is peaceful for some distance south of Changwha, and to the north entirely. No guards are needed and the farmers are working as industriously as ever. The people seem to feel perfectly contented, and are making more money than they ever thought of doing before. The coolie question is practically settled and perhaps no more Japanese coolies will be sent for.

Fifteen to twenty thousand Chinese coolies are employed altogether, and with the very liberal pay they are receiving, there is no difficulty in securing any number. In fact the principle difficulty is to pick out the best, and to try and prevent the fights that occur among the Chinese for the work. For carrying one package six or eight miles about forty cents is paid, the whole family engaging in the work; a group consisting of the mother and daughter struggling along with one package swinging from a shoulder pole, two small boys with another package, similarly carried, and the father and perhaps older son with two, thus giving them \$1.60 for a few hours work. Chinese cash is seldom seen and the Japanese *sen* and small silver pieces seem to be the principal me-

dium. No coolie will think of work short of a dollar a day, and three coolies, whom I endeavoured to engage to carry my chair for a half day's trip, wanted \$1.20 apiece and stuck to it. Of course, commodities have gone up in consequence. No doubt many thousand Chinese would sincerely regret to see the Japanese leave now.

The following news is from Chinese sources in the south and is considered trustworthy, if trust be possible:—A relative of General Liu has gone to Canton to endeavour to secure more troops. The soldiers from one of the camps who were loud in their condemnation of General Liu for being forced to fight the Japanese, deserted their camp and left in junks for the mainland. A Chinese merchant from Singapore arrived in Amoy and succeeded in getting a considerable amount of powder shipped to Formosa for General Liu. A Mandarin was sent from Tai-nan-foo to Amoy on the 13th to purchase powder. Many spies have been sent to Taipeifu as merchants, carpenters, etc., some having even entered Japanese employ as writers in Government House.

Tael 160,000 were delivered to the rebels by an English merchant steamer at Anping to aid in the rebellion. Gen. Liu endeavoured to escape; claiming that he wanted to go to Foochow to secure additional troops and more funds to continue the war, but his people who are watching him very closely would not allow him to go, saying that he had all the troops he needed, that they had supplied him with funds, and that he must stick by his troops. It is the opinion of the Chinese throughout the country that the "Black Flags" are very much frightened and do not want to fight. Gen. Liu endeavoured to arrange with the savages to allow him to retreat into their territory in case of defeat, but they refused. He then endeavoured to punish them and several were killed. The savages have shown the greatest friendliness to the Japanese and have turned the guns furnished them by the Chinese upon the Chinese themselves instead of upon the Japanese, as intended.

Kelung, October 3.

Wishing to join the southern expedition, I left Changwha September 23rd, for Taipeifu, taking a chair, as the roads are almost impassable for a horse. On the second morning we reached the Tskai river, and found it impossible to cross, as the current was too strong for boats, and fording was out of the question. It was a simple question of wait, and three days passed before any one ventured to cross. Then two Japanese coolies plunged into the stream to swim to the other bank, but the powerful surging current drew them under and they were both drowned. A later attempt was made to get some horses across but they met the same fate. On the fourth day the water perceptibly lowered, so a line was secured from each bank and a Chinese boat made trips all day. After crossing, about thirty streams were forded before we reached Teck-cham (Hsien chu ku). The Engineering Corps have been doing good work in building roads, and work will be commenced extending the railroad south from Teck-cham to Tai-nan-foo at once; and it is expected that a considerable portion of it will be built this fall. At Teck-cham we took the railroad for the forty miles to Taipeifu, ending our two hundred and fifty mile journey on the 28th. General Takashima is in command of the Southern Expedition, which will leave here to-day and tomorrow for the Pescadores. There it will divide, and a Southern Expedition, under command of General Nogi, will land, it is my opinion, at Pong-lian, a harbour 30 miles south of Takao. There is not expected to be any Chinese camp at this place, although five miles south, at Che-long-ka, there formerly were some soldiers. Further south, however, there are known to be two camps. The travelling towards Takao, which is of course the objective point, will be extremely difficult. Many streams must be forded, and at Tan-kang is a very large river, which must be ferried. If the Chinese destroy all the boats, it will be necessary to make a considerable detour and cross the river farther inland. The city of Tan-kang, situated on the left bank, has about eight thousand inhabitants, and is a flourishing place. If the "Black Flags" intend to oppose the Japanese, the first battle of any importance will probably take place at this point. After leaving the city we pass through richly cultivated fields of sugar cane and indigo, coming out on to a barren sandy plain with five or six streams to ford, which during heavy rains becomes one water course. Several small villages of but little importance are passed, and after about half of the distance has been travelled, the route lies along the sea beach. As Takao is neared, the natural vegetation, which in some places consists of jungles of pines, mangroves, bamboos, cycads, etc., will offer an excellent opportunity for the Chinese to indulge in a little guerilla warfare. After Takao is taken the troops will probably be

hurried on to Tainan-foo and Anping, where it is hoped to finally quell the resistance of the Chinese soldiers.

The main expedition will probably land at Pawtaychin, a harbour about 25 miles north of Anping. They will no doubt unite with the Guards division, which will have taken Kagee, a point now occupied by the Chinese, and will then drive the Chinese troops ahead of them towards Anping. They will travel first through the territory of the Pepohans, but as these have expressed their friendliness to the Japanese, it is not thought that any resistance will be met with. Nearly all the distance to Anping will be an immense plain, and the travelling not specially difficult. It is expected that the southern and northern expeditions will have the whole Formosa Chinese force between them; with the savages to the East and the ocean to the west, the Chinese must fight or surrender, and here will be no more retreating. The Japanese forces will no doubt concentrate at Anping.

I shall accompany General Nogi with the southern expedition, as it will pass through a portion of Formosa new to me and of considerable interest. Mr. Kasawamura, formerly military attaché of the Japanese Legation at Berlin, who has been with me since my return to Formosa, is my companion and will act as interpreter. Every facility is given me in my work, and none of my letters pass through the hands of the censor, as was the custom in the north. It is said that at Tainan-foo there are 10 complete camps amounting to 5,000 men, and at Anping, 6 camps or 3,000 men, as well other scattered camps which will make the Chinese force in the district about 10,000 men. The Japanese men-of-war will play their part from the sea, and with the large Japanese force on land General Liu with his world famous "Black Flags," who are brave only in the columns of certain journals, will be brought to bay and disposed of in short order. It is the opinion among many of the Japanese that Gen. Liu will make good his escape as General Tang did in the north. The principal foe the Japanese troops have to face in Formosa is sickness, although the percentage of deaths is decreasing rapidly.

PHOTOGRAPHIC SOCIETY OF JAPAN.

A regular meeting of the above mentioned Society was held at the Genrokukwan, Kobiki-cho, Tokyo, on Friday, 11th Oct., at 5 p.m., Mr. S. Kajima, Junior, in the chair. The minutes of the last meeting having been read and approved, the following paper was read by Mr. Y. Isawa:—

LIESGANG'S COLLODION TRANSFER PAPER.

I received a circular about Transferotype some time ago, kindly forwarded by the manufacturer, Dr. Liesgang, of Germany. It struck me that, if this paper would work well, it would be most useful, particularly as there have been difficulties in working other papers of a like kind, so I decided to try it and, if successful, to give my results to the Society. Accordingly, I wrote to Dr. Liesgang on the 17th June to forward me some sample packages, and I received these last August.

I have to thank Dr. Liesgang for kindly giving me the chance to show you his "new paper," at the same time I regret that the paper came to hand here very badly discoloured. Besides the transfer paper, Dr. Liesgang sent samples of his famous Aristopaper and his new Li-paper; both of these came to hand without the least sign of discolouration. I perceived a smell of glycerine on opening the package of transfer paper, and I think this was the cause of discolouration, as it keeps the paper soft but at the same time keeps it somewhat moist, and the moisture probably attacks the paper. The paper came by parcel post, so that it had not the protection it would have had in a tin or zinc-lined case. Last year Prof. W. K. Burton imported some carbon tissue without glycerine, and some with glycerine in its composition, and found the kind with glycerine was damaged more quickly than that without, though it kept for some months. If the transfer paper came in an air-tight box it might very likely keep undamaged for some time. It was as much damaged as you see in the case of this sample (paper sent round), but fortunately this discolouration does not interfere much with the prints; on fixing, I found the colour almost disappeared so that it cannot be observed by transmitted light using the prints as transparencies or Lantern Slides, though it shows slightly by reflected light using the prints as positives on porcelain or plaques. I do not condemn the paper on account of discolouration, but, on the contrary, I recommend the paper for any kind of transfer work. I only hope that the manufacturers will make it with a less quantity of glycerine or altogether without it if possible, though perhaps the

paper may thus become difficult to manipulate. The paper, in its present form, is so easy to manipulate that, were the difficulties of manipulation increased even two or three times it would still be not other than easy in the hands of one exercising even moderate care.

The sample slides I am going to show you are made out of this discoloured paper, but I believe that you will find it difficult to imagine that they were printed on such paper, because they are perhaps clearer than slides made on special lantern plates coated with gelatine emulsion. There are many advantages in this paper. It can be inspected during printing, can be toned to any desired shade, is easy to manipulate, and the results are beautiful. As I told you before, the use of this paper is not only to make transfers upon clear glass for making lantern slides, diapositives, etc., but also for ornamenting porcelain, plaques, etc., in fact anything that it is wished should be decorated with a photographic picture. This evening I am going to demonstrate how to transfer this paper, using glass as the support, for making lantern slides. The transfer to other kinds of surface may be done in the same way. After my demonstration there is to be a lantern exhibition of the slides sent from America to this society. Should there be time I will show the result of my demonstration on the screen. I send you round a set of lantern slides made by the use of this paper by Mr. Konishi from his own negatives. Here is the paper which has been printed during the day time. Now I am going to show you, with the assistance of Mr. Konishi, the process of toning and fixing, and then of transferring upon the surface of glass.

The process of transferring recommended by the manufacturer for ordinary transparencies, is gone through after toning, fixing, and thoroughly washing, but the toning and fixing may be done either before detaching the film from paper, or after it is fixed on the surface to which it has been transferred. The particular samples I received were damp and the film came off in the first washing water, so I am going to show you the process of transferring with the usual order somewhat reversed, that is the film is detached in the first washing water and film is toned, fixed, and washed and after all manipulations is transferred to the glass surface. This mode of transferring is not recommended for ordinary transparencies by the manufacturer, but is recommended in the case of curved surface. I used the separate toning bath recommended by the manufacturer, though there is also a formulae for a combined bath. I proceeded thus: First I wash the prints in several changes of water, till the free silver is washed out, during this washing I detach the films from its original support and wash off as much white medium between the paper and film as I can. When the washing is completed the film is transferred to the following toning bath recommended by the manufacturer:—

A	Water	1,500 gr.
	Chloride of Gold	1 gr.
B	Water	1,500 gr.
	Sulphocyanide of Ammonia ...	40 gr.
	Hypo	3 gr.
	Glycerine	60 gr.

I take equal parts of A and B, and pour A into B, never reversing this order. When it is sufficiently toned, I transfer the proof into the fixing bath without any previous washing. In five or six minutes the prints are completely fixed, when I proceed to wash in clean water. With several changes of water the washing may be finished in a couple of hours. Now the film is put on a piece of glass in lukewarm water, and the back of the film is gently rubbed with a brush to remove all the remaining white stuff. When it is cleared, I fix it on the final support, for which I take a piece of glass to make a transparency.

I make a solution of 5 gr. of gelatine in one litre of water and maintain the temperature during the process of fixing. The gelatine solution is poured into a bath of convenient size, and this is put into another large-sized bath into which is poured hot water to keep the gelatine solution warm. Now we put the clean glass into the solution, waiting a little till it becomes of the same temperature as the solution, then we take the film in the solution and raise it out of the bath together with the glass. We lay the glass flat, film-side up, and put a clean piece of paper upon it, and squeeze to expel the air. When it is in perfect contact with the glass, it is dried thoroughly in the air.

Mr. Isawa's demonstration was most successful. The films readily left the paper, and were so tough that they went through the subsequent processes without showing any tendency to tear, and without needing any very great care in manipulation. They showed no tendency to curl up either. Several slides produced by the transfer paper were afterwards shown in the lantern, and were declared to

be of as good quality as could be wished. Even in the lantern there was no perceptible veil.

Mr. C. D. West, M.A., showed a Hetherington camera, which he had improved by adding a "cloud-compelling" arrangement to the shutter. Many shutters have been made to give a shorter exposure to the lower part of the plate—corresponding to the upper part of the subject—than to the lower with the view of getting a better rendering of clouds, but such shutters are not suitable to subjects in which there is little or no sky. The shutter of the Hetherington camera consists mainly of a revolving disc having two circular openings, either of which can be made to pass rapidly in front of the lens, so as to give an instantaneous exposure. By modifying the shape of one of the openings, the shutter is converted into one that can be used either for an equal exposure all over the plate, or so as to give the sky relatively less exposure than the foreground. Many prints, both direct and enlarged, were shown to demonstrate the advantage of the addition. Some taken at Ika showed comparatively dark foregrounds, fully exposed, the pictures having, at the same time, magnificent clouds. Such effects are impossible with a single exposure with a shutter giving the same relative exposure all over the plate. The Hetherington is a 5 X 4 hand camera with a changing arrangement that seems to work without a hitch at any time, and the camera is justly becoming popular in this country.

Mr. T. Asanuma showed a very handsome half-plate camera for hand or stand, by the Rochester Optical Company of the United States. The camera, with three double backs, folds up into a small space, and is extended with a bellows for use. The workmanship is throughout of a very high class.

Mr. Asanuma also showed a hand camera by Mr. T. R. Dallmeyer. Mr. W. K. Burton showed one by Mr. George Hare. They are so similar that they may be described together. The cameras are both very compact, and have all motions necessary, including rising front for both vertical and horizontal pictures. The most novel feature in both is the dark slides, with 6 of which each camera is fitted. These have wooden frames, and corrugated steel doors for the actual exposure of the plate. The doors are opened into the cameras by turning a little lever. Thus the nuisance of pulling out a sliding shutter, which is always in the way afterwards, is avoided. The slides occupy much less space than do those of the ordinary kind.

Mr. Burton showed a large quantity of work done by his camera, both direct and enlarged. He considered the camera a thoroughly useful and reliable one, and one as good as could be got at less than an extravagant price.

Mr. Asanuma showed a tele-photographic lens, without name, but said to be of "French make," which had engraved on the tube quite an elaborate table to facilitate determining the magnitude of the image, and to assist in focussing—always rather a difficult task with a tele-photographic lens.

In the evening the slides sent by the American Lantern Slide Interchange Society were exhibited to a large audience. The collection is of the greatest excellence, and the exhibition was most thoroughly enjoyed. Dr. Augustus Wood read out a description of each slide as it appeared on the screen; and what with this, and the fact that many of the slides were detained whilst the audience was discussing or asking questions about them, only a little more than half the slides had been shown when, at a late hour, it was announced that the supply of gas had failed, and that the meeting would have to be adjourned.

Due notice of the adjourned meeting will be given to members, and will be printed in the Yokohama press.

The meeting ended with a vote of thanks to the American Lantern Interchange Society, and to Mr. S. Kajima, Junior, who had put the Genrakukwan at the disposal of the Photographic Society of Japan, and had provided the lantern.

It is understood that the Government are desirous of availing themselves of the advice and ability of General Sir Redvers Buller in the approaching reorganisation of the War Office, and that he has therefore been offered a prolongation of his appointment as Adjutant-General for a period of two years. As Sir Evelyn Wood has yet more than three years to serve as Quarter-master-General, this arrangement would seem to imply that the Duke of Connaught does not go to Army Head-quarters just yet. Nevertheless, it is believed at Aldershot that he has put in his last season there. But there is certainly no sign of the removal of his effects from Government House.

YOKOHAMA CRICKET FESTIVAL.

The first day's play in the Yokohama Cricket Festival took place on Monday. The weather was dull and threatening, besides being very cold, when the eleven got down to the ground, and taking it altogether the prospects did not look particularly favourable for a continuous fine day. But later on bits of blue sky began to peep out and in the afternoon a flood of sunshine was pouring on to the ground. The wicket was in capital order, indeed it has seldom been in finer condition. The laying out of the ground has been most tastefully done and reflects great credit on the Committee specially in charge. The Pavilion was draped in the club colours; the flags of the S. C. C., the K. C. C., and the Y. C. & A. C. flew from the flag staffs, while the shields of the three Clubs were hung in front of the Pavilion, immediately over the clock. A most artistic scorers' and press-box was erected to the left of the Pavilion—this latter will be a permanent object of beauty, and utility—and in the opposite corner of the ground stood the Ladies' Refreshment Tent. This was most charmingly set out with flowers and draperies, the Club Colours predominating. On Monday it was in charge of Mrs. J. P. Mollison, wife of the President of the Yokohama Cricket and Athletic Club, Mrs. Stuart Eldridge, and the Misses Eldridge. For a first day the attendance was poor, and even the ladies did not turn out in large numbers, but doubtless this will be amended as the week progresses. Play commenced at 10 a.m., and Shanghai going out to the wickets first remained in until nearly a quarter to five o'clock. In that time 254 runs were compiled. The play of the visitors was exasperatingly careful all the way through, from a spectators' point of view, but the bowling of the home team left much to be desired; while the fielding was poor. Upon Yokohama going in Kenyon made things lively, and within eighteen minutes 20 had been scored. Then time was called. Rain set in during the night and continued all day on Tuesday, the game was therefore declared a draw to the regret of every one. Mr. Dodds was Umpire for the home side all day, with Messrs Lightfoot, Wilkinson, and Lucas, for Shanghai; Mr. Carew kept the score for Yokohama, Mr. Braess doing the same for Shanghai during the afternoon.

b. 3	20

On Wednesday the sun shone out from an absolutely cloudless sky. There was hardly any wind stirring, and the soaked wicket dried slowly; it was, however, much better than might reasonably have been expected. Still Farbridge, the Shanghai Captain, would have been better advised if he had sent in his opponents to bat, instead of putting his own side in. This error in judgment greatly accounts for the poor showing of Shanghai. Going in at about twenty minutes past ten o'clock, they were all out immediately after tiffin for the paltry score of 65 runs, and many of the team that had stood so well on Monday were out for miserable ducks on Wednesday. Then Kobe went in and played havoc with the Shanghai bowling, completely bereaving it of life, and when stumps were drawn at five o'clock the Southern Settlement had compiled 246 and had three wickets still to fall. The Kobe Captain gave a grand exhibition of good cricket, and his 81, not out, is a record of hard hitting mingled with judicious blocking of difficult deliveries. Shanghai is certainly weak in bowling, as a glance at the score will show, nearly all their opponents being caught out, and not bowled clean. Kobe, as usual, made an interesting display of leg hitting—its favourite run-getting device; and in fielding it was smart. Lucas' bow-

ling average is remarkably good, and at one time looked even considerably better, but the glorious uncertainties of the game upset calculations towards the close. Tiffin was served as usual on the ground, the President of the Club, Mr. J. P. Mollison, in the chair: on either side he had the Shanghai and Kobe Captains, Messrs. Farbridge and Duff. In a few cheery words he welcomed the visitors to the Yokohama ground, and then announced his intention of giving a bat for the best individual score during the Festival, a statement that was greeted with loud cheering. Messrs. Farbridge and Pakenham duly returned thanks for the hospitalities and courtesies shown by Yokohama during the Festival. There was a very good attendance during the afternoon, the bright weather inducing a large number of ladies to don smart gowns and patronize the ground. A number of Tokyo visitors were also present.

On Thursday the second day's play in the Kobe-Shanghai match took place in fine, but overcast weather. Once or twice during the day the sun came out, but not for long, and at tiffin time a few drops of rain fell. A slight breeze sprang up soon after and the rain-clouds dispersed, and from then on the sky cleared and clouded alternately. When stumps were drawn the previous evening the game stood—246-7-9, with Duff, not out, 81, and Pakenham, not out, 5. Upon going in on Thursday Duff hit out freely and 279 was soon reached, at which point Duff, having made 103, the Kobe innings were declared closed. This was a tremendous total for the Shanghai team to face, and it was soon seen that the task was entirely beyond them. At tiffin time they had made 58 runs and six wickets had fallen; and the possibility of playing out the afternoon was seen to be impossible. At a quarter to three o'clock their last wicket fell, and only 89 runs had been compiled. A win of an innings and 125 runs is a feather in the cap of the Kobe Captain, and more than sufficiently atones for Kobe's defeat at Shanghai last year. Long and hearty was the cheering of both teams as the men returned to the Pavilion, and the Captains came in for an ovation. The stopping of the game at this early hour of the afternoon was rather unfortunate for the ladies, who had just begun to assemble, while even the Town Band had not started its proposed programme of music. A pick-up game fell through, the Kobe team having to reserve themselves for to-morrow's struggle, when they meet Yokohama in the annual interport encounter.

To fill up time, a tennis match was arranged between Shanghai and Kobe, and Shanghai avenged its defeat at cricket by winning at tennis by two sets to one. Kobe was represented by Wilkinson and Lucas; Shanghai by Platt and McGregor. Then an adjournment was made to the Ladies' Pavilion where Mrs. Platt, wife of the genial hon. secretary of the S.C.C., handed over the pretty red and white silk Shanghai flag to Kobe's Captain, Mr. C.M. Duff, accompanied by a charming little speech.

ABANDONMENT OF THE YOKOHAMA-SHANGHAI MATCH.

To the great disappointment of everyone concerned, the match between Shanghai and Yokohama has to be declared drawn, the heavy rains of Tuesday making the continuation of the game impossible. The storm came on during the night, and continued with varying force until late in the afternoon. As Wednesday and Thursday are arranged for Kobe-Shanghai, and Friday and Saturday to the annual Kobe-Yokohama encounter, the match with Yokohama stands drawn at 254 for the visitors, and 20 runs, no wickets, for Yokohama. This is not the first occasion on which Jupiter Pluvius has taken a hand in an interport match in which Shanghai has been practically interested. Some years ago a Hong-kong Eleven visited Shanghai and the rain poured down in torrents for days after their arrival. "Tung Chia" has immortalised the incident in one of his Lays of Far Cathay. He describes how

'Twas in the palmy days of ancient Greece
To'ards sea-bound Corinth, on whose classic plain
That year were being held the sacred games,
From out Minerva's city came a train
Of heroes comely as the sons of Zeus,
Hearts buoyant with expectancy of fame;
With purpose firm, all eager for the fray,
Eleven dauntless souls to Corinth came.

Then the lyric proceeds to describe the reception Shanghai accorded the visitors on their landing, how

Unto the market place the elders came
With joyful steps and decked in glad array;

[And] brought them with great rejoicings on the way
To lodge them with the Chief Men of the State.

A lively pen-picture of the Hongkong team follows, and a hint at the forthcoming festival.

But in Olympus, when the Immortals saw
The pride and glory of these sons of Greece
Was wrath; (it was the twilight of the Gods)
And great Jove swore, ay, by the Golden Fleece,
That not in vain had he been "Pluvius" called,
Swore it, and next rude Boreas he bade
Gather the winds and loose the floods of heaven:

And from the classic plain no sound was heard
Of contest, save the croaking bull-frog's din.

How long the rain lasted we do not know, but Shanghai did its best—as Yokohama at the present time is doing—to keep up the spirits of their visitors, for the bard tells us:—

There was banquetting within the halls,
And many amphoræ of goodly wine:
And eke the dances, dice, and games of chance—
In one and all did the Athenians shine.

But Jupiter grew tired long before the Shanghai cricketers—whose patience we now know by only one day's experience to be more than that of average men—and anon the rain ceased and the sun came out. The rush to the cricket ground is well told, and the classical fragment concludes:

But all the record of those glorious days
Before th' Athenians turned them to their homes,
Is it not graven in the hearts of men,
And told o' nights when dreary winter comes!

During Tuesday afternoon Mr. and Mrs. J. P. Morrison held a reception in honour of the visiting teams and the local Club. The rain has now completely cleared off and the Kobe-Shanghai match opens with fine weather, but a damp wicket.

AMATEUR THEATRICALS AT THE PUBLIC HALL.

The rain had cleared away long before the time for starting for the Public Hall, and theatre-goers had the pleasure of proceeding thither under a star bespangled sky, in which the Milky Way was particularly brilliant. By a re-arrangement of the sittings over a hundred extra seats were provided, and an audience of nearly five hundred consequently settled itself in comfort. The Public Hall, we may mention in passing, has been tastefully decorated and now presents a bright and pleasing appearance with its floral scrolls and Grecian panels. Another exit has also been provided under the staircase leading to the smoking-room, and this apartment has also been improved. Altogether the changes are distinct improvements and meet a really long-felt want. Pots of lovely flowers—principally chrysanthemums—and foliage plants were grouped around the stage and orchestra, and over the proscenium hung the flags of the S.C.C., the K.C.C., and the Yokohama Cricket and Athletic Club, marks of distinction absent from an ordinary theatrical performance. The programmes too bore a neat design of the "three associated flags," appropriately emblazoned in their proper colours.

The performance commenced with a Septette of Beethoven's by Mrs. Bayne, Mrs. Strähler, Miss Outh, and Miss Meier—during the intervals the same ladies kindly contributed the Overture from "Tannhäuser," Reissiger's "Die Felsenmühle," and Brahms' "Ungarische Tänze." The Com-

edietta "Cut off with a Shilling" was the curtain-raiser, and the parts were taken as follows:—

Gaythorne Mr. H. J. Sharp.
Colonel Berners Mr. W. G. Bayne.
Kitty Gaythorne Miss Wheeler.

The story opens with *Kitty Gaythorne* and her young husband at a seaside breakfast. *Gaythorne* has married his wife straight from boarding school—eloped with her in fact—and the pair are speculating upon the probable nature of the answer that the young man's uncle—*Colonel Berners*, of the Volunteers—may make to the letter announcing their marriage. Considering that *Colonel Berners* had intended *Gaythorne* to marry into a family of high degree, and that he has threatened to cut his nephew off with a shilling if he refuses, it is hardly surprising that the expected missive, when it does arrive, contains the promised shilling and the literary fulfilment of the threat. A tiff between the newly wedded pair results, and *Gaythorne* "makes himself scarce" for a while. Then fate opportunely sends *Colonel Berners* into the apartment occupied by *Kitty*—he had effected a masterly retreat from a bull—and the little comedy is worked out prettily between the pair: *Kitty's* beauty, winsome ways, and whole-hearted love for her scape-grace husband bringing about the desired consummation—the restoration of *Gaythorne* to his uncle's favour, and to the reversionary rights in the avuncular relative's property. Miss Wheeler carried her part out splendidly. She improves vastly in characterization, manner, and delivery every time she appears upon the boards. But fortunately with the fuller knowledge of her craft she loses none of the dainty simplicity and genuine naturalness which charmed everyone on her first appearance. The brightness of the *ingénue* remains with all the finish of completer art. Mr. Sharp had naturally little to do, but he did that little well. Mr. Bayne was very much at home in the part of the irascible old bachelor uncle, and his interpretation of the character received the hearty approval of the audience. On the players being recalled a handsome basket of flowers was handed over the footlights to Miss Wheeler.

It was close on half-past ten o'clock when the scene rose on "Tom Cobb," Gilbert's well-known farcical, comedy in which he so cleverly satirises the æsthetic craze. The craze has spent itself long years ago, but the shade of the ineffable *Bunthorne* rises fresh and delightfully vivid before the mind's eye, when the lily-cluster and the sun-flowers burst upon the view again. It is not *Bunthorne*, however, who figures in this comedy, but his stage-relatives, the *Effinghams*: they are almost as diverting as the archetype himself. But to the play. The characters were cast as follows:—

Colonel O'Fipp An Irish Adventurer ... Mr. A. C. Read.
Tom Cobb (Young Surgeons) ... Mr. H. J. Sharp.
Whipple (Mr. W. R. H. Carew.
Matilda O'Fipp { The Colonel's Daughter ... Mrs. A. C. Read.
Mr. Effingham { Members of a ... Mr. H. V. Henson.
Mrs. Effingham { Romantic ... Mrs. Carew.
Bulstrode Effingham { Family ... Mr. F. Coghill Jackson.
Caroline Effingham { Miss Wheeler.

It is some years since "Tom Cobb" has been presented, so a brief sketch may be given of its plot. An Irish adventurer, to wit *Colonel O'Fipp*, has a beautiful and accomplished daughter *Matilda*, who is repeatedly asked in marriage by susceptible young men. When the confiding swain has obtained consent from both father and daughter, the former borrows money from the young man, for which he gives bills. After many years of this kind of thing, one man turns up whom *Matilda* really likes, *Tom Cobb*, a surgeon without a practice. Of course he falls in love with her and equally naturally, as she "goes with the bills," *Matilda* and he are engaged, and the father obtains the loan of all *Tom's* money. Then a friend of *Tom's*, a surgeon with a rattling good practice presents himself, and *Matilda* is engaged by her charming papa, without her consent, to this young man—who is named *Whipple* by the way—and of course the inevitable loan is contracted and "bills" are given by the doting parent to the son-in-law-elect. *Tom*, penniless and love-lorn, is in despair and proposes suicide, but the death of an old man in a deserted house bearing the same name suggests to *Whipple* the possibility of *Tom* dying by proxy. *Tom* accepts, but before putting the idea into practice makes a will leaving all his property to *Matilda* and appointing her father executor. Then he vanishes, with £25 from *Whipple*, for three months. Meanwhile, *Whipple* discovers that the deserted old man has died worth a good deal of money, which he had hidden under the hearth stone of his cottage. By virtue of the living *Tom Cobb's* will, *Colonel O'Fipp* collars this money and sets up house-keeping in grand style. Upon *Tom Cobb* coming out of banishment after the three months, all his old friends refuse to recognise him, and the *Colonel* induces him to assume the name of a General

officer serving in India, upon guaranteeing him a pension of a pound week. As luck would have it, *Caroline Effingham* has fallen in love with this military man in a most æsthetic fashion. She has never seen him, except in spirit, yet letters of fondest endearment have passed between them; these suddenly stop, and the romantic girl sends them to her solicitors and claims £5,000 for breach of promise. It will therefore be realised how *Tom* complicates matters by taking on the General Officer's patronymic, especially as the *O'Fipp's* are great friends of the *Effinghams*. The fun consequently grows fast and furious when all parties get together under one roof; but Gilbert in his inimitable manner manages to straighten out the topsy-turvy business—with many a quip and lively crank, and many a diverting situation—and eventually *Tom Cobb* comes by his own name and fortune again, and wins the fair but transcendent *Caroline*, the *O'Tipp's*, father and daughter, being very much "left."

Mr. and Mrs. Read bore away the honours of the piece with their splendidly sustained brogue, and ready conception of the nimble Irish wit. The house was in sympathy with them from the start—as indeed it was with all the other characters in the piece—and the comedy therefore went with a spirited action that makes it the biggest theatrical "hit" ever achieved by our amateurs. Its success was beyond all expectation. Mr. Sharp played in his usual quiet, restrained style, never over-emphasising a situation, nor allowing a point to slip. In the last scene in particular, when surrounded by the romantic *Effinghams*—sunflower and lily bedecked and wearing clothes of æsthetic cut and colouring—he was seen to great advantage. Mr. Carew made a capital *Whipple* in a negative sort of way; Mr. Henson was excellent as *Effingham père*—a part he realised thoroughly—and Mr. F. Coghill Jackson as the more than ineffable son, was very good. As *Mrs. Effingham*, Mrs. Carew was noticeably successful, and Miss Wheeler gained fresh laurels by her interpretation of *Caroline*. The curtain was rung down at a few minutes past twelve o'clock amid hearty applause, and the ladies were afterwards presented with some lovely bouquets and baskets of flowers.

THE CRICKET DINNER.

The Cricket Dinner was held at the Club Hotel in the evening, nearly seventy people sitting down. Mr. J. P. Morrison, President of the Yokohama Cricket and Athletic Club, presided. He was supported right and left by the visiting captains, Messrs. Fairbridge and Duff; while the vice-chairs were filled by Mr. A. B. Walford, and Mr. E. O. Kenyon, Captain and Honorary Secretary respectively of the local club.

After full justice had been done to the capital bill-of-fare provided, the CHAIRMAN proposed the "Rules of our respective countries," which happened, curiously enough, to be Queen Victoria, the Queen of the Netherlands, and the Emperor of Japan. He next proposed "Our Visitors," and after alluding to the pleasure which it gave Yokohama to welcome both the Kobe and Shanghai teams on the local ground, referred to the first interport match of the Far East. This was played in 1866, when Shanghai sent a team to Hongkong and was badly beaten. He took part in the Shanghai match of 1867, and therefore when a Shanghai team visited Yokohama he felt that he was among "old comrades" again. Then as now, the houses of Jardine, Matheson, and Gibb, Livingston, did all they could to further sport, for they placed their steamers, the *Glenglye* and the *Dumbartonshire* at the disposal of the visiting eleven. One of the men he remembered playing with in the sixties was Mr. Hearne, the present President of the Shanghai Cricket Club, and he was rejoiced to find that he still took a keen interest in the game.—(Hear, hear.) With regard to Kobe, he knew he was echoing the sentiments of all Yokohama cricketers when he said they were always glad to meet them on the cricket field in a friendly encounter. The annual interport cricket match was an incentive to good cricket.

Mr. FARBRIDGE returned thanks for the unbounded hospitality extended towards his team by Yokohama. The members of the Y.A. and A.C. were imbued with the spirit of true sport, and he hoped that the mingling of the three cricket flags of Shanghai, Kobe, and Yokohama would lead to lasting friendship which would cement into a strong union, and conduce to the benefit of a game which was the joy and happiness of them all.—(Applause.)

Mr. DUFF responded for Kobe in a hearty speech, and concluded: Happy have we met, happy have we been, and happy may we meet again.—(Loud applause.)

The health of the Yokohama Cricket and Athletic

Club was proposed by Mr. HELLYER and Mr. FARBRIDGE. The former in his speech referred to the first cricket match in which he had played in Japan. It was exactly 25 years ago, and one of the men whom he remembered most distinctly as meeting then was their present host, Mr. Mollison.—(Hear, hear.) Having paid a tribute to the Chairman's good, sportsmanlike qualities, Mr. Hellyer went on to refer to the manner in which Yokohama had received its cricketing guests. To borrow a vulgar phrase for the moment, "Yokohama had done themselves proud." The refinement of their hospitality was beyond all praise. He could remember the hospitality that Kobe used to dispense in the days of long ago, and he for one was not sorry that that those "good old days" had gone by, for in order to survive them one required a cast-iron constitution, and if such hospitality was the order of things now-a-days he was afraid that he would never be able to return home to his wife.—(Loud laughter and applause.)—Therefore, for the hospitality shown by Yokohama, for the consideration extended, and the courtesy everywhere experienced be returned deep-felt thanks. Since the teams had been here not one had spent a dull moment.—(Hear, hear.)

Mr. FARBRIDGE in his reply alluded to a photograph taken of the teams that had engaged in the match which the Chairman had mentioned, that adorned the walls of the Cricket Pavilion at Shanghai and in which Mr. Mollison appeared. He hoped to see a team from Yokohama in Shanghai at no distant date, and he promised them a hearty reception. The team which he (the speaker) had the honour to captain had been called "an eleven of old men and boys;" all he could say was that if the old men did not feel as young as boys again, they never would: the team really felt 10 years younger all round after the reception accorded them in Yokohama.—(Applause.)

Mr. WALFORD responded, and referred in appreciative terms to the good feelings engendered and friendships made by the triangular encounters of the week. He hoped to meet Kobe on its own ground next year. Shanghai was a far cry from Yokohama, still, if a team could be got together—and the difficulties seemed well nigh insuperable—he felt no doubt that it would go across to play.

Mr. KENYON next proposed "Umpires, Scorers, and all who have kindly assisted." He alluded in happy terms to the services rendered by the Umpires, Scorers, and those who had received the visitors and put them up during the week.

Mr. DODDS responded.

Then the event of the evening took place. The CHAIRMAN said they all knew what valuable services Mr. W. D. S. Edwards had contributed to the Yokohama Cricket and Athletic Club, both at batting and bowling. Well, he was about to take unto himself a wife—(loud applause)—and the members of the Club had felt that they should like to mark their sense of his services by making him a small gift.—(Renewed cheering.) He therefore begged Mr. Edwards' acceptance of the enclosed cheque.—(Applause.)

Mr. EDWARDS thanked the donors briefly. He well remembered the first game he had played in Yokohama. It was on the 13th of October, a Saturday, ten years ago, and was against the Fleet and Tokyo. Among the men who took part were Dr. Wheeler, Mr. Mollison, Mr. Duff, and, he thought, Mr. Dodds. He had the photograph of the teams in his room still. He had hoped to meet St. Croix, of Shanghai, at dinner that evening, for they had been at the same school in the old country and had learnt cricket together. He was very pleased to see a Shanghai team visiting Yokohama, and trusted that it was but the first of many similar encounters.—(Hear, hear.) He was sorry he was playing against Yokohama the next day—after receiving such a gift from them—but he was pleased to be playing for Kobe—(hear, hear)—as he did not like to be left out of an inter-port match, and he hoped he might be able to get into three figures on the morrow.—(Laughter and applause.) He had only missed one inter-port match since coming to Japan, and that was in the autumn of the year when he was at home. He hoped the match on the following day would be favoured with fine weather, that the game would be well fought out, and that the best team would win.—(Applause.)

Mr. ADAMS proposed "The Ladies," for which toast Mr. White responded. "The Press" was proposed by Mr. Walford, and Mr. Tennant responded. Mr. Flint Kilby proposed the health of the popular and energetic honorary Secretary of the Y.C. and A.C., Mr. E. O. Kenyon, and the same was drunk with musical honours; Mr. Kenyon suitably responded. During the evening the following songs were sung; "When the King enjoys his own again," Mr. Walford; "The Harbour Bar," Mr. Sale Hill; "In the

North Sea lived a Whale," Mr. Baiton; "Life's short: or the verdict was," Mr. Wickham; "Of Mullingar Town," Mr. Platt; "Where are you going to, my pretty maid," Mr. White; "The Jagler," Mr. Sale Hill; "Nancy Lee," Mr. Wickham; "Old Madrid," Mr. Johnson; and many others.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 16.

The Sultan accepts the reforms [for Armenia] in principle, but declines to promulgate them forthwith, because that course would make it appear that he was yielding to pressure. The outlook generally is regarded as much more hopeful at Constantinople.

(FROM THE "CHINA MAIL.")

Foochow, Saturday, Oct. 5, 4.40 p.m.

The British and United States Consuls have wired to Admiral Buller and Admiral Carpenter for warships to Foochow to demonstrate the intention of the Powers to insist on a more satisfactory conduct of the Enquiry at Kucheng, and for adequate reparation for the Whasung massacres. Two British warships have just arrived.

Mr. E. L. B. Allen, the British Vice-Consul, and Lieut. Evans, of the U.S. Navy, left Kucheng for Foochow to-day. They are probably bringing despatches for their respective Governments.

(FROM THE "SHANGHAI MERCURY.")

Foochow, Oct. 5 (4 p.m.)

The Prefect left Kucheng to-day en route for Foochow. He is reported to be tired of the whole business of the Commission.

Vice-Consul Allen, a member of the Commission, left Kucheng this morning and he will proceed to Peking to represent matters to the British Minister.

Lieut. Evans, of the U.S. Navy, and Dr. Hart, left Kucheng this morning for Foochow.

The work of the Commission appears to be over. The members are tired out with being at continual loggerheads with the Chinese officials.

Hongkong, Oct. 5 (5.53 p.m.)

The *Bangkok Observer* is reliably informed that M. Gerard, the French Minister at Peking, is negotiating for the Chinese in Siam to be placed under French protection.

(FROM THE "CHINA GAZETTE.")

Foochow Oct. 10.

Despite all the remonstrances from the Consuls, the deadlock in the proceedings of the Kucheng Enquiry continues, the Viceroy remaining obdurate and insisting that his orders be carried out. There are now four foreign warships, British and American, here and more are expected. The British Admiral's arrival is hourly looked for, and it is reported that the next naval demonstration will be in these waters.

[Admiral Buller left Shanghai in the *Alacrity* this afternoon for Foochow.]

Pekin, Oct. 12.

It is reported here in well-informed circles that the acting Viceroy of the Liang-kiang provinces, Chang Chih-tung, has been ordered to return to his former post as Viceroy of Liang Hu (Wuchang). And it is believed that the reason for this important step is that Chang has failed to raise the necessary funds to carry on the business of the most expensive viceroyalty in China, and because no other efficient man can be found to take over the Hu provinces on account of the many costly and ruinous enterprises that Chang has started there but never put upon a paying footing. It is believed that Li Hung-chang is not unlikely to get the viceroyalty of the two provinces (despite his being a native of Anhui) in the event of Chang vacating them, as Li's knowledge of foreign affairs would stand him in good stead in Nanking, the importance of which is daily growing in relation to foreign intercourse.

(FROM THE "N.C. DAILY NEWS.")

London, October 9.

King Menelek of Abyssinia is marching

against the Italians, and the Italian Government is sending re-inforcements.

The Sultan has sent Marshal Fuad to inspect the forts at the Dardanelles, and torpedoes have been sent to the Dardanelles Straits.

Ninety-five corpses of Armenians have been collected for interment, and it is believed that numbers of bodies have been thrown into the sea. The churches are still crammed with Armenians who refuse to leave these places of safety.

Guard-ships belonging to the Powers are moored off Galata for the protection of foreigners.

London, October 10.

An armed body of Turks, including soldiers, has made an attack upon the Armenians at Trebizond, in the course of which many were killed.

(FROM JAPANESE PAPERS.)

Söul, October 11.

Seventeen U.S. Marines have arrived here.

Kobe, October 12.

The Austrian ship *Aurora* arrived from Nagasaki this morning.

Okayama, Oct. 12.

A violent shock of earthquake was felt here at 2.20 p.m. to-day.

Tientsin, October 12.

It is stated that the Japanese Government will obtain 30 million taels from the Chinese Government for the return of the Liaotung peninsula.

Shimonoseki, October 13.

The spot where the *Chow Chow Foo* stranded is two miles from Mitsureshima, and her hull has not yet disappeared; the vessel lies at an acute angle. Most damage was done to her bottom, but no particulars are yet to hand. The passengers were brought to this port the day after the stranding. The Nippon Yusen Kaisha's steam launches and cargo boats are employed in lightering the cargo, which consisted of grain to the amount of over 12,000 bags.

Shanghai, October 13.

The Russian, French, and German war-ships have been instructed by their respective Governments to assemble at Chefoo, and the ships are now proceeding to that port.

Nagasaki, Oct. 13.

The *Izumi Kan* came out of dock on the 11th inst.

Söul, Oct. 13.

Gyo In-chu was yesterday appointed Minister of Finance, and Boku Tei-yo, Minister of Home Affairs removed to be President of the Privy Council, Yu Kitsu-ye, Vice-Minister of Home Affairs was being ordered to act as Home Minister. Chin So-Kun, Minister of Finance Li Zai-sei, Vice-Minister of Justice, were dismissed, Kei-ju and Li In-yo being appointed members of the Privy Council.

Mito, Oct. 13.

A destructive fire broke out at Suwa, Otsucho, Taga District, at one o'clock this morning, and 500 dwellings, the Post Office, and a police station were destroyed.

Shimonoseki, Oct. 14.

Half of the cargo of the *Chow Chow Foo* has been removed. She is very badly damaged on the bottom, and has taken in a lot of water. It is said that there is no hope of floating her again.

Söul, Oct. 14.

Prince Wi-hwa has been commanded to visit England, France, Germany, Russia, Austria, and Italy as Ambassador from Korea.

Shanghai, October 14.

Lanchow, in Kansu Province, has been occupied by the Mahomedans, and the Governor-General has committed suicide.

Pekin, October 16.

Li Hung-chang has been appointed a Plenipotentiary to the negotiate return of the Liaotung peninsula. The first meeting of the commissioners of the two countries is fixed for the 17th inst. It is likely that the negotiations will be concluded at two or three meetings. It is said that the Chinese Government will pay 20 or 30 million taels as an indemnity for the return of the peninsula. Li Hung-chang has been visit-

ing the Russian, French, and German Legations the last two or three days.

Söul, Oct. 18.

Viscount Miura, Japanese Minister; Mr. Sngimura, Secretary; Mr. Kokubu, Interpreter; Mr. Horiguchi, an attaché, and Mr. Hagiwara, Police Inspector, have suddenly been recalled, and Mr. Hioki, Secretary, only remain at the Legation.

Mr. Komura, Chief of the Political Business Bureau in the Foreign Department, who has been dispatched here on business connected with the recent disturbance, has been appointed Japanese Minister Resident in Korea.

Mr. Okamoto, ex-Japanese adviser to the War Department, and a few other Japanese residents have been ordered to leave Korea on suspicion of being associated with the plot of the *Kun-renalai* soldiers.

Söul, October 17.

Mr. Komura, Chief of the Political Business Bureau, and Viscount Miura, Japanese Minister, proceeded to the Royal Palace to-day, and interviewed the King. Thirty gendarmes arrived here from Japan to-day. Things are now very quiet.

Shanghai, October 17.

To-day's Pekin telegram states that the first meeting of Mr. Hayashi, the Japanese Commissioner, and Li Hung-chang, the Chinese Commissioner, took place to-day, to discuss the Liaotung question, and the Japanese commissioner explained the terms for its return.

According to rumour the demands made by Japan, after consultation with Russia, France, Germany, are as follow:—

1. That the Chinese Government shall pay an indemnity to the amount of 30 million taels.
2. That neither Russia, France, nor Germany shall permanently occupy the Liaotung peninsula, and that the Chinese Government also shall not cede the peninsula to any other nation.
3. That Talienwan shall be thrown open as a free trade port.
4. That Tatung and Takushan shall be opened to foreign trade.

Pekin, October 17.

The first meeting of the commissioners of both countries, which was to take place to-day, has been postponed until the 20th inst, owing to some unexplained circumstance.

Söul, Oct. 18.

Viscount Miura visited the Cabinet Office to-day.

It is said that a number of persons, who were punished for having attempted to depose the King some time ago, will be restored to public life, and others who were deprived of rank in connection with the affair will be promoted again.

CHESS.

(All Communications to be addressed to the CHIEF EDITOR.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

E.D.—Your first communication is withdrawn as you request.

PROBLEM No. 200. By ANTONIN KVICALA.

WHITE.

White to play and mate in three moves.

We commend our 200th Problem to the attention of our solvers. It is a beautiful position and a fine example of the modern Hungarian school.

The local Chess Clubs are hard at work, practising well, so as to be ready for any matches that may arise. The Tokyo players have already begun their Club Tournament, and at Yokohama the Championship Cup contest begins 1st November. All entries to be lodged with the Secretary before 31st October. One round per month to be played, the best out of three games to decide a heat. These arrangements should cause the Championship for 1896 to be settled not later than 28th February.

Appended is another collection of games from the Hastings Chess Congress:

Per French steamer *Ernest Simons*, for Shanghai via ports:—Raw Silk for Europe, 367 bales; Waste Silk for Europe, 93 bales. Treasure for Shanghai, \$4,000.

LATEST COMMERCIAL.

IMPORTS.

Less doing, the recent rise in Exchange checking buyers. Now that Silver is lower again, there will probably soon be more trade, for the position of affairs is good and the money received for Silk during the last few months will apparently soon flow out again for the purpose of buying textile fabrics. Although markets generally are quiet, prices are strong and the outlook good.

COTTON PIECE GOODS

	PER PIECE.
Grey Shirtings—84 lb. 38 1/2 yds. 39 inches	\$2 30 to 2 90

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribunes in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin disease, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

May 1st, 1895.

THE PROCEEDINGS

OF THE
IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EDITORISED DEBATES, Translations of the Bills discussed, Reports, Speeches of the Ministers of State in full, Questions put and the answers of the Government, and the Legislative Work of the Session.

PRICE \$1.

To be obtained at the Office of the Japan Mail—No. 51, Main Street.

THAMES ELECTRIC & STEAM LAUNCH CO.

ELECTRIC LAUNCH "GLOW-WORM," 63ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, OCT. 26TH, 1895.

BIRTH.

At No. 255, Bluff, Yokohama, at 11 a.m. on the 25th October, the wife of SAMUEL DEBRABANT, of a Daughter.

MARRIAGE.

On the 24th of October, at the Union Church, Kobe, by the Rev. Sidney Swann, assisted by the Rev. C. G. Gardner, MARY HARDING, second daughter of Thomas Fenn, of Downton, Ludlow, England, to WILLIAM D. STUART EDWARDS, second son of the late Edward Edwards, of Boreton, Salop, England.

SUMMARY OF NEWS.

MR. TOTSUKA SENTARO has been elected President of the Yokohama Commercial Bank.

WOR. BRO. CHARLES DAVIS MOSS has been reinstalled W.M. of the Otentosama Lodge, Yokohama.

MR. KO EI-KI, ex-Korean Minister to Japan, left Tokyo on the 19th inst. for home. Pending the arrival of his successor, the business of

the Legation will be discharged by Mr. Li Tai-shoku, a Councillor, as *Chargé d'Affaires*.

THE presence of H.I.M. the Emperor is hoped for on the second day of the Autumn Race Meeting.

THE Kobu Railway Co. proposes to declare a dividend of 11 per cent. per annum for the past half-year.

Two thousand five hundred artisans will shortly be engaged in Tokyo for Formosa to construct barracks there.

A LONG shock of earthquake was felt in Yokohama on Wednesday evening and a smart shock the following morning.

MR. SAITO KAN, the newly appointed Japanese Consul at Tacoma, left the capital for his mission on the 22nd instant.

COUNT ITAGAKI, the Radical Leader, who has been visiting Ominato, in Awomori Prefecture, returned to Tokyo on the 18th inst.

H.I.H. THE PRINCE IMPERIAL is now in pretty good health. He has increased in weight, and may again personally receive visitors.

COUNT INOUE has been ordered to Korea to condole with the King, on behalf of the Emperor of Japan, upon the recent *émeute*.

A *banto* employed by Messrs. Grösser & Co., Yokohama, has been arrested by the police for embezzling over \$2,000 from his employers.

A MARINE Court of Inquiry sitting at Yokohama has severely reprimanded Captain Walker for the stranding of the O. & O. steamer *Belgic*.

THE annual interport cricket match between Yokohama and Kobe was played last week and resulted in a draw, but greatly in favour of Kobe.

A POLICE GUARD has been placed near the Greek Church at Surugadai, Kanda, Tokyo, for the past few days, for what reason is not known.

It is stated that the quantity of sugar procured in Formosa this year will be only from 50 to 70 per cent. of the average yearly out-turn in consequence of the war.

THE eleven hundredth anniversary of the founding of Kyoto as a capital city was celebrated this week. H.I.M. the Emperor was represented by H.I.H. Prince Yamashina.

THE *Wm. H. Macy*, which was recently in collision with the British steamer *Isis*, in the Uraga Channel, has been towed up to Yokohama by the *Musashi Kan*.

DURING the absence of the Austro-Hungarian Consul from Yokohama, the business of the Austro-Hungarian Consulate will be transacted by the British Consul.

THE *Fomiuri Shimbun*, of Tokyo; *Sakigake Shimpō*, of Akita Prefecture; and *Tottori Shimpō*, of Tottori Prefecture, have been suspended for the usual offence.

A DESTITUTE tramp found travelling in the interior of Japan without a passport, has been sentenced to 20 days' imprisonment by the U.S. Consul-General at Kanagawa.

H.I.H. Prince Kwacho, who has been pursuing his studies in a military school at Kiel, Germany, since 1889, will return home by the *Empress of India*, which is expected to arrive at Yokohama on the 28th inst.

NINE Australian horses have been drawn for by members of the Nippon Race Club during the week. An Off-day will be arranged for these

animals, they having arrived too late to be trained for in the legitimate programme of the Autumn meeting.

THE weather has been showery all the week, with a decided drop in the temperature.

THE redoubtable Black Flag leader has fled from Formosa in a junk, and the Japanese forces are now in full possession of the island.

THEIR IMPERIAL MAJESTIES THE EMPEROR AND EMPRESS have granted *pen* 500 toward the relief of the sufferers by the recent conflagration at Otsu, Taga District, Ibaraki Prefecture.

REUTER telegraphs:—Prince Lobanoff, at an interview with the German Emperor, said that Russia cannot tolerate the Japanese establishing themselves in Korea, where their presence would be a continual menace to both Russia and China. The French have occupied Antananarivo after a brilliant action, and peace has been concluded. France is creating a stringent Protectorate and is garrisoning the capital with French troops. The Queen of Madagascar is to be maintained by France, but the Premier is to be deported. The American Government has notified to Spain the necessity of promptly crushing the rebellion in Cuba. Seven hundred persons have been killed and wounded in Constantinople since the first outbreak of rioting. There have been disorders at different points in the neighbourhood of Ismid, a seaport of Asia Minor, but the number of persons killed is unknown. The Porte is fortifying Besika Bay. Cholera is raging in Volhynia, a province in the south-west of Russia. There have been four thousand cases within a fortnight, and seventeen hundred deaths. The Russian Press is bitterly hostile to England on the Armenian Question. A British ultimatum to the King of Coomassie demands a British Protectorate with the appointment of a Resident. If this is rejected, it is expected that an expedition will be despatched.

THE Import trade is somewhat quieter, and there is less doing in Yarns, while prices, if nominally unchanged, are easier. Shirtings are neglected, but Fancy Cottons meet some enquiry, especially Turkey Reds. There is not much actually passing in Woollens, but prices are fully maintained in the business done. The Metal market is strong, due to an advance in values at home, but actual transactions here are not on an extensive scale. Deliveries of Kerosene continue good, and the market is in a healthy condition though values are a shade easier. Sugar has been in fair demand, and prices for Browns show a turn in favour of sellers. There is no Formosa Sugar now on offer, the market having been cleared at \$4.50. Of White sorts a moderate quantity has been moved at full rates, and the market remains firm. The principal Export has attracted more attention through lower quotations, but notwithstanding several transactions in Silk, the stock is accumulating fast, and it is plain that if sales are to keep pace with arrivals lower prices will have to be accepted. Not much has been done in Waste Silk, but there is a feeling among holders that they would like to be moving some of the rapidly increasing stock now on offer, but prices remain unchanged, and so long as they do there will not be much business. The Tea market is quiet, though some parcels of Common to Good Medium have been taken at about late rates. Common sorts are now scarce, and the present stock of all grades is only about 5,000 piculs, but settlements total 8,000 more this season than last at same date. Exchange has fluctuated, though rates are on the whole higher than those of a week ago. The latest movement, however, is a slight decline.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Korean *émeute* and the questions that have grown out of it continue to engross the attention of the metropolitan journalists. Organs of all parties are unanimous in denouncing the sanguinary and treasonable *coup d'état*, and demanding the exemplary punishment of all Japanese criminally concerned in the affair. One newspaper, however, endeavours persistently to consider the *coup d'état* itself independently of the murder of the Queen and other sanguinary issues. It is the *Nippon*. So far as these acts of brutality are concerned, our contemporary condemns them in the strongest language. But it contends that to extend condemnation to the general political change of which these were but accidental incidents, would be an error. The object of the *coup d'état* was not to murder the Queen, but to place on a sounder basis the work of reformation which had been thwarted and endangered by the selfish and arbitrary conduct of the Min faction. Such having been the primary purpose of the Tai Wōn-kun and his followers, the Japanese Minister did not act in opposition to the general policy of his Government when, in compliance with the ex-Regent's request, he consented to furnish to the latter an escort of Japanese troops for the purpose of entering the Palace. In justification of the high-handed proceeding planned and carried out by the Tai Wōn-kun, our contemporary alludes to the dangerous position in which the task of reform and its advocates were placed by the restoration of power to the Queen and her faction. The Min politicians being positively averse to reform, it was evidently Viscount Miura's duty to render countenance and support to their opponents. Our contemporary in this manner endeavours to defend the procedure of the ex-Japanese Minister, the only part of his conduct that it recognises as reprehensible being his failure to adopt precautions against the accidental bloodshed by which an otherwise perfectly laudable political change was disfigured. Such in brief, is the gist of the *Nippon's* argument. Its zeal on behalf of its special friend and patrons seems to have perverted its judgment. Its writings are valued at their true worth, and little notice is taken of them by the other metropolitan papers, which, as already stated, unanimously condemn the whole incident in the most unsparing terms, and applaud the frank and manly course pursued by the Government.

There is a tendency in certain quarters to hold that the absence of a fixed policy on the part of the Government is primarily responsible for the occurrence now engaging so much attention. This phase of the question is dealt with by the *Nichi Nichi* in an article worthy of reference. For some years past it has been the fashion among certain journalists in Japan to advocate the adoption of a fixed permanent foreign policy, and to blame the Government for tardiness in following their counsel. The *Nichi Nichi* has more than once pointed out the absurdity of these publicists' contention. To declare that a country should pursue a fixed and permanent foreign policy, is to show entire ignorance of diplomatic affairs. It is true that each country, owing to its historical traditions and geographical position sees outlined before it, more or less distinctly, a path that its interests as well as its circumstances would ordinarily impel it to follow. There is no more occasion for the persons charged with the direction of the administration to point out that path to the people than there is necessity for them to pursue it in defiance of the policy indicated by the needs of the moment. England, for example, aims generally at maintaining her commercial ascendancy and maritime supremacy, and endeavours to avoid all entanglements or complications with other Powers. Russia's dogged persistence in a southward march in search of an ice-free port; Germany's anxiety to preserve peace in Europe so that she may devote herself to the work of colonization and commercial extension; France's ambition to keep her army equal to that of Germany and to in-

crease her Navy to the point of equality with that of England—if these may be cited as instances of a national policy, Japan, too, is not without such a policy. To maintain equality on land with a certain neighbour on her north and on sea with a certain neighbour on her south, has ever been the basis of her policy in matters of national defence. The encouragement of navigation, commerce, and colonization, and the creation of a Navy competent to satisfy the ever-increasing demand for protective duties; the preservation of tranquillity in order to attain these objects—such may be called the salient features of Japan's national policy, and such, indeed, is the policy indicated by the Emperor in the Rescripts of April 21st and May 13th of the present year. Thus a general national policy has long been established. For the rest, there is no occasion to decide upon a fixed foreign policy. It is impossible to do so; for a country's diplomacy must be constantly adjusted to ever-changing circumstances abroad and at home. Another circumstance, too, must be borne in mind. "The national aims above set forth require a long time to realize, and pending their realization, only one course offers for Japan, namely, to maintain peace as far as possible by avoiding all needless complications. That principle should govern her attitude not only toward China and Korea but also toward all the countries of the West. By that principle she was actuated when she concluded peace with China, when she renounced the possession of Liaotung, and when she agreed to a written understanding with some European Powers in respect of the possession of Formosa and the southern boundary of the Empire. Under those circumstances, she must maintain the *status quo* in Korea by continuing the policy of advocating and promoting reforms,—a policy that ought not to be abandoned so long as Korea does not compel the Japanese to interfere with her domestic affairs by conducting herself in an abandoned, lawless, and ungrateful manner toward her benefactor." The *Nichi Nichi* then proceeds to criticise some of the apologies that have been advanced in defence of Viscount Miura and others implicated in the *coup d'état*. They may have thought it desirable to have in power men understood to be well affected toward Japan; but they forgot how little there is to choose in the matter of fidelity and consistency between the various contending factions in Sōul, and they did not reflect that Japan's real interest is to keep herself aloof from all faction struggles. Some people allege that the Queen meditated a sweeping revolution in secret concert with the Russian Minister. If so, the matter was not to be settled in Sōul, but either in Tokyo or St. Petersburg.

The *Yiji Shimpō*, declaring that Japan's object in Korea has always been and will always be to preserve the peninsular Kingdom's independence and promote its civilization, points out in the most emphatic terms the injustice of confounding the actions of a few misguided Japanese in the peninsula with the aims and motives of their nation as a whole. Our contemporary compares the conduct of Viscount Miura and his coadjutors with that of the Russian officers, who, thirty years ago, unlawfully landed in Tsushima and made as though they were bent upon seizing the island in the name of their country. Their actions were disowned by the Government in St. Petersburg, and they were recalled. Such irregularities on the part of subordinate functionaries sometimes occur in the most civilized States, and there is no reason to expect that Japan alone should be free from errors of the kind. The purity of her motives toward Korea may be seen from the fact that she was not unwilling to share the task of propping up the peninsular kingdom in combination with a third party, namely, China. What she desires is that Korea's territorial integrity shall be secured against all danger of violation, to the end that the peace of the East may not be endangered.

As to political responsibility for the late in-

cident in Korea, the press is remarkably unanimous in arguing that the Cabinet, or at least the Premier and the Foreign Minister, should tender their resignations, not because they were in any way connected with the disgraceful *coup d'état*, but because they recommended to His Majesty the appointment of an official who has brought such a stain upon the country's fair fame. With regard to this question, metropolitan journalists are not without interested motives. Some of them go so far as to publish predictions not at all likely to be fulfilled. As to the rumour about Count Okuma's joining the Ministry, a somewhat guarded denial of it by the Progressionist papers has not at all tended to check the circulation of the story.

The *Yomiuri Shimbun's* article on the report of Count Okuma's return to power may be noticed briefly. Reading between its lines, one is led to think that our contemporary has no small apprehension of its leader's consenting to take a seat in the Cabinet. In its opinion, the present is not a fit time for him to assume office. The programme of combining in office all the leading statesmen of the elder generation, as advocated by the *Yiji* with so much zeal, is pronounced by the *Yomiuri* to be a mere dream. The experiment was once tried under the premiership of Count Kuroda, with results best known to Count Okuma. The latter may think that, if the terms proposed by him be accepted by those in power, there can be no reason why he should not assume office. But he is reminded of the fact that the so-called conditions exacted by him on a former occasion were of little use in practice. Before he had been long in office, he was forced to forget such matters. A compact necessarily entered into orally and in secret, is apt to lose force in the presence of personal considerations not taken full account of by the contracting parties at the outset. Whatever promises be given, no weight should be attached to them if circumstances are unfavourable to their fulfilment, and instances are unfavourable at present in the *Yomiuri's* opinion. Hence the Progressionist leader is advised not to put any confidence in fair words. Our contemporary concludes by hoping that the Count will not be over anxious to employ his ability in the service of his country despite adverse conditions.

The *Kokumin Shimbun* raises its voice against the tendency among teachers of the Middle Schools and primary schools to suppress and misdirect the religious yearnings of their young pupils. The morality taught in these institutions is based on the nationalized system of Confucian philosophy from which all the religious features of the cult, as it existed in China, have been carefully eliminated. Our contemporary does not say that the teaching of this system of morality is in itself bad: what it complains of is that teachers, mistaking their duties, very often take it upon themselves to prejudice their pupils against religious creeds of all kinds. When any of the pupils are known to have attended a Christian service or worshipped in a Buddhist temple, he or she is publicly rebuked in the presence of the class, and the rebuke is enforced by a discourse on the absurdity of religious beliefs. All teachers do not behave in this manner, but it is bad enough that some do so. The *Kokumin* plainly tells these officious educators that, since they are not required to teach religion, they should at least abstain from interfering with the religious progress of the young souls under their care. To pervert school rooms into places for the propagation of any particular religion is not commendable, but it is unquestionably important that school teachers should encourage the religious propensities of their pupils. Our contemporary of course takes it for granted that no human society can exist without religion of some sort. To attempt to build up a respectable edifice of society completely on a secular foundation, would be an impossible task, says the *Kokumin*. The present unsatisfactory condition of Buddhism and Christianity in Japan, is no doubt in a large measure due to faults on

the part of the priests and propagandists themselves. But the principal cause is to be found in national indifference to religion; indifference resulting, to a great extent, from the dry and anti-religious system of ethics taught in the schools.

EDITORIAL NOTES.

UNION INSURANCE SOCIETY OF CANTON, LIMITED.

THE following is the report for presentation to the shareholders at the twenty-second ordinary meeting to be held on the 30th inst.:—The directors have now to submit to the shareholders a report of the business of the Society for the year 1894, and for the six months ending the 30th June, 1895. 1894.—The net premium collected for the year, after deducting returns and reinsurances, amounts to \$1,585,288.06, after providing for a bonus of 25% on contributions paid in April last, there remains at credit of working account a balance of \$439,177.18. From this sum the directors recommend the payment of a second bonus of 6% on contributions, dividend of \$12 per share, equivalent to 48% on the paid up capital of \$25 per share, and an addition to the reserve fund of \$80,000 raising the reserve to \$1,050,000. The balance remaining of \$161,025.43 they propose to carry forward to meet liabilities and claims still outstanding, and thus close the account for the year 1894. With reference to the division of profits the new articles of association apply only from the 1st January, 1895, and although the old articles were cancelled by special resolution on the 16th May, 1894, the directors have thought it right to follow the provisions of the old articles and to allot the usual two thirds of the total profits as bonus to contributing shareholders. 1895.—The position of the Society for the present year, as far as it can be ascertained, is as follows:—Balance of working account to the 30th June, \$683,236.15, add estimate of premium to 30th September, \$410,000.00, total, \$1,093,236.15; less estimate of losses to pay, \$336,000; balance, \$747,036.15. The remuneration to directors remains as originally fixed in the articles of association, namely, \$7,000 per annum, and while not wishing to bring forward any motion on this subject, the board feels that the figure is more suited to the rates of exchange and the society's business of twenty years ago than to those of the present time, and has therefore shown the item separately in the accounts for the consideration of the shareholders. Since the last general meeting the directors have had to deplore the death on the 12th December last of Mr. H. Hoppius, who had for many years served on the board. The Hon. J. J. Keswick and Mr. C. J. Holliday resigned their seats on their departure from the colony. Mr. R. L. Richardson, of the firm of Messrs. Bradley & Co., was invited to join the board. In accordance with clause 86 of the articles of association, Messrs. D. R. Sassoon and G. B. Dodwell retire, but offer themselves for re-election.

A SHREWD SPECULATOR.

THE recent extraordinary rise in prices is said to have been shrewdly utilized by a keen speculator. Foreseeing that the appreciation would be felt much more quickly in the centres of trade than in the provincial towns, and that its effect would be necessarily sensible in the case of newly manufactured goods, whereas the prices of old stock in retail dealers' possession would remain for a time unchanged, this gentleman made a hasty tour of the provinces, and bought up great quantities of piece-goods at the prices with which their labels had been marked since last year. Carrying them to Tokyo and Osaka, he easily and quickly realized a profit of from twenty to thirty per cent.

JAPANESE SHIPS' NAMES.

THE Captain of the N. Y. K. steamer *Miike Maru* has written to the *Times of India* to put people straight as regards the name of his ship. All Japanese ships, he says, are called after some province, district, town, or city in Japan, and *Miike* is a province. The word *Maru* is applied

to all merchant ships; it means that the ship is engaged in mercantile pursuits. All men-of-war, or armed ships, have the word *Kan* applied to their names, which means fighting ship. He was induced to give this explanation by hearing a man in the dock inquiring for his ship as the *Mucky Mary*! If the nickname had not gained any wide circulation before Captain Brown's explanation, the letter is likely to secure it, and to do more towards making it "stick" than towards repressing it. It will be surprising if the worthy Captain does not hear a great deal more of the *Mucky Mary* in future than he ever did before!—*Madras Times*.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for September, showing the foreign trade of the empire for the month:—

	1894. SILVER YEN.	1895. SILVER YEN.

THE TERM "FILATURE."

We have been requested, says the *American Silk Journal*, to give the derivation and explain the meaning of the word "filature," so frequently used in connection with raw silk production. Filature is derived from the word "filament," a thread or fibre, and means: 1. The act of spinning; 2, a spinning-ground, and 3, a spinning-mill. Hence the term in most

commonly applied to an establishment such as are common in Italy, Japan, and elsewhere in silk-growing countries, where cocoons are received from the growers and the silk is reeled from the cocoons and prepared for the market. A certain number of the exceedingly fine separate filaments are united by pressure, or twisting, according to the standard of raw silk to be produced. This filature silk, being the resultant of skilled labour and utmost care, is far superior to the "country silk" reeled by the growers at home after the most primitive methods. Very little of this latter reaches this country of late, its manipulation being comparatively difficult and labour here being too costly. A "filature" is a spinner, or proprietor of a filature or a spinning mill.

CANTON INSURANCE OFFICE, LIMITED.

THE following is the Report presented to the shareholders at the fourteenth ordinary general meeting, held at the offices of the General Agents, Messrs. Jardine Matheson & Co., Hongkong, on the 19th inst.:—The General Agents and Consulting Committee have pleasure in laying before the shareholders the final accounts for the year 1894, and an estimate of the present year's underwriting to the 30th ultimo, 1894 Account.—The balance at credit of this account is \$542,455.65, out of which the sum of \$263,693.97 has already been paid for a dividend of 10 per cent. to shareholders, and a bonus of 20 per cent. to contributors of premia. Subject to the approval of shareholders, it has been decided to dispose of the remaining balance of \$278,761.68 by adding to Reserve Fund \$175,000, thereby increasing it to \$1,200,000; paying a final dividend of \$6 per share, and carrying forward the sum of \$43,761.68 to 1895 account. 1895 Account.—This account shows an estimated balance at credit of \$676,352. Consulting Committee.—The present members, Messrs. Dalrymple, Sassoon, Gillies, Chater, and Bird retire, but offer themselves for re-election.

INFRINGING THE GERMAN COMMERCIAL CODE.

C. F. REIMERS, of Kobe, appeared on Saturday before Mr. R. von Krencki, H.I.G.M.'s Consul, at Kobe, on a summons charging him with an infringement of the German Commercial Code. It appeared from the evidence given that the accused had been warned some time since not to use the firm name "Reimers & Co." in the business, as he was registered under the name of "C. F. Reimers." He then stated that he had painted out the "& Co." which appeared on his sign-board, and had prefixed the letters "C. F.," but on the Amtsdienr going to the office of the accused on the 10th and 11th inst., he found the original sign-board "Reimers & Co." still displayed. The charge being made out, the accused was fined 200 marks and costs, and warned that a repetition of the offence would be followed by a further fine of 200 marks.—*Chronicle*.

SHIPPING DISASTER.

A REUTER'S telegram from Flushing, dated 10th September, states that a collision occurred at night on 9th September off Borselen between the Spanish steamer *Manila*, proceeding to China, and the Norwegian steamer *Xania*, bound for Antwerp. The latter sank. The Belgian pilot, who was on board the *Xania*, and five of the crew were drowned. The *Manila* was badly damaged and anchored in the roadstead. The *Manila* was recently constructed in England for a Spanish commercial line, and was making her first voyage to the Straits Settlements and the Philippine Islands. She was damaged in the bows, and her fore-peak is full of water. The cargo has apparently not suffered.

THE AUSTRALIAN HORSES.

We understand that two prizes have been offered by "Mr. Worthington" and "Mr. State" respectively, to be raced for by the Australian horses on Saturday, the 16th November, when it is hoped that an Off-day may be arranged for beaten ponies at the Autumn meeting. The "Worthington Cup," value \$200, will be open for Australian horses only, distance, three-quar-

ters of a mile; while the "State's Cup," value \$150, is given for a mile race between the Australian and country-bred horses, in which category are included thorough-bred horses bred in Japan. The present lot of Australians consist of eight geldings and one stallion. Ten were originally brought, but one had to be destroyed early on the voyage owing to an accident. Japanese owners are said to be prepared to bring forward five native thorough-breds to compete, and they will probably be admitted in the five races to be set apart for these horses at the Spring meeting, 1896. Considering the time these horses have been on board the steamer, they are in good condition, and although none of them are handsome they will undoubtedly develop into useful animals for hacks and carriage horses.

"TOWNSEND HARRIS, FIRST AMERICAN ENVOY TO JAPAN."

THE above is the title of a new book, by William E. Griffis, author of "Japan:—In History, Folk-Lore, and Art," "The Lily Among Thorns," "Brave Little Holland," etc. With Portrait. Crown 8vo, \$2.00. The material of Dr. Griffis's book, says the *Dial*, is of very high historic value, and is new to Americans, Europeans, and Japanese. It omits what may be found in other books which treat of various phases of Japanese life, and gives Mr. Harris's journals which contain matter of unique value; hence this work must always stand as one of peculiar interest.

THE KOREAN SPECIAL AMBASSADOR.

THE Ambassador of the King of Korea proceeded to the Palace on the 19th instant. He was conveyed in a carriage sent from the Imperial Household, and Mr. Asano, a Master of Ceremonies, rode with him. At the entrance to the Palace the Ambassador was received by other Masters of Ceremonies, and was then conducted to the ante-room, where he was welcomed by Marquis Saionji, Acting Minister of Foreign Affairs, and Mr. Sannomiya, Grand Master of Ceremonies. H.I.M. the Emperor then gave audience to the Ambassador in Hoo-noma. He was next introduced to the Kiri-noma, where he was received by H.I.M. the Empress.

THE DISTURBANCES IN SOUTH-WEST KWANGTUNG.

A TELEGRAPHIC advice from Peking to the *Chinese Mail* (*Wah Tsu Yat Po*) is to the effect that on Saturday, the 12th inst., an Imperial Edict was issued ordering the suspension of Li Chetan, magistrate of Ng Chun district and acting magistrate of Shun E district, for not having brought to justice the rebel chiefs Peng Lai Cha Mi, who is organising disturbances in the Ko Chow Prefecture, in the South West of Kwangtung. The Tien Pak magistrate is ordered to be dismissed the service for incompetency, although he is exonerated from the charge of receiving bribes to release captured robbers.

ANTI-FOREIGN LITERATURE IN CHINA.

THE Rev. Griffith John, writes from Hankow, under date of October 7th, the following letter to the *North China Daily News*:—

On Saturday last a native friend of mine turned up in my study bringing in his hand a number of the Hunan anti-foreign publications. In reply to the question as to how he got hold of them, he said:—"These are only a part of a large quantity just received at the office of the —. They have come direct from Changsha, and no doubt from Chou Han. The letter which accompanies them is anonymous, and contains an urgent request that the firm will reprint them, and have them widely distributed. These seven have only been lent to me till Monday, when I must return them without fail."

I have just been looking over these seven, and I find that they are old friends, with the exception of one, which is a sheet tract. Two of the books, however, have greatly interested me, for I find that they are old friends in new dresses. They are no other than two editions of the infamous *Death to the Devil's Religion*. One of the two is a Szechuan edition, issued for the first time in 1890, and the other is a Kuangsi edition, issued for the first time in 1889. Both contain the Hunan manifesto, which was translated by me in 1891, and is given in *The Anti-Foreign Riots in China*, published by you in 1892. On the covers it is stated that all the scholars and people of Kuangsi and Szechuan are, in imitation of Hunan, printing this book and widely distributing it. The get-up of these two editions is superior to that of the

Hunan edition, and there can be no doubt that the copies before me have been struck from blocks perfectly new.

I called special attention to this work in my letter of 1891, which have been published in the *The Foreign Riots in China*. The author is Chou Han himself. On the cover it is stated that the book is the production of "Chou, a disciple of Confucius and a Minister of the Great Pure Dynasty." Of all the anti-foreign publications this is most popular in Hunan. It has been distributed gratuitously by the hundreds of thousands of copies. It takes the place of the *Death Blow to the Corrupt Doctrines*, published some twenty-five years ago. The *Death Blow*, however, was written for the scholars, whilst *Death to the Devil's Religion* is written for the people. Any one who can read at all can read this book; and I know that it has been read and is being read by millions of ordinary readers in Hunan and in all the provinces.

Of all the Hunan publications I do not know one more violent, more abusive, more foul, or more inflammatory than this. It finishes up with a song, to be committed to memory by the reader. Were I to translate, and send it to you, you could not print it, it being too dirty and vile for your columns. I may, however, give you the closing words, which are words of exhortation to old and young. "Let fathers and elders teach the children to sing this song and thus accumulate merit and secure happiness. Let the little boys learn to sing this song and thus remove calamity and escape danger. Why fear because the demons (foreigners) are many? We are firmly resolved to exterminate them utterly." All the charges brought against foreigners are given this book in full detail. The use of the eyes and brains, and other parts of the human body, for medicinal and other purposes are minutely described. The history of Jesus is given; and anything more blasphemous it would be impossible for the mind of man to conceive.

This is the book which Chou Han has been scattering over the face of the land. We know that there is a Szechuan edition and a Kuangsi edition. It is highly probable that every province has its edition. Be that as it may, there can be no doubt as to the widespread dissemination of the book. It is everywhere and its abominable libels are believed by everyone. Is it a thing to be surprised at that the people have got to fear us and hate us? Is it not a wonder that riots and massacres are not more numerous? Let us not forget that Chou Han is not only a scholar, but, an official, but an intimate friend of some of the greatest officials in the land. Some of the highest officials have been his abettors in this unholy crusade.

The question now is.—What is to be done with Chou Han? Whilst Hunan is closed, and whilst Chou Han is allowed to work his dark deeds in that dark place, we shall never be safe. Let Hunan be opened; let Chou Han be dragged out of his den, and let this infamous literature be suppressed everywhere—let this be done, and a change for the better will soon follow.

THE MEKONG.

WE take the following from *The Times*:—

The arrival of Lieutenant Simon in a French gunboat at Luang Prabang, nearly 1,500 miles from the sea, is regarded here as an important feat, the crowning achievement of two years' labours. At Khong the gunboat had to be transported over land by a short temporary railway, but it managed to surmount the Kemerab Rapids, 60 miles in length, though one of Lieutenant Simon's subordinates declared that no personal consideration would ever induce him to pass another six days like those. Above Khong, up to the foot of the Rapids, the Mekong may serve for trade, except in the spring, when the water is very low. Above Wieng-kang the Mekong does not appear to be practically navigable, and, pending the details of Lieutenant Simon's voyage, his arrival at Luang Prabang may be considered conducive to French prestige rather than to trade. His own belief is that on the Middle Mekong a few hundred piastres expended on dredging certain spots would make it available for trading steamers. The Laos chiefs repeatedly asked him what would be the cost of sending goods to Saigon as compared with Bangkok, and trade may be expected to take the former route.

TERRIBLE BOILER EXPLOSION.

News reached Shanghai on Wednesday the 16th, by telegram, that the C.M.S.N. Co.'s steamer *Kungpai* had had her funnel blown away and some of the soldier passengers on board hurt. The telegram stated that the fore part of the vessel had been blown out by an explosion. The *Kungpai* was engaged in conveying soldiers from Kinchow to Tongku. The *Shanghai Mercury* prints a telegram to the effect that only the following were saved:—Third Engineer (Mr. O. Frome), 10 of the crew, one foreign and ten Chinese passengers.

CHEVALIER DE KONTSKI.

THE Chevalier de Kontski seems to have taken Shanghai by storm. Most enthusiastic notices of his concerts are given by all the journals of the model settlement. We understand that the Chevalier is not unlikely to pay Japan another visit next April.

DEPARTURE OF COUNT INOUE.

COUNT INOUE left Shinagawa by the 2.38 p.m.

train on Thursday. Marquis Ito and Baron Ito Miyoji, Chief Secretary of the Cabinet, rode with him down to Oiso. Viscount Nomura, Minister of Home Affairs; Mr. Yoshikawa, Minister of Justice; Mr. Shirane, Minister of Communications; Princess Mori, Countess Kuroda, some Local Governors, and several others assembled at Shinagawa to see him off.

MISS AMY SHERWIN'S JEWELS AND COSTUMES.

THOSE who remember Miss Amy Sherwin's visit to Japan some years ago will be interested to learn that her residence in London was entered by burglars during the absence of the family at the seaside, and every room in the house ransacked. The burglars decamped with the bulk of Miss Sherwin's jewels, as well as a number of costly presents and her costumes.

THE CHAMPION CRICKET COUNTY.

AT the Oval, on 3rd September, Surrey wound up a most successful season with a decisive victory over Hampshire, and thus retained the county cricket championship. The batting and bowling averages of the Surrey eleven have been published, their chief features being the remarkable batting of Abel, and the even more extraordinary bowling of Richardson.

THE SHANGHAI VISITORS.

THE Shanghai team was seen off on Saturday morning on the *Ernest Simons* by a large number of members of the Y. C. & A. C., and other friends. They carry away with them impressions of a thoroughly enjoyable week—as their captain, Mr. Farbridge, expressed it, it has been the jolliest and happiest week of all their lives.

THE CRUISER "AURORA."

THE Austrian cruiser *Aurora*, under command of Captain Constantin von Pott, came up the Bay this morning. The *Aurora* is a vessel of 1,370 tons, with engines of 1,000 horse power; she carries three machine-guns, and six breech loading guns; her crew numbers 223 all told.

ROBBERY.

A JAPANESE named Horiguchi Yosaburo, employed by Messrs. Carl Rohde & Co., was arrested on Thursday for having stolen since the 3rd September, 24 revolvers, 2 silver watches, and 6 alarm clocks, valued at \$193. All the goods were recovered on the apprehension of the thief.

THE YANGTZE VALLEY.

When the pessimists cry out about Great Britain's self-effacement in the East because she declined to become a unit in a coalition of Powers of which one is her hereditary enemy and open rival in Central Asia; another her persistent and petulant opponent in various quarters of the globe, and the third a purely selfish friend of the two first, we can not but speculate how effectually the theories of these publicists would be shattered did events force the hand of the patient Secretary in Downing Street. From time to time rumours circulate about a British occupation of Chusan, and within the past few weeks the seizure of the Yangtze Valley by Her Majesty's China Squadron might have occurred at any moment. In either of these events, the position in which Great Britain would stand needs no explanation. The fact is that England has at her command in the Far East a force sufficient to make her virtually mistress of the situation. Any attempt to eliminate her from the settlement of the Eastern problem would merely provoke action of a conclusive character. With Chusan and the Yangtze Valley in British occupation, the Chinese empire would be cut in two, and it would not greatly matter what events transpired in Manchuria or even in Korea. It is not to be supposed that Great Britain could tamely submit to Russia's posting herself within cannon's range of the rich trade routes established by English capital and English enterprise in this quarter of the globe. Were such a contingency in sight, the law of self-protection would quickly find signal application.

KOREAN NEWS.

The latest news from Sōul has greatly changed the aspect of affairs. Not merely a few ignorant and insignificant Japanese of the *Soshi* class, but several well known men have been found to have been active participators in the horrible drama of the 8th instant. The facts relating to the incident, thus far gathered from trustworthy sources by the *Nichi Nichi Shimbun*, are as follow:—"On the evening preceding the *émeute*, or more exactly at about 11 p.m. on the 7th instant, a Japanese, whose name is withheld from publication, and thirty *Soshi*, held a secret conference at Yong-san. It is stated that the party included some Japanese police officials, but this point requires confirmation. After concerting a general plan of action, the party proceeded to the Tai Wōn-kun's residence at Kong-tok-ri, reaching it at a little past midnight. On the way they were met by two Koreans, Gu Zenju and Sen Bai, sent by the Tai Wōn-kun. When they approached the ex-Regent's mansion, they found the gates closed and guarded by constables that had been sent by the Queen. The first action of the Japanese *Soshi* was to seize these constables and confine them in a well secured apartment. This done, the party entered the Tai Wōn-kun's chamber, where they had a conversation with him for some time. Immediately afterwards, the ex-Regent proceeded toward the Royal Palace, escorted by a party of Japanese troops and the *Soshi*. It was two o'clock in the morning when the procession left Kong-tok-ri. But it stopped about an hour on the way, waiting for the Second Battalion of the foreign drilled Korean troops, with which some previous arrangement seems to have been made. Presently the party were met by Wu Hanzen at the head of a picked body of about thirty soldiers, and resuming their march they entered the palace through the Kwaug-wha gate. It appears to be a fact that some Japanese troops secretly rendered assistance to the foreign-drilled Korean soldiers when the latter forced their way into the Palace. Following the Tai Wōn-kun, who had safely entered the Palace, the Korean soldiers and a small body of Japanese troops, forming His Highness's escort, were marching through the gate, when they were attacked on the flank by Ko Keikun, a trusted follower of the Queen, and commander of the foreign-drilled Korean troops, at the head of the Palace Guards. This essay, proved ineffectual, and Ko himself was shot down, receiving a mortal wound. The Tai Wōn-kun, meanwhile, under the escort of his body-guard—the *Soshi* and the picked body of foreign-drilled troops—proceeded direct to the apartments occupied by the King and had an audience with His Majesty. While the old Prince and his son were closeted together, the *Soshi* and the Korean troops entered the ladies' apartments and behaved in a riotous manner. They slew a lady who was surrounded by several female attendants. The *Soshi*, being of course ignorant of the Queen's personal appearance, had to proceed by guess work. They took this lady for Her Majesty, and unfortunately, they seem to have been correct in their supposition. According to report, the lady slain by them was soon afterwards burnt to ashes. A certain personage is said to have asserted most emphatically that he not only saw many Japanese *Soshi* taking part in these acts of violence, but that he recognised them to be the principal actors. Whether or not the murderers of the Queen were Japanese, cannot be definitely ascertained without fuller investigation. But that a gang of *Soshi* were directly connected with the *coup d'état*, was recognized, from the first by the Japanese residents of Sōul, who could not believe that faint-hearted Koreans had planned and executed such a programme so promptly and decisively. One story says that in ignorance of the topography of the Palace, the *Soshi* by mistake rushed into the King's apartments, where they were made aware of their mistake by His Majesty's attendants, who waved their hands, at the same time loudly calling out "King," "King." The *Soshi*, according to the same authority, then, turned to-

ward the ladies' apartments, and killed a lady in the manner already described. It is also stated that the Crown Prince was an eye-witness of his mother's murder, and that His Highness afterwards put down in writing a description of the persons of the murderers and sent a copy to a certain foreign Minister. One or two other officials were on the spot and defended the Queen. One of these was Li Koshoku, Minister of the Household. The *émeute* had not been entirely unexpected. The Queen had been becoming more and more tyrannical and lawless in her conduct, especially since Count Inouye's return to Japan. Her Majesty had indeed gone so far as to project the replacement of the existing Cabinet by politicians of her own faction. In order to ensure the complete success of her design, she had decided, on the one hand, to secure the person of the Tai Wōn-kun and on the other, to disband the foreign-drilled troops, replacing them by her own soldiers. Repeated collisions that occurred between the foreign-drilled soldiers and the police, were part of her plan, her object being in this way to establish a pretext for the disbandment of these troops. The plot became known to the Tai Wōn-kun, and he was not slow to plan a counter movement, a leading share in the execution of which was entrusted to a gang of Japanese *Soshi*. But the astonishing feature of this *coup d'état* is that not *Soshi* only were implicated in it, but that several Japanese civil officials and military officers are believed to have been privy to the plot. The reports from Minister Miura are said to have been very vague and indefinite, but the truth has gradually become known."

The facts set down here will, we believe, suffice to convey to our readers a tolerably accurate idea of what took place in Sōul. Under the circumstances, the Government, rightly taking a serious view of the matter, at once despatched Mr. Komura, to Sōul, to replace Viscount Miura, who, together with some forty officials of the Legation and Consulate, have been recalled. We are in possession of further information, apparently trustworthy, but we think it advisable to observe a measure of reticence pending the investigations now being conducted by the Authorities." The *Nichi Nichi* concludes thus:—"It is to be deeply regretted that an incident such as that now engaging public attention should have furnished a pretext to the world to call in question the motives of this Empire in its avowed policy of maintaining Korean independence, reforming her administration, and leading her along the path of civilization. We sincerely hope that the Government will preserve the country's honour and dignity by taking frank and just measures."

The same journal in its issue of yesterday, gives further particulars:—"When the Japanese troops and the *Soshi* (including journalists, physicians, and merchants) arrived at the Tai Wōn-kun's residence at Kong-tok-ri, one of the Koreans, Sen Bai, who had been sent out to meet the Japanese party on the way, attempted to open the gate. But it was found to be strongly secured on the inside and guarded by a body of constables sent by the Queen. Thereupon two or three Japanese policemen made their way through a window, dragging the above named Korean after them, and once inside they easily succeeded in overpowering the Korean constables. To open the gate and admit the whole party was then the work of a moment. The leaders immediately had an audience with the Tai Wōn-kun. On leaving his residence, the latter issued orders that the persons of the King and the Crown Prince should be guarded from all harm, but that in the case of the Queen whatever measures circumstances rendered expedient should be taken. It had originally been arranged that the plot should be carried out in the dead of night, but but the entrance of Tai Wōn-kun into the Palace was delayed until five o'clock in the morning on account of a mistake committed by the Korean and Japanese troops that came to Sōul to meet the Tai Wōn-kun; they took a route different from that previously arranged. At the time of the ex-Regent's entrance in the Palace, the party

was preceded by some Japanese policemen, who scaled the walls with the aid of a ladder, and opened the gate. Taking advantage of the consternation into which the Palace Guards were thrown, the Tai Wōn-kun, and his escort rushed through the gate opened by the Japanese police. The escort consisted, first, of a party of Japanese troops, then a portion of the second foreign-drilled battalion of Korean soldiers, and, lastly, another body of Japanese troops. While this force was still filing through the gate, Ko Keikun attacked them at the head of the First Battalion of the foreign-drilled Korean soldiers. The latter thought that the Tai Wōn-kun's escort consisted of Korean troops only, but on finding that Japanese soldiers accompanied them, they speedily took to their heels. On the other hand, the Japanese troops, too, beat a retreat, for they had no orders to fight. As already stated, unforeseen mistakes delayed the execution of the *coup d'état*, and it was about eight in the morning when the Japanese *Soshi* came out of the Palace, armed with pistols and swords, some even carrying drawn swords with marks of blood on them. These *Soshi* as they made their way through the crowds that had gathered in the street, bore themselves as men proud rather than ashamed of what they had done in the Palace. This incident renders it probable that the Russian and American Ministers, who repaired to the Palace at six in the morning, did really see, as they supposed, some Japanese *Soshi* carrying blood stained swords in the Palace. It is stated that Minister Miura, ex-Adviser Okamoto, Secretary Sugimura, Consular Probationer Horiye, Interpreter Kokubu, Police Sergeant Hagiwara, and six police constables were the principal parties implicated in the *émeute*. The Japanese troops seem to have acted under the orders of the Korean Government, Messrs. Saito Shuichiro, Hoshi Toru, Oshizuka Eizo, and a few others had no connection whatever with the affair. These persons are said to have strongly remonstrated with Viscount Miura on the day of the disturbance."

THE KOREAN AFFAIR AND THE JAPANESE PRESS.

Most of the Japanese correspondents in Sōul were implicated in the recent *coup d'état*, and it is not surprising that the news first published in Tokyo should have been wilfully misleading in many essential points. But when the astounding revelation was made by the *Nichi Nichi Shimbun* that not only *Soshi* but also Japanese diplomatic officials and military officers had taken part in the drama, the metropolitan press, rightly interpreting the sentiments of the nation, united in condemning in the strongest terms the inexcusable conduct of their nationals, and unhesitatingly approved the prompt and vigorous measures taken by the Government in connection with the incident. On the other hand, they urged that the Government's duty would not be discharged by merely disavowing the conduct of its agents in the peninsula, for the responsibility must extend to higher quarters. The *Kokumin Shimbun*'s article may be taken as representative in this respect.

After expressing wonder and regret, the *Kokumin* urges the importance of condemning in the strongest language the savage and inhuman actions of the Japanese connected with the affair. Should any mercy be shown to these enemies of civilization and humanity, with what face could Japan confront the world or claim the status of an enlightened State? While, therefore, the action taken by the Ito Cabinet must be approved without reserve, the question arises whether the responsibility should not be carried higher than Minister Miura. Should not the Minister actually charged with the direction of foreign affairs be also held responsible for an affair so serious? Who is the actual Minister of Foreign Affairs? Our contemporary thinks that neither Count Mutsu nor Marquis Saionji has the actual control of foreign affairs, but that Marquis Ito is the *de facto* Minister. Moreover, Marquis Ito has a further responsibility in the matter, for it was chiefly

by his recommendation and that of Count Inouye that Viscount Miura was appointed to the Court of Sōul. The *Kokumin* further thinks that in a case like the present, the Minister President of State should properly be held responsible, and illustrates its point by reference to English history, special allusion being made to the fall of Khartoum for which Mr. Gladstone, Prime Minister, was called to account, and to the Russo-Turkish war, when Mr. Disraeli, Premier, and not Lord Salisbury, Secretary for Foreign Affairs, was the prime object of public criticism. But it is not necessary to go abroad in search of precedents bearing on the question. The changes effected in the *personnel* of the Cabinet at the time of the Otsu incident, and on the failure of the treaty revision programme of Count Okuma, suffice to show what sort of measures the Government ought to adopt in the present instance. So far the *Kokumin*.

As to the question of responsibility, the *Nichi Nichi*, too, writes as follows:—"It is a matter of course that responsibility does not stop with the Japanese Minister at Sōul and his subordinates, but we propose to discuss this point at greater length on some future occasion."

THE KOREAN AFFAIR AND THE POLITICAL PARTIES.

The Constitutional Reform party held a meeting on the morning of the 18th instant, there being present Messrs. Kusumoto, Ohigashi, Kudo, Suzuki, Kawashima, and so forth. They adopted the following resolutions:—

1st.—Concerning the recent Korean *émeute*, the Japanese Government should endeavour to prevent any confusion of legal with international questions, and adhering to the original purpose of Japan's policy, should strive to promote the rights of the Empire in Korea.

2nd.—Whether or not the present affair involve international complications, the responsibility of all the officials concerned should be clearly established.

3rd.—Should any Japanese subject be discovered to have been criminally concerned in the affair, he should be brought to justice, so that the dignity of Japan as a Constitutional State may be maintained."

The *Chuo Giin Kai*, a club formed by the Progressionists and their allies, met on the same day and adopted the following resolution:—

"That the Government should institute thorough investigations into the recent Korean disturbance and find out where the responsibility lies, with a view to the maintenance of the dignity of the country."

The National Unionists held a meeting on the 19th instant. There were present Messrs. Minai Giichi, Motoda Hajime, Wada Hikoshiro, Ono Kamesaburo, and others. They adopted the following resolutions:—

1st.—Prompt measures should be taken to ascertain the truth about the affair."

2nd.—In case any Japanese subject be found to have taken part in the disturbance, he should be dealt with according to the law, without any mercy. As to public functionaries guilty of negligence in not providing against the affair, they too, should be dealt with in a proper manner."

3rd.—We sympathize profoundly with our unfortunate neighbour, and sincerely regret that some reckless Japanese were concerned in the trouble, but we fail to conceive how international complications can reasonably arise out of the situation."

4th.—It should be the aim of the Japanese, as pioneers of civilization in the Orient, and as guardians of peace in Eastern Asia, to afford increasing assistance to Korea, so that the peace of the Far East may be preserved for ever and Japan's honour may be kept intact."

The *Doshi Kai* politicians, too, met on the 18th instant, but they do not appear to have come to any decision, for they are to meet again to-day (21st).

The Radicals have not taken any open step with regard to the question. It is stated that

they are opposed to adopting any measure in the name of the Party, preferring that individual members be left free to adopt any course they may think proper.

It seems pretty plain, on the whole, that the Opposition Parties are inclined to hold the Cabinet responsible for the affair. Their organs have begun to raise a cry for the resignation of the Ministry, or at least, the Minister President and the Minister of Foreign Affairs.

LETTER FROM KOREA.

(FROM OUR OWN CORRESPONDENT).

Sōul, October 10th, 1895.

Since my letter of yesterday, more has been learned and the worst has been confirmed in reference to the Queen of Korea. It is now known that the Queen was foully murdered by Japanese. Reports are still more or less unsatisfactory, but it is certain that the ex-Regent entered the Royal Palace on the morning of the 8th inst. accompanied by Korean and Japanese soldiers. There were also *soshi* among them. These forced their way into the Royal presence and demanded to know the whereabouts of the Queen. I am informed that the Crown Prince was rudely asked where his mother was and cuffed when he refused to tell. While part of the band were in the presence of the King flourishing their swords and calling out for the Queen, another part slipped round the back way to Her Majesty's apartments and there assaulted and killed four ladies, one of whom was the Queen. The report states that the ladies were dragged out of the rooms by the hair of their heads. The Queen was knocked down by a Japanese, killed, and her body then burned—a barbarity worthy of the darkest ages of the world's history.

Such are the plain facts. The most shocking part of this most cruel assassination or butchery is that it seems to have been done with the knowledge of the Japanese authorities here. I make this statement based on what seems to me the strongest evidence. It is known that the Japanese and Korean soldiery entered the presence of the King, that the insults offered to him and to the Crown Prince were made by Japanese in civilian's dress, and that officers of the army were standing by and making no objection. These knew what their comrades were going to do when they slipped around and brutally butchered and burned the Queen.

During the night of the 9th, the Queen Dowager committed suicide by taking a dose of opium. And during the same night the heads of Ministers of State or supposed friends of the dead Queen were sought for. The foreign community is burning with indignation at the slaughter of the last two days.

THE KOREAN AFFAIR AND THE RADICAL PARTY.

The Radicals met to consider the Korean question on the 21st instant, and adopted the following resolutions:—

First, that it being the united aim of the nation to assist Korea in the maintenance of her independence, we view the recent incident with the sincerest regret.

Secondly, that the Government should take proper measures to bring to justice all Japanese connected with the *émeute*, so as to make it clear that their conduct is not countenanced by their countrymen at home.

Thirdly, that all other topics connected with the present affair be enquired into by our Party without loss of time.

BISHOP BICKERSTETH.

Bishop and Mrs. Bickersteth are leaving Yokohama on Monday by the *Empress of India* en route for England. We understand that the Bishop has been unexpectedly summoned to consult with the ecclesiastical authorities in England in reference to the proposed extension of the English episcopate in Japan, and hopes to return to the East in the early spring of next year.

THE KOREAN AFFAIR.

The *Nichi Nichi Shimbun* has just published a long and interesting article reviewing the relations between Japan and Korea during the past year, and discussing the responsibility of the Cabinet about the recent *émeute* in Sōul. We reproduce the gist of the essay under the respective headings into which it is divided:—

I.—THE GOVERNMENT'S POLICY AND COUNT INOUE'S VIEWS.

The Japanese Government advised the Korean Government to introduce reforms in all departments of the administration, and accredited Count Inouye to the Court of Sōul with instructions to devote himself to the guidance of Korea in matters of administrative reform. He had not been long at his post, however, before he discovered that the task entrusted to him was attended with peculiar difficulties. In addition to perpetual rivalry between the contending factions at Court, the Korean politicians showed themselves not only incapable of understanding the rudimentary principles of political science, but were also lamentably deficient in public spirit and patriotism. They also proved exceedingly untrustworthy. To give a few examples illustrating these statements:—The Tai Wōn-kun, who owed much to the assistance of the Japanese Minister, was unscrupulous enough to conspire with the Tonghaks and even to ally himself with the Chinese Generals in Ph्योंng-yang. Having found out the old Prince's plots, the Japanese Minister next turned to Pak Yong-ho, who was, consequently, appointed to a Ministerial post. He, too, proved no better than other Koreans. Instead of promoting the work of administrative reform, he suffered himself to be so far carried away by ambition as to attempt to contrive a rupture between the Court and the Japanese Legation. As a result of his unprincipled conduct, he became an object of suspicion to the Queen and hatred to his colleagues, and at last he was driven from office in disgrace. Thus it was found that, whenever Koreans were placed at the head of the administration, it was almost impossible to hope for reform, and some of the Japanese Cabinet Ministers began to insist on the necessity of giving up the task of administrative regeneration and adopting a new line of policy toward Korea. About that time Count Inouye returned to Tokyo, and pointed out the unwisdom of pronouncing a hasty judgment upon the political capacity of the Koreans on the strength of an experience of only eight or nine months. Moreover, slow as was the progress of reforms in Korea, he pointed out that in some respects a change for the better had been effected since the country was released from the baleful control of China. Another consideration also counselled the continued pursuance of the policy thus far followed, namely, the consciousness that, having just passed through a great war, Japan was not then in a position to face the difficult complications that were sure to arise with the Western Powers in connection with the change of situation in Korea. So it was decided to persist in the policy of guiding Korea along the path of reform and progress; and Count Inouye was again sent to Sōul. It was, however, understood that he would not stay in Sōul longer than might be necessary for the purpose of readjusting the political situation disturbed by the Pak incident, and that he would be succeeded by Viscount Miura. During the recent war with China, there existed a defensive and offensive alliance between Japan and Korea, and it was deemed necessary to have at the Korean Court a statesman of Count Inouye's power and standing, but the alliance having ceased to be operative upon the termination of hostilities, there was no longer any positive necessity for his continued residence in Sōul. When Viscount Miura was appointed to the Legation at Sōul, it is unnecessary to state that he went there with definite instructions to pursue the same policy that his predecessor had consistently followed, namely, the policy of guiding Korea in the path of reform and independence.

II.—THE KOREAN ROYAL FAMILY AND FACTIONS.

It has already been observed that there is no

statesman in Korea who has proved himself capable of comprehending the true nature of political reforms, and who is free from the evil of faction jealousy. It may not be out of place to describe more in detail the principal personages on the stage of Korean politics. First, as to the Tai Wön-kun. Notwithstanding the fact that his third son is the present occupier of the throne, he at first caused his eldest son to conspire against the crown, and when the plan did not succeed he again instigated his grandson to carry out a similar design. At another time, he caused a dynamite bomb to be thrown into the residence of the Queen's parents, killing her father and brother. In politics, he was at first anti-Japanese when he was Regent of the Kingdom. But on his return from captivity in China, he ingratiated himself with the Japanese, and through the latter's influence he again obtained ascendancy in the State, last year. But he soon showed his gratitude to the Japanese by opening secret correspondence with Chinese officers at P'yöng-yang. Next, the late Queen was a woman of extraordinary intelligence. In spite, however, of her intellectual capacity, she was remarkable for all the weaknesses common to her sex. On one occasion, when Count Inouye had an audience, Her Majesty talked with him for three hours about the history of the foreign intercourse of her kingdom, handling the subject in a masterly manner. She was well read in Chinese literature, being intimately acquainted with the works of the principal writers. She used to have Japanese newspapers daily read to her. In discussing political matters, she was observed not infrequently to take at disadvantage such men like Pak Yong-ho, Kim Ok-kyun, and Gyo Inchu. Intelligent as she was, she was after all a woman, and had a due share of women's weakness. Her intellect was clouded by a strong suspicion of the Tai Wön-kun and his partisans. She could not trust any body except those in the immediate vicinity of her person, and she even refused to eat food prepared by the ordinary culinary department of the Household. Her unconquerable propensity for suspicion was the primary cause of the perpetual misunderstanding between the Court and the Cabinet. As for the King, His Majesty is a man of average ability among the Koreans, and it is out of the question that he should comprehend what was beyond even the intelligence of the Queen to grasp. Among the Korean politicians, Gyo Inchu is known for his solidity, while Kim Koshu is valued as an upright and virtuous man. But they do not understand the question of political reform. One or two stories may be cited to show how things are managed in the peninsular kingdom. On one occasion, Count Inouye, while talking to the King about reforms, referred to the inadvisability of the Queen meddling with political affairs, and advised His Majesty to cause her to put down her vow in writing that she would never again interfere with the affairs of State. The King assured the Count that the evil practice would not be allowed any more, but asked to be released from the vow. Kim Koshu and Gyo Inchu happened to be present at the audience, and they, too, expressed their opinion that there was no necessity for a written vow. Thereupon, Count Inouye turned upon them and demanded if they could give him an assurance in the King's presence that the Queen would never again meddle with politics. The two Ministers turned pale, and seemed at a loss how to answer. The Count then reproved them severely for their want of conviction and their lack of courage to offer straightforward advice to their Sovereign. When Count Inouye went to Korea for a second time, the King told him that His Majesty's Ministers had represented to him that, according to the usage in Japan and other countries, the Sovereign was bound to sanction every measure decided upon by the Cabinet, and that he was not free to reject whatever might be suggested by his Ministers. Whenever His Majesty had ventured to hesitate about giving his sanction to any measure proposed by the Cabinet, he was sure to be told that

his refusal of sanction was contrary to law and would bring down upon his head the wrath of Minister Inouye. The Count of course acquainted His Majesty with the erroneousness of the views entertained by his Ministers of State. These stories show something of the difficulties with which the task of reformation in Korea is attended.

III.—JAPANESE IN KOREA.

The insolence of the Japanese residents toward Koreans was once pointed out by Count Inouye. The manner in which the Japanese are conducting themselves is indeed a matter of grave concern to all sober-minded observers. To cite an instance of utter disregard of treaty obligations, it may be mentioned that, in direct violation of the treaty, the Japanese own land in the interior of the country. It is idle to multiply these instances, which are indeed countless. Suffice it to say that not only are the Japanese overbearing in their attitude toward the Koreans, but they resort to all sorts of deceitful practices. Unless these things are checked, it is to be much feared not only that Korean sympathy will be entirely alienated from Japan, but that the reputation of Japan will be seriously damaged in the eyes of other nations. It should be the aim of the Japanese to confine themselves strictly within the limits of the treaty stipulations, and to avoid all illegal procedure, especially such as may tend to dry up the sources of Korea's revenue. In view of these circumstances, it is to be sincerely regretted that the extraordinary session of the Diet at Hiroshima refused to approve the Ordinance issued to restrict the passage of men of undesirable character to Korea. Had this Ordinance been in force, many of the *soshi* that took part in the recent disturbance would not have been able to cross the sea. It might be said by way of objection that the Japanese Consuls are empowered to deport men whose presence is deemed incompatible with peace and tranquility. But this authority is to be exercised only when there are sufficient grounds for it, and is, consequently, obviously insufficient for the purpose unless assisted by the discretion of the Authorities at home in granting passports to those intending to go to Korea.

VII.—CHANGE OF JAPANESE MINISTER AT SÖUL.

Count Inouye seems to have made it his policy to compel his nationals in Korea to abstain from all infringement of the stipulations of the existing treaty, justly holding it inconsistent for Japan, in the character of Korea's protector, to take any unfair advantage of the latter's helpless position. As to political affairs, Count Inouye came to the conclusion that it is better to give definite recognition to the Queen's interference with public matters. It being found impossible to prevent her from exerting her influence over the mind of the King, to try to keep her under restraint was sure to convert her interference into a secret, and, consequently, more dangerous force. Under these circumstances, the Count thought it advisable to bring about a coalition between the Queen's faction and the faction led by Kim Koshu. So, before his departure from Söul, Count Inouye earnestly called the attention of the King and the Queen to the paramount importance of the Royal family's standing aloof from all party contentions, and showing no partiality to any particular set of men. He also alluded to the return of Min Yong-chun, and advised their Majesties never to take any precipitate steps to raise him to power. Not content with these oral representations, Count Inouye addressed a long memorial to the King on the eve of his departure from Ninsen, reiterating what he had had the honour to state to His Majesty personally. He also took care to send a copy of the document to his successor, Viscount Miura, who had already arrived in Söul. When Viscount Miura took charge of the Legation in Söul, the late Queen had already recovered her political position, and the Mins were just beginning to show their heads once more. Alarmed by the recovery of power by the Mins, the opposite party resorted to a desperate plan of action in concert with the Tai Wön-kun. How this counter

movement has been carried out has been already described.

V.—OPINIONS ABOUT THE RECENT INCIDENT.

Under this heading the *Nichi Nichi* exposes the fallacy of some of the criticisms and apologies attempted by some journalists in Tokyo. We may skip this chapter without any loss. There is, however, a point to which allusion may be made. The *Nippon* had been absurd enough to insinuate that the Government had to disown Viscount Miura's actions in obedience to pressure brought to bear upon it by a foreign country. On this point, the *Nichi Nichi* states that, from the first the vague and incoherent messages sent from the Legation in Söul had attracted attention; and that instructions had been issued to Viscount Miura to forward more complete and accurate information. The Government's suspicion was still more excited by the tenor of the telegrams received from Japanese Ministers at Washington and St. Petersburg. This led to the despatch of Mr. Komura to Söul, and before his arrival there, Minister Miura sent some telegrams which in many respects confirmed the suspicious information that had been wired from the Legations in the United States and Russia. Mr. Komura's reports subsequently cleared the affair, and the Government has not been slow to take measures suited to the nature of this incident. Under such circumstances, it is scarcely necessary to point out that the *Nippon's* insinuation about foreign influence is absolutely without foundation.

V.—RESPONSIBILITY ABOUT THE INCIDENT.

On this point the *Nichi Nichi* expresses its opinion as follows:—

First, that the Minister and his subordinates should be properly punished for having acted in direct disregard of the general policy and instructions of the Government, and for having acted on their own responsibility without asking for instruction from their superiors at home; and that their punishment should be carried out by the Cabinet in pursuance of Imperial Command;

Secondly, that the Cabinet which recommended the appointment of the erring Minister should be held responsible;

Thirdly, that, the question whether the responsibility stops with the Minister of Foreign Affairs or whether it ought to be extended to the Minister President, and even to other Ministers, must be left to the ultimate pleasure of the Emperor; but that, since according to the existing Official Organization, the appointment of officials of a Minister Plenipotentiary's rank is made by the recommendation of the Cabinet, the whole Cabinet should be held responsible; and

Fourthly, that, while, on the one hand, recommending themselves for proper punishment by the Emperor, the Cabinet Ministers should, on the other, take such measures as may be deemed necessary under the circumstances; and that they are not permitted to lay down their portfolios at their own discretion.

THE "WILLIAM H. MACY" IN HARBOUR.

The American sailing ship *William H. Macy*, recently in collision with the British steamer *Isis*, arrived in harbour at 5 o'clock on Wednesday evening, in tow of the Japanese cruiser *Musashi Kan*. The cruiser happened to be down in Tateyama Bay practising, and her commander's kind offer to tow the damaged ship up to Yokohama was thankfully accepted. Considering how badly damaged the *William H. Macy* is, her stem being very much smashed and twisted down to the keelson, it speaks well for Mr. T. M. Laffin's ability as a wrecker, that she got off so soon, and that not one case of cargo was discharged. She was got off the beach stern first, the strain of hauling her round so that she might slip into deep water bows first, being considered too great. The *William H. Macy* will be moored bow and stern while her cargo is being discharged, and arrangements will be made for her speedy repair.

FAREWELL DINNER TO COUNT DE BYLANDT.

On the evening of the 19th instant the members of the Tokyo Club gave a farewell dinner to Count de Bylandt, who is about to visit Europe on leave of absence. Fifty-six of the members were present, the chair being taken by Mr. W. H. Stone, Vice-President of the Club. Among those present were the Russian and Spanish Ministers and their Staffs, the Hawaiian Minister, the Austro-Hungarian and Italian *Chargé d'Affaires*, the Vice-Minister of State for Foreign Affairs, the Director of the Commercial Bureau in the Foreign Office, Mr. Kusaka, Minister in Reserve, Messrs. Paget, Longford, and other members of the British Legation and Consulates, several friends from Yokohama, &c.

Count de Bylandt, during his stay in Tokyo, has won the warmest friendship among all nationalities, and his return to Japan is earnestly hoped for. His health was proposed by the Vice-President in the following terms:—

YOUR EXCELLENCIES AND GENTLEMEN—Another of the off-recurring disagreeableness incidental to living in regions far from home brings us together this evening. We have to say farewell to an esteemed friend and member of this Club who has been with us for the past six years and who is now returning to Europe on leave of absence. We fear, however, that Count de Bylandt's services may be required by his Sovereign in some other part of the world, and that he may not return to Japan. Count de Bylandt has been an active member of the Tokyo Club since he first arrived here. He has done good service on the Committee; has always taken the warmest interest in its success, and has been a good and valued friend to many of us here.

I need hardly say that it is with mixed feelings, in which there is much sorrow, that I ask you to drink to him. May he be granted health and strength, a bright and prosperous career, and the best success in all he undertakes. We can assure him that we should hail with pleasure the information that the post he has been filling here is raised in rank, and that he is coming back again to this country.

Health and happiness to Count de Bylandt!

The toast was drunk with all the honours and the greatest enthusiasm.

H.E. Mr. Hitrovo, the Russian Representative, speaking in French, made some very friendly and sympathetic remarks upon the approaching departure of Count de Bylandt. His Excellency said that the Count was an old acquaintance of his; that he had known his father and mother; that the father had lived in the same round of duties as the son—the life of a diplomat—travelling from country to country, always changing his surroundings, not only of objects but of people, of acquaintances, of friends, not having the advantage that our ancestors enjoyed, that of being born, of living, of dying, under the same conditions and with the same friends and surroundings. Mr. Hitrovo finished his warm and friendly remarks by expressing the very best wishes for the future of Count de Bylandt.

Count de Bylandt, who on rising was received with loud cheers, spoke as follows:—

MR. CHAIRMAN, your EXCELLENCIES and GENTLEMEN, my friends all!

I am very sorry, I am extremely sorry indeed, both for you and for myself, that I am not an after-dinner speaker. For, next to the awkward feeling of one who has to rise in response to a toast, knowing that he cannot rise to the occasion, surely comes the sensation of anguish of those who, with a smile, have to listen to his feeble utterances. This reminds me of a happy remark, made by one of the best Englishmen that lived and worked in this century. His name, if not his work, is known to every student of England's modern parliamentary history. He was for many years Clerk of the House of Commons, and his name was Sir Thomas Erskine May. On one occasion, it was, I believe, a wedding, he was asked, being an old friend of the house, just to say a few words. And when he rose he prefaced his remarks by saying that, if he had the choice, he would much prefer to speak at a party dinner than at a dinner party. Well, I am sorry that I do not stand in the late Clerk of the House's shoes, nor have the advantage of his alternative. For, if I have rightly understood Mr. Stone, you have

all assembled here with one and the same object, which is the distinctive feature of a party-dinner, whereas the assembly is equally a dinner-party in so far that that object is a purely social one.

You must therefore be patient with me, the more so because I am not speaking in my native tongue.

It is therefore with a certain diffidence, that I turn to the chair, to tender to you, Mr. Stone and also to you, Mr. Hitrovo, the expression of my heartfelt and sincerest gratitude for the kindly and, I must say, by far too complimentary terms in which you have addressed me, and to you, gentlemen, my very best thanks for the way in which you have received that toast.

I have gathered from Mr. Stone's words that he spoke in your name, and it seems to me that you have endorsed them. But that is not for me a sufficient reason to accept for myself all the good things which he has said. I will do it on one condition, and that is, that you will, on your part, accept a theory, which I can propose to you in a few, brief words. It comes to this. I do not believe in a free will. At least not in an unlimited free will. Free-will is an invention, a useful fiction in the domain of speculative philosophy, just like other fictions. Take for instance the "average number" in the field of statistics. Have you ever seen the average? Or, to put the question in a more concrete form, has any one of you ever eaten the average apple? I dare say not. What we are apt to call "free will" is after all only the result of circumstances, of surroundings, of the education, and the influence of those with whom we associate. And if you accept this view, then you must admit that I have no difficulty in bringing home the responsibility for all the good things which Mr. Stone has placed at my door.

I am afraid that it takes but little time to make us acquainted with trouble or disappointment; and I dare say that many of us have had their fair share of either or both of them. But, luckily, Providence has shaped us in such manner that we are enabled to shake off unpleasant recollections, allowing the better and brighter memories to become the companions of our later years. In this respect I have been singularly fortunate. For during the 5½ years which I have, so to say, spent in your midst, you have given me the opportunity of collecting a treasure, which I shall always cherish; a treasure so big, that none of Kamakura's caves would be able to hold it. Accept, therefore my best thanks.

Speaking of surroundings and associations; I feel that it would be ungracious, if not ungrateful in me if I did not mention this Club. I have seen many Clubs in different countries, and it has always struck me that their atmosphere contained dissolving elements, that there lived microbes, intent upon destroying something. It might be the happiness and charm of home life, it might be the good and friendly relations between members, it might be health or the balance at the banker's. Here I have found a Club with only constructive elements. I have found mutual forbearance and goodwill, resulting in a good fellowship, which, if opportunities and occasions were only favourable, would grow into something which comes very near to close and lasting friendship. If that good spirit continues to prevail, which no doubt it will, I can safely prophesy prosperity to the Club when it shall have left this building and taken possession of its future abode.

I must take this opportunity to say that Mr. Stone has been right in one of his statements. It is true that I have shown some interest in the Club and in the comfort of its members. I plead guilty to having written complaints, long and short. I admit that I have often called for the acting Manager's presence, that I have, in fact, made myself generally disagreeable to the servants. But I trust that I may have been forgiven.

I began by a reminiscence from my stay in London. Let me finish by a reminiscence from Tokyo, from this Club and from this very room. Many of you will remember that when our friend Mr. Oki Morikata was appointed to be Governor of Wakayama Prefecture, he was our guest at a farewell dinner in this room, and that the toast of the evening was then given by Admiral Count Kawamura. In winding up, the Admiral took a flower from the stand before him and holding it up to the Governor, said: "Beware, my friend, of the many flowers which you will meet on your path." As you probably all know, Wakayama is noted for abundance of feminine beauty.

Well, since I do not think that very many of you will ever be appointed to be Governor in that prefecture, I need not repeat the warning, nor the word play which it contains. But I may still be allowed to take a flower from this stand before me, and hold it up to you, and I may express the wish that you may find your paths strewn with flowers, for to those who love them they are a joy for ever. And I may ask this flower to be my Ambassador to you, and to convey to you what I have tried to

say this evening. Listen to me: I do not know whether it is a quotation, or whether I am inspired, but this is what I want you to hear: The rose may wither, and the leaves may drop from the stem, but the flower's sweet fragrance will always linger in my memory.

And now, gentlemen, let me drink your good health, individually and collectively, and let me assure you that, on my part, the "old acquaintance" will not be forgotten.—(Loud cheers.)

Mr. Casati, on behalf of Italy, bid the Count farewell in these lines:—

Les vapeurs du Champagne et du Chateau-Lafosse Ne veulent pas, cher Messieurs, que je parle en prose;

Par conséquent je vous demande mille excuses, Si je dis ma pensée en chatoillant les muses.

Le désir que je sens c'est d'offrir une guirlande, À notre Victime... le Ministre de Hollande!

Après tant d'années dans ce beau Pays du Soleil Voilà le Comte qui nous prive de son Conseil!

En vérité, Monsieur de Comte, êtes vous sans cœur Pour plonger comme ça vos amis dans la douleur?

Vous faut il absolument l'air de la Mer Noire Pour être plus heureux et vous couvrir de gloire?

J'espère bien que vous plaisantez et que le beau jour,

N'est pas très loin où nous fêterons votre retour; Donc, sans adieux, Monsieur Le Comte, et sans

Good-bye, Je vous dis tout simplement: "Mata nasshai"!!

Dans cette douce attente, Messieurs, je vide mon verre,

Au plus charmant des hommes sur la croule de la terre!!!

COUNT OKUMA & HORTICULTURE.

It has already been stated that Count Okuma's recent garden party was not attended by any of the Ministers of State; nor were they invited to it. The false rumour that it was to have been attended by the Ministers originated in the fact that they are expected to visit his garden for the purpose of viewing a horticultural exposition to be held there by the members of the Tokyo Horticultural Society on the 27th instant. There is a close resemblance in sound between *yen-gei-kai* (horticultural exposition) and *yen-yen-kai* (garden party), and the reporters of a certain news agency, confounding the two terms, circulated the above mentioned rumour. *En passant*, we may notice that the Tokyo Horticulture Society counts among its members a large number of distinguished personages in the capital. The President is Mr. Hanabusa Yoshikata, of the Household Department, and its Vice-Presidents are Messrs. Fukuba Hayato and Tanaka Yoshio. Count Okuma is one of the most enthusiastic members. He is said to have attained a high degree of skill in growing the chrysanthemum, a certain species of which is reported to have made such excellent growth under his care that a single stem carries two thousand petals, while its branches cover a circle of four yards in diameter. But the most celebrated horticulturists are said to be Mr. Iwasaki Hisaya, of Tokyo, and the Archbishop of the Nishi Hongwanji in Kyoto. The exposition of the 27th instant is looked forward to with great interest.

COUNT INOUE'S RETURN TO KOREA.

According to the *Jiji Shimpō* Count Inouye's return to Korea has been decided upon. His Excellency's mission is to convey to the King of Korea the Emperor of Japan's condolences in connection with the recent *émeute* in Sōul and its lamentable issue. The Count will start on the 24th or 25th instant. It is not expected that he will remain long in Sōul.

Rumours are again circulated that Mr. Hoshi Toru will soon be appointed Japanese Representative in Sōul. The *Kokkai* is very confident on the subject. It alleges that Count Ito has always been in favour of the appointment, but that some opposition was formerly encountered in the Cabinet. Now, however, there is a consensus of opinion as to the advisability of sending Mr. Hoshi after Count Inouye has "straightened out" the recent complications.

FORMOSA NEWS.

The following telegram from Governor-General Kabayama, dated Tai-pei, 16th October, and wired from Kagoshima on the 20th at 7.10 a.m., has been received at the Imperial Military Head-quarters:—

"On the 10th instant, a British warship came to the Pescadores with the British Consul at Anping on board. He brought a letter from Liu Yung-fu, addressed to Vice-Admiral Arijii, Commander of the Standing Squadron, asking for peace in language of a brusque character. Vice-Admiral Arijii answered that he should proceed, on the 12th, to a point off Anping in the warship *Yoshino*, to receive either Liu or his properly appointed representative.

"Vice-Governor Takashima, acting in my (Count Kabayama's) behalf, sent a reply to Liu Yung-fu on the 11th through Vice-Admiral Arijii, rejecting his request.

"On the 12th, Liu once more addressed a note to the Commander of the Imperial Guards through two Englishmen. The request was again rejected.

"On the 10th, the Fourth Mixed Brigade commenced landing at Pan-tay-chi, after overcoming some feeble resistance made by the enemy. The naval squadron coöperated. The process of debarkation being attended with extraordinary difficulties on account of the naturally bad roadstead and the inclement weather, some portions of the troops were still on board the transports on the 14th. Rebel soldiers, together with some of the inhabitants, having risen northward of Pan-tay-chi, measures are now in progress to deal with them.

"The main body of the Imperial Guards Division is still at Chia-i, but its van has reached Chia Tung-tsz.

"On the 11th, the Second Division landed in the vicinity of Fang-liao without any opposition from the enemy. The debarkation was completed by 6 p.m. The vanguard and right detachment encountered a tolerably stout resistance at Ka-liao and Chie-tung-chue, and after a sharp skirmish, put the enemy to flight. The loss on our side was 84 in killed and wounded.

"On the 12th, the Second Division reached Tan-kang. It is believed that the Division occupied Têng-shan on the 14th, but no news has been received from it."

It is scarcely necessary to state that the above telegram has been anticipated by messages sent through Amoy.

The latest letters from the Japanese correspondents with the Army in Formosa relate to the landing of the Fourth Brigade of the Second Division at Pan-tay-chi. With this Brigade, commanded by H.I.H. Prince Fushimi, were the Commander-in-Chief of the whole army in the island, Lieut.-General Takashima, and his staff. At 6 a.m. on the 10th instant, the Brigade left the Pescadores in nineteen transports, escorted by three warships, the *Naniwa*, *Saiyen* (former *Tsai Yuen* of the Chinese Northern Fleet), and the *Kaimon*. After the departure of these vessels, there still remained at the Pescadores more than thirty transports and a few warships, the *Yoshino*, *Akitsu-shima*, *Yamato*, *Saikyo*, and *Yayeyama*. The transports left behind had on board troops of the Third Brigade under Major-General Baron Yamaguchi) destined to leave, a few hours afterwards, for a point south of Tainan, namely, Tang-kang.

When the fleet of transports carrying the Fourth Brigade commenced its voyage on the morning of the 10th, a gale was blowing and the sea ran very high. After steaming for about two hours, the ships were met by a British man-of-war, which signalled to the *Naniwa* that she had brought an offer of surrender from Liu Yung-fu. The Japanese warship referred her to the Commander of the fleet at the Pescadores. At 10.50 a.m., the transports reached their destination. The roadstead being very shallow, they had to drop anchor at a distance of about three miles from the shore. Straggling parties of insurgents were observed moving along the shore, and it was besides known that the village of Pan-tay-chi contained several battalions of the enemy, afterwards ascertained to have been 3,500

strong. The *Saiyen*, *Naniwa*, and *Kaimon* began to bombard the place at about 11.40 a.m.

At half-past two, a party of marines, about 160 strong, rowed toward the shore. At a short distance from the land, they were fired at by a band of insurgents, two or three hundred strong. The marines, however, easily put the enemy to flight and effected a landing. The insurgents retreated only a short distance from the landing place and seemed determined to resist the progress of the Japanese at every advantageous point. Fire was again opened, and with the assistance of a company of Foot, which had landed soon afterwards, the marines were able to drive the enemy from the field. The greater part of the troops occupying the village seem to have evacuated it as soon as the marines got ashore, setting fire to the houses as they retreated. The skirmish lasted about two hours. No exact statement of casualties is given, but one of the correspondents mentions that two were killed and several wounded on the Japanese side.

Japanese correspondents continue to describe the progress of the troops that began to land at Pan-tay-chi on the 10th inst. As to the burning of the village of Pan-tay-chi, some of the correspondents are of opinion that it was not the work of the retreating Chinese, but that the conflagration owed its origin to shells from the Japanese warships. Whatever may have been the cause, the Japanese troops had ample reason to regret the fire, for insufficiency of roofed shelter gave them considerable inconvenience. On the night of the 10th, the marines remained on shore to support the troops, that had to bivouac before the enemy. Firing continued during the whole night, skirmishes frequently taking place between the advance posts on both sides.

On the morning of the 11th, a detachment of the Fourth Brigade was despatched from Pan-tay-chi in the direction of Yuen-sui-kang, a seaport town of about 700 houses, eight miles to the south. On nearing the place, it was found that a force of the Imperial Guards had just commenced an engagement with a few hundred rebels posted in the houses of the town. The two bodies of Japanese troops coöperated and occupied the place after a short skirmish, at half-past ten in the morning. A junction was thus effected between the Guards and the Fourth Mixed Brigade. The Guards, it may here be stated, had commenced their southward march from Chang-wha on the 6th instant, and fighting all the way, had seized Chia-i on the 9th. Chia-i was defended by Black Flags and volunteers, in all about 2,500 strong. The engagement had continued an hour and a half, when the issue was decided by a general charge against the insurgents, who fled through the gate of the town.

The people in the vicinity of Pan-tay-chi are said to be bitterly hostile to the Japanese. They conduct themselves much in the same fashion as the Hakkas did between Tai-pei-fu and Shin-chuh. Like the semi-savages of the north, the peasants in the vicinity of Pan-tay-chi assume a peaceful mien when the Japanese pass in large numbers, but are always ready to attack small isolated parties. A few instances will suffice to show what trouble these people are giving. On the afternoon of the 12th, a number of coolies were despatched from Pan-tay-chi to fetch drinking water from a well about two miles and a half distant, there being no supply of good water at Pan-tay-chi itself. Having been joined on the way by a party of five or six scouts, the whole were proceeding in the direction of the well, when they were suddenly attacked by thirty or forty peasants, variously armed with guns, swords, spears, kitchen-knives, and so forth. The Japanese slowly retreated toward a field hospital in the vicinity of the well, guarded by a detachment of infantry, with whose assistance the truculent mob was soon dispersed. On the same day, Captain Ogino, an officer attached to the head-quarters of the Southern Army, was returning to Pan-tay-chi from Yuen-sui-kang, accompanied by interpreters and coolies, numbering in all about twenty, when the party found itself assailed by a superior force of armed peasants. Beside Captain Ogino, a sick private was the only

fighting man among the Japanese. The officer, seizing the invalid's rifle, covered the retreat of the party, which fortunately soon fell in with a company of Engineers that happened to be in the vicinity. Toward evening on the same day, a military post stationed between Pan-tay-chi and Yuen-sui-kang was attacked by armed peasants. These incidents will probably lead to the adoption of summary measures such as those resorted to in the north.

Letters from the correspondents accompanying the expedition under Lieut.-General Baron Nogi, since known to have landed at Fang-liao, have not yet been received, except one or two dated on board transports that had just arrived off the point of debarkation. The latest, indeed the only, news about the doings ashore of this part of the army, is published in the *Nichi Nichi Shimbun* on the authority of an anonymous individual that has just returned from the south by the transport *Himeji Maru*. According to his report, the troops landed at Banshirin on the 11th instant. The locality is not marked on the map, but from the context we gather that it is somewhere in the vicinity of Fang-liao, about twenty-five miles south of Takow. There were insurgents assembled on shore, but without attempting the slightest resistance, they fell back upon Kataukha, seven or eight miles inland to the north. A detachment having been despatched in pursuit of the retreating enemy, the bulk of the Japanese troops moved northward along the coast. Subsequently, no report having been received from the above mentioned detachment, a fresh force was sent in the same direction. A pretty sharp engagement seems to have taken place at Kataukha, for it is stated that the Japanese sustained a loss of sixty-one in killed and wounded. The enemy fled to Sekikoken. Without pursuing them, the Japanese turned in the direction of Tan-kang. At the time of the *Himeji's* departure—the date of which is not given—it was arranged that the troops then at Tan-kang should march toward Feng-shan on the 14th, and preparations were briskly going on for building bridges where practicable, and providing ferry boats elsewhere. The troops had all been landed at Banshirin, but the provisions and baggage were partly discharged at Tan-kang, the rest being sent on for landing at Takow. The people in this part of the island are said to be keeping themselves quiet. When the *Himeji* steamed out of port, the *Yayeyama* and *Saikyo* were off Tan-kang, while the *Akitsu-shima*, *Naniwa*, *Yoshino*, and *Yamato* were lying off Arcoutien-chi.

An official telegram from Governor-General Count Kabayama, dated at Taipei, 3.05 p.m. on the 22nd instant, says that the leader of the Black Flags, General Liu Yung-fu, has escaped by sea to China, and that a portion of the Second Division entered Tainan on the 21st instant. The Head-quarters of the Southern Army were to be moved to the same place on the 23rd, and Count Kabayama himself was to leave Keelung by steamer for Tainan on the 24th. Intelligence of the flight of Liu Yung-fu had reached Japan before the receipt of Admiral Kabayama's message, but an official message was required to place the matter beyond doubt.

LOCAL GOVERNORS' ASSEMBLY.

The Local Governors Assembly, now sitting in the Department of Home Affairs, will be brought to a close in a few days. The subjects of discussion are laws relating to the regulation of rivers and roads, and the establishment of reserve funds. The chair is usually occupied by Viscount Nomura, Minister of Home Affairs, and, in case of his absence, by Governor Miura of Tokyo. The measures submitted for the consideration of the Governors are explained by one or other of the higher officials of the Home Office.

REVISED TREATY WITH DENMARK.

The *Nichi Nichi Shimbun* says that the revised Treaty with Denmark, which has been for some time under discussion in Copenhagen, was signed on the 20th instant.

CHINESE EDUCATION.

Mr. Otori Keisuke, late Japanese Representative in China and Korea, in an address delivered to the Young Men's Christian Association a short time ago, described the results of his study of the Chinese system of education during his stay in Peking. We give in our own words a summary of Mr. Otori's speech.

Learning in China is of two kinds, one being theoretical and the other practical: the former designed to train men for official life, the latter to prepare them for a business career. The education of an official consists in a thorough study of the Chinese classics, practice in the art of writing verses and of composing essays on texts culled from the works of standard authors. The training of a youth who aims at becoming a man of business, consists of instruction bearing on the actual condition of political, commercial, and industrial affairs, and of lessons on physical science and kindred subjects. There is a great deficiency of public schools in China. Most of the education is obtained by means of private tuition. Rich houses employ three or four tutors to instruct their children, while parents in less affluent circumstances often unite with their neighbours or friends in providing the salary of a single teacher, who takes charge of a class consisting of the sons of the contributors. The instruction imparted by private tutors consists of a thorough explanation of the meaning of the Confucian classics and the works of Mencius. After receiving this private coaching, the student resorts to one of the public libraries, called 書院, *Shu-jūan*, or 義學, *I-hsiao* in China, where he is provided with books, lights, fuel, and other requisite. Here he enters on the serious business of preparing himself for his first examination.

The first examination that a Chinese student has to pass is called 歲試 *Sui-shih*, or the age examination, because after the pupil reaches a certain age he has to undergo this examination, which is held annually. Next comes the 鄉試 *Hsiang-shih*, the village or district examination, held once in three years. Then follows the 會試, *Hui-shih*, or Combined Examination, which is held in Peking once in five years and is attended by students from all parts of the empire. Next to the above is the 殿試 *Tien-shih*, or Palace Examination, held within the precincts of the Palace. Each district of the empire is represented by a learned man in Peking, whose duty it is to receive the students sent up from the provinces to undergo examination. Those who pass this examination successfully become graduates of the first degree, and bear the title of 秀才 *Hsiu 'tsai*, or men of superior talents. There are three higher degrees to be won, and the examinations to be passed by the competitors for these degrees are graded so that each is more difficult than its predecessor. The successful candidates receive new titles as they ascend the ladder of learning. Graduates of the 2nd degree are called 舉人 *Chi-jên*, men of eminence or high rank; those of the 3rd degree 進士, *Chin Shih*, or advanced scholars, and those of the 4th degree 殿試 *Tien Shih*, that is men who have passed the final Palace examination and have thus reached the acme of literary fame. The number of students sent up to Peking from the provinces to attend these examinations is limited, so that only young men that have won the highest honours in their own provinces are allowed to compete for degrees. The candidates that pass the examination for the third degree successfully, receive a perfect ovation from the inhabitants of their native villages or towns. But still higher honours await those successful at the Palace Examination. They are for the time being treated as princes, and when they leave the Palace they pass through a gateway which on all ordinary occasions is only opened for members of the royal family and the very higher officers of State. The men that soar to this height in the literary world are all drafted into the Government service.

Notwithstanding the care with which these examinations are conducted and the severe tests of intellectual power to which Chinese students are subjected, there is no disguising the fact that the training of the higher Chinese officials is a very poor preparation for their duties and responsibilities as the rulers of a great empire. These polished classical scholars are ignorant of the geography, the history, and the science of the world. Of the state of Eastern countries, of the burning questions of Eastern policy, they know nothing. The scope of the education they receive is too narrow to qualify them to hold their own in the progressive age in which we live. While in Peking, observed Mr. Otori, I repeatedly pointed this out to certain high-class officials with whom I was intimate. Whether what I said had any effect I cannot tell. The traditions of generations are hard things to part with. Yet, among the young men of Peking I have reason to think there are a few anxious to strike out in a new line, having obtained from foreign teachers and other sources a knowledge of the outside world and being desirous of seeing an entirely new system of education inaugurated in China. But for the most part, those that have acquired knowledge of a foreign language and whose minds have been expanded by study of western science and literature, occupy subordinate positions in the Government, and are hence unable to make their influence felt to any appreciable degree in the administration of public affairs. Those aspiring to rise to high positions in the State are usually men that have confined their studies to classical literature. To expect that any radical reform should originate from such officials is to expect an impossibility.

The Chinese as a nation are represented to be extremely bigoted and averse to change. But in my opinion the mass of the people are in no way opposed to reform. It is officialdom that blocks the path of progress. Nothing can exceed the diligence and perseverance in their several callings manifested by the non-official classes. They take no interest in the Government and are entirely without patriotism, owing to the fact that by their despotism and oppression the officials have rendered themselves a hated class. Patriotism cannot live where a nation's rulers are from generation to generation held in abhorrence by the masses. There are no enlightening influences in China. The newspaper and magazine, as they exist in Japan, are practically unknown in China. Yet there is no denying that the Chinese possess many of the characteristics that go to make a great nation. Their business capacity is marvellous; their simplicity of life and economy are unsurpassed by any nation. Some of their richest men live in modest looking dwellings, such as are elsewhere inhabited by persons that still have their fortunes to make.

In Japan education has made rapid strides, and we are now sufficiently far advanced to be qualified to act as China's instructors in numerous subjects. But we must not overlook the fact that in one particular we are inferior to the Chinese. We lack as a nation the power to persevere in the face of difficulty. We are impetuous. Without much forethought, in a light, inconsiderate mood, we embark on a new enterprise. We fail; and are at once thoroughly disheartened and abandon the enterprise with the same lightness with which we pledged ourselves to carry it through. Not so the Chinaman. No amount of difficulty, no giant obstacles daunt his spirit. With dogged perseverance he pursues the course he has marked out for himself, and never loses heart though years of toil lie between him and the final goal of his ambition. In learning how to do new things the Chinaman is not so quick as we are. But his dullness in this respect is more than atoned for by the persistence with which he works when he has once begun.

Japan is in some danger of being too elated by her victories and of overlooking her imperfections and weaknesses. There is an old saying, *Katte kabuto no o wo shimeru*: "Tighten the strings of your helmet after victory." The lesson we should learn from the war is, increased caution.

THE ERUPTION OF KIRISHIMA-DAKE.

An eruption causing some loss of life took place on Kirishima-dake, at the boundary of the Province of Hyuga and Osumi, on the 16th instant. On receipt of the news, an official party of exploration, including Councillor Kikuchi and Chief Police Inspector Tateishi, were dispatched from Kagoshima the same day. After passing the night at Taguchi, a few miles from the volcanic peak, the party commenced the ascent on the morning of the 17th. Before proceeding far, however, they met a party of five persons who had just come down from the Peak of Takachiho, which is higher than that of Kirishima and is apparently reached by crossing the latter. These persons said that while ascending Takachiho, they had met a party of three persons who were descending, an old man, a woman, and a boy, and that the three could scarcely have escaped injury, as the eruption had taken place when they were within a dangerous distance of the crater. The persons making this statement had heard the report of the eruption just as they were commencing the descent. Not knowing what had happened and seized with fear, they had run down the mountain, evidently along a path different from that followed by them in going up. The official exploration party had ascended some distance when they saw the terribly mutilated corpse of a boy being carried down by some men, from whom it was learned that another dead body was higher up, but could not possibly be extricated from the mass of stones under which it lay. The unfortunate boy, Horikiri Takeo by name, was a son of the proprietor of the hot spring of Iwo-dani. At a short distance from the crater, the exploration party discovered an old woman's dead body lying on a large slab of rock, her face and body cut and bruised in a fearful manner, the rock and the thick layer of ashes around being dyed with her blood. At some distance lay the body of an old man in a similar condition. It was afterwards ascertained that the boy had conducted the old woman, a relative of his, to the hot spring belonging to his father at Iwo-dani, and, before accompanying her back to her home in Kajiki, had guided her to the peak of Takachiho to worship at a famous national shrine there. The old man was the boy's servant. As to the eruption, it took place within the old crater, which is about a hundred yards deep and more than a mile in circumference. A curious circumstance is that, while a strong shock was felt at Kagoshima, more than thirty miles from the mountain, the shaking of the ground was comparatively slight in the immediate vicinity of the volcano.

THE EMIGRATION ASSOCIATION.

The Standing Committee of the Emigration Association held a meeting on the 21st inst., with Viscount Enomoto in the chair. There were present Messrs. Ando Taro, Tamari Kizo, Yasui Mankichi, Takano Shusei, Sakuma Teiichi, Inoue Kakugoro, Kawamura Hisanao, Magaki Jocho, and so forth. Viscount Enomoto reported the results of negotiations with the Mexican Minister concerning a project of emigration to that country. He also submitted the draft constitution of a corporation to be formed for carrying out the above mentioned scheme of emigration. After a debate, the following resolutions were adopted:—

First, that the first instalment of the capital be paid in the course of the month of November.

Secondly, that a tract of land be purchased at Eskintra (?), in the month of December.

Thirdly, that the first batch of emigrants be confined, as far as possible, to independent settlers.

Fourthly, that detailed regulations be fixed at a meeting of the Standing Committee of Investigation to be held on the 30th instant.

POLITICAL ITEMS.

It is now denied very explicitly that any foundation existed for the rumours recently circulated about a political *rapprochement* between Marquis Ito and Count Okuma. The story is said to have been manufactured out of whole cloth by a news agency. At all events, the prediction that the Minister President of State and several of his colleagues would attend the garden party given by Count Okuma on the 18th instant, was falsified by events, for neither Marquis Ito nor any member of the Cabinet was present. Hence whatever inferences might have been drawn from the presence of the Ministers, falls to the ground in their absence. It was on the 18th of October, 1889, that Count Okuma lost his leg by the explosion of a bomb thrown at him as he was driving into the gate of the Foreign Office on his way back from a Cabinet meeting. The Count has not been in the habit of organizing any special festivities to commemorate the anniversary of the day, but his friends and well-wishers have usually called upon him, each year, *more Japonico*, to offer their congratulations, and in anticipation of their coming some hospitable preparations have been made. This year, however, being the seventh since the event, an exceptional step was taken. A garden party was organized, and invitations are said to have been issued to the Cabinet Ministers, among others. As to truth of that we know nothing, but certainly none of the Ministers were present. If their absence be significant of the Count's continued seclusion from official life, the fact is exceedingly regrettable in the interests of the country, for assuredly his services are badly needed.

A correspondent of the *Mainichi Shimbun* raises a curious and very shallow question about the interview said to have recently taken place between the Premier and Count Okuma. While the latter, after resigning the portfolio of Foreign Affairs in 1889, held the office of Privy Councillor, he opened communications with Count Itagaki, leader of the *Jiyu-to*, which party was then bitterly opposed to the Government. Commerce with a party leader hostile to the Cabinet being considered improper, Count Okuma had to give up his post of Privy Councillor. Has the principle then observed been altered now, asks the correspondent. If not, how is it lawful for Count Ito the Premier, to pay a friendly visit to Count Okuma, leader of the *Kaishin-to*, if it was not lawful for Count Okuma, the Privy Councillor, to pay a friendly visit to Count Itagaki, leader of the *Jiyu-to*? We presume that the writer in the *Mainichi* expects to find some reader completely lacking in discernment. Otherwise it would obviously be labour lost to invite comparison between a member of the Government's opening correspondence with a party leader for the purpose of overthrowing the Government, and the Minister President's opening relations with a party leader for the purpose of bringing him into the Government.

THE LATE PROFESSOR KONAKA-MURA.

In the person of Professor Konakamura, who has succumbed to cholera, Japan loses one of the greatest scholars of her national literature. He was born on the 22nd of January, 1822, in the family of a goldsmith in Kojimachi, Yedo. Although belonging to the despised class of plebeians, his family was descended from the lower grade of gentry, his ancestor who first settled in the Shogun's capital having been a son of the Shinto priest attached to the celebrated Hachiman Shrine of Iwashimizu in Yamashiro. With the priestly blood there seems to have descended in the family a taste for the national classical literature that the guardians of the Shrines have always been distinguished for cultivating. At the age of six he could read story books in the popular style. He studied national classics under the guidance of such masters as Iwo Hidenori and Motowori Uchitoo. His fame as a scholar finally reaching the ears of the powerful

Prince of Kii, he was appointed President of the Classical Department in the College of the Clan at Wakayama, when he was about forty years of age. This appointment carried with it the status of a *samurai*. At the time of the Restoration, his extensive stores of information relating to the institutions and usages under the ancient Imperial régime were of immense value to the new Government in compiling the organizations of the newly revived departments of State. After rendering similar services in the compilation of laws, he was appointed a Professor in the Imperial University, his speciality being the ancient laws and institutions of the Empire. In addition to his Professorship, he was appointed by the Emperor a life member of the House of Peers in September, 1890. His official rank meanwhile was advanced by degrees until he was of the First Grade of the Fifth Class when he died. Besides his official duties, he was indefatigable in lending assistance to every project started for the encouragement of study of the national literature. His sudden death is deeply regretted by the public in general, and by every student of national classics in particular.

DRAFT OF NEXT YEAR'S BUDGET.

The *Taiyo* publishes a financial statement said to have been presented to the Cabinet by Count Matsukata before he resigned his portfolio. The figures given are as follow:—

BUDGET OF 1896.	
	Yen.
Revenue.....	94,080,000
Expenditure	84,050,000
Surplus.....	10,030,000
Increase of Government Expenses ...	8,210,000
Increase of Expenditure consequent on the War	17,300,000
Total.....	25,510,000
Surplus	10,030,000
Deficiency	15,480,000
War Expenditure in the past	159,000,000
Realized by Government bonds and from surplus of last year's revenue.	104,000,000
Deficiency	55,000,000
Increase of the Saké tax to be levied from October 1st, 1895	10,800,000
Tax on business, to be collected from January 1st, 1896.....	7,500,000
Loss on taxes to be abolished ..	18,300,000
Deficiency	2,600,000
Deficiency (as above)	15,700,000
Surplus.....	15,480,000
Surplus.....	220,000
Method of expending the Indemnity to be paid by China:—	
	Yen.
To meet outlays already incurred on account of the War, as shown above	55,000,000
Increase of the Army	50,000,000
Increase of the Navy	30,000,000
Cost of building a dockyard for the construction of ironclads.....	5,000,000
Contingent and Incidental Expenses	50,000,000
Expense of Establishing a Bank of Agriculture	10,000,000
	300,000,000

MARQUIS ITO AND COUNT OKUMA.

Marquis Ito's visit to Count Okuma, on the 8th instant, having given rise to a very generally credited rumour that the latter statesman is about to enter the Cabinet, the Progressionists sent a deputation to wait upon their leader with the object of ascertaining the truth of the story. The deputation consisted of Messrs. Koizuka Ryu, Ogawa Michizo, and Kurosu Ryutaro. The conversation, as reported in the *Mainichi*, was as follows:—

Deputation—May we ask if it is true that your Excellency was recently visited by the Premier, Marquis Ito?

Count—It is true. Ito is in office and I am out of office, but we were such intimate co-

workers in the early years of the Restoration as to be completely identified with each other in the eyes of the public. It is, therefore, but natural that, however much we may now differ in political opinions, we should see in each other close friends whenever we meet. Ito knew my deceased mother very well, as he also knows my wife. He recollects the former days of intimate friendship with my family, and was good enough on the 8th instant to pay us a visit of condolence in consequence of the lamented loss of our parent. He remained with us three hours, during which, although we avoided all political topics, we had most pleasant talk about subjects that caused us mutual sorrow or joy in the days of the Restoration. Our present difference in politics is not sufficient to obliterate our friendship.

Deputation—We think we know your Excellency pretty well, but the public say that you are about to enter the Cabinet.

Count—The public is apt to say extraordinary things. When there is any anti-Cabinet movement, the public alleges that I am at the bottom of it. When Matsukata resigned, men said I had instigated him. They say I am an intriguer and that my object is to pull down the Government. Whenever anything unfavourable to the Government is projected, it is always ascribed to my influence. I am confident that I am the best judge of myself, and that whatever abuse the public chooses to heap upon me has no power to make me different from what I am. One day or another, the truth will be known, and even if it should not be known, I do not care, I am sure that, if anybody is in a fortunate position, I am the man. I used to say that three beings deserve to be worshipped and revered; namely the deities, the Emperor, and my mother. My mother having died, my duties are to the deities and the Emperor. In all other respects I am perfectly at liberty; I have not to bend my knees to anybody in the world. Nothing can be more delightful for me than to live in this secluded suburb and say what I like to say about the current events of the time. Occupying such a situation, what should induce me to desire power? Whatever the public may say about me, I am contented to remain in a position where I can enjoy complete freedom of opinion. Nothing could be more extraordinary than that men should talk of my entrance into the Cabinet. You know well that long as I served in the Government, I never held office at the sacrifice of my political views. Obstinacy is my constitutional malady. So long as it remains uncured you may believe I am still alive. Had I been free from this weakness, I might have continued without interruption to hold a Ministerial post. That you now find me leading a retired life, is a proof that my self-confidence is still unshaken. I feel constrained to differ from those in power about the meaning of the term loyalty. The men in power are apt to say that though sincerely reluctant to assume office, they dare not disobey the Imperial Command without doing violence to their loyalty. Is that true loyalty? If it be, it is the kind of loyalty taught by Chinese philosophy. I am disposed to believe that true loyalty requires men sometimes even to disobey the Emperor's Commands. Such cases may be rare, but still it is quite conceivable that the Imperial orders may not be compatible with the interests of the Imperial House and of the Empire. In such instances, true loyalty should counsel disobedience to the Imperial wishes. I am confident that my interpretation of loyalty is correct, and I shall not abandon that confidence for the sake of obtaining a Ministerial post. You must not suppose, however, that I have become a recluse. Although leading a retired life, my thoughts never wander from the Imperial House and the Empire. Should the time arrive when I can serve my country without doing violence to my conscience, I shall ever be ready to offer myself to the State, not hesitating to serve in its cause until the last breath of my life. But I shall never be guilty of taking office against my convictions.

WHAT SHOULD BE THE EDUCATION OF ISLANDERS?

In the *Kokumin Shimbun* we find some interesting statistics bearing on the shipping tonnage of Japan compared with that of other countries, furnished by a naval officer, Captain Kimotsuki Kaneyuki, who makes these statistics the basis of certain general observations on Japan's past history and the text for a discourse on the policy to be adopted in future. The following is a full *résumé* of Captain Kimotsuki's address.

There is no truer saying than that "marine transport is the mother of the navy." Any country that aims at enlarging its navy must be prepared to develop transport facilities in a corresponding ratio to the proposed increase of its men-of-war. A glance at the marine transport of western countries is sufficient to show how far we are behind and how urgent is the need of increased attention being paid to this subject. If all ships of over 100 tons be included, the total number of merchant vessels in the world is 30,792, aggregating 24,655,000 tons, distributed as follow:—

	TONS.
England	12,970,000
America	2,171,000
Germany	1,785,000
Norway	1,669,000
France	1,090,000
Italy	772,000
Spain	547,000
Sweden	498,000
Russia	477,000
Holland	437,000
Greece	343,000
Denmark	333,000
Austria-Hungary	303,000
Japan	282,000

The above table shows that England does more than half of the carrying trade of the world and hence holds the rank of the Monarch of the Seas. There is nothing surprising in the fact that next on the list to England stand America and Germany; but that a little country like Norway should rank so high is specially calculated to excite admiration and to stimulate hope in Japan. Although the late war was the means of adding a number of ships to our merchant fleet, last year's official report gives the total number of ships as only 450 and the tonnage 282,000. If the shipping tonnage of several of the above-named Powers be compared to the number of inhabitants, the results are as follow:—For every 1,000 inhabitants Norway has 835 tons, England, 312, Japan, 7. If the number of inhabitants per 100 tons of shipping be calculated, it is found that Norway has 120, England 321, and Japan 14,540. Though in point of population Japan occupies the fifth place among the nations of the world, with a feeling of shame I say it, in marine transport she is but an infant. We all know what kind of a country Norway is. It does not extend beyond the 57th degree of south latitude; its northernmost boundary reaches the 72nd degree; in size it does not exceed 20,800 square miles,* and 75 per cent. of this area is utterly useless for cultivation. Such a country cannot for a moment be compared with Japan. And yet, with all these physical drawbacks, the Norwegians have succeeded in developing a marine transport business of dimensions that are perfectly astounding.

Now let us turn our attention to the freight paid on goods imported into Japan. In 1893 this amounted to 16,886,000 *yen*. Of this sum our ships only earned 1,415,600 *yen*, that is about 8 per cent. This is like buying a fish and allowing the cat to carry it off. There is no reason whatever why the whole of the above large sum of money should not annually swell Japanese coffers.

The rank held by the various countries of the world in naval power are as follow:—England I., France II., Russia III., Italy IV., Germany V., America VI., Spain VII. Prior to the late war, Japan ranked 12th, but the captured Chinese vessels have enabled her to rise

four grades and she now occupies the 8th place. But where we are so far behind other countries is the inability of our people to provide money for the increase of our armaments. The amount annually collected for this purpose is pitifully small. While France is able to raise an annual sum in gold of 174,920,000 *yen*, Japan can only raise in silver 18,450,000 *yen*. Taking the population of the two countries, France collects in gold 4 *yen* 56 cents per inhabitant and Japan only 45 cents in silver. Even including the amount provided for incidental expenses, the budget of 1894 gives a total sum that represents only 61 cents per inhabitant, being 36 cents for the army and 25 for the Navy.

When Napoleon was asked what is the most important thing in war, he replied "money." It is here that Japan feels her deficiency when compared with Western Powers. It is plain that the country can only be permanently enriched by the harmonious working of four distinct agencies. 1, There must be good government; 2, an efficient army and navy; 3, development of trade and industry of every kind; 4, moral power. These agencies must be adjusted so as not to injure each other. The increase of the army and navy must be proportioned to the ability of taxpayers to meet the additional expense involved. In regard to the efficiency of our troops, the late war proved that we need have no apprehensions on this point. All our energies should therefore be centred on increasing the volume of our trade and developing industry. In this lies the source of a country's greatness.

The present position of our country may be compared to that of a man finding himself in the capital of a great empire after spending most of his life in the country. We find ourselves in the midst of new surroundings. We can no longer live after the fashion of our ancestors. Our actions cannot but be influenced by the new associations. Thus there will arise a new generation of Japanese whose lives will be moulded by the spirit of the age. Among the material sources of a country's prosperity three call for special mention, namely: (1) increase of population; (2) quality of the soil; (3) location and physical advantages. (1). In respect of population, leaving China out of the calculation, the order in which different countries stand is as follows:—I., Russia; II., America; III., Germany; IV., Austria; V., England, France, and Japan. As regards the quality of her soil, location, and physical advantages Japan very much resembles England.

Captain Kimotsuki here institutes an elaborate geographical comparison between Japan and Great Britain. The Straits of Tsugaru are said to correspond to the Straits of Gibraltar, Tsushima to the island of Malta, and so on. England is represented as having attained her present position as lord of the seas owing to her geographical position, and it is argued that Japan is no less favourably situated. The time is not far distant, observes Captain Kimotsuki, when the completion of the Siberian railway and the Nicaragua Canal will make Japan one of the most important centres of the world. In view of this, is it not to be regretted that our agriculture is so far in advance of our commerce and industry? Just as the centre of a great city is too valuable to be turned into a rice field, so a country which lies on the very highroad of commerce is better designed for taking the lead in trade and industry than growing cereals. The following table gives the proportionate development of agriculture, industry and commerce in England, France, Germany, America, and Japan:—

	Agriculture.	Industry.	Commerce.
England.....	22.....	68.....	10
France	57.....	30.....	13
Germany	48.....	41.....	11
America.....	57.....	29.....	14
Japan	79.....	7.....	14

It is quite evident that with its rapidly increasing population and its urgent and even growing need for money, Japan can no longer depend principally on its agricultural resources as it has hitherto done. The rapidity with which the population is increasing ought to occupy the serious attention of our statesmen.

It has been calculated that in a hundred years it will be three times what it now is. Since the products of the soil will no longer sustain the growing population, the rising generation must be prepared to strike out in a new line, to make it their ambition to win for Japan's industries and commerce a name such as has been won for her army and navy. How best to prepare the young men of Japan for the world of commerce and industry in which they are to play a prominent part is the most urgent of all educational questions.

CHINA NEWS.

"From a private letter just received from Foochow," says the *Pekin and Tientsin Times*, "we learn that two or three days before the Kuchêng massacre, Mr. Stewart was visited by one of the leaders of the Vegetarians, who brought presents for the children, and had tea with the family. He enquired from Mr. Stewart whether he could lend him a gun as he was desirous of setting out after tigers which were giving trouble in some near neighbourhood. It is now supposed that he was spying out the situation of the houses, and satisfying himself that the Missionaries had no firearms."

Concerning the notorious Chou Han, who, from his retreat in Hunan, has again been issuing rabid anti-foreign brochures, the *North China Daily News* recalls the following interesting facts:—

In May, 1892, there was published in the *Pekin Gazette* the report of the investigation by the Viceroy Chang Chih-tung and the Governor of Hunan into the charges made against Chou Han of issuing libellous placards, etc. The substance of the report was that Chou Han was not guilty, that he had fits of insanity, and that "designing persons must have made use of his name, as that of a person in high position, in order to attract more attention." The Viceroy and Governor acquitted him of the actual charges made against him, but proposed that he should be temporarily cashiered and kept at home under surveillance in order to prevent his doing it again. Prince Ching and the Ministers of the Tsungli Yamén backed the report, and an Imperial Decree was issued, declaring that Chou Han, by his wild language and insane conduct had enabled evil-disposed persons to make use of his name and excite the public by fabricated stories. He therefore could not be held guiltless. He was to be cashiered forthwith, and further compelled to return to his home, to be kept under the strict supervision of the local authorities, who were not to allow him to go abroad or cause trouble. Some wood blocks with which the offensive placards had been printed were burnt at Hankow in the presence of the British Consul, and Sir John Walsham was satisfied.

In 1892, Dr. Griffith John was Chou Han's chief accuser, and now once more the same sturdy Christian arraigns the nominally insane ex-official on the same charge. There have been published in Szechuan and Kwangsi new editions of the infamous "Death to the Devils' Religion," the authorship being openly attributed to "Chou, a Disciple of Confucius and a Minister of the Great Pure Dynasty." It is impossible not to endorse the contention that the opening of Hunan to foreign trade, and the invasion of Chou Han's retreat at Changsha are measures essential to peaceful relations with China.

The *Pekin Gazette* gives an account of a terrible practice said to be in vogue in the south of Chihli. Children are kidnapped and held to ransom. Should no ransom be forthcoming, they are killed, cut up, and the pieces of their bodies sent to their parents. A Censor brought the matter to the notice of the Throne, the local officials having refused to interfere.

The *Pekin* correspondent of the *North China Daily News* gives the following account of Sir Nicholas O'Connor's action with regard to the ex-Viceroy Liu:—

He began by asking for Commissions, and such like, but finally last Thursday, 26th September, he went to the Tsung-li Yamén with an ultimatum in his pocket. He had previously given them three days to think the matter over and come to some decision. Their mind was, however, made up, and there on the spot they stood to their determination not to concede the demands of the British Minister,

* These figures are incorrect, even supposing that the Japanese *ri* is intended, they do not represent more than about a third of the size of Norway, which is given in Bartholomew's Gazetteer at 125,646.39 *ri*.

and therefore they said the granting of a period of time in which to deliberate and come to a conclusion was altogether unnecessary. On the day in question, the Princes and all the Ministers with Ex-Viceroy Li Hung-chang, were at the Yamén to meet Sir Nicholas. The conference lasted between two and three hours, and it ended by the British Minister tabling his ultimatum to the effect that if in four days (the period expiring on Sunday evening at sunset, 29th September) a favourable decision was not arrived at, he would put the whole affair into the hands of the Admiral. The Minister gave them till 10th October, a period of 14 days, in which to issue the edict degrading and banishing Liu Ping-chang, the late Viceroy of Szechuan. On Sunday the edict was issued and it is eminently satisfactory in every respect, although not banishing the degraded official. The local magistrates have their penalties yet to be meted out to them after their cases shall have been investigated. This puts an end, humanly speaking, to all further trouble in China against foreigners. He will be a bold official who in the face of this edict of degradation and deprivation for ever from office will attempt directly or indirectly to stir up trouble against missionaries and foreigners.

The American Commission to inquire into the circumstances of the Szechuan riots started from Tientsin on October 6th. The route selected is almost the same as that followed by Messer Marco, so many years ago. It is a two months' journey, some 1,700 miles, and the Commission can not hope to begin its work until seven months after the occurrences it has to investigate. The Commissioners will travel through the capitals of Chihli, Shansi, and Shensi, and will receive from the Governor of each province a cavalry escort of 50 troopers to accompany them to the capital of the next province. A quicker and easier route would have been *via* the Yangtze river, but the idea of the United States Government is to advertise as widely as possible the fact that a Commission has been sent by the great Republic, under the compulsory auspices and protection of Chinese officialdom, to investigate anti-Christian riots and determine the penalties impossible for the destruction of foreign property. From that point of view, the long, weary journey of two months will probably bear commensurate fruit.

A batch of nine men have been executed at Chêng-tu for participation in the riots of last May. We take the following paragraph on the subject from the *N.-C. Daily News* :—

According to despatches received from Chêngtu, nine of the rioters concerned in the disturbances last May were executed by order of the Viceroy Lu on the 10th ult. The names of the condemned were Wang Hsiang-yo, Hsia Lao-hsing, Yang Ying-shih, Tung Lao-wu (a Manchu), Wang T'sih (who volunteered to die for his relative who is the only son of a widow), Liao Kuang Pi-ku, Fu Ma-yao-ku, Wu Lao-wu, and Chang Sz-ma-ize also nick-named "the Hungry Tiger." These men decorated themselves with red cloth tied round their heads as braves (*Ying hsing*), and some had coloured paper tied like aprons round the waist. They conversed gaily with the crowds that followed the procession to the execution ground and some sang warlike songs of ancient heroes. There were no regrets expressed as sometimes happens in such cases, except the harangue of Tung Lao-wu, the Manchu, who cried out to the crowd on the execution ground :—"We are here to die to-day; but in what a manner! Is this the reward we deserve, and ought not *our friends* to have come to bid us a farewell? Really it makes one indignant to think of this!" There was apparently a covert meaning in these remarks for they had friends and sympathisers following them by the thousand—and probably referred to the instigators of the riots, whom Tung Lao-wu really expected to escape scot-free. The Provincial Judge and principal civil and military local authorities watched the executions. There are still a number of prisoners waiting in the Yamens probably to be tried before British and American Commissions when the time comes. This execution took place for certain reasons best known to the officials, and perhaps was really meant as a warning to the populace to abstain from further violence against foreigners.

The men that made such a savage attack on Dr. Sheffield in Tungchow three months ago, nearly accomplishing his death, are confined in the Tungchow prison, their hands free but their feet in wooden stocks. They threaten, if they ever get out, to kill every foreigner they can find and to make mince-meat of Dr. Sheffield.

According to the *China Gazette*, several of the German officers engaged for service at Nanking during the war, have returned from Shanghai, completely dissatisfied with the arrangements about their pay.

Mr. Wright, third engineer of the Blue-funnel steamer *Sarpedon*, died in the Shanghai General Hospital on October 11th. He was turning on the steam in the pipe on deck connected with one of the winches a week previously, when the valve blew out, the steam scalding him fearfully, and the force of the explosion throwing him across the open hatch into the 'tween-decks. He was able to get up and call for assistance, and on the steamer's arrival at Shanghai was taken to the Hospital, but all the care that was given him was unavailing. He was only 25 years old.

According to a despatch received in Shanghai from Peking, the Grand Secretary Li Hung-chang having been delegated full powers to conclude the Commercial Treaty with Japan, has really no proper office, outside the Inner City, where he can conveniently meet the Japanese Minister. To supply this want the Emperor has ordered apartments to be prepared for him in the Tsung-li Yamén and has also appointed a staff of eight secretaries and deputies to serve under him. A wooden seal containing the legend: "The seal of the Chief High Commissioner, granted plenary powers by Imperial edict to conclude the Treaty," has also been given Li; but the fact of its being a wooden one suggests the transitory nature of Li's "plenary powers," and that as soon as this Treaty has been ratified the ex-Viceroy will be relegated to the literary sinecure provided for him in the *Nui-kô* or Inner Council Chamber. It is generally believed, though, that it will not be long before the Emperor will be obliged to bring him back into full power.

It is reported in Shanghai that the Rev. Timothy Richard is now in Peking busy making arrangements for establishing a Chinese daily paper in the capital, and that this scheme has received the hearty support of a large number of distinguished officers connected with the Imperial Court. There is even a report that the Emperor, upon being informed of Mr. Richard's intention, was much pleased at the idea, hoping that when it is realised he will be easily informed of what is going on in the world without being dependent on Court gossip or the uncertain memorials of his Ministers.

The *N.-C. Daily News* says that two Edicts dated the 13th instant were received at Shanghai from Peking, appointing Yü Lu, the Tartar-general and Brevet Viceroy at Moukden (Fengtien) to the post of Tartar-General of Foochow and Superintendent of Customs at that port in the empire. It will be remembered that Yü Lu, as Governor-General of Fêngtien or Western Manchuria, was during the recent war degraded step by step successively for the fall of the Yalu cities and those in the Liaotung Peninsula, and for the loss of Newchwang and Yingkow, so that by this time, although still retained in office, the button on his official hat ought properly speaking to be merely a gilt one. With his new appointment, however, all his former ranks and titles are returned to him, which shows that in spite of losing three-fourths of his Viceroyalty to the Japanese, Yü Lu is still in high favour with his Emperor. By the same decree the famous Tartar-General E-k'ô-t'ang-à (also described as "General I"), commander of the Tartar forces that opposed the Japanese in East and North Manchuria, is appointed to the post vacated by Yü Lu, as a reward for his (E-k'ô-t'ang-à's) services last year and this spring. By another decree of the same date, Shou Ying, one of the Vice-Presidents at Peking, has been appointed to the Military Governorship of Jeho, *vice* Ch'ung Li, whose illness was reported last week.

The *North China Daily News* reported the other day the existence of another insurrection in Kwangtung, this time in one of the districts belonging to the prefecture of Kaochow, on the sea-coast and about 500 miles to the north-east of Canton. According to an edict of the 12th inst. wired to Shanghai, the Vice-President of the

Court of Censors, Yang Yi, a native of Canton, has memorialised the Throne of this rising and denounced the inability of Li Chih-fan, the district magistrate of Wuch'uan-hsien, of Kaochow prefecture, for having been unable to nip the insurrection in the bud when it began in his district. The Viceroy and Governor of the province having been instructed to investigate the matter, report that the district magistrate in question had neglected nothing to suppress the rising and had succeeded, by offering large rewards, in capturing a number of insurgents, but that owing to the limited means at hand he had been unsuccessful in capturing the two chiefs of the rising, nick-named "P'ang Lai" and "Cha Wei" (Eczema and Dregs), who were therefore still at large. The said district magistrate is therefore, by this decree, removed from office and the Viceroy T'an is commanded to send troops to suppress the insurrection, which, as the denouncing Censor Yang Yi reports, "threatens to assume serious dimensions if not promptly and vigorously dealt with."

The local native papers, says a Shanghai contemporary, accuse Liu Wei-yuan, the Formosa millionaire who fled from Taipeifu to Amoy about the time of the collapse of the Formosa Republic under President T'ang, of having, through his agents in Formosa, offered five million dollars to the Japanese for the privilege of retaining his immense estates in the island, offering also to become a citizen of Japan. The speedy fall of Taipeifu at the time of the Japanese attack on Kelung is also attributed to the treachery of the millionaire, whose friends were the first to notify the Japanese of the defenceless condition of the Formosan capital. Liu Wei-yuan, it will be remembered, is a descendant of the chief lieutenant of the celebrated Chinese pirate Koxinga, who drove the Dutch out of the island at the end of the Ming dynasty. Upon the occupation of Formosa by Koxinga's hordes, he divided up the island amongst his lieutenants, the chief share naturally falling to Liu Wei-yuan's ancestor and remaining in the hands of the family until the present day. For Liu Wei-yuan's numerous contributions to the government in times of financial crisis, amounting to nearly eight million dollars during the last fifteen years, he was made Director of the Court of the Imperial Stud—one of the five Courts attached to the Imperial Palace—or a mandarin of the 3rd rank, class A, and also Vice-Imperial Commissioner of Agriculture for Formosa, a Board established for the encouragement of agriculture amongst settlers as well as for the civilisation of the savages. Upon the cession of Formosa to Japan, however, Liu Wei-yuan resigned his posts on the score of sickness, which was permitted by Imperial decree. This left him free to become a Japanese subject, if he considered the change advantageous.

The *Wantai*, the Foochow built cruiser which ran down and sank the *Birkhall*, at Woosung recently, has been paid off, according to the *China Gazette*, and put out of commission for three years in order to save sufficient money to make up for the loss the Chinese Government has been let in for over the accident, and she has gone to the Kiangnan Arsenal to lie up for that period. When this decision was made known amongst the crew, and they were all told they would be dismissed in order to save their wages (which, by the way, were seldom paid), there was a regular mutiny on board, and Captain Yung, who himself, poor man, was far from a gainer through the accident, as we shall presently relate, had to sleep that night with two revolvers under his pillow in order to be ready for the Chinese crew who were expected to rise every moment. Captain Yung, who is a very advanced young Chinaman, educated in the highest naval schools in Germany, has been stripped of all his private wealth, which goes against the bill presented by the owners of the *Birkhall*, and has been exiled to the "fever regions" for three years as a punishment for saddling his Government with so much expense as the settlement of the *Birkhall* claim will entail, at a time when China has as much on her hands in the financial line as she can conveniently tackle.

THE KOREAN IMBROGLIO.

PUBLIC opinion will not be likely to find any extenuation of the part played by Japanese in the Korean *coup d'état* of the 8th instant. Nothing more unfortunate for the reputation of this country could possibly have occurred. Standing before the world as guardians of the wretched little Kingdom's morals, pioneers that should lead its people into the path of civilization, the Japanese themselves have coöperated in precisely the kind of crime most opposed to the principles they profess. It is a miserable business. What we have to avoid, however, is an indiscriminate verdict. Considering the evidence thus far available, it appears just to distinguish between the actual incidents of the *émeute* and the general plan. It may be that the assassination of the QUEEN entered into the programme conceived by the Japanese *Soshi*, whose secret conference at Yongsan immediately preceded the *coup d'état*. But we can not believe that any Japanese officers or officials were privy to such an act of brutality. A more rational hypothesis is that the conspiracy, as represented to those whose share in it constitutes the most serious disgrace to Japan, did not extend beyond the deposition of the QUEEN and the final overthrow of the MIN faction. On the purpose entertained by the TAI WÖN-KUN, indeed, we have no warrant to put anything but the worst construction. The old Prince's unvarying loyalty to deeds of blood, throughout his whole career, makes it very probable that he intended the QUEEN'S violent death to be an essential feature of the affair. With her decease the power of the faction opposed to him would be finally broken, and, moreover, events had shown of late that his own personal safety, not merely his recovery of political influence, depended on getting HER MAJESTY out of the way. It is true that her public deposition and disgrace would have served that purpose equally well, but looking back to the long struggle in which this clever, resourceful woman had always defeated his attempts to overthrow her, the TAI WÖN-KUN may not unreasonably have thought that nothing short of her death would suffice to bring him peace and power. Whatever may be the extent of the old Prince's savagery, however, we are most unwilling to think that educated Japanese were privy to such a deed: their purpose probably did not extend beyond a reversal of the political situation, the deposition of the QUEEN and the disgrace of the MIN faction. But when a man sets fire to a dwelling-house, the law holds him guilty of manslaughter, as well as arson, should any lives be lost in the conflagration, though no idea of taking life originally prompted his act. So, too, every Japanese that countenanced or coöperated in the *émeute* in Söul must accept responsibility for everything that occurred in its

sequel. Nothing can mitigate the disgrace except a frank and full national condemnation of the affair, a searching inquiry into the details, and unflinching punishment of the guilty persons. We observe with pleasure that the Government is not disposed to hesitate. The almost instantaneous recall of Viscount MIURA, together with some forty members of the Legation and Consulate at Söul, is a measure of the most uncompromising nature, nor can we doubt its justification, seeing that the return of Mr. HOSHI TORU to Tokyo has placed the Ministry in possession of sufficiently explicit information as to the action of the Japanese officials in Söul. The *Nichi Nichi Shimbun*, indeed, mentions a report that Viscount MIURA himself was privy to the *coup d'état*, and that he suffered the arrangements to proceed, despite the strong remonstrances of Mr. SAITO SHUICHIRO, and two or three other far-seeing persons. Our contemporary would scarcely allude to such a story unless there were reasons to credit it. If it be true, we shall not be surprised to receive confirmation of the rumour that Viscount MIURA has committed suicide. Judging from the tone of the vernacular press, he and all those directly or indirectly concerned in the disgraceful affair will go down in history as objects of national execration. They may have thought that in the deposition of the QUEEN lay the only remaining chance of saving the cause of reform in Korea, but although that hypothesis would tend to vindicate their motives, no conceivable theory can excuse their methods. We have not the smallest doubt that without direct interference in the domestic affairs of the Kingdom, no programme of administrative and fiscal regeneration has any chance of success, and we perceive plainly enough that, in view of the attitude assumed last April by Germany, Russia, and France, direct interference by Japan must involve serious international complications. But it would be incomparably better to bow to the logical necessity of direct interference, defying its consequences, than to have recourse to the disgraceful alternative illustrated by the events of the 8th instant. If the sight of immediately impending administrative relapse, and the menace of retrogressive intrigues obscured the moral vision of some Japanese in Söul, it is re-assuring to find that their countrymen at home take a more wholesome view and are not slow to give expression to it.

ANONYMS AND ANONYMITY.

WITHOUT desiring to take any part in the controversy now carried on in these columns between defenders and deniers of Old Testament prophecy, we feel constrained, in our editorial capacity, to notice a remark made by the Rev. J. M. MCCALED in his last letter. The Rev.

gentleman, referring to his opponent "Secularian," writes:—

While there may be certain circumstances from which one is justified in withholding his name from his own writings, it is to me nevertheless a reason of suspicion that the writer is either ashamed of his position or lacking in a due degree of sincerity in actually believing what he claims. That such suspicion may not rest upon Mr. Secularian, I request that before he attempt further objection to my letters, that he either give me satisfactory reason, by private note, for writing over an assumed name changing with each succeeding letter, or give his real signature. Indeed, Sir, if the thinking world of to-day are, as indicated, with Mr. Secularian, I should think he would be pleased to be identified with such honourable company. I may be far behind the times and exceedingly ignorant, yet I am nevertheless so sincere in what I hold that I am anxious that my name go down to posterity on the side of Christ and his saints. While Christian people generally have not abandoned the prophecies as my critic seems to think, I may be allowed to suggest perhaps a truer statement, that many of the more experienced, avoiding my mistake, rather than be unfairly treated before the reading public, and be pained by having that Holy Name evil spoken against, have abandoned such critics as Mr. Secularian.

This paragraph contains one very grave assertion, seriously impugning not alone the good faith of "Secularian," but also that of the *Japan Mail*. Putting aside for the moment the question whether or not anonymity is permissible and proper in such controversies, we can not but think that Mr. MCCALED should have exercised more discretion than to accuse "Secularian" of "writing over an assumed name changing with each succeeding letter." It is a rule invariably observed by all respectable journals—a rule founded on the plainest principles of integrity—that communications on the same subject from the pen of the same writer must not be inserted if they have different *noms de plume* appended. There can be only one object in using various signatures under such circumstances, and that object is to deceive the public; to convey the false impression that writers as numerous as the signatures employed are ranged on the side of arguments advanced by only one person in reality. No honest editor, we repeat, would lend his columns for the purposes of such simulation, and no honest correspondent would resort to it. Mr. MCCALED doubtless preferred his accusation without reflecting on its significance, and will make due acknowledgment when he recognises the nature of the deception ascribed by him to both our correspondent and ourselves. We do not pretend to say that the rule here laid down is observed by all the foreign journals published in Japan. It is on record that an English newspaper of Yokohama suffered two correspondents—one a reporter on its own staff, the other an *employé* of the Japanese Government—to publish in its columns letter after letter, all bearing differentonyms and all devoted to abuse of the *Japan Mail*. The wretched fraud was continued for some years, but beyond the narrow circle of imposters privy to it, no one could have been found to defend it for an instant.

As to the question of anonymity, it may be advisable to say a word from an out-

sider's point of view. We are constrained to think that "Secularian's" prudence in not writing over his own signature, is vindicated by the attitude of Mr. McCaleb himself. The one paragraph quoted above sufficiently illustrates our meaning. Unfortunately, the time has not yet arrived when defenders of Orthodoxy can be persuaded to treat their opponents as every sincere and conscientious thinker is entitled to be treated. To all digressions from the narrow path of traditional faith there attaches a stigma the value of which as an unfair means of deterring criticism is only too well understood. No man deserves to be hounded for his opinions, so long as they are not immoral or degrading, yet the history of religious controversies forbids us to hope that any man assailing orthodoxy to-day can escape a certain measure of opprobrium. Assuredly he would be bound to face that danger if by proclaiming his identity the cause of truth could be promoted. But how can the value of Old Testament prophecies be affected one tittle by publishing or withholding "Secularian's" real name? Mr. McCaleb must appreciate that point quite as clearly as we do, and when he seeks to discredit "Secularian's" arguments on the ground of their formulator's anonymity, he simply points the wisdom of excluding the personal element altogether from such discussions.

POPULAR QUALIFICATIONS AND OFFICIAL ORDINANCES.

THE large interval by which popular sentiment is separated from practical administration in Japan has been frequently illustrated. Claiming to speak in the name of the nation, the Opposition in the Diet protests, every session, against all legislation tending to restrict the liberty of the subject. At the outset of parliamentary institutions the extremists on the Radical side—then a numerous and influential coterie—clamoured so loudly for a large extension of the franchise and liberal interpretation of the Constitution, that foreign critics began to predict for Japan the future of a South-American republic. That mania passed away in part, but in some other respects the Representatives' estimate of their constituencies' qualifications remained as high as ever. Absolute freedom of speech and pen—liberty for the safe enjoyment of which not more than two or three peoples have shown themselves sufficiently advanced—has always been demanded by an overwhelming majority of the Lower House, and would long ago have received legal sanction did not the Upper House stand in the way. So, too, each session has seen the Representatives unconditionally rescind the Peace Preservation Regulations, and each rescission has been followed by incidents conclusively demonstrating the utility of the obnoxious law. An equally

conspicuous example has just been brought into special prominence by the Korean *coup d'état*. Last year, the Government issued an urgency ordinance imposing restrictions on the passage of Japanese subjects to Korea, the object being to keep out an element so disturbing as the Japanese *Soshi*, who, ever since the celebrated conspiracy in which certain members of the present House of Representatives took a leading part, have betrayed a marked disposition to regard the politics of the little kingdom as a proper arena for their stalwart performances. In the ordinary course of constitutional routine the Government had to submit the Ordinance to the Diet in its next session, and the House of Representatives, true to its habitual rôle, refused to sanction the law, which consequently became, from that time, inoperative. Now, within a few months of the Diet's action, the public learns that Japanese *Soshi* have just taken a leading part in a disgraceful *émeute* in Söul, bringing discredit on their country and impairing her foreign relations. We can scarcely imagine any more striking evidence that the Government's knowledge of the nation's administrative needs is much more accurate than the Diet's estimate of popular qualifications. It is, of course, a most wholesome feature that the people's representatives ask for a fuller measure of liberty than they enjoy, and attach to the rights of the subject a higher value than they are yet entitled to command. Such a state of affairs indicates that legislative progress remains fully within the bounds of safety. But we must confess that the reasoning of the Opposition organs at the present juncture does not strengthen the claims they habitually advance. When it was pointed out that a portion of responsibility for Japanese participation in the Söul *émeute* must be borne by the House of Representatives, which had rescinded a measure directly intended to avert such occurrences, the Opposition journals ridiculed the assertion, contending that Consuls in Korea, in the ordinary discharge of their functions, have ample power to deport questionable characters. It is incredible that an argument so shallow should be gravely advanced. The Government's Ordinance was a preventive measure, whereas the deporting power of the Consuls is punitive. There is all the difference in the world between keeping Japanese *Soshi* out of Korea lest they should foment disturbances there, and sending them out of Korea after they have fomented disturbances. Then, again, we find the Opposition's organs pointing with triumph to the fact that responsible Japanese officials and officers were privy to the *coup d'état*, and asking how the exclusion of *Soshi* from Söul could have affected that phase of the affair. Yet no intelligent writer can fail to see that the only really disgraceful incident of the *coup d'état* was the assassination,

and that, as that foul deed was perpetrated by the *Soshi*, the responsibility of bringing obloquy upon their country rests with them alone. The *coup d'état* itself was not a shameful affair. In so far as it imported military force into the domain of politics, it could not escape condemnation. But had its result been limited to deposition of the QUEEN, final disgrace of the MIN faction, and restoration of the programme of national reform, neither those planning it nor those executing it need have hung their heads. The one shocking outrage that put a halter round the neck of the whole business was the murder of the QUEEN and her ladies in waiting. For that piece of savagery the *Soshi* alone have to answer, and it is the obliquest persiflage to contend that because respectable Japanese were privy to the general scheme of the *coup d'état*, the presence or absence of *Soshi* at the moment of execution was a point of no consequence. Two things, so far as the evidence goes, combined to decide the fate of the unhappy QUEEN. One was the barbarous injunction of the TAI WÖN-KUN as he set out from his house in the dead of night, "Let the QUEEN be dealt with according to expediency; the other was the fact that the interpreters of that injunction were *Soshi*. In truth the Diet, when it rescinded an Ordinance now of necessity re-issued, showed that it lacked the Cabinet's perception of administrative requirements and of the people's condition.

THE LEAF.

(COMMUNICATED.)

THE season for flowers has largely passed. The great parable of the fading and falling leaf is once more represented before us in many-coloured lights. And while we gaze with wonder at the kaleidoscopic glory of the autumnal spectacle, we think of the nearly 200,000 species of plants, and are overwhelmed at the thought of the countless varieties of colour, form, and size of this vast multitude. It is worth remarking, however, that besides being rich in colour and graceful in shape, they are very simple in structure, and are "among the most exquisite productions of nature's loom." Submit the leaf to the microscope and you find under the cuticle several layers of elongated cells, beneath which is a tissue of loose but exceedingly delicate texture, while each leaf is strengthened by ribs of woody tissue.

A singular fact, perhaps first dreamed of by LINNÆUS, propounded as a theory by WOLFF, and popularized by GÖTTE, is now accepted as a correct scientific theory, and taught in all the schools: that all the parts of a plant—the seed, the stem, the blossom, the fruit—are but modifications of a leaf. "The stem is a leaf rolled up tight; the blossom is a leaf transfigured for a higher purpose;

the fruit is a leaf changed into a receptacle for the seed; and the seed itself is a leaf packed together in a case to protect it from unfavourable weather, and furnished with a sufficient amount of food for its unfolding and growth into a new plant in more favourable circumstances." The discovery and establishment of this great truth revolutionized the study of Botany. It solved mysteries, hitherto insoluble, in the singular metamorphoses that plants undergo. It gave valuable assistance to the florist and horticulturist in the development of flowers and fruits; and it gives us the clue to find our way through the vast varieties of form and structure in the vegetable kingdom, and furnished another striking illustration of the unity that may be traced throughout nature. We are not as one lost in a forest through which there is no pathway; this principle will conduct us safely through all the mazes of the labyrinth.

A necessary food of the plant is carbonic acid gas. In early ages of the earth, long before man's appearance, the air was charged heavily with this gas, which would have quickly destroyed all animal life. It nourished, however, a luxuriant vegetation. Gigantic plants were produced, which in course of revolving ages became coal-beds in the bowels of the earth. Thus the air in process of time was purified and stores of fuel were provided to enable our race to live upon the earth. Still the leaves of the trees are purifying our atmosphere and keep the air in a condition fit for human lungs. And were it not for them, carbonic acid gas would accumulate to such an extent that all animal life would perish. Wonderful is "the balance that is constantly kept up between the animals that contaminate the air and the plants that purify it; the refuse of the one kingdom being the food of the other!"

This is not the only wonder; everything concerning the leaf is wonderful. Wonderful is the adaptation of the form of the leaf to the purpose that it has to serve, not only in reference to the conditions and requirements of the plant itself, but also in reference to its place and use in the economy of creation! Wonderful the variety of forms that the leaves display in all the three great classes into which the vegetable kingdom has been divided! Wonderful, too, the variety of colours; not only all the varied shades of green, but all the other tints, in the beautifully-foliaged plants, gay as any flowers! And wonderful, very wonderful, the chemistry that, out of black mould and invisible vapour, builds up the stately structures we call trees, towering aloft in pillared majesty, crowned with a glorious capital or dome of green!

No more exactly does law regulate the movements of the planets in their spheres than it regulates the various arrangements of the plant. Law is seen, as Dr. MCCOSH has taught us, in the fact that

the spiral regulates the positions of the leaves; in the correspondence between the distribution and disposition of the branches, and the disposition and distribution of the leaf veins; in the correspondence between the angle at which the branch goes off, and that at which the lateral veins go off; and in a correspondence between the curve of the vein and the curve of the corresponding branches. Very interesting it is to see the strong liking that leaves seem to have for light, without which they could not throw off the oxygen so indispensable to our life; the agitation as of fear that some seem to feel on coming in contact with other bodies, the Mimosa sensitively shrinking and drooping at the slightest touch, or even if you breathe upon it; and the protection that is afforded to some leaves by an arrangement of hairs, to others by their form and structure, as in exposed places they are narrow and rough, and to others again by their defensive armour of prickles, thorns, or stings. What is all this but a Divine contrivance of means to ends, which should fill us with awe as in the immediate presence of GOD! Well has MILTON sung:

By contemplation of created things—
By steps we may ascend to God.

Dr. McMILLAN contends that the green leaf is the source of all the life of the world. He says that it is "by its agency alone that inert inorganic matter is changed into organic matter. The green leaf alone conserves and creates. Everything else consumes and destroys. It is because of its ministry that in a world once burnt up is found an abundant supply of combustible materials for all our wants. The quiet sunbeams, working by means of the most delicate of all structures, the cellular tissue of the green leaf, by a process the most subtle and wonderful in the whole range of chemistry, have partly undone the work of that fire; and whatever now exists on the earth unburnt—wood, coal, animal and vegetable tissue, the wondrous body of man himself—we owe to that simple agent, the green leaf."

Let us pause for a moment to notice some special idiosyncracies and uses of the leaf. The Sundews capture and devour insects. No sooner do the latter alight than they are entangled in a sticky substance that holds them fast. Thereupon the tentacles close over the body of the insect and never uncurl until the victim has been digested and absorbed into the substance of the plant. The Areca of the West Indies, which shoots up a hundred and fifty feet or more, produces a leaf six or seven yards long; while from ten to twenty people parched by the rays of a vertical sun, may find shelter under a single fan-shaped leaf of the Talipot Palm of Ceylon. Besides the shelter it affords, the uses of the palm-leaf are manifold. Orientals say it can be applied to 376 uses. The leaf of

the Cactus on the arid prairies is fleshy and juicy; having no evaporating pores in its skin, the moisture it draws from the soil is retained. The Pitcher-plant holds up to monkey or man its cup of pure water, covered with a lid to protect it from the dust. The Eucalyptus leaf, which is furnished with multitudinous breathing pores, exhales into the atmosphere during twelve hours several times its own weight of water, and secretes large quantities of an aromatic essential oil; it is these properties that render it useful in effecting great sanitary changes in the regions where it is planted. The Rain-tree of South America grows to a height of sixty feet with a diameter of three feet at its base, and possesses the power of attracting, absorbing, and condensing a vast amount of humidity. Water is always dripping from its trunk, and the ground about it is rendered marshy. It is in the heat of summer, when the rivers are nearly dried up, that the tree is most active. In a leafless world there would be no rains and no streams. Let the slaughter of forests, woods, groves, and orchards go on and no trees be planted in their stead, and it will not be long before no rain clouds will form, no streams will flow, the world will become a dreary desert. On the other hand multiply your trees, and the wilderness becomes a garden of the LORD. For the leaf pumps water from the ground through thousands of tubes and sends out into the atmosphere invisible vapour, which, condensed, falls in showers that replenish the springs and streams. An acre of trees, it is affirmed, will yield 800 barrels of water to the air in 24 hours.

The leaf is also a mighty worker in man's behalf in that it is our best conductor of electricity. This is one of its great functions, to handle electricity. It is said to be three times as effective as the metallic points of the lightning rod. The leaf is always pointed, and its pointed edges are all adapted to this end of seizing and transmitting immense quantities of electricity from the clouds to the earth.

And when it has spent its strength in the service of man

The leaf presents to God its finished story,
Receiving at His hand its meed of glory;
And floating gently down with mission ended,
Moulders beneath the bough its life defended.
Freely it gave its all the tree to nourish,
That by its tiny power the oak might flourish.
For 'tis the blossomed branch whose vital juices
Fed by the foliage dense the fruit produces.

And men gather them up and use them as mulching material, as stock bedding, and as a stable absorbent, without a thought of the immense and inconceivable value of the leaf to us and the world we live in. It has rescued us and all that is of life in our world from the first great conflagration; it has built up the mighty monarchs of the wood to which we are indebted for our homes and so many of our necessities and comforts; it has given us pure air, and kept it pure; it has furnished

us with our springs and streams and wells ; it has averted from us the lighting stroke ; and in the autumn, winding up its useful toils, it is transfigured before our eyes, and puts on all the glories of the chromatic scale, all the rays of the sun's spectrum, which have fallen upon it in its earlier life, reappearing with a richness and variety of colouring, splendid beyond the power of the artist to depict.

It would be well for us if with the *Duke* in "As You Like It" we could say :

This our life, exempt from public haunt
Finds tongues in trees.

What an eloquent tongue has TENNYSON'S "Talking Oak!" In the fable of Jotham, that fine bit of satire, stinging and true, how admirably do the Olive, the Figtree, and the Vine discourse, and how true to its grovelling, base-born nature is the speech of the Bramble! "He who understands," says Dr. McMILLAN, "the typology of plants, finds an eloquent tongue in every leaf, and a suggestive sermon in every tree and flower. He walks among continual and delightful surprises and never wearies even in the most monotonous season. At every step he is arrested by some new proof of his Heavenly Father's wisdom, which leads his mind out into far-reaching vistas of thought." Leaves will tell him of GOD'S care over the lowliest things and of the lofty uses to which He will put them. Like the famous Sibylline leaves of old, they will utter oracles of profound significance. They will teach him the unity of the kosmos, and how all things are bound together in one by Him who is the sole Creator and Governor of the universe. The fading leaf will warn him of his own mortality, for how slight is the hold—as slight as the leaf's—he has on the tree Igdrasil, the Tree of Existence. The tree abides, but the leaf perishes. But the teachings of the leaf are not pessimistic. It does not teach that "death ends all." It gives us many intimations of the trees that grow on either side of the River of Life, whose leaves are for the healing of the nations, where there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain, for the former things shall have passed away.

LETTER FROM FORMOSA.

FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.

Aboard the *Satsuma Maru*, Military Transport,
Ponghion Harbour, Pescadore Islands,

October 10th, 1895.

The following correspondence has been exchanged between Governor Kabayama and the Black Flag Chief General Liu Yung-fu. Being very anxious to obtain a copy of these letters and having been specially favoured in having my wishes gratified, I express my thanks to the Governor Count Kabayama and to Admiral Tsunoda, to whose kind services in my behalf this rather extraordinary request was granted.

Admiral Viscount KABAYAMA, Governor of Formosa sends this communication to LIU YUNG-FU (Liu Yung-fu).

Last year war was declared between Japan and

China, and as a result of the battles that ensued the Chinese troops were defeated at Asan and Pingyang. Their navy was defeated at the battle of the Yalu, and later the important positions of Port Arthur and Weihaiwei were taken. The Chinese lost all the vessels belonging to the northern squadron, and thus the Capital of the empire was endangered. The Chinese Emperor then sent his plenipotentiaries, Li Hung-chang and Li Kaho, to propose terms of peace, and the Japanese Emperor appointed his plenipotentiary to meet them. Negotiations were conducted at Shimonoseki and terms of peace were agreed upon, in which one of the conditions was that all Formosa and the Pescadore group should be ceded to Japan.

Lately the Chinese Plenipotentiary, Li Kaho, and I, the Governor of this island, met at Kelung and the islands above mentioned were formally handed over. The Administration by the Japanese Government was then established at Taipeh-fu and the island taken under our rule. As I hear you occupy Tianan with the intention of resisting our occupation of that portion of the island, I wish to point out to you how fruitless will be your attempts to oppose us. With the whole north at peace you will be unable to obtain reinforcements, and shut out from outside help as you are, success is almost impossible.

It is easy for you to understand this.

Your name is widely known, and you have the reputation of being a brave man. You are well acquainted with international law, but you go contrary to its precepts, as well as directly disobey the commands of your Emperor. In this you conduct yourself in the manner of an ignorant person.

If you will respect the orders of the Chinese Emperor, disband your army, and give peace to the country, I will beg my Emperor to send you back to the mainland with honors worthy of your rank, and the soldiers in your command will be pardoned and given passage to their homes.

We sent from Taipehfu, Kelung, Gelan, and Hobe about 8,000 Chinese soldiers, carrying some with our own ships and in the case of others furnishing them money to purchase their passages on merchant ships.

As I have long been acquainted with your name, I offer you these suggestions and advice. Whether you choose to accept them or not, remains with you.

The above letter was sent to General Liu by a special Chinese messenger who returned with the following answer some time in September.

General LIU YUNG-FU, Minister and Military Governor of the defences of Formosa, General-in-Chief of Fukien and Formosa, gives this answer to His Excellency KABAYAMA, Japanese Governor.

I received your communication; and offer you my thanks.

In this letter I find much that I do not understand. But of other points I will try to inform you.

The Chinese Emperor, having succeeded in a dynasty lasting several hundred years during which good was always done for our country, and friendships were established with other countries, has endeavoured, even to a greater extent than his ancestors, to do good for his own people and to be at peace with all nations. To make firm his friendship has he not sent Ministers to every country? And your country, Japan, being in Asia and a near neighbour, should have closer relations than all others, and by becoming strong allies we would thus both be strengthened. But your country has not thought of that, for without cause you declared war against us. Our country possessing many brave soldiers, pledged to battle for our Emperor, there with arms in hand, were anxiously awaiting your coming. But in our army there were some people who were not competent and therefore did not take advantage of the right opportunities, which resulted in our losing Asan, Ping Yang, Port Arthur, and Wei-hai-wei. The battles were not lost because our soldiers were not brave, but because certain of our people could not comprehend the right time and plan of attack. But even if you think this was not so, you must admit that although all Japan's soldiers were engaged they were unable to fight their way into the heart of our country.

On the fourth month our good Emperor, unwilling that his soldiers and people should longer suffer, made peace.

I, Minister, with orders to defend Formosa, must cast my lot with the people:

Your letter says I am going contrary to the orders of my Emperor; it is this that I cannot understand. Also I cannot understand or believe that Formosa and all its islands have been given to Japan by order of my Emperor, and that his representative Li Kaho formally handed over the islands to you. If this is all true, why has not my Emperor notified me? And why did not Li come to Tianan rather than Kelung to inform me?

I wish to ask you whether, since the olden times, it has not been the rule and the custom when a person has been entrusted by the Emperor with the defence of a country to continue to oppose the enemy until orders are received by the Emperor to do otherwise. You are Governor and Chief of the army, what do you think of this—am I not right?

I hear now by reports from my people in the north that your army is without discipline, that your soldiers are ravaging women, burning all towns, and killing all the inhabitants, and the people in Tianan are very anxious in consequence.

The people are under Chinese law and obey well the wishes of their master, and are flocking to me asking my aid.

Such being the feelings of the people, and I, Minister and General, being the Emperor's Representative and obeying his orders, I must protect this country and its people until the end.

Thus do I lay open to you my mind. It expresses my wish—my will.

You are capable of understanding the feelings of the people, and if I have made my position clear to you, I will be very glad. I thus have the honour of sending to you this my answer.

Aboard the *Kioto Maru* Transport,
Off Pong-lian, South Formosa Coast,

October, 11th, 1895.

As the advance guard is aboard this ship, I have changed into her.

Yesterday at daybreak the northern expedition with Prince Fushimi, Fourth Brigade Commander and General Takashima, Commander, departed for Pawtoy-chui, North of Anping.

At 3 p.m. yesterday our Expedition consisting of 28 steamships, escorted by several men-of-war, left the Pescadores for Pong-lian, where we arrived this morning at daybreak. The transports carry 13,459 soldiers and military coolies, 2,725 horses, besides 3 steam launches, 72 large Japanese sampans, and 10 big cargo boats to be used in landing.

It is very quiet this morning, scarcely a breath of wind and the sea as smooth as a mirror, although when we left the Pescadores it was blowing a gale of wind. Owing to the deep water all the transports lie close to the shore, and we shall have no difficulty in landing. There are a few houses scattered about on shore, but no soldiers can be seen. Pong-lian lies about twenty-five miles south of Takao.

CORRESPONDENCE.

THE PROBLEM OF HIGH-CLASS EDUCATION BY MISSIONARIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My attention has been called to an article entitled, "The problem of High Class Education by Missionaries" which appeared in the *Daily Mail*, of Friday, October 18th. Perhaps it might seem possibly unnecessary, even improper, for a member of the mission immediately concerned to refer to the important questions dealt with in that article, and I should have hesitated to do so were it not for the fact that some of your readers have gained the impression that the writer was, to a certain extent, in the confidence of the gentlemen, named in the article, who are now in Japan at the invitation of the Japan Mission of the American Board. It is only fair to them, and, indeed to all concerned, to say that they have as yet given but little time to the consideration of the Doshisha problems. They have given no intimation of what their counsel to the Mission and the Board will be, and the presumption is that they have not, even provisionally, formed an opinion upon these many-sided problems.

I have said advisedly that these gentlemen are here at the invitation of the Mission, for it must not be supposed that their coming betokens distrust of the Mission on the part of the managers of the Board. They come because the Mission for many years has sought such counsel and has felt, especially during the past year, that the grave importance of the questions confronting it demanded the careful study of fresh and unbiassed minds. The same considerations have led the Japanese Christians to second the Mission's request.

It is a mistake to suppose, as the writer of the article apparently does, that there has been a growing distrust on the part of American Christians of the educational policy pursued by the missionaries in Japan, at least, if we mean thereby

that the present tendency is to narrow the scope of missionary operations and to give to education a less prominent place. My own impression is the reverse of this.

Again the article says:—"On this understanding" (i.e., that high education and not propaganda is the main object of the Doshisha) "numbers of prominent men, not Christians and entertaining no desire to be identified with the spread of Christianity, have allowed their names to be placed on the subscribers' list. When some years ago, it was decided to make the Doshisha a university, it was plainly seen by the Japanese promoters of the scheme that the adoption of this measure would involve the thorough secularization of the education to be imparted in the institution. The forecast has been verified to the satisfaction of the general Japanese public."

This paragraph is based, as I am convinced, upon a misapprehension of motives which induced the Japanese gentlemen in question to contribute about *yen* 40,000, toward the endowment of the Doshisha. Some of the large givers, one certainly who not only gave liberally himself but secured very large gifts from others, took pains to say that they were interested in the Doshisha because of the strong moral influence exerted upon the students which they attributed to its Christian character—an influence so strong that an officer of very high position stated in my hearing within the present month, that, as regards the moral character of its students, the Doshisha stood first among all the schools of Japan.

Again; while I freely admit that the secularization of the Doshisha has gone far enough to cause much anxiety to its friends, it is not true that it has gone to the length indicated. It is not true that Christianity and Buddhism are placed upon the same plane, as the article seems to imply. Neither is it true that the teaching of Christianity in the Doshisha does, or would, diminish its popularity. Two well-known Japanese gentlemen occupying high positions in educational circles have recently declared with emphasis that the very life of the Doshisha depends upon the maintenance of its Christian character.

Whatever the future of the Doshisha may be, and I believe it is to have a future worthy of the hopes and prayers which have centred in it, it certainly has had a history in which every one connected with it may take pride. Even from a missionary point of view, it has been a grand success.

I remain, yours faithfully,

D. C. GREENE.

October 22nd, 1895.

THE CHRIST ACCORDING TO PROPHECY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—While there may be certain circumstances from which one is justified in withholding his name from his own writings, it is to me nevertheless a reason of suspicion that the writer is either ashamed of his position or lacking in a due degree of sincerity in actually believing what he claims. That such suspicion may not rest upon Mr. Secularian, I request that before he attempt further objection to my letters that he either give me satisfactory reason, by private note, for writing over an assumed name changing with each succeeding letter or give his real signature. Indeed, Sir, if the thinking world of to-day are, as indicated, with Mr. Secularian, I should think he would be pleased to be identified with such honourable company. I may be far behind the times and exceedingly ignorant, yet I am nevertheless so sincere in what I hold that I am anxious that my name go down to posterity on the side of Christ and his saints. While Christian people generally have not abandoned the prophecies as my critic seems to think, I may be allowed to suggest perhaps a truer statement, that many of the more experienced, avoiding my mistake, rather than be unfairly treated before the reading public, and be pained by having that Holy Name evil spoken against, have abandoned such critics Mr. Secularian.

But I am pleased to say, Sir, that this opponent of Christianity, though no doubt very much against his own will, in his attempts to destroy the gospel is establishing the very facts of it, as foretold by the prophets, when he says that the mass of the Jews did not accept Christ. For does not Isaiah say, "The Lord of hosts, him shall ye sanctify; and let him be your fear and him be your dread. And he shall be for a sanctuary; but for a stone of stumbling and for a rock of offence to both the houses of Israel, for a gin and for a snare to the inhabitants of Jerusalem." "And it shall come to pass in that day, that the remnant of Israel, and they that are escaped of the house of Jacob, shall no more stay upon him that smote them, but shall stay upon the Lord, the Holy One of Israel in truth. A remnant shall return, even the remnant

of Jacob unto the Mighty God. For though thy people Israel be as the sand of the sea, only a remnant of them shall return, a consumption is determined overflowing with righteousness." Isaiah 8:13, 14; 10:20-22). Paul and Peter apply the prophet's language thus: "And Isaiah crieth concerning Israel, If the number of the children of Israel be as the sand of the sea it is the remnant that shall be saved. . . . What shall we say then? That the Gentiles which followed not after righteousness, attained to the righteousness even the righteousness which is of faith; but Israel, following after a law of righteousness, did not arrive at that law. Wherefore? Because they sought it not by faith but as it were by works, they stumbled at the stone of stumbling; even as it is written, Behold, I lay in Zion a stone of stumbling and a rock of offence; and he that believeth on him shall not be put to shame." And David saith, (Psa. 69:22,23) "Let their table be a snare and a trap, and a stumbling block and a recompense unto them: let their eyes be darkened that they may not see, and bow down their back away." "If ye have tasted that the Lord is gracious; unto whom coming a living stone, rejected indeed of men, but with God elect, precious, ye also, as living stones, are built up a spiritual house, to be a holy priesthood, to offer up spiritual sacrifices, acceptable to God through Jesus Christ. Because it is contained in scripture (Isaiah, 28:16). Behold, I lay in Zion a chief corner stone elect precious; and he that believeth on him shall not be put to shame. For you therefore which believe is the preciousness; but for such as believe, the stone which the builders rejected the same is made the head of the corner; and a stone of stumbling and a rock of offence; for they stumble at the word, being disobedient; whereunto also they were appointed." (Rom., 9:27-33; 11:9, 10; (Pet., 2:3-8). In the light of these scriptures, to which profane history also corresponds, we need hardly be told at this late date that the mass of the Jews did not accept Christ. Not, however, from the weakness of prophecy but from the very strength of it, which predicted not only the unbelief of the Jews but the ground of this unbelief. But Mr. Secularian, being willingly ignorant of these things, in his attempts to destroy the gospel is unwittingly giving his testimony in its favour. Surely the Lord maketh the wrath of man to praise him.

In attempting to evade the force of Isaiah's prophecy concerning the Christ, my critic has repudiated the New Testament, and hence, so far as he is concerned, before proceeding further to show the fulfilment of the prophecies from this source of testimony it would be proper to first show that this is a reliable source of authority. But as his denial is without the slightest evidence in support of it I shall proceed with this source of evidence by again calling attention to Matthew's application of Isaiah, 7:14, which says, "Fear not to take unto thee Mary thy wife; for that which is conceived in her is of the Holy Spirit. And she shall bring forth a son; and thou shalt call his name Jesus; for it is he that shall save his people from their sins. Now all this is come to pass that it might be fulfilled which was spoken by the Lord through the prophet, saying, Behold the virgin shall be with child and shall bring forth a son, and they shall call his name Immanuel, which is, being interpreted, God with us" (Matt., 1:20-23). It is no matter of surprise that one who sets aside the prophecies should also reject the testimony of the New Testament writers, for in the face of such language as the above, with which their writings abound, it would be impossible to disbelieve them. But noticing our critic's language on its own merits, it should be noted that the fulfilment he seeks for Isaiah's language cannot possibly be the proper one, for, (1), the one the prophet speaks of is to be called "Immanuel" (God with us), while the one spoken of in Chapter 8:3, is called "Maher-shalal-hash-baz." (The spoil speedeth, the prey hasteth.); (2), Immanuel was to be born of a virgin, Maher-shalal-hash-baz was born of a prophetess; (3), in reference to the former, God speaking through the prophet addresses the "house of David," but in regard to the latter no such reference is made. Hence those who reject the New Testament as to who was meant must look elsewhere than here for a fulfilment of the prophet's language. Nor can it be shown that his mother did not call her son Immanuel, but suppose we grant she did not, the prophet leaves it indefinite as to who is to call him Immanuel; but Matthew makes Isaiah's language clear at this point by saying, "they shall call his name Immanuel." But suppose there should be found some other person in whom the language of Isaiah was partially fulfilled, would it, therefore, mitigate against its complete fulfilment in Jesus? Now to make this point clear I shall take an example from the source Mr. Secularian seems to place credence in, the Old Testament. God

said to Abraham, "And I will make thee exceeding fruitful, and I will make nations of thee, and kings shall come out of thee." (Gen., 17:6) Abraham said, "O, that Ishmael might live before thee." (Gen., 17:18). The Lord replied, "And as for Ishmael, I have heard thee: Behold I have blessed him, and will make him fruitful, and I will multiply him exceedingly: twelve princes shall be begot, and I will make him a great nation." (Gen., 17:20). Here then is a secondary fulfilment of God's promise to Abraham. But no one of the most ordinary students of the Bible need be told that Isaac is the chief one referred to. Even so David and the prophets frequently spoke in language partly applicable to themselves or others but which found its chief fulfilment in Christ. They frequently spoke concerning their own condition or that of the people, but being moved by the Holy Spirit their language often had an import they themselves did not fully understand. (See 1 Pet., 1:10-12.)

Further, we are gravely told that the name "Christ" is nowhere found in any of the books of the Old Testament; which simply means, that the Old Testament was not written in Greek, for what more is the word "Christ" than the Greek word; *χριστος* (*Kristos*), transliterated to English, but which if translated would be, The Anointed. The Old Testament writers being Hebrews used in the place of this word *Mashiah*, which we have anglicised to Messiah, but which when translated means, The Anointed. Now, as already commented upon, Daniel speaks of the coming of "Messiah the Prince," or as the revised text has it "the anointed one" who should "make reconciliation for iniquity, and bring in everlasting righteousness and seal up the vision and prophecy, and who was to be "cut off but not for himself." (Dan., 9:24-26; see also John, 4:25). Let it be noted that the only objection to this as applicable to Christ was the name, which we have just dwelt upon; and the time, to which we now proceed. In prophecy a day is taken for a year. And this statement shall be made good from the same source (the Old Testament) upon which my critic relies for the only argument he has produced. The Israelites had disobeyed God in regard to Canaan for which he predicted their punishment in the following language:—"After the number of days in which ye searched the land even forty days, *each day for a year*, ye shall bear your iniquity even forty years, and ye shall know my breach of promise." (Numbers, 14:34). Predicting the captivity of the Jews, Ezekiel says: "Moreover lie thou upon thy left side and lay the iniquity of the house of Israel upon it, according to the number of the days that thou shalt lie upon it, thou shalt bear their iniquity. *For I have appointed the years of their iniquity, to be unto them a number of the days*, even three hundred and ninety days . . . thou shalt lie on thy right side and shalt bear the iniquity of the house of Judah; forty days, *each day a year*, have I appointed it unto thee." (Ezk., 4:4-6). No one in light of these scriptures can with candour deny that in prophecy a day is taken for a year. Moreover, the Prophet Daniel lays aside the figure and tells us plainly (Dan., 2:44) what he means by the seventy weeks, namely, that "in the days of these [Roman] kings shall the God of heaven set up a kingdom which shall never be destroyed," which leaves us without doubt as to the time this Kingdom should begin when the Lord would "bring in everlasting righteousness" and "seal up the vision of prophecy" and "anoint the Most Holy;" and which history both sacred and profane verifies to be true.

Before proceeding further, I must apologize, Sir, for taking time and space upon objections of so trivial a nature. For we are told, that to say Jesus was born of a virgin is contradictory to his being of the house of David; just as though a virgin could not descend from David! And that he never sat upon the throne of David. "And the Lord God shall give unto him the throne of his father David; and he shall reign over the house of Jacob forever; and of his kingdom there shall be no end." (Luke, 1:32,33) "Brethren, I may say unto you freely of the patriarch David, that he both died and was buried, and his tomb is with us unto this day. Being therefore a prophet, and knowing that God had sworn with an oath to him, that of the fruit of his loins he would set one upon his throne; he foreseeing this, spoke of the resurrection of the Christ, that neither was he left in Hades, nor did his flesh see corruption. This Jesus did God raise up, whereof we all are witnesses. Being therefore by the right hand of God exalted, and having received of the father the promise of the Holy Ghost, he hath poured forth this which ye see and hear, for David ascended not into the heavens: but he saith himself, the Lord said unto my Lord, sit thou on my right hand, till I make thine enemies the foot-stool of thy feet. Let all the house of Israel therefore

know assuredly, that God hath made him both Lord and Christ, this Jesus whom ye crucified. (Acts, 2: 29-36). These words of Peter were spoken to those who were the murderers of Jesus, hence certainly not prejudiced in his favour. But not one of them seems to have found fault with Peter's application of the prophecy, but many were convicted of its truthfulness and cried out "Brethren what shall we do?" But Peter explains that though Jesus was a descendant of David according to the flesh, he was nevertheless to sit upon his throne in a spiritual sense. He was the legal heir to the throne of David according to the flesh, hence became true the prediction "The Lord God shall give unto him the throne of his father David;" but he did not become a "King of the Jews" in the sense the people looked for or desired. He broke down the middle wall of national differences and was crowned King of kings and Lord of lords.

Are the genealogies contradictory? Luke gives the line from Mary back to David, Mathew gives the line from Joseph (Jesus father by law) back to David. These two lines are precisely the same as that of any child whose ancestry, on both the side of his father and mother, should be given. In tracing the genealogy of any child in this way two independent lines would have to be followed. But it would be a very common occurrence if these lines should meet in the same persons at some points. Now this is precisely what occurs in the case of Jesus: upon his mother's side he was a descendant of David through David's son Nathan (Luke, 3: 23-31) but upon his father's side he was of the royal line through Solomon (Matt., 1: 6-16.) Thus he became both of the blood and royal descent of the throne. These two independent streams as they descend from the fountain touch in Shealtiel and Zerubbabel, part again and descend independently till they unite in Christ (comp. Matt., 1: 7-16, and Luke, 3: 23-31). Hence no contradictions.

Most respectfully, J. M. McCaleb.
12, Tsukiji, Tokyo.

HARVARD UNIVERSITY EXAMINATIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If I may again encroach upon the valuable space of your correspondence columns, I should be glad, through them, to make known, to those who may be interested in the subject, the fact that the two students from the Tsukiji School, who presented themselves last June for the Preliminary Examinations for admission to Harvard College, have been notified of their success in the subjects in which they offered themselves, and I am glad to state that the College authorities were so well pleased with their papers that they have asked me to congratulate both the candidates and their instructors on their success.

Similar examinations, Preliminary and Final, will be held in Tokyo in June next, of which the exact dates and hours will be duly announced. In the meantime, I shall be glad to communicate with intending applicants, giving fuller particulars, and furnishing specimen examination papers.

Thanking you for your courtesy in giving publicity to this announcement,
I remain, yours very truly,

J. Mc. D. GARDINER,
Agent for Harvard University.
No. 40, Tsukiji, Tokyo, October 22nd, 1895.

A LIST OF CHRISTIAN CHARITIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Last March or April you were courteous enough to publish a tentative list of Christian Orphanages, Asylums, Hospitals, and Industrial Schools, prepared under my supervision. I have received quite a number of corrections and addition to that partial list. Intending shortly to publish a revised census, may I use your columns to ask that missionaries or others who noted errors or omissions in last spring's list, and have not informed me of such, will be kind enough to write me *at once*? In this way a fairly complete and accurate table may be compiled, which will be of some practical service in the broad field of institutional charity.

Yours very truly, J. H. PETTEE.
Okayama, Oct. 17, 1895.

"SECULARIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With considerable interest I have read the letter appearing in the correspondence columns of the *Japan Weekly Mail*, of October 12th, in which "Secularian" criticizes Mr. McCaleb's remarks on Messianic Prophecy.

It seems really a pity to have carefully prepared arguments so summarily disposed of, but Mr. McCaleb evidently had yet much to learn. Perhaps his recantation has already appeared in your columns.

I hope, however, that I may be pardoned if I express my surprise that one possessed of so much theological erudition as "Secularian" displays, should think it "astonishing in these days of inquiry and investigation to find any one so far behind the age as Mr. J. M. McCaleb." This innocent amazement at such a phenomenon leads one to ask in what corner of this world our "Secularian" was brought up, and with what kind of people he has associated that it should be astonishing to him to find one holding the ordinary Christian faith. If he should desire to extend the range of his observation a little, I could give him the names and addresses of quite a number of astonishing characters like Mr. McCaleb.

To these strange people belong Mr. Gladstone, the author of "The Impregnable Rock of Holy Scripture;" Mr. Balfour, not unknown in English political circles, the author of "The Foundations of Belief;" all the men elected to the Presidency of the United States since 1876; and a substantial majority of the College Presidents and Professors in America. I should be surprised to find that there is a single respectable institution in the world, having the four faculties of the true University, where some one is not found to teach this doctrine, and to teach it with all the learning of modern historical and linguistic science.

It has fallen to the lot of "Secularian" to furnish a new illustration of the frog in the well. Truly, when we need a man to tell us whether we are behind the age, we shall look for one well enough acquainted with the age not to be astonished at the apparition of a Christian believer.

But there is a reason for "Secularian's" astonishment. He informs us that he favoured the readers of the *Mail* with a discussion of this subject some years ago. I have not been so fortunate as to read these remarks, but we can guess their nature from the present article by the same author. Doubtless profound and accurate scholarship and a judical temper shone forth from every line. Perhaps the remarks were even courteous in expression. It must have been a genuine "Death blow to Corrupt Doctrine." It should have settled the matter once for all. And now, in spite of all this, up pops this ignoramus, McCaleb, and has the audacity to set forth these ideas in the public press. This is truly exasperating. It makes one feel sorry for "Secularian." Another Moses, offering to lead the men of his time out of Egyptian bondage, has been rejected. No wonder "Secularian" is astonished. We are astonished ourselves that the Christian faith should have survived the attacks of such a foe.

Let "Secularian" take comfort, however. To quote Daniel Webster:—"This is not the first time in the history of human affairs that the vigour and successes of the war have not come up to the sounding phrase of the manifesto." Moreover, it is better to be heartily admired by the excellent audience of one's self than to be applauded to the echo by a crooked and perverse generation.

There is another reflection suggested by reading "Secularian's" letter, and that is that a man may show himself to be behind the times not only by lack of knowledge but also by lack of manners. Some of his sentences have a strong flavour of the time when eminent theologians threw offensive epithets at each other's heads like brickbats; and when every man who differed from another in opinion was of necessity either a knave or a fool. But that was a long time ago; I scarcely dare to say how long. Perhaps I am behind the times in this also, and it may be that in "these days of inquiry and investigation" such pleasant little courtesies are again in fashion. If so, more's the pity, for many of us are so fond of the enlightened and gentlemanly controversial methods of the nineteenth century as to have neither skill in the use of such weapons nor desire to acquire it.

I remain, yours faithfully, ERIC ERICS.

Nagasaki, October 18th, 1895.

PHOTOGRAPHY IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the notice of a recent meeting of the Japan Photo. Soc. it is mentioned that Mr. C. D. West exhibited "a cloud compelling shutter" which he had been using with good results during the summer. It should have been stated, as doubtless Professor West told the meeting, that it was at my suggestion that he fitted it up. In fact I wrote an article on such a shutter in an English Photographic Journal some few years since.

Truly Yours, F. W. GROVES.

Kobe, October 17th, 1895.

MEMORIAL

(Adopted at a Meeting of the Missionary Association of Central Japan, October 15th, 1895.)

The Providence of our Divine Father, always good and wise, though at times inscrutable, has allowed the stroke of death to fall upon one of our members, the Rev. George Edward Woodhull, in whom were being realized the fondest hopes of aged parents, and the joy of wife and children. This dispensation has occurred at the beginning of a missionary career full of constantly enlarging work and usefulness. From the time of his coming to Japan in 1888 until his decease on October 11th, 1895, he lived in the city of Osaka, making it the centre of direct evangelistic work for this and the outlying provinces. The preaching of Christ in this large district has been the one work into which, until the Lord called him home, he threw all the energies of a cultured and sanctified manhood.

As an Association we desire to record our high esteem of his work as a faithful, zealous missionary, his companionableness as a co-labourer, his unswerving devotion to the doctrines of the Cross, his uniform courtesy towards all, and his usefulness as a member of the community in which he lived.

To the Board of Missions to which he belonged we desire to express our appreciation of the fidelity of his labours and our sense of the greatness of the loss which his death has occasioned.

To the mission with which he was connected we extend our heartfelt sympathies in view of this trial which would, under any circumstances, be great, but which, at the present time when such men are so sorely needed, must be all the more keenly felt. We desire to unite with them in praying that the Lord of the Harvest will graciously raise up worthy successors in his place.

To the father and mother, to whom this sad intelligence of the death of an affectionate son will come so suddenly, and to whom the blow will be so severe, we would especially recall the rich promises of Divine Grace in the Word of God upon which they have learned so long to lean for comfort.

To the devoted wife, upon whom this lamented calamity has fallen with gradually increasing severity, and whose physical weakness just now calls all the more for our hearty sympathy, we offer our sincerest and tenderest condolence; and we commend her and her little ones to Him who has made special promises of protection and care for the widow and the fatherless.

THE YOKOHAMA JUVENILE TONIC SOL-FA SOCIETY.

This Society held its fourth annual meeting on Saturday afternoon in the vestibule of the Public Hall, Mrs. Patton, President, in the chair, nearly every member being present. The report of the retiring Treasurer, Master C. S. Moss, was received, and showed a balance to the credit of the Society clear of all expenses of \$150.86. Mrs. Patton congratulated the members upon having such a sum in hand as would enable to Society at any time to carry out one of the chief conditions of its existence, by making a suitable contribution towards the alleviation of any public calamity that might occur.

The resignation of three members was reported Miss P. Cheetham, Masters H. Cooke and M. Mollison, and an accession of seven new members, Misses M. Thomas, C. and N. Mudie, and Masters C. Pulford, R. Loomis, E. Cleveland, and A. Hutchison.

The President reminded the members that the Society had now entered upon the fifth year of its existence, and continued to flourish in spite of many drawbacks, and she impressed upon the members the desirability of keeping up an active interest in its progress, which they could best exhibit by regular attendance at choral practice.

The next concert would take place in the Spring, all being well, and will be for the benefit of Mrs. Patton.

The resignation of Master C. S. Moss as Hon. Treasurer, was accepted, and Master C. Bennett, proposed by Mrs. Patton and seconded by the Secretary, Mr. N. Sargent, was elected in his place.

A vote of thanks was accorded to Master Moss, to which he replied in a few well-chosen words; and at the suggestion of the Secretary, three cheers were given for Mrs. Patton and Miss Bloxham, which terminated the proceedings.

YOKOHAMA CRICKET FESTIVAL.

YOKOHAMA-KOBE MATCH.

When play began on Friday week in the annual Kobe-Yokohama match, the heavy clouds which completely covered the heavens looked ominous for a wet afternoon. Fortunately a slight breeze sprang up, and the rain held off, only a wisp driving across the ground just after Yokohama went out to field after tiffin. A few heavy drops had fallen about eight o'clock in the morning, so the wicket was a little damp, but it quickly dried and again played excellently. Yokohama won the toss, and, going in to bat, opened disastrously, Dickinson coming out first ball leg before. White was also sent back to the Pavilion l.b.w., after scoring three. Then Denne joined Crawford, but only to stay a little while, during which time he made six. Upon Walford going out some stand was made, and a separation was not effected until 78 had been reached. Morriss, who followed, saw all his partners go, and by a quarter to three o'clock the whole side were out for 129. Crawford was caught by Lightfoot when he had made 6, but Heller, upon being appealed to, gave a verdict in favour of the batsman, who then went on and made top score for his side, 60. Tate's bowling analysis deserves studying: it is one of the best performances of the week. Kobe started its first innings at three o'clock and made matters lively for the local eleven. For the loss of three wickets they compiled 126 by the time stumps were drawn. By a quaint coincidence the last ten minutes of the game was played to the doleful accompaniment of "The heart bowed down," by the Town Band—an appropriate melody as regards one of the elevens engaged. When the men came back into the Pavilion it was found that White had severely strained a tendon of his left leg; he could barely hobble in; and Denne has incapacitated himself by the strain induced through throwing in. These mishaps will account in no small degree for the wretched display of fielding on the part of the local men.

The last day of the Yokohama Cricket Festival produced one of the most exciting games of the whole week. The weather was delightful, a deep blue sky being flecked with snow-white fleecy clouds, and a pleasant breeze moved beneath. From an early hour visitors made their appearance on the ground, the game having been left at a very interesting point the previous evening. Yokohama had had its first innings and been dismissed for 129; while Kobe was left at the wickets with 126 runs on the score and three men only out. Everything therefore looked rosy for Kobe attaining her hearts' desire—a win over the northern treaty port. For years she has gallantly sent up team after team in order to make a game, though she knew that to win was hopeless: now for the first time since 1887, we believe, an eleven had come up to Yokohama possessing all the elements necessary to success, being strong in all points—batting, howling, and fielding. The prize of victory seemed almost within her grasp: but the fates willed otherwise. Seven of Kobe's wickets fell on Saturday for 31 runs, the younger Edwards playing sad havoc with their stumps, and at a quarter past eleven the side were out for 157. Yokohama again opened disastrously, six of the best wickets—Dickinson, Denne, White, Crawford, Murray, and Morriss—being dismissed for 38 runs. Then the Captain of the home eleven and Johnson came together and the stand of the week was made. Bowler after bowler was changed, but Walford steadily refused to budge, playing with judicious caution. Slowly the score mounted as the hours went by. At 87, Johnson was caught by Pakenham. This was shortly after three o'clock. Still Kobe's chances were bright, though the band did ironically start in with "There's nae luck about th' house." E. B. S. Edwards had a short but merry innings, however; Lias followed suit, and when he was finally disposed of Kobe had to make 120 to win. With only three quarters of an hour before them, they found the task impossible, and the game has consequently to be declared drawn at 71 for two wickets. Scores:—

THE CHAMPION BAT.

The Champion Bat was presented to the Kobe captain in the Ladies' Tent, by Mr. Mollison, President of the Y. C. and A. C., at the close of play. Mr. Mollison said it gave him extreme pleasure to make the presentation. One hundred and three runs were not often made on the Yokohama ground, particularly in interport matches, and he was glad the bat had been won by such a score and that it was a member of the Kobe team who had won it. He hoped Mr. Duff would make many more such scores in the interest of the Kobe Club. He called for three cheers for Duff, and these were vociferously given. Mr. C. M. Duff, in responding, hoped he might have many opportunities of making scores with the bat in Yokohama and Kobe, and he also hoped that he might use it in playing again against their Shanghai friends. He desired on behalf of the Kobe team to say how deeply indebted they all were for all the kindness extended to them during their stay in Yokohama. He called for three cheers for Mr. Mollison, and three cheers for the ladies, calls which met with a very hearty response.

L'ENVOI.

The year is waning to its close:
The blood-red autumn leaves
Cover the summer grass beneath
The gaunt Pavilion eaves.
Retiring Cricket yields her place
To Football's rising sway;
Come, umpire, in thy long white coat,
And take the stumps away
Triumphant Grace* has run his course,
Though still to memory dear
Lingers the record of his feats
And England's† hearty cheer;
But the goal-posts are a-painting,
And Cricket's had her day.
So, Umpire, in thy long white coat,
Come take the stumps away!
The verging year brings chilly air
As Time unfolds his scrolls,
Congenial to the duller day
The ampler football rolls.
The parting umpire waves his hand;
He ends where we begin;
Come, craftsmen, here are last year's marks,
Deep drive the goal-posts in!—J.W.M. in
Sketch.

MARINE COURT OF INQUIRY.

YOKOHAMA, OCTOBER 21ST, 1895.

THE STRANDING OF THE "BELGIC."

A Marine Court of Inquiry was held at H.B.M.'s, Consulate on Monday, to inquire into the circumstances connected with the stranding of the O. & O. steamer *Belgic* at Sunosaki, on the 8th September.

The Court was composed of H.B.M. Consul, Mr. J. C. Hall, President; Commander Edward Street, of the P. & O. steamer *Ravenna*. Captain Wm. A. Evans, steamer *Monmouthshire*; and Captain Robert McGregor, steamer *Guildhall*. Mr. Dadds represented the owners of the *Belgic*.

Capt. W. H. Walker, master of the *Belgic*, was the first witness called. Upon being sworn, he said—On the day coming in, 8th Sept., we had good observations at noon, and at the course for three miles south of Noshima Light, the 89 miles distant. At 4 p.m. we sighted land on the starboard side, and at 6.40, after altering the course, we sighted Noshima Light bearing W. compass. At 7 p.m. we altered course to S. 75 W. by compass. At 7.25 Noshima Light was abeam. I estimated the distance at three miles, and altered course to W. ½ S. At 7.55 altered course to N. by W., and at 7.59 altered course to N. ½ W. At 8.05 altered course to N. and at 8.10 to N. ½ E., and at 8.17 to N. by E. At 8.20 altered course to N. 17 E., I taking Mela Head for Sunosaki, and considered that Sunosaki was abeam. I then left the bridge for about ten minutes. Upon returning to the bridge at 8.31 the Second Officer was in charge and reported that we were running into a thick fog-bank. On looking ahead I noticed we were close to the land and could see the line of breakers. At 8.32 put the helm hard astarboard and put the engines full speed astern, the ship driving on to a sandy beach. At 8.47 engines full speed astern. At 8.49, ship stranded, and stopped engines. The ship's head was N. 29 W., Sunosaki about N. 57 W., Mela Head S. 5 E.: all by compass. The moon was just rising over the land, and the horizon was a little deceptive. It was a fine night. The fourth and second officers were on the bridge and a Chinaman on the look-out forward. After setting the courses I had no conversation with the officers on the bridge, beyond saying Sunosaki was abeam. I have made the entrance to Tokyo Bay for ten years running. This was my forty-ninth voyage over the course. I was steering more by the land than by the compass courses. A current might possibly have deflected my course, but there was nothing unusual in wind or tide. We allow a degree and a half for the current.

The chart by which the ship was steered was then put in.

To Capt. McGregor—I saw the breakers about ten or eleven minutes before we struck.

To the President—We passed outside the Mela Ledge. The ship was going at 12 knots. We did not slacken until we grounded. I do not impute any blame to any of my officers or men in regard to the stranding.

To Capt. McGregor—The look-out was on the fore-castle head, and reported nothing. The second officer reported that we were running into a fog-bank, about a couple of minutes before we struck. The officers and crew behaved in the best possible manner after the casualty happened. Boats were lowered and lights arranged. The second officer, Mr. Beckman, lost his life in getting out the boats. Everything possible was done to rescue him. I think he was probably stunned against the side of the ship as he went down into the boat. There was a south-westerly swell running at the time.

To the President—I attribute the accident entirely to my own mistake in judgment in taking Mela Head for Sunosaki. I was not ill or out of sorts at the time.

To the Court—My orders as to the courses were all carried out. Had I been right in my judgment as to my position, I should have passed Sunosaki point by about 2 miles and a half. We had taken all the observations we could during the morning and afternoon. I saw nothing of Sagami Light.

To the President—Sagami Light is visible when Sunosaki is abeam. It is possible that the lights could have been seen full distance: there was more or less haze over the horizon, and appearances were deceptive. I was trusting to my own knowledge, and did not think it necessary to take soundings.

Mr. Lowder, who appeared for Capt. Walker, with the permission of the Court then put some questions.—How long have you been at sea?

Captain Walker—Thirty-one to thirty-two years. How long have you been in command of a ship?—Four years and to months on a sailing ship, and ten years in my present command. I have been in the service of my present owners about 18 years.

This is the first time I have been before a Board of Trade or Naval inquiry for an accident to a ship under my command. I made the observation that Sunosaki was abeam to the fourth officer. It was a very usual thing for me to steer by the land. I should judge that it is a usual thing for officers or pilots in command of vessels making the entrance to the Bay to steer by the land. The breakers were distinctly visible when I came up on the bridge the second time. I cannot hope that if I had been on the bridge when they first came in sight that the casualty could have been prevented, but I am not in a position to say. There are no lights on Mela Head or Suno-saki, and at night time they present a similar appearance. I only know of one vessel, the *Tokyo Maru*, being in the same position.

The entry in the official log referring to the accident was then read over; and also the entry relating to the death of the second officer.

G. T. Tiltson, First Officer of the *Belgia*, sworn, said—I went on watch at four o'clock on the day of the grounding. Everything went on well; at 6.40 we sighted Noshima Light bearing West, by compass. The course was then altered to S. 70° W. at 7 o'clock, the course was altered to S. 75° W.; at 7.10, Noshima Light was 4 points on the bow; at 7.25, the Light was abeam, at a distance of three miles by 4-point bearing. The course was then altered to W. ½ S. At 7.55, the course was altered N. by W.; at 7.59, it was put at N. ½ W. I then suggested to the Captain, who was on the bridge, not to haul round too soon, but to let the ship get out to the westward. He answered, "No, all right." At that time 8 bells were struck, and I was relieved by the second officer, to whom I gave the course N. ½ W., and reported lights burning brightly. I then left the bridge, the captain and the second officer being up there. I went forward and saw the anchors and chains all clear, and similar duties up till about a quarter-past eight. Then I went to my room and sat down. A short time afterwards I felt the ship strike something, and I immediately rushed to the bridge. I found the ship heading directly to the land and amongst the breakers. The engines were going full speed astern. They continued working astern for some little while, but the southwest wind drove her stern ashore, and the ship touched the beach all along the starboard side, and remained so. We then proceeded to put out boats and show signals of distress. It was decided to send a boat to Kannonsaki for assistance, with the second officer in charge. When near the water the boat was driven forward by the swell and the second officer, who was holding on to the life-line, was blown overboard. We threw him a life-buoy, which he grasped, but the swell drove him forward and away from the ship. I called to the men in the boat to push out an oar; but by this time he seemed fatigued and disappeared from sight. I then sent off the third officer in charge of the same boat. Shortly afterwards some fishermen swam out from shore, and offered to pilot one of our boats ashore, if we would send her. We then dispatched a boat with the purser, and she reached shore safely and established communications. The ship by this time was broadside to the beach. Nothing could be done but to make everything secure, shut watertight doors, etc., and wait for assistance from Yokohama. The carpenter reported the ship making no water.

The President—To what do you attribute the casualty?

Witness—Well, I can hardly say: except keeping too close to the land, and mistaking Mela Head for Sunosaki, as entered in the log. The entry in the log in regard to the time of stranding was not signed by me when first presented, as my time log did not tally with the time entered in the official log. The times were then corrected, and I signed the entry. Everything possible was done to save Mr. Beckman's life. The behaviour of the officers and men after the accident was very commendable. I have made the entrance of the Bay from San Francisco for thirteen years.

To a Member of the Court—Before entering my room at a quarter-past eight, I did not look at the land. The duties of the junior officers kept them near the wheel-house, and the second officer was on the bridge.

To Capt. McGregor—I have been chief officer of the *Belgia* for five years. I have always been on good terms with Captain Walker. Nothing occurred between us on the date of the accident. I saw Mela Head, but I did not think we could have been at Suno-saki by the time. The ship was going at about 13 knots. The deviation of the compasses I estimated on Westerly courses to be about 5 W., on south westerly courses from 4 to nothing.

The President—Have you always been on good relations with Capt. Walker?—None of the best.

How long has this lasted?—Dating back some

time. For four years I have not been on cordial terms with him.

Did you make the suggestion as to the alteration of the course in a proper and respectful way?—Yes, sir.

Was Captain Walker sober?—Up to the time I left the bridge he seemed so.

Is he a man of sober, steady habits?—I can't say he was.

Have you ever seen him under the influence of liquor?—I am sorry to say I have remonstrated with him in regard to drinking. I think he was not under the influence of liquor up to the time I left the bridge.

Have you any reason to suppose that he was under the influence of liquor the night of the accident?—I am afraid he was.

How long after the accident?—Before midnight.

Have you any reason to believe that he obtained liquor, and was under its influence soon after, or before, the accident?—I can only infer that he was under the influence of liquor from his extraordinary manner after the stranding.

Captain Street—Are you certain it was liquor, or was it only due to excitement?—Possibly it may have been both.

The President—You are quite certain that the captain was under the influence of liquor on the evening of the stranding, after the ship had gone ashore: remember, you are on your oath?—I know that he was under the influence of liquor before midnight.

Captain Evans—Then your feelings towards Captain Walker were not exactly friendly?—They were not hostile to him. I am willing to serve under any master the company may put in command of its ships, but I have my own duty to perform and I do it. Personally, as a man, I have nothing to say against Captain Walker. He is master of the ship, and I am the chief officer. I have a master's certificate to defend, and therefore I do all I can for the welfare and safety of the ship.

The President—How do you infer that the Captain was drunk?—From his dazed and dull kind of manner.

Mr. Lowder—How long after you joined the ship was it that you gave up taking meals in the cabin and messed by yourself?—About a year.

From that time you had no social relations with Captain Walker?—None particularly.

You have said that on several occasions you have seen Captain Walker under the influence of drink and have remonstrated with him?—Yes, sir; but I have no specific dates.

Could you tell me on how many occasions you spoke to him on the subject?—Well, I spoke to him, I think, about four or five times.

Had you occasion to remonstrate with him on this voyage?—I have done so since the steamer stranded.

But prior to the stranding?—No.

When you remonstrated with him did he make you any answer?—Yes.

What did he say?—It is so long back since I first spoke to him that I do not remember what answer he gave.

Did he tell you to mind your own business?—No, sir.

On these occasions, do you not think that you might possibly have been mistaken as to his condition?—Certainly not.

Not on any one occasion?—Not on any of the four or five times that I speak of.

You have no note or memorandum regarding any of these occasions?—No, sir.

Was it not your duty to have entered on the log, in your own log, if not in the official log, that you had seen your Captain intoxicated?—I don't say that he was intoxicated, merely that he was under the influence of liquor.

You wish to draw that distinction?—Yes.

Then I am right in inferring that on none of these occasions was Captain Walker in a condition that would interfere with the discharge of his duties on board his ship?—I think you are wrong there. On some of the occasions I speak of, he was far from being in a fit state, and in a condition not to know what was the right and proper thing to do for the ship; consequently I spoke to him about it.

If he was in that condition, was it not your duty to have logged the fact?—I thought not in my subordinate position. I thought that it was my simple duty to speak to him. I don't think that on any of these occasions Captain Walker could stand up in this Court and say—

Never mind what you think.—Very well, sir.

Can you give me any idea of the date of any of these occasions?—It was so long ago when the thing first took place, that I don't think I can give you a date. It happened after we ran down a fishing boat in going out of Yokohama Bay, four years ago.

Have you anything else by which you could

fix it?—It must have been entered on the log-book. I could look back to the logs of four years ago.

You spoke to him after the fishing boat was run down?—Yes, I did.

And after the fishing boat was run down he had this dull, dazed sort of manner?—Yes, he had at the time.

You noticed his dull, dazed condition at the time and afterwards attributed it to drunkenness?—I supposed it was so.

Now, you are not prepared to swear that on any of these occasions of which you speak, you had seen him drinking?—No.

I suggest to you that Captain Walker's dull, dazed condition arose from the fact of having just run down a fishing boat?—I think not, from my experience of the sea.

You can give no particular instance, until after the stranding, of seeing Captain Walker in this dull, dazed condition?—Oh, yes, I can. I saw him so when we were going through Van Diemen's Straits to Nagasaki, on the same voyage.

You always noticed him to be in this state, dull, dazed, when nearing land, going in, or coming out of harbour?—I never noticed it at sea, out on the ocean.

Then if your Captain on those occasions presented a dull, dazed appearance upon approaching land, was it a fair inference to draw, that he was under the influence of liquor?—I have also smelt it. I have seen him drinking.

You are evading the question?—I think the inference I drew was quite fair.

Has he not, to your knowledge, always been extremely nervous when approaching or leaving the land?—Yes, he has always been so.

Now, to come to the date of the stranding. After the casualty you say you saw that Captain Walker was under the influence of liquor?—I think it was before midnight when I saw him so. Everybody was upset at the stranding, and everybody was on deck. I had my duty to attend to, and ordered the carpenter to close the water-tight bulkhead doors, to batten down the hatches, etc. and to make all things safe. I went along the deck and saw Capt. Walker stretched out on a canvas chair, snoring. I think therefore he was under the influence of liquor; at any rate he was the only man asleep on board the steamer that night.

And because he was asleep at that time, you inferred that he was drunk?—I thought so.

The ship was now in safety?—No sir, she was bumping; and there was a heavy list to port.

If the captain had been awake could he have prevented that?—No, sir: but there was no telling when the masts might go.

Could he have prevented that if he had been awake?—No.

Well, then, could he not go to sleep if he so desired: what was there he could do?—(No answer.)

When next did you see him, or think you saw him, under the influence of liquor?—Next morning. It was like this. In the morning, the Japanese head official of the village near where we stranded, came aboard. He asked a lot of questions; asked if we had permission to take the ship into that bay; then he wanted to know if we had passports, or whether the passengers had passports, if they had not the passengers could not land, and unless Customs permits were given their baggage could not be landed. Altogether, this official stayed about half an hour, then he asked me if I was the Captain. Upon hearing that I was not, he said he had some private questions to put to the Captain. I did not know where the Captain was, but I took the official, whom I afterwards discovered to be the Mayor, through the saloon to the captain's room. I found him lying down on a couch. I introduced the Japanese to him. Ten minutes afterwards the Japanese came on deck to me and said—

Mr. Lowder—I don't want to hear what was said: it is what you saw yourself that you have to speak.

Witness—I saw that Capt. Walker was under the influence of liquor. I saw it at a glance. He got up off the couch when I roused him.

And he presented the dull, dazed appearance?—Very much so.

He had suffered a great mental strain?—We all had.

Yes, but he in particular as Master of the ship; the catastrophe may have made you more energetic for all I know.

Thomas Dillon, third officer of the *Belgia*, sworn, deposed—I was below at the time of the stranding, going off watch at eight. I went immediately on deck, and from thence to the bridge, where I found the captain, first, and second officers. The engines were going full speed astern. I heard no conversation between the chief officer and the captain as to the course before I went off duty. I have been on this line for 5 years or so. At 6 o'clock, we were steering S. 61° W., compass course. At

that time we could see the land on the star-board side. At 6.40 Noshima was sighted. It bore W. by compass. I reported to the captain, and he said alter the course to S. 7° W. He also said get a four point bearing of it and let me know when it is abeam. I then hove the log and found the ship to be going at a little over 12 knots. At 7 o'clock the course was altered to S. 75° W., and a four point bearing again was taken; at 7.10 the course was altered. We were then three miles from Noshima and steering W. ½ S. by compass. At 7.55, the captain again altered the course, and as she came round I called the points to N. by W.; then he said steady the ship on that. At 7.57, I left the bridge to enter the course on the slate, and at 7.59, the course was altered to N. ½ W. Then I was relieved by the fourth officer, to whom I reported the course. I saw the second officer engaged in getting out the boats. Every officer did the best he could after the accident, the Captain as well, and I left the ship a little after 9, to go to Kanonsaki to obtain assistance.

To a Member of the Court—I noticed there was a coolness between the Captain and the Chief Officer, but the latter never mentioned it to me. I never heard the Chief Officer speaking disrespectfully of the Captain. I did not hear the Chief Officer make a remark about the ship being too close to land. I merely conund the ship.

To the President—I have never seen Captain Walker under the influence of liquor. I can not form any opinion as to the Captain being a sober man.

The Court then adjourned to 2 p.m.

H. Gankroger, Fourth Officer of the *Belgic*, sworn deposed—I relieved the third officer at eight o'clock on the 8th inst. I met him at the bridge ladder, and he gave me the course; N. ½ W. I then went to the quartermaster and obtained the course he was steering. At 8.5 p.m., the course was altered to N., at 8.10 to N. ½ E., at 8.17 N. by E.; and at 8.20 to 17° E. Then the Captain called me over and said Suno-saki was abeam, and the course was to be N. 17° E. He ordered me to go down and enter it in his log-book; which I did. Then I went into the wheel-house and entered the same on the log-slate. I then returned to the bridge, and saw the second officer looking through the glasses. I also saw a dark bank ahead. I said, "What is that, it looks like land?" And he said, "Land be d—d, what are you talking about; there's no land there: it's fog." Just then the captain came on the bridge, and the second officer said, "There's a thick bank of fog ahead." The Captain said: "Is there?" I looked up again, and saw what I supposed to be breakers.

The President—With the naked eye or with glasses?

Witness—With the naked eye.

Witness continuing—I rushed to the telegraph and just as I got there, the Captain shouted: Stop, full speed astern. The ship grounded immediately. The chief and third officer came rushing on the bridge. The chief ordered me to take soundings, which I did. I found three fathoms amidships; three fathoms aft, and 2½ forward. Then he ordered me to go and clear away the boats, the captain was on the bridge all the time. I saw nothing of the death of the second officer. I attribute the stranding of the ship to the mistaking of Mela Head for Sunosaki.

To the President—The Captain was on the bridge at 8.20, he came up again just as I had finished talking to the third officer. The Captain seemed all right, and I saw him between eight o'clock and midnight on the night of the stranding. He seemed all right, nothing the matter with him, the same as he always is. I did not see him asleep. I consider the Captain was sober all that night, both before and after the casualty. I have never seen the captain under the influence of liquor. I joined him on Nov. 8th, 1894.

To Captain McGregor—I did not hear the Chief Officer tell the Captain that he was too close to land.

To the President—I do not think that the Captain and the Chief Officer were on friendly terms. They were very cool. I never heard the Chief Officer speak disparagingly or disrespectfully of the Captain on the ship.

M. S. Niswander, Purser, deposed—I did not see the Captain on the evening in question until the vessel struck. After the stranding, the Captain was in his normal condition. He was not under the influence of liquor. He asked me to go ashore and take a telegram, which he wrote out. I made the entry in the log on the 9th Sept., referring to the stranding. I asked the Captain if I should make the entry, and he said yes. He did not dictate the wording. It was signed by the captain, that afternoon, I think; the chief officer did not then. He did so subsequently a few days ago. I made the mistake myself in regard to

the time. I have served under Captain Walker for a year. He has always been steady and sober. I have never seen him under the influence of liquor. He has taken a drink occasionally, but never to excess. I have never witnessed any displays of ill-feeling between the captain and the chief officer, nor has the latter ever made any remarks about the Captain.

Mr. Lowder—In the summons calling Captain Walker to this Court no indication is given that a charge of drunkenness was to be preferred against him. If any notice had been given that such a charge was to be brought I should have been ready to produce evidence on the other side. But if the Court thinks that sufficient evidence has been given in rebuttal of the charge, then it will not be necessary for me to put any questions to this witness. I do not wish the Court to give an opinion before the time arrives for it to do so, but in my own mind I am convinced that the charge has not been sustained. I will, however, ask the Court to allow me permission to reserve my examination of this witness.

The President said that he did not intend to express any opinion before the proper time arrived to pronounce the decision of the Court. The Court had no objection to Mr. Lowder reserving his questions.

Mr. Lowder said that he proposed to put in evidence a statement made *de bene esse* before H.M. Consul at Yokohama, by a Mr. Hansell Easton, who was a passenger by the steamer *Belgic* on the voyage from San Francisco when the stranding occurred.

The President read the statement which was made on the 23rd Sept. by Mr. Easton, who deposed to being an American citizen and on board the *Belgic* when she ran ashore between Sunosaki and Mela Head. He had long known Captain Walker as a personal friend, and had made three voyages across the Pacific with him. He knew him as an abstemious man and not given to drink. There was nothing abnormal in his manner before the stranding, and from deponent's own observation, Captain Walker had not been drinking. He was seen by deponent two hours after the stranding and he then presented the appearance of a man who was suffering from a great mental strain. He did not attribute this to drinking. Some four days later he saw Captain Walker and he seemed to be in the same mental condition. Captain Walker had suffered from sunstroke; he was not a total abstainer. Good feelings prevailed between him and his officers. The night was fine when the *Belgic* went ashore, but the horizon was hazy.

Mr. Lowder said that after that statement he should take it for granted that the charge of drunkenness had entirely broken down. If the Court was not with him on this point, then he should ask for an adjournment of the Inquiry in order to produce some 30 to 50 witnesses who could give evidence in his client's behalf.

The President (after consultation with his assessors) said that they unanimously found the charge of drunkenness to be entirely unproven. The Court did not consider it necessary to call further evidence, but would proceed to consider its findings, unless Mr. Lowder wished to address the Court.

Mr. Lowder said the decision of the Court on the charge just raised greatly abbreviated his task. He did not think a man could occupy a more serious position than did his client, when such a charge was preferred. He (counsel) was prepared to have rebutted it by evidence, and, even if it took a week, the matter would have been sifted to the bottom. But the charge had completely broken down, and the Court were unanimous in arriving at that decision. The question now to be considered was the punishment which was to be awarded Captain Walker—for unfortunately blame did attach to him. After paying a tribute to the straightforward, honest, open-hearted manner in which Captain Walker had given his evidence that morning, Mr. Lowder said that Captain Walker had taken all the blame of the accident upon his own shoulders, even after an opportunity had been given him to explain it away. When asked if he could have rectified his mistake in time to prevent the stranding, he replied that he did not think he could have done so. Counsel hoped that the Court would bear with him while he addressed it at some little length upon the reason why the punishment to be awarded Captain Walker should not be severe. The Court was called under section 260 of the Merchant Shipping Act of 1854, though section 489 of the Merchant Shipping Act of 1894, was really the statute quoted, this Act having repealed the former Act. The Act of 1894, if he might be allowed to say so, was not artistically drawn, and required a little study ere the exact meaning of the legislature could be arrived at. The Court was called under section 480 as a Naval Court by a Consular official. Mr. Lowder then quoted the different clauses of the Act bearing on the

duties and powers of Naval Courts of Inquiry, and pointed out that they had power to remove a master from his ship if they thought fit: still they could not exercise this power without the consent of the consignor of the ship. The owner of the ship was fully represented at the inquiry, and, as his Honour was aware, he had been informed of the *de bene esse* proceedings. No complaint, however, had been brought against the master of the ship by the owners, and the inference to be drawn from that was, that as far as the owners were concerned, they had not lost confidence in Captain Walker, nor did they think it in the interest of the ship or crew that he should be removed from the command of the ship. They were therefore thrown back upon section 470 of the Act of 1894, which provides that the certificates of a Master, Chief Officer, or Engineer might only be suspended if the Court found that the loss of the ship, or the abandonment of the ship, or serious loss or damage to the ship, or loss of life, had been caused through his or their wrongful act or default. Mr. Lowder then pointed out that the vessel had neither been lost nor abandoned, while there was absolutely no evidence before the Court that the ship had been damaged at all. If there had been no loss of the vessel, no abandonment of the ship, nor no serious damage done, the only conclusion that could be arrived at was that the certificate of the master could not be dealt with at all. That the casualty had occurred could not be denied. They were, however, construing a penal statute, and therefore the Act must be construed properly. Mr. Lowder therefore submitted with confidence that according to the wording of the Act, Captain Walker's certificate could not be dealt with. He regretted that the other side was not represented by Counsel, so that he might have strengthened his argument in reply. He thought that the assessors of the Court must feel deep sympathy for Captain Walker in his present position. Captain Walker had held a position in which he was thoroughly trusted by his owners and by everybody who knew him, except by one witness, who had come into Court that day with the evident intention of doing him harm. It was notorious—they had the evidence of their own eyes to prove it—that the ship had been got off the beach and was now in Yokohama harbour. The captain's owners had no intention of getting rid of his client, who had worked hard for a month past to get the vessel floated. He had suffered more during that time than he, the speaker, had the power to imagine or adequately bring before the imagination of their minds. For a whole month he had been doing his best in circumstances that would depress—it was a weak word to use in the case—the strongest man, and now appeared before the Court a broken-hearted, broken-spirited man. He had met with an accident, for the first time in his life, through an error in judgment—not a wrongful act or default. Under the circumstances, a censure by the Court would go as far to prevent a repetition of the error as any punishment could do. After all, the Court did not sit there to take revenge. He simply could not see what fault his client had committed which deserved more than a severe reprimand, and he confidently believed that beyond that the Court would not feel it their duty to go.

The Chief Officer wished to address the Court, but the President said he could not hear him.

The Court was then cleared, and upon the public being readmitted, the President read the finding of the Court. After reviewing the evidence the Court found:—

- 1.—That up to the time of passing Noshima Light the Master appears to have navigated his ship with due care.
- 2.—That after that point sufficient care was not taken in calculating the distance run by the ship.
- 3.—That owing primarily to this neglect the Master was led into an error of judgment in mistaking Mela Head for Sunosaki.
- 4.—That the casualty was due entirely to this error of judgment on the part of the Master.
- 5.—That the conduct of the first officer, Mr. Tilston is commended for having paid due regard to the navigation of the ship, and for having drawn the Master's attention to the fact that the ship was too near the land and should not have been hauled up so soon.
- 6.—That after the casualty everything appears to have been done that was necessary for securing the safety of the ship and passengers.
- 7.—That the second officer, Mr. Beckman, was drowned in performing his duty of launching and getting ready the boats, and that all available measures were taken to save his life.
- 8.—The Court considering that the Master's mistake, though a serious one, is the first made by him during a service extending over 14 years in command, are of opinion that a severe reprimand

will meet the justice of the case, and he is hereby reprimanded accordingly. The conduct of the rest of the officers and crew is free from blame.

9.—That the expenses of this Court, amounting to £8 12s. 6d., be paid by the master.

MASONIC INSTALLATION IN YOKOHAMA.

On Saturday evening at the Masonic Temple, Yokohama, Wor. Bro. C. D. Moss, Vice-president of the D.B. of G.P. of the Grand Lodge of Japan, was duly installed W.M. of the Otentosama Lodge, No. 1263, E.C. The outgoing Master, Wor. Bro. H. Moss, Pres. D.B. of G.P., conducted the ceremonies, in which Wor. Bros. Kiel, Crane, and Hodges assisted. The newly installed Master then invested his officers as follows:—

Wor. Bro. H. Moss I. P. M. & Treas.
 Bro. S. E. Unite S. W.
 Bro. A. B. Brown J. W.
 Wor. Bro. G. Hodges Secretary.
 Bro. Rev. A. R. Morgan Chaplain.
 Bro. L. Harlow D. of C.
 Bro. C. F. Rhine Org.
 Bro. G. S. Nelson S. D.
 Bro. F. C. Heib J. D.
 Bro. H. J. Neville I. G.
 Bro. J. E. Beale Steward.
 Bro. C. B. Clausen Steward.
 Bro. H. Ivison Tyler.

A banquet followed, at which Wor. Bro. C. D. Moss presided, being supported by six Past Masters of the Lodge, and many P.M.'s of both constitutions, and many visitors, nearly fifty in all sitting down. The menu was as follows:—

Ox Tail Soup.
 Salmon and Shrimp Sauce, Truffled Chicken Patte.
 Fillet of Beef and Mushrooms, Salmi of Snipe on Toast.
 Green Peas.
 Artichokes, French Beans.
 Roast Leg of Mutton, Pheasant and Bread Sauce.
 Salad.
 Diplomatic Pudding, Vanilla Ice Cream.
 Dessert.

When the glasses were charged, the W. M. gave "The Queen and the Craft," and The Most Worshipful the Grand Master, H.R.H. the Prince of Wales, and Officers of Grand Lodge: the loyal and patriotic anthems suitable to each being played by Wor. Bro. John Griffin.

The next toast, "The Right Worshipful the District Master and Officers of the District Grand Lodge of Japan," was given by the W.M. After an instrumental trio from the "Cavalleria Rusticana," by Bro. Dr. Gordon Munro, Wor. Bro. Crane, and Wor. Bro. John Griffin. Wor. Bro. E. Flint Kilby, D.G.S.W., in the unavoidable absence of the D.G.M., returned thanks. In doing so he congratulated the Otentosama Lodge upon reinstalling Wor. Bro. C. D. Moss in the chair. He was a Mason who carried out the grand principles of the Craft in all the thoughts and actions of his busy, outer life. The Lodge, honoured itself by honouring such a Mason.—(Loud applause.)

The "Newly Installed Worshipful Master and his Officers," was given in feeling terms by Wor. Bro. Crane. The speaker had known Bro. C. D. Moss from the day of his first landing in Japan. He had been initiated into the Craft twenty-years ago, and twelve years since was W.M. of the Otentosama Lodge. Both as a Mason and as a citizen of the world, the newly re-installed W.M. had won the regard and esteem of men. His fresh year of office would be followed with deep interest, for he was one of those men who did not leave his Masonic principles of benevolence, uprightness, and true charity behind, when the door of the Lodge closed at his back.—(Hear, hear). The best wishes of the whole masonic fraternity of Japan were extended to Wor. Bro. Moss and his officers for a year of continual prosperity.—(Applause.)

Wor. Bro. C. D. Moss responded in felicitous terms, which were warmly endorsed by Bros. Unite, S.W., and Brown, J.W.

The toast of the "Past Masters of the Otentosama Lodge," was given by Bro. Dr. Gordon Munro in happy terms. Wor. Bros. Booth and Crane responded. "The sister constitutions and our visitors," was given by Wor. Bro. Hodges, and Wor. Bros. R. Hay, Home Cook, Beatty, Griffin, and Goodwin responded. "The mothers, wives, daughters, and sisters of Masons," was given by Bro. A. B. Brown and Bro. J. B. Barrett replied. "The Tyler's Toast," by Wor. Bro. Hodges concluded the speeches of the evening. During the course of the proceedings instrumental selections were given by Bros. Griffin, Munro, Crane, Rhine; songs by Bros. Crane, Unite and Clarke; and recitations by Bros. Pancefote, Davison, and Brown.

FRENCH CONSULAR-GENERAL COURT.

Before M. A. KLOBUKOWSKI, Consul-General,
 President, and Messrs. S. DEBRABANT
 and T. SCHÖENINGER, Assessors

MONDAY, 21st October, 1895.

THE "NATAL" COLLISION CASE.

Kobayashi Daikichi, owner of the junk *Eiho Maru* v. The Messageries Maritimes Company.

This was a claim \$10,135.745 alleged to be due for damages sustained by plaintiff through the sinking of the *Eiho Maru* by the steamer *Natal* and interest.

The plaintiff was represented by Mr. Kusaka, Mr. Conil appearing for the defendant Company, and Mr. M. Adam and Mr. J. Oueda acted as Interpreters.

The Court said that in this case the evidence of three naval experts had been requisitioned—a French and Japanese first, but as these two conflicted in the deductions drawn from the evidence laid before them, the services of an American naval officer had finally been asked for and rendered.

Mr. Kusaka contended that the steamer was entirely to blame, seeing that the sailing vessel was making no headway at the time and was going against the current.

A chart prepared by the American expert was produced and examined, which showed the respective courses of the two vessels.

Mr. Kusaka wished to know whether the Report of the Captain of the *Natal* had been deposited.

The Court—Yes. The petition had been filed so late—4 months after the occurrence—that the *Natal's* report had to be sent for from France and then filed. Of course the usual pilot's Report had been made on the vessel's arrival in port.

Mr. Kusaka wished to know whether it was not necessary for a full report to be made at the first port of arrival of any such occurrence as the present. Such not having been done the ship must be held liable.

The Court replied that it was not the business of the Court to discuss the question, but would read the Report of the Captain made on the 18th of September before the French Consulate at Shanghai relative to the accident, which occurred between Kobe and Nagasaki. As the vessel made only a few hours' stay there, the report of the circumstances was made in Shanghai.

Mr. Kusaka said that the crew of the *Eiho Maru*, after she had been run down by the *Natal*, were not permitted to go on board, and that in consequence the crew of the junk had been enabled to reach land only after great hardship and difficulty.

Mr. Conil said that the claim of \$10,145.745 was preposterous for a junk. He could only characterise such a demand as an attempt to make money out of the affair. The *Natal* left port in the morning and at 7.30 p.m. saw a white light 300 metres ahead. As soon as it was seen the helm was put down 45° to 50°, and two minutes later the collision occurred. There was sufficient time for the avoidance of the accident had the junk followed the rules of the road. Captain James, the pilot, was explicit on this point. The assertion that the Japanese not only were not succoured, but were not permitted to go on board, was a base libel on the M.M. Co. They actually came on board and demanded money on the ground that they were poor and had lost their all. A passage to Nagasaki was then offered them which they refused. This was fully referred to in Capt. James report, which was very minute, and had been sent to Tokyo. It was an extraordinary circumstance that the case was only brought four months after the occurrence instead of immediately. Why? They came to the Agent and begged for some recompense, which he said he was unable to give until he had made enquiries, when they went away.

Mr. Kusaka contended that when the junk was first seen she was immovable, consequently the steamer should have given way. In regard to the question of their having gone on the *Natal*, he could not reconcile it with the fact of the men having been obliged to take to their boat to reach the shore. They would have jumped at the opportunity to get to Nagasaki on the steamer.

Mr. Conil pointed out that this was denied by all on board, passengers included. The refusal to take them on could never be charged against a M.M. steamer.

Mr. Kusaka remarked that as to the report of the pilot James, seeing that he had, in connection with this case, returned the licence he received from the Teishinsho, his evidence could not be taken as conclusive on any point, and it was there-

fore useless. He was called before a Marine Court of Inquiry, where he refused to give evidence, nor even before this when questioned by Captain Mahlmann, the Harbour Master at Kobe.

Mr. Conil replied that Captain James was called to give evidence in the case months after its occurrence, when he claimed that the Osaka Court had no jurisdiction and refused to speak. This was common knowledge, as it had been reported in the papers of Kobe.

Mr. Kusaka claimed that the original report of the accident should have been made at Nagasaki, and not at Shanghai. The lapse of time before bringing the case was beside the question.

Mr. Conil could not understand why, if such was the case, in regard to the report the claim was made four months afterwards instead of immediately on arrival of the steamer at Nagasaki or Shanghai.

Mr. Kusaka replied that the plaintiff was not sure of the name of the vessel, so had waited to make sure. Anyhow, the case was brought within the legal limit of time.

Some discussion here took place as to whether Mr. Beguex, who acted as interpreter, understood the Japanese, and whether they in their turn understood him when the parley took place after the accident.

The Court remarked that Mr. Mahlmann had sent the report of the accident to Tokyo four days after its receipt, and the plaintiff must have known it, yet he allowed at least three months to pass before he brought his claim.

Mr. Kusaka said the report was wrong. The Japanese never went on board, and if they did no foreigner could have understood them, as they belonged to Bichu.

The Court—It is said that they attempted to go on board, but were not permitted; how do you account for your assertion that they could not understand each other?

Mr. Kusaka—They never got on deck.

The Court—I may remark that the whole of the evidence is against this.

The evidence of the Japanese was here read. The plaintiff is reported to have said that the *Natal* stopped after she struck the junk, and that two boats were lowered. Witness told the interpreter four men had been hurt. They were told to come on board, but had refused. The interpreter spoke good Japanese. Witnesses never asked for money, but used the words "*Tasukete okure.*" They were asked on board, but did not go.

Mr. Kusaka contended that this could not be construed into their having been on deck.

The Court pointed out that according to the evidence of the deck officer, the Japanese said they could look after themselves, so the vessel proceeded.

Capt. James's report was here read. This corroborated that the Japanese refused a passage to Nagasaki.

Mr. Conil remarked that in view of the fact that two boats were lowered, the assertion that no succour was offered was a falsehood.

Mr. Kusaka would admit the lowering of the boats, but denied that the men were offered a passage to Nagasaki.

The Court remarked that the main question at issue was, which vessel was to blame for the collision, and upon this question there also was conflict of deduction.

The Court—Was the junk stationary, or had she headway at the time?

Mr. Kusaka—She had her sails up, but was stationary at the time.

The Court pointed out that there was a discrepancy in plaintiff's evidence relative to this: in one place he said she had headway, while in another he said she was anchored; if the latter was the case, how could they account for the two halves of the junk sinking in different directions, and the moving of the forward part?

Mr. Kusaka said the cable must have been severed by the force of the collision.

The evidence of the Japanese and French technical experts was then read. Both were lengthy documents: the former placing the steamer in the wrong and the latter the junk.

An argument here arose as to the length of the cable of the junk and the depth of water in the locality of the accident. It was here proved beyond all doubt, by the official soundings in the charts, that the junk could not have been at anchor, the regulation length of cable for a boat of her size being altogether inadequate.

The evidence of the third expert was then read. In this every available point *pro* and *con* was fully given, as well as the rules of the road at sea, lights, &c., and the decision arrived at was that everything possible was correctly done by the pilot and officers of the *Natal* and that no blame whatever attached to her. Good

discipline was maintained and the true instincts of humanity followed.

The Court then adjourned till 2 o'clock, when both sides addressed the Court, plaintiff asking for judgment for the amount claimed, and the defendants for the dismissal of the case.

Judgment will be delivered on Monday next, the 28th inst.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 21.

Prince Lobanoff, at an interview with the German Emperor, said that Russia cannot tolerate the Japanese establishing themselves in Korea, where their presence would be a continual menace to both Russia and China.

(FROM THE "CHINA GAZETTE.")

Foochow, Oct. 8th, 9.45 a.m.

It is reported here privately that the British and American Ministers have informed the Chinese Government that unless their demands connected with the Kucheng Inquiry are satisfactorily settled and all the murderers punished within twenty days, united action will be taken by the Fleets of the Powers concerned. To this end several vessels of the British and American squadrons have been ordered to be in readiness to proceed to Foochow at a moment's notice.

Foochow, October 11., 9.20 p.m.

The deadlock at Kucheng continues. Mr. Mansfield is returning to Foochow, and is due here to-morrow (Saturday).

Tientsin, Oct. 11.

The American Commission appointed to enquire into the Szechuen riots of May last started from Peking on Sunday on their long journey to Chengtu. The party consisted of Consul Read, Mr. Cheshire of the U.S. Legation, and Lieut. Merrill of the U.S.S. *Baltimore*. They were escorted by twenty-five mounted coolies in military uniform.

It will take the Commission fully two months to reach their journey's end, where they will arrive seven months after the events into which they are to enquire took place.

Foochow, October 12.

Mr. Mansfield, British Consul, and the Rev. W. Banister, C.M.S., have arrived from Kucheng for the purpose of interviewing the Viceroy, and will return to Kucheng on Wednesday.

Foochow, October 13.

Admiral Buller arrived here yesterday.

Pekin, October 15.

An Imperial Decree has been published in the *Pekin Gazette* stating that all the officials whose names were given to the Tsung-li Yamên on 30th August last by M. Gérard, the Minister for France, and who have been found guilty, after trial by competent courts, of complicity in the Szechuan Riots, have been degraded in accordance with M. Gérard's representations. Liu Ping-chang—ex-Viceroy—was the first name on the list.

The Chinese Legations in Paris and London having been separated at the request of the French Government, Tchou Tchong, Chancellor of the Legation in Paris and *Chargé d'Affaires*, Mandarin of the Second Class, has been appointed Minister to France.

The Chinese Government has ordered the Chinese General commanding in the neighbourhood of Monkay, from which M. Lyaudet, the French Customs officer, and his family were carried off by pirates, to hand the captives over to the French Consul at Pakhoi. This is the first occasion on which the Chinese Government has admitted its responsibilities for the operations of native marauders on the southern frontier.

Sir Nicholas O'Connor's attitude towards the Yamên over the Kucheng trial is very strong, and yesterday the Chinese signified (or pretended) entire acquiescence with his just demands.

Foochow, Oct. 15.

After the visit of the Admiral and Consul to the Yamên, the Viceroy was evidently impressed with the danger of his playing any longer, and he has promised to give a full settlement within a week's time, and offers to behead 18

more of the prisoners, hoping this will satisfy all demands.

(FROM THE "N.C. DAILY NEWS.")

London, October 15.

Reuter's Agent at Constantinople states that Great Britain is resolved to secure the adoption of Armenian reforms, and that she will not hesitate to use pressure on the Sultan.

Foochow, October 15, 8.55 p.m.

Mr. Mansfield has had a satisfactory interview with the Viceroy. Eighteen more men are to be executed immediately and others who have been convicted are to be banished. The investigation is to be continued.

Pekin, October 13, 3 p.m.

Several urgent telegrams have been received from Kansu this morning, and there is a report now here that Lanchou, the provincial capital of Kansu, has succumbed to the attacks of the Mohammedan rebels, and that Yang Ch'ang-chün, Viceroy of Shen-Kan, whose seat is at Lanchou, has committed suicide in order to escape indignity at the hands of the captors. Another report is that Lanchou, having fallen into the rebels' hands, the Viceroy Yang with a body of cavalry succeeded in cutting his way through the rebels, and is now with General Lei Chên-kuan, whose force of 8,000 men is also in danger of being surrounded to the north of Lanchou. General Tung, the Kashgar Commander-in-Chief, is still about 100 miles to the south-east of Lanchou. The Emperor, upon receipt of these telegrams, issued two secret decrees immediately afterwards, ordering General Tung to hasten to meet the rebels and fight a decisive battle with them. Four decrees were also sent to the Governors of Shensi, Shansi, Honan, and Shantung to send all available troops to reinforce General Tung. This General has reported in a secret memorial that he is surrounded on all sides by traitors and does not dare to make a general forward movements for fear of wholesale desertions in the face of the enemy. General Tung's troops are nine-tenths natives of Kansu, and it is feared that they will refuse to fight their friends and kinsmen. Secret society men from Central China are also reported to have joined the Mohammedans, so that this rebellion is not purely a war of religion. The situation is considered so serious that it is proposed to send off a large body of the Peking Field Force, and to call in the Tartar troops of Kirin and Heilungchiang and send them by way of Mongolia to the aid of General Tung.

London, October 17.

It is stated that two thousand Spaniards have been either killed or have died in the course of the Cuban campaign.

Pekin, October 11.

The Edict of the 29th of September, exacted by the British Minister exclusively, provided explicitly for the punishment of all the officials concerned in the riots. The second Edict, dated the 14th instant, is issued in fulfilment of the engagement thus made with Sir Nicholas O'Connor.

London, October 18.

The Straits Association has accepted Lord Ripon's proposal of 28th June as to the military contribution required from Singapore. The proposals made for other colonies in the East, with regard to their military contributions, are as follows:—Seventeen and a-half per cent. is demanded from Hongkong, five per cent. from Mauritius, and it is expected that Ceylon will contribute from eight to ten per cent. of their respective revenues.

(FROM TONKIN PAPERS.)

Paris, October 5.

The King of Portugal is visiting Paris.

The funeral of M. Pasteur was an imposing ceremony. M. Faure, Prince Nicolas, and Archduke Constantine were present. Many wreaths were sent, including one from the King of Portugal.

Paris, October 6.

President Faure and the King of Portugal have exchanged visits.

(FROM THE "SIAM OBSERVER.")

London, September 30.

Lord Lamington has been appointed to the Governorship of Queensland.

London, October 3.

A band of missionaries are leaving to take the places of those killed in the recent massacres.

(FROM "LE COURRIER D'HAIPHONG.")

Haiphong, October 10.

The Chinese Marshal Sou handed over the Lyaudets the day before yesterday, to M. Bons D'Anty, French Consul at Lungchow, who is on a visit to Moncay.

There are no details yet available showing how Sou got the captives out of the hands of the brigands.

(FROM JAPANESE PAPERS.)

Sôul, Oct. 22.

Li Shun-yo, who was to have left here for Japan last night, has postponed his departure until the 26th inst.

Shimonoseki, Oct. 22.

Mr. Okamoto Ryunosuke and over forty other Japanese residents, who left Ninsen on the 21st inst. by the *Chikugogawa Maru*, are expected to reach here to-morrow.

Shanghai, Oct. 22.

Liu Yung-fu, the Black Flag leader, effected his escape in a junk on the 19th inst., and his whereabouts are unknown.

Later.

Liu Yung-fu and eleven followers have escaped from Formosa in a junk, and landed in the neighbourhood of Amoy.

A report from Amoy says that the Black Flags have surrendered, and the Japanese army is expected to have now occupied the whole of the island.

A report has reached here to the effect that the British steamer *Thales* has been inspected by a Japanese man-of-war on suspicion that she was conveying the Black Flag leader. The statement, however, requires confirmation.

Kyoto, Oct. 22.

The anniversary of the foundation of this capital was celebrated to-day. The ceremony took place at 9 a.m. in the Taikyoku-den, at which H.I.M. the Emperor was represented by H.I.H. Prince Yamashina. Mr. Yamada, Governor of Kyoto, read an address, after which an Imperial Rescript was read by Prince Yamashina. Congratulatory addresses sent from Viscount Nomura, Minister of Home Affairs, and H.I.H. Prince Komatsu, were then read. The guests, numbering over 400 in all, afterwards sat down to a banquet. The streets are richly decorated, but the bad weather is causing trouble, and the city is unexpectedly quiet.

Sôul, Oct. 23.

Although some of the Foreign Representatives have been entertaining doubts as to the good faith of Japan in connection with the recent *émeute*, they have since become assured that the disturbance was chiefly the work of Koreans, and that the Japanese merely lent assistance, while these same Japanese were chiefly *soshi*, who acted contrary to the wishes of the Japanese Government. Expressions of opinion towards the Japanese have grown mild.

Hiroshima, October 24.

The *Chikugogawa Maru* is expected to arrive at the Nishima Quarantine Station at 4 p.m. to-day. Chief Public Procurator Kusano, and Mr. Terada, Superintendent of the Hiroshima Police, attended by seven police inspectors and thirty constables, will proceed to the *Chikugogawa* to arrest the Japanese deportees, and bring them to the prison in this town.

Judge Yoshioka and Public Procurator Kitagawa proceeded to Ujina to-day.

Four hundred and fifty soldiers will leave here for Formosa to-day.

Osaka, Oct. 24.

Marquis Yamagata and Count Okuma are meeting almost every day, and whenever they meet they indulge in a long conversation. It is said some important questions of the day are discussed.

Fusan, Oct. 24.

A Russian man-of-war passed off this port to-day with about one thousand Russian soldiers for Vladivostock.

Nagasaki, October 25.

The French flagship *Bayard* left here for Yokohama to-day.

Soul, October 24.

Li Tai-ben, Minister of the Imperial Household, was placed on the Retired List to-day.

The Tai Wön-kun, who has been staying at the Palace since the 8th inst. has returned to his residence at Un-hyon.

Prince Wi-hwa left here to-day for America and Europe. In Chi-yo and In Chi-ken have been ordered to accompany the Prince.

Hiroshima, October 24th.

Twenty-two Japanese deportees arrived at the Nishima Quarantine Station by the *Chikugawa Maru* at 1.30 p.m. to-day. Medical inspection was concluded at 4 o'clock and no one was found to be indisposed. Chief Public Procurator Kusano issued warrants for all to be arrested. They are accused of wilful murder and the instigation of a riot. The prisoners were conveyed to this town in *jinrikisha*, and reached the Hiroshima Local Court at half-past 8 o'clock. The names of the deportees arrested are:—Okamoto Ryunosuke, Kunitome Shigeaki, Hirota Shizen, Sasa Tadashi, Sato Keikichi, Mayeda Shunzo, Hirayama Iwahiko, Kikuchi Kenjo, Iyeiri Kakichi, Tsukinari Hikaru, Fuji Katsuki, Yamada Ressei, Yoshida Tomokichi, Shiba Shiro, Suzuki Junken, Osaki Shokichi, Takeda Hanzo, Matsumura Ryuki, Kumabe Yonekichi, Uno Takeo, Ushijima Hideo, and Sawakura Measa.

Nagasaki, Oct. 25.

The *Idzumi Kan* has left for Saseho, and the French cruiser *Isly* has arrived from Ninsen.

CHESS.

(All Communications to be addressed to the CHIEF EDITOR.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 199.

WHITE.

- 1—R to K B 2
- 2—R to Kt 2, mate
- 2—R to Q 2, mate
- 2—Q to Kt 6, mate
- 2—R to B 4, mate
- 2—Q to B 3, mate.

BLACK.

- 1—K takes Kt (ch.)
- 1—K B takes Kt
- 1—P to K 4
- 1—Q or Q B takes Kt
- 1—Q to Kt 8

Correct answers from Shogi, W.H.S., Kr., Digamma, and J.D.

E.D.—Another cancel! You would at least have been in good company this time.

R.—Your Key-move is unsound. If Black replies Q B takes Q there is no possible mate.

DON.—Q B to Q B 5 is an answer to your Key-move.

E. J. KING.—No use! After Black's move of 1—B to B 5, 2—Kt to Q sq. does not mate; as Black's K B interposes.

PROBLEM No. 201.

By W. PULITZER.

BLACK.

WHITE.

White to play and mate in two moves.

| 23—K R to Q sq. | 23—B takes B |
| 24—Kt takes B | 24—B to R 4 (o) |
| 25—P to Kt 4 | 25—B to B 2 |
| 26—Kt to Kt 5 | 26—P to R 4 |
| 27—Kt to B 3 | 27—B to Kt 3 |
| 28—P to Kt 5 (p) | 28—P takes P |
| 29—Q R to Kt sq. | 29—R to B sq. (q) |

And North London resigns.

NOTES BY THE GLASGOW COMMITTEE.

- (a) Looks peculiar, but appears on analysis to be the best move; first, we believe, played by Steinitz.
- (b) Gives an apparently confined game, but in reality Black's position is perfectly safe.
- (c) At once turns Black into the aggressive. This move was suggested in the "International Club Magazine" of September, 1891. If White now play Kt to Q 4, Black replies B to Q 2, with a good game. Kt to Q 4 was, however, better than Kt to K sq., as, we believe, the North London players realised immediately after making the move.
- (d) White's position becomes now somewhat cramped.
- (e) Seems doubtful, for it leaves the K B in a constrained position.
- (f) Preparatory to planting at the commanding position of Q 6. White's last move is weak, because if here 14—Kt takes P, then Q to Q 6; and if 15—R to K 3, Q takes P, with much the better game.
- (g) This is at once the loss of a valuable pawn, but White's position has become so cramped that it is difficult to show a good move.
- (h) If here 15—Kt takes P B takes Kt; 16—R takes B, Kt to Q 6; 17—R to K 2, Q to R 4. If 16—Q takes B then Kt to R 6 wins a piece or the exchange.
- (i) It is, of course, obvious that at this point Kt cannot take B.
- (k) A strong and effective reply. The result is to lead to the exchange of Queens, with Black a pawn up, and still maintaining a deadly attack.
- (l) Of course, if here Kt took P, Black wins by R to Kt 5.
- (m) If the B remained at B sq, then Kt takes B followed by R takes P.
- (n) A move adopted on the suggestion of Sheriff Spens. Strong as the Kt was at Q 6, it is still more effectively posted here.
- (o) In pursuance of the combination instituted at the 22nd move.
- (p) Useless.
- (q) White has no resource left.

GAME No. 374.

The subjoined "skittle" game between Bird and Lasker, played at Newcastle, shows the danger of playing too fast with the cunning old veteran:—

DANISH GAMBIT.

- | WHITE.
Bird. | BLACK.
Lasker. |
|--------------------|-------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—P to Q 4 | 2—P takes P |
| 3—P to Q B 3 | 3—P takes P |
| 4—B to Q B 4 | 4—P takes P |
| 5—Q B takes P | 5—Q to Kt 4 |
| 6—Kt to K B 3 | 6—Q takes P |
| 7—R to Kt sq. | 7—B to Kt 5 ch. |
| 8—K to K 2 | 8—Q to R 6 |
| 9—B takes P ch.! | 9—K to Q sq. |
| 10—B takes P | 10—Kt to K 2 |
| 11—Kt to Kt 5 | 11—Q to R 5 |
| 12—Kt to K 6 mate. | |

GAME No. 375.

An off-hand game played some years ago between two well-known American experts:—

KING'S BISHOP OPENING.

- | WHITE.
Richardson. | BLACK.
Delmar. |
|-----------------------|--------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—B to B 4 | 2—Kt to K B 3 |
| 3—Kt to K B 3 | 3—Kt takes P |
| 4—Kt to B 3 | 4—Kt takes B P (a) |
| 5—K takes Kt | 5—B to B 4 ch. |
| 6—P to Q 4 | 6—P takes P |
| 7—R to K sq. ch. | 7—K to B sq. |
| 8—Kt to K 4 | 8—B to Kt 3 |
| 9—Q to Q 3 (b) | 9—P to Q 4 |
| 10—Q to R 3 ch. | 10—K to Kt sq. |
| 11—B takes Q P | 11—Q takes B (c) |
| 12—Kt to B 6 ch. | 12—P takes Kt |

- | | |
|-------------------|----------------|
| 13—Q to B 8 ch. | 13—K takes Q |
| 14—B to R 6 ch. | 14—K to Kt sq. |
| 15—R to K 8 mate. | |

NOTES BY CAPTAIN MC'KENZIE.

- (a) A sacrifice quite in keeping with Mr. Delmar's dashing style, but one that is pretty sure to turn out badly against his present antagonist.
- (b) Evidently courting the "fork" of his two pieces by the Q P and preparing the very fine ending which results therefrom.
- (c) In an off-hand game as was the present, Black may be pardoned for not having foreseen the blaze of glory in which his King is now about to be consumed.

GAME No. 376.

CHESS IN TOKYO.

A Queen's Gambit with a smart ending recently played in the T. C. C.

- | WHITE. | BLACK. |
|-------------------------------------|-------------------|
| 1—P to Q 4 | 1—P to Q 4 |
| 2—P to Q B 4 | 2—P takes P |
| 3—Kt to Q B 3 | 3—P to K 3 |
| 4—P to K 3 | 4—Kt to K B 3 |
| 5—Kt to K B 3 | 5—B to Q 3 (a) |
| 6—B takes P | 6—P to Q B 3 (b) |
| 7—P to Q R 4 | 7—P to Q R 4 |
| 8—Castles | 8—B to Kt 5 |
| 9—P to R 3 | 9—P to R 3 |
| 10—B to Q 3! | 10—Q Kt to Q 2 |
| 11—P to K 4 | 11—Q to B 2 |
| 12—P to K 5 | 12—Kt to Q 4 |
| 13—B to K 3 | 13—Q Kt to Kt 3 |
| 14—Kt takes Kt | 14—Kt takes Kt |
| 15—Kt to Q 2 | 15—B to Q 2 |
| 16—Kt to Kt 3 | 16—P to Kt 3 |
| 17—B to K 4 | 17—Castles |
| 18—Q to Kt 4 | 18—Kt takes B (c) |
| 19—P takes Kt | 19—B to K 2 |
| 20—R to B 6 (d) | 20—B takes R |
| 21—P takes B | 21—P to Kt 3 |
| 22—B takes Kt P | 22—K to R sq. |
| 23—Q to R 5 and mates in two moves. | |

- (a) B to K 2 is recommended by the books.
- (b) P to Q B 4 seems stronger.
- (c) White wished to open his K B file by getting rid of this B P to K B 4 might have equalised Black's game.
- (d) The winning move.

HASTINGS CONGRESS.

GAME No. 377.

In view of the fact that Steinitz is very desirous of playing a second match with Lasker, by means of which he expects to regain his old position as world's champion, the game played by these redoubtable men at the Hastings tourney possesses more than ordinary interest. The full score, with notes supplied by Mr. Kemeny to the Philadelphia *Ladger* follows:—

RUY LOPEZ.

- | WHITE.
Lasker. | BLACK.
Steinitz. |
|-------------------|---------------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to Kt 5 | 3—P to Q R 3 |
| 4—B to R 4 | 4—P to Q 3 |
| 5—Castles | 5—K Kt to K 2 |
| 6—P to B 3 (a) | 6—B to Q 2 |
| 7—P to Q 4 | 7—Kt to Kt 3 |
| 8—R to K sq. | 8—B to K 2 |
| 9—Q Kt to Q 2 | 9—Castles |

| 30—B takes Kt ch. | 30—K to Kt sq. |
| 31—B to Q sq. (h) | 31—B to R 6 ch. |
| 32—K to Kt sq. | 32—Kt takes P (i) |
| 33—B takes B | 33—Kt to B 5 |
| 34—B to B 6 | 34—Q to Q 7 (k). |
| 35—R to K 2 (l) | 35—Kt takes R ch. |
| 36—B takes Kt | 36—Q to Q 2 |
| 37—R to Q sq. | 37—Q to B 2 |
| 38—B to B 4 | 38—B to K 3 |
| 39—P to K 5 | 39—B takes B |
| 40—Kt to B 5 (m) | 40—Resigns. |

NOTES.

- (a) Superior to P to Q 4, for it enables White to maintain his strong center pawns.
- (b) With the intention to continue Kt x Q P winning an important pawn. The move was lost of time only, as White's proper reply B to B 2, proves. K to R sq., followed by P to B 4, was a much superior line of play.
- (c) Q to B sq., followed by P to B 4, was probably better.

(d) This is an extraordinary position, indeed. Seventeen moves were made, and Black has all his pieces on the first row. Could he only retreat the K P, Q P and Q R P the climax of modern chess would be reached.

(e) Black should have made every effort to advance the K B P for the past twelve or fourteen moves. Now it was disastrous on account of threatening sacrifice. He should have continued P to K B 3, K to K 2, Kt to R 3 and Kt to R 2.

(f) The best continuation. Had White played P to K Kt 5 Black would answer Kt (K 2 x Q P, and very likely would have escaped defeat.

(g) This loses a piece, as White's reply, Q to Kt 5, shows. However, there was no proper defence for Black. P to K R 3 was dangerous on account of opening the R file.

(h) Excellent play! This powerful move annihilates any counter attack Black might have in view.

(i) The sacrifice of a piece was not sound. The game, however was beyond repair already.

(k) R x B followed by R to K B sq. and Kt to Q 6, was more promising.

(l) The quickest win! White, by sacrificing the exchange, forces back the Queen, and also brings his Q R and K B into play.

(m) An exceedingly neat finish! In order to avoid the threatening mate, Kt to R 6, Black is obliged to sacrifice the Queen.

Mr. Mason says that at the outset the Knights are easily moved about—"and easily moved too much." They should not be overworked, or heedlessly exchanged for other pieces, because in mere exchange there can be no loss. When you have no Knight a great part of the flexibility of your position is gone, especially for attack. A Knight posted and supported on adverse ground, looking towards the King and free from Pawn disturbance, is often a host in himself. The Pawn is the Knight's worst enemy. Sometimes a Rook's Pawn—of all Pawns—will Queen against him single handed and alone. It is generally well to have the Knights either supporting each other or side by side. In this latter position they command more ground. A single Knight is often a good protection to the King against close checks from the Queen. Place a King, friendly Knight, and adverse Queen on three successive squares in rank or file, and it will be found that the Queen cannot give check without going *en prise*."

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea,
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPITOMISED
DEBATES, Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of
the Session.

PRICE \$1.

To be obtained at the Office of the Japan
Mail, No. 51, Main Street.

YOKOHAMA: SATURDAY, NOV. 2ND, 1895.

SUMMARY OF NEWS.

COMMANDER TAKAI TADATOSHI has been appointed to the *Hosho Kan*.

ST. ANDREW'S BALL will be held in Yokohama this year on St. Andrew's Eve.

BISHOP and Mrs. BICKERSTETH left Japan on Monday on a short visit to England.

THE Imperial Guards will return to Tokyo from Formosa before the close of November.

It is stated that Mr. Daigoro Go, Japanese Consul at Bombay, sent in his resignation a few days ago.

THE *Yi-yu Shimbun* was suspended on the 25th ult.; on the 29th the *Nichi Nichi* experienced a similar fate.

VISCOUNT MIURA and others implicated in the Korea *émeute* have been arrested upon arrival at Shimonoseki. All are now confined there

pending the finding of the Court of Preliminary Examination.

COUNT INOUE, the special Korean Ambassador, and the ex-Korean Minister to Japan, have arrived at Sôul.

H.I.H. PRINCE ARISUGAWA entertained the Princes of the Blood and Ministers of State on the 26th ult.

AN Imperial Ordinance convoking the ninth session of the Diet will, it is said, be issued about November 10th.

DANGO-ZAKA and other famous chrysanthemum shows in Tokyo have been thrown open to the public during the week.

THE funeral of the late Major-General Baron Yamane took place in Tokyo on the 27th ult. with full military honours.

RUMOUR has it that some leading Japanese capitalists are contemplating the establishment of a silk spinning factory at Shanghai.

H.I.H. PRINCE KITASHIRAKAWA, Commander of the Imperial Body-Guards in Formosa, is dead; and the Birthday Ball has been abandoned.

THE Supplementary articles of the Anglo-Japanese Treaty, relating to import duties has been reported upon by the Privy Council to the Emperor.

THE Hantan Railway Co. has distributed yen 150,300 as a dividend for the half-year ending September last at the rate of 3 per cent. per annum.

FIFTEEN Korean students, who have been studying at the Keiwo Gijuku, Shiba, Tokyo, left for Korea on the 27th ult. owing to sickness and other circumstances.

THE Toyama Prefectural Assembly passed, on the 26th ult., a vote of no confidence in Governor Tokushima in connection with his management of the public works fund.

SOME paper manufacturers in Kanagawa Prefecture are contemplating the establishment in Yokohama of a paper export company with a capital of yen 400,000.

H.I.H. PRINCE KWACHO arrived at Yokohama on Monday, by the *Empress of India*. The Prince was received by Count Nanbu, Commander Bando, and several others.

THE surveys being made by the *Kaimon Kan* along the western coast of Formosa have for their object the discovery of an anchorage suitable for converting into a harbour.

TRAINING for the Autumn races is proceeding apace, and the prospects of good sport are bright. The early morning gallops are attracting a number of people to the Course.

THE case brought in the French Consular Court by some Japanese junk-owners to recover damage caused through the M.M. steamer *Natal* running down their vessel, has been compromised.

VISCOUNT NOMURA, Minister of Home Affairs, gave an entertainment on the 28th ult., at his official residence to the Local Governors now in Tokyo and the leading officials of the Home Department.

MARQUIS ITO, the Premier, and Marquis Saionji, Temporary Minister of Foreign Affairs, gave a farewell banquet to the Netherlands Minister on the 29th inst. at the official residence of the Minister of Foreign Affairs.

ONDA JUSHIRO, of Koishikawa, Tokyo, who was arrested a few days ago for having forged

a quantity of 20 *sen* silver coins, has confessed that he was engaged in forging coins for four years, during which period he made over two thousand pieces.

THE sale in Japan of the *Sokojiji* (No. 120), a Japanese Magazine published in America, was prohibited by the House Minister on the 30th instant, as it contained matter regarded as injurious to the public peace.

MR. OTORI gave a banquet to the leading Japanese residents of Yokohama on the 26th inst. at the Maple Hall, Shiba Park, Tokyo, in return for the warm reception tendered him at Yokohama immediately after his return from Korea.

THE first anniversary of the Japanese army's entry into Mongolia was celebrated at the Military Club, Kudan, Tokyo, on the 25th of October. Marshal Count Nozu, Major-General Baron Ogawa, and Major-General Shioya were present.

REUTER telegraphs:—A telegram to *The Times* from Hongkong says that Russia has concluded a treaty with China, securing to the former Power the right of anchoring her fleet in Port Arthur, together with other advantages outside the most-favoured-nation clause. The papers regard the news as of very great gravity, and declare that if it is true Great Britain is bound to intervene. The Foreign Office is without information on the subject. China pays to the Japanese, on the 8th of November next, thirty million taels for the evacuation of the Liaotung Peninsula. It is stated that Russia, France, and Germany are presenting a note to Japan, accepting the reply of Japan concerning the evacuation of Liaotung by the Japanese within three months after the payment by China of thirty million taels, and the assurance of the freedom of the navigation of the Formosa Channel. There is excitement at Lebanon where fatal conflicts have taken place between the Druses and Metualis. The latter complain of Turkish injustice, and it is feared that the Sultan's acceptance of the reforms urged will not settle the question from the Armenian point of view, while there is increasing discontent amongst the Mussulman Liberals.

THERE is no change of importance to note in the Import trade, but recent large purchases must have well supplied dealers in the interior, and a quieter condition of the markets must be now expected. This is beginning to be apparent as regards Yarns and Textiles, which meet with somewhat less enquiry, though there is no quotable change in prices. There has been some business in Metals, but buyers do not readily rise to the advance in value following increased home cost. Stocks of Iron, however, are known to be short, and requirements will have to be supplied. In Kerosene there is not the business that might be expected, having regard to the present price of Oil. There is little change in the Sugar trade, and the principal business of the week has been the delivery of recent purchases. White sorts are in some demand, and are firmly held. The Silk trade is quiet, due principally to the firmness of holders, who might induce a considerable business by making some reduction in the prices at present demanded. In the Waste trade the attitude of holders is also a bar to business, which would doubtless follow a fall in prices—in fact less money must be taken before any movement of importance can come about. There continues to be a little done in Tea at late rates, but the season may now be considered as very nearly at an end. Exchange has fluctuated slightly, and during the past few days the tendency of rates has been to the upward grade.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Korean question continues to occupy the most prominent place in Tokyo journalistic discussion. The Opposition journals insist, though with decreasing ardour, upon the resignation of the Cabinet in connection with the *émeute* in Söul, which they endeavour to depict in the worst possible light, so that their demand for Ministerial changes may be urged with the greater degree of plausibility and force. Various motives induce these papers to call for the Ministry's resignation, but the most important are two; namely, first, their desire to pull down the Government, for the attainment of which end they welcome any and every opportunity, fair or foul; and secondly, a conviction that the present Administration's foreign policy, especially with regard to Korea, is vacillating and out of touch with the spirit by which the nation is animated. Doubtless the regret they express for the incident is genuine. In that respect they evidently echo the sentiments of the people. But they are betrayed into palpable exaggerations by the personal and political considerations always uppermost in the minds of the Opposition journalists.

The *Nippon*, as we mentioned in our last weekly summary, has erred on the other side. Though regretting the acts of barbarity by which the *coup d'état* was accompanied, it has done everything in its power to extenuate the part taken in the affair by Japanese diplomats and residents. Seeing, however, that there is no longer any possibility of maintaining an apologetic position about the doings of Viscount Miura and others, the *Nippon* now begins to add its voice to the cry for the resignation of the Cabinet. Consistency has evidently no value in its eyes.

Concerning the position of the new Government in Söul, the *Nippon* thinks that there is no reason why it should not be recognized by the Treaty Powers, especially Japan. The recent change did not affect in the slightest degree either the position of the Sovereign, or the political system of the country. It was simply a change of Cabinet. Under such circumstances, Occidental Powers refusing to recognize the new Ministry act in a very unfair and unwarrantable manner, evidently consulting their own interests only. As for the Japanese Government, should it follow the example of these self-interested States and refuse to deal with the present Cabinet in Söul, it will incur a grave responsibility, for such a step would surely lead to a state of anarchy in the peninsula,—a result that might be convenient for some Powers, but would be productive of the worst possible consequences for Japan. Thus the *Nippon* is strongly opposed to the policy of disowning the new Korean Cabinet, a policy contemplated, it fears, by the Government. "Abandoned by the Imperial Government, the Korean Cabinet would be like a fish deprived of water. The Tai Wön-kun and the Ministers of State would in that case, feel as though they had been rudely awakened from a pleasing dream. Unwilling to say much on this subject, we may, nevertheless, be permitted to express our wonder at the controlling influence exercised by a few strong Powers, and at the Imperial Government's tame acquiescence with the wish of these Powers. Are we, the Japanese nation, doomed to find that what we have done and thought during the past twelve months was merely a long dream?"

The *Nichi Nichi Shimbun* thinks otherwise. It observes that a Korean Cabinet, in order to be recognized by Japan, ought to be freely chosen of the King and unconnected with any heinous crime. In the case of a truly independent State, these things are beyond the interference of a foreign country. "But having regard to the present relationship between Japan and Korea, our Government is in duty bound to urge upon the King the advisability of

dismissing a Cabinet liable to be accounted lawless and unfit for office. The present Korean Government, even supposing that it had no hand in the atrocious crimes committed during the recent disturbance, can not escape the disgrace of incompetence to prevent such incidents. Is it permissible for the guardian of Korea to raise no objection to a Cabinet that has either been connected with or has tacitly approved an act of heinous treason? There is no evidence that the present Cabinet owes its existence to the spontaneous will of the King. The question cannot be decided on the strength of official declarations made by the Government in Söul. At all events, close investigation is needed to determine whether the present Cabinet owes its appointment to the free wishes of the King, and if so, whether it is morally qualified to direct the affairs of the Kingdom." Our contemporary then goes on to refute the absurdity of contending that the new Korean Government ought to be supported because it is friendly to Japan. "It is a grievous mistake to suppose that the maintenance of Japan's influence in the peninsular depends upon the favour of any particular set of politicians, be they Mins, Lis, or Kims."

The *Mainichi* agrees with its contemporaries as to the propriety of bringing to justice all Japanese subjects, whoever, they be, that were connected with the barbarous drama of the 8th of October. But our contemporary thinks it quite possible to be too severe in punishing these offenders. It places full confidence in the uprightness of Japanese law officers, but insinuates that the ministry may be tempted, from diplomatic considerations, to bring pressure to bear upon the administrators of justice. The criminals should be punished to the full extent provided by law, but only to that extent.

The *Kokumin Shimbun* observes that, since no doubt remains that the conduct of the knot of Japanese concerned in the *émeute* is unqualifiedly condemned by the whole nation, Japan must not suffer herself to be thrust out of the position occupied by her in the peninsula. Some folks, the *Kokumin* alleges, though we ourselves have never come across them, are weak enough to suggest the desirability of withdrawing the troops from Korea. But the necessity of keeping Japanese troops there cannot be denied by any fair-minded person. Some European Powers may not like to see Japanese forces in the peninsula, but there is no reason to question Japan's sincerity when she declares that her object is not to occupy Korea for ever, and that her historical, social, and commercial relations with the peninsula, as well as considerations of national safety, make it absolutely necessary for her to maintain, at whatever cost, the territorial integrity of the peninsula. The present relationship between Japan and Korea is a logical consequence of the late war, and should any of the European Powers be disposed to object to Japan's position in the peninsula, such Power ought to have expressed its objection at the commencement of the war. Our contemporary proceeds to discuss the question of Ministerial responsibility in connection with the question, but its remarks on this topic need not be noticed, as they are a mere repetition of what has already been reproduced more than once.

The *Fiji Shimpö*, as usual, takes a comprehensive and cool view of the matter. It regrets to observe its countrymen engaging in fruitless party disputes at a time when external circumstances call for national unity and harmony. "Reserve your disputes for future opportunities, and not only allow the Government perfect freedom of action but also render it every possible assistance and support. That is our most earnest wish. The Government is perfectly acquainted with the views of the people, so that there can be now no danger in giving it *carte-blanc* to manage the country's affairs. Not only is there no danger, but such generous trust on the part of the people cannot fail to make the Ministers feel more keenly the gravity of their responsibility."

"Some of the metropolitan journals, probably from a desire to help those in power, do not hesitate to publish things that had better be left unsaid; others, from partiality toward participants in the disturbance, try to distort facts; and others, again, seem bent upon perverting the question into a weapon for party warfare against the Government. Patience and disinterestedness are essential in considering questions of this nature."

Writing on military development, the *Fiji Shimpö* laughs at the timidity of the Government and the people about the expenses required for the purpose. It assures both the Ministry and the nation that the wealth of the country has enormously developed during the past fifteen years, and that the nation is quite capable of bearing, without any inconvenience, taxation sufficient to maintain an Army and Navy for more powerful than the most extreme advocates of increased armaments contemplate. The *Fiji* cannot comprehend why the Government should be ignorant of this fact. Any body doubting the truth of its assertion is referred to the ease with which the War Loan was raised, and the stability maintained in national economy during the war. The Government should be bold in devising a programme of Army and Navy increase, and the Diet liberal in granting supplies.

EDITORIAL NOTES.

MISS ANNIE MAY ABBOTT IN TOKYO.

For the past week Miss Abbott has, despite the dull weather, performed to crowded houses twice daily, the large hall of the Kinki Kan, Kanda, being chosen. Mr. Black, or rather Mr. Ishii, for he has been naturalized as a Japanese citizen, acted as spokesman interpreter, interlard his remarks with those whimsical speeches which so delight a Japanese audience, and to which he owes his success as a professional *hanashtka*. At first the audiences appeared a bit unsympathetic, probably owing to the wide-spread opinion that the whole performance was a hoax. But when physicians, scientists and well-known merchants took their places on the platform and willingly gave their opinion that there was not the slightest deception about the marvels performed by the "Little Georgia-Magnet," a more enthusiastic time prevailed. Miss Abbott, moreover, has had the honour of performing in the presence of the Prince Imperial, and was, on last Friday, the guest of the Army and Navy Club at Kudan. The metropolitan press speak in terms of unstinted praise of the performances, which were attended by over ten thousand people during the last eight days.

NAVAL NOTES.

We understand that the following is the approximate programme for the wintering of H.B.M. ships in North China:—The *Esk*, at Ichang; *Firebrand*, at Hankow; *Linnæ*, at Tientsin; and *Rattler*, at Newchwang. The winter stores are, as usual, being duly forwarded from Hongkong. H.M.S. *Caroline* is reported as likely to proceed Home from Shanghai by way of the Cape. The *Narcissus* and *Immortalité* are expected to take the place on the China station of the *Caroline* and *Mercury*. It is reported that new crews for the *Daphne*, *Plover*, *Redpole*, *Pigmy*, and *Alacrity* may be looked for in Hongkong in the early part of the year. Two new second-class cruisers, the *Theseus* and the *Sappho*, are mentioned as the medium of transport of those new crews; but it may be noted that the *Sappho* has recently been commissioned to relieve the *Melita* in the Mediterranean. H.M.S. *Tweed* will, we hear, be escorted to Foochow (by either the *Pique* or *Peacock*) in order that she may there take the place of the *Linnæ*, ordered to Tientsin. The present crew of the *Daphne* will "turn over" to the *Victor Emmanuel* on Thursday next, during the refitting and docking of the *Daphne*. H.M.S. *Porpoise*, which has been for some time in the Behring Sea, is expected to arrive at Yokohama. Referring to our remarks in the *China Mail* of the 11th inst. we may add that the steam steel-lighter for mooring purposes has been finally

settled, and the Hongkong and Whampoa Dock Company will at once proceed with the work. This useful craft is intended to take the place of the old *Opossum* (which, it may be noted, took part in the bombardment of Canton), which ancient and historical hull will probably be sold. —*China Mail*.

THE LOSS OF THE "KUNGPAL."

THE following telegram from Kinchou has been handed to the *N.-C. Daily News* for publication:—"Herewith a few details about the fearful disaster which happened to the steamer *Kungpai* a few days ago, 80 *ri* from here. Captain Soden, the first and second mate, and the first and second engineer are all dead; only the third engineer, a Swede, is saved. The disaster occurred on the morning of the 14th inst. The steamer had on board 700 soldiers when a powder explosion happened and the steamer took fire. The crew worked hard for more than half an hour to extinguish the fire, but in vain, and another powder explosion followed. The captain and chief officer were wounded by the first explosion, and they were laid in a boat to be brought to shore, but the soldiers rushed on in such great numbers that the davits broke and the boat was smashed by the heavy sea running at that time. The steamer sank in shallow water and the survivors, one foreigner and 200 soldiers, were sitting on the wreck for seventeen hours, the sea being too heavy for any boat to reach them. Twenty-seven wounded soldiers were brought to the foreign hospital here yesterday. They look a fearful sight, scalded and burnt as they are. To judge from their appearance the steamer was wrecked by a simultaneous powder and boiler explosion. The third engineer is leaving for Tientsin shortly." Kinchou, near where the explosion occurred, is the prefectural city near the north-west corner of the Gulf of Liaotung. The *Kungpai* was formerly the British steamer *Wycliffe*. She was a vessel of 940 tons gross register and 95 horse-power, built at Leith in 1880. She was commanded by Captain R. Soden, her officers being Messrs. A. F. Ljunglof (married), Petersen, chief and second officer respectively. W. H. Graham, chief, A. Wise (married), 2nd, and O. From, third engineer. She had a crew of nearly seventy all told, and a passenger, Master E. Clements, a lad of about seventeen.

FLOATING OF THE "KINSHU MARU."

A CORRESPONDENT sends the *Kobe Chronicle* a description of the floating of the *Kinshu*, which, as will be remembered, went ashore at Kelung on the 24th ult. in a typhoon. With a view to getting the vessel off at the earliest possible moment, Captain Thomsen put out five heavy anchors, with chain cables and wire ropes attached to each, and commenced to haul on these inch by inch night and day for a distance of 900 feet, the vessel being imbedded in from 5 to 9 feet of sand. An attempt made by the *Kisogawa-maru* to render assistance was a failure, as he could scarcely tow the rope taut, while the cables attached from the *Kinshu-maru* to her anchors were standing like iron bars. After much hard work under adverse conditions owing to lack of the necessary apparatus, the operations at last proved successful, and Captain Thomsen had the satisfaction of seeing the *Kinshu Maru* come off into deep water on the evening of the 9th inst. On examination it was found that the bottom of the vessel was uninjured, with the possible exception of a few rivets started, and the vessel being found seaworthy, at once took in a general cargo for Makung, in the Pescadores, whence she will proceed to Hongkong to be docked and overhauled.

RIOTING AT WANNGANHIEH.

On the 15th inst. an anti-foreign riot occurred at Wannganhien in Southern Kiangse in which a Roman Catholic Mission was attacked. It appears that a mob attacked the French Lazarist Mission premises, which they partly destroyed, and wounded some of the priests. The mob did a good deal of damage. On the evening of the 16th, news of the riot reached M. Dubail, the French Consul-General at Shanghai, who wired the next morning at 8 o'clock

to H.E. Chang Chih-tung. The Viceroy was exceedingly angry with the district officials over the affair and he promptly issued telegraphic orders of a most severe nature holding the local officials responsible for what had occurred and may occur. It is believed that this trouble is due solely to the way in which the Foreign Governments have permitted hitherto the Fukien authorities to do as they please, and the Kucheng crime has invited this attack. But the Viceroy Chang Chih-tung is determined to render full justice and punish the officials if found guilty. Both M. Dubail and the Viceroy are to be congratulated for their promptitude in acting, and the latter especially for his expressed determination to keep his government in order. —*Mercury*.

THE "EQUITABLE."

THE *Equitable Record* for this month is a big advertisement, which, in the interests of the United States Equitable Life, whose organ it is, ought to be widely circulated. It contains in full the text of the report presented by the New York Insurance Superintendent, after his recent exhaustive examination of the Society's affairs. He found, says a home paper, everything in "apple-pie" order although he seems to the rather "down" on some sections of the Society's foreign business, chiefly, it would appear, on account of the increasing exactions of foreign Governments, for the mortality experience has been favorable all round. It is needless to say that the objection does not apply to England, in which the risks in force total over seven millions sterling. The Superintendent's report is too lengthy to be referred to in detail, but the concluding sentences will speak for themselves:—"It affords me profound satisfaction," he says, "to find that all the affairs of this vast insurance corporation are in a sound and prosperous condition. The policy-holders of the Equitable may be satisfied that their interests are guarded by conscientious and skilled officers and directors, whose integrity is a guarantee of fidelity, and who long experience qualifies them to conduct the business in a manner best calculated to conserve the true interests of the policy-holders." Speaking of the U.S. Equitable, it must be admitted that the Society is fortunate in the possession of representatives of abnormal enterprise and originality, if the following advertisement inserted by the local manager in a Toledo (U.S.) paper may be taken as a sample. It is too good to be left out. This is how the gifted genius puts it:—

Lives there a man with soul so dead, who never to himself has said: "I must protect my loving wife, and so I must assure my life." I would not be a soulless boor, who dies and leaves his family poor. I'll pay a premium every year and then my loved ones need not fear but what, when I am in my grave they'll have far more than I can save; or if when old I living be, the money will provide for me, and "an old age serene and bright, and peaceful as a summer night, shall lead me to the grave." If you would be another such, and wish to find out just how much the premium cost to you will be, write, 'phone, or call on me.

BOOKS OF TO-DAY.

It was remarked at the time when Mr. Layard found the books of the Babylonians engraved on bricks, so that neither time nor weather can destroy them, and we, thousands of years afterwards, can read them as clearly as those for whom they were written, that if Europe suffered from a cataclysm, all our records, being written on perishable paper, would be destroyed, while those of Nineveh would still be legible. According to the *Publishers' Circular*, our case is still worse now. It declares that a "hundred years hence, probably indeed in much less time, the whole of the newspapers, periodical literature, and most of the books which are now being printed will have disappeared. The fact is, paper is being made out of anything and everything but rags, and not only are powerful chemicals used to obtain the necessary whiteness, but foreign materials, such for instance, as China clay, enter largely into the composition of many of the highly-finished, hot-rolled papers, the presumable object of their introduction being to obtain a good printing surface at a low figure, and at the same time to add to the weight." Our contemporary goes on to say that all that

remained of an extensive collection of modern books in Brazil, which has a moist, warm climate, was a mass of matter in a state of semi-pulp. "The leather bindings stood up gaunt and erect, but the books themselves had entirely collapsed, with the solitary exception of a set of Fielding's works and an old copy of "Tom Brown's School Days." The metamorphosis in the case we have cited was rapid, owing to the climate; as the climate of Britain is also humid, the same result will eventually overtake all our publications which are printed on cheap papers. Only the other day we had occasion to refer to a newspaper printed twenty-three years ago, and though carefully preserved, it crumbled to pieces as though it had been scorched, while copies of the same journal printed a hundred years ago are in a perfect condition."

THE "NATAL"-"EIHO MARU" CASE.

THIS case was adjourned from Monday last for Judgment, but on the 26th inst. a telegram was received from Mr. Kusaka, withdrawing the case. The Judgment of the Court to-day was to the effect that on the 27th of May last it was decided to ask the assistance of technical experts to elucidate the case. A Japanese and French expert were requisitioned but as they disagreed, the services of a U.S. Naval officer was asked for on 7th August. On the 21st October the case came on for hearing when several questions were asked and the reports of the experts were read. In the meantime an arrangement was made outside the Court, the Japanese asking for a compromise by the sending of a telegram to stop judgment. The Court ordered that the expenses of the Court 215 francs (\$75.97) be equally divided by both parties, also the Japanese expert's fees, \$170; the French and American officers having rendered their services to the Court free of charge. The compromise, we understand, was for a nominal sum.

YOKOHAMA ST. ANDREW'S SOCIETY.

THE annual general meeting of the members of the Yokohama St. Andrew's Society took place on Wednesday afternoon at Kiel's Building. A balance in hand of \$350.14 was reported, and the accounts having been proposed and seconded were duly passed. The membership was stated as being 89, but over forty members were absent from Yokohama. Nine new members were elected at the meeting. The office-bearers and Committee were appointed as follows:—President, M. T. B. Macpherson; Vice-President, W. Ross; Committee, James Stewart, E. A. Coutts, J. T. Boag, J. Dodds, and J. A. Fraser; Hon. Treasurer, Geo. Philip; Hon. Secretary, Charles W. Ure. The 30th of November falls this year on a Saturday and it was therefore decided, in the event of a Ball being given in commemoration of the Saint's anniversary—prospects of which are particularly bright—that the function should take place on St. Andrew's Eve, Friday, November 29th.

A MAN-CARRYING KITE.

LIEUT. BADEN-POWELL recently gave an exhibition in Christchurch Park, Ipswich, of his man-carrying kite. The weather was not very favourable for an ascent, the breeze being of the lightest description. Nevertheless, after repeated attempts, Lieut. Baden-Powell, and subsequently two other individuals, were easily raised to a height of some 50ft. The apparatus was held captive during the experiment. It consists of five hexagonal kites flying at varying distances apart on a continuous line. Some distance below the last kite a basket is suspended, and above it a parachute, which would ease the descent of the basket in case of accident. Much interest was displayed in the exhibition, and the officer was loudly cheered by the spectators on accomplishing his first ascent.

A FAST MAIL PACKET.

THE new steamer *Rapide*, built for the Belgian mail service between Dover and Ostend, figured successfully, *The Times* says, in two exciting races which took place in the English Channel, beating first her Majesty's ship *Magnificent*, one of the fastest battleships in the British Navy, and subsequently the Margate and Boulogne steamer

La Marguerite, which has the reputation of being the "greyhound" of the Thames. Both trials were quite unexpected, the *Rapide*, which had been taken out for a private trip by Mr. D. N. Bridge, the general agent of the Belgian Government in London, being in each case the challenger. The races were watched with intense interest from the shore, and the superiority of the Ostend boat was frankly acknowledged by the dipping of the flag on each of the British vessels. At her recent trial on the Clyde the *Rapide* attained an average speed of 20.834 knots, and this, while making 52 revolutions per minute, she slightly exceeded in the contests referred to, the opinion entertained being that she will reach even a higher record.

A DISCIPLE OF CARLYLE.

THOMAS CARLYLE, remarks a contemporary, put it on record that the world as he knew it was populated mostly by fools. Mr. Commissioner Kerr, one of the London stipendiaries, is in wonderful agreement with the Carlylian philosophy. In the course of a case that came before him recently the Commissioner gave a short dissertation on the average thickness of the brainpans of humanity. The plaintiff, a fish-salesman, of Billingsgate Market, sued a fish-dealer to recover the value of certain goods supplied. The defendant swore emphatically that he had paid the money, and the plaintiff was equally positive that he had never received it. Foxhall wished to produce his books to show that he had paid it, and the plaintiff wanted to show his to demonstrate that he had not done it. To this Mr. Commissioner Kerr remarked: "I must tell both of you that your books are not evidence in your own favour. I have been telling people so for thirty years, but their heads are so thick they do not seem to understand it. The average man's head is so thick that it is impossible to drive it into him; but I will give you both an instance. When you go home write down in your books that you have supplied the Lord Mayor with £1,000 worth of soles. Then bring an action for your £1,000, and see if you will recover. I think you will find yourself in a woeful position." The jury subsequently found a verdict for the defendant.

A QUEER ADVERTISEMENT.

THE following advertisement appears in the columns of the *Hiogo News*, and purports to concern a country hostelry much frequented by residents of Kobe. In reading it one is very much struck by the close family likeness it bears to those fugitive productions known as "Kobe Expresses." Perhaps therein lies the "humour" of the thing:—

For the information of the crowds who intend visiting this resort we desire to say that it is the most accommodating house on this mundane sphere. Cats, Dogs, Monkeys, and Parrots are allowed without any extra charge, cows are kept, so all pets may have fresh cream at all hours of the day.

Guests need not wipe their feet when they come in, they can get postage-stamps at the office free; bring snakes, horned toads, lizards, and other such animals into the house, and the manager will skin and prepare them free of charge.

If you don't pay your bills every week it makes no matter, for we are related to Rothschild. We furnish a piano, corkscrew, and sewing-machine to every guest.

For ladies who want to wash and cook in their rooms we offer our best suites. Plenty of hot-water bags and medicine, from Niwo to Tansan. Our can take all the glass and silver to your room and the cooks will serve you with any kind of liniment or poultice day or night.

You can do, in fact, anything you want to, but not more than 6 gentlemen are allowed to sleep on the dining table at once.

Any one breaking the rules of this house can receive massage treatment with a club by leaving notice at this office.

T. YAMASHITA, Manager.
E. SHIRASAKI, Chucker-out.

THE "KUNGPAI" DISASTER.

A TELEGRAM was received at Tientsin on the 20th ult. from Captain Crawford of the *Irene*, who had been sent to investigate the *Kungpai* disaster. The telegram stated that a strong northerly wind was blowing so that it was im-

possible for a boat to land. The *Kungpai* was submerged at high water and the deck awash aft at low water. The vessel is completely destroyed from mainmast to stem. Several natives who had managed to get off to the *Irene* stated that three of the *Kungpai's* crew were on shore. Captain Crawford was waiting for boats from shore to get anything he could from the wreck. We learn that on the first trip of the *Kungpai* from Kinchou to Taku, the soldiers were so careless that gunpowder was lying on the deck like sand. The *Kungpai* was making her second trip when the disaster happened.—*N.-C. Daily News*.

SILK IMPORTS TO UNITED STATES.

The Imports of Raw Silk at the Ports of New York and San Francisco in September, 1895, were:—

	Bales.	Lbs.	Value.
New York	737...	158,466...	\$ 628,041
San Francisco	4,687...	596,234...	1,983,591
	5,424	754,700	2,611,632

The Imports of Waste in the same period were:—

New York.....	39...	11,700...	5,536
---------------	-------	-----------	-------

The Imports of Japanese Piece Goods and Handkerchiefs from July 1st to August 24th, 1895, were:—

Silk Piece Goods	20,099	Pcs.
Handkerchiefs	201,757	Doz.

THE ISLY.

THE French second class unarmoured steel cruiser *Isly*, now in harbour, has a displacement of 4,160 tons. Her length is 346 feet, her beam being 43.6, and draught 19.6. She is driven by two propellers, her engines having an indicated horse-power of 8,100, which send her along at a speed of 18.1 knots. Her armament consists of 4 16-c.m. quick-firers, 6 14-c.m. ditto, 6 47-m.m. ditto, 8 machine guns, and 5 torpedo tubes. The *Isly* cost £252,760 to build, and was launched in 1891. Her sister ships are the *Fean Bart* and *Alger*. With the three heavy fighting tops on her fore mast and two on the main, and with her smoke-stacks very far forward she presents an unusual appearance. She has a protected deck.

THE RECENT THEFT OF CLOCKS.

HORIGUCHI YONESABURO was on Monday sentenced, in the Yokohama Chiho Saibansho, to major confinement for one year and 6 months' police supervision, for having stolen some pistols and clocks belonging to Messrs. Carl Rohde & Co., No. 70, Yokohama. Matsumoto Yoshitaro, who received the stolen articles, was sentenced to major confinement for 6 months and fined yen 10, with police supervision for 6 months.

THE U.S. CONSULAR SERVICE.

PRESIDENT CLEVELAND has issued an order under date of Sept. 20 placing all grades of the Consular Service with a compensation between \$1,000 and \$2,500 under a modified civil service, which provides for class but not competitive examinations. This order will affect a little more than one-half of all those engaged in the consular service of the United States.

THE WILLARD OPERA COMPANY.

THE Willard Opera Company proceeded to Bombay from Singapore where they will be amalgamated with two new companies brought out from London by Mr. Pemberton Willard, and after a season in that great seaport will be sub-divided into three companies—two touring India while the third detachment will make for the Far East.

PROMOTIONS AND HONOURS.

A LARGE number of civil and military officers were on Thursday decorated by the Emperor at the palace. Viscount Sano, Vice-Superintendent of the Red Cross Society of Japan, was promoted to the rank of Count, and Dr. Hashimoto Tsunatsune, President of the Red Cross Hospital; and Messrs. Hayashi, Japanese Minister to China; Suzuki, Vice-Minister of Communications; Tajiri, Vice-Minister of Finance; Suyematsu, Chief of the Legislative Bureau, and Kawata, President of the Bank of Japan, to the rank of Baron. They also received de-

corations. Mr. Okoshi, Superintendent of the Yokohama Custom House, received a decoration of the Fifth Class of the Order of the Rising Sun.

KOBE CUSTOMS ACCOMMODATION.

MR. GERARD LOWTHER, Secretary of H.B.M. Legation, has been spending a few days in Kobe, together with Miss Lowther. He is combining pleasure with business—the business principally concerning the Customs accommodation at the Southern port.

A KOBE DISPUTE.

WE learn that a case will be heard in the American Court on Thursday about which there has already been a good deal of gossip locally,—the case, we mean, of *R. T. Head v. D. B. Taylor*. A good array of witnesses have been summoned in connection with the case, six of them being British subjects.—*Chronicle*.

AN AWKWARD PREDICAMENT.

H.M.S. *Redpole*, in Singapore, had a narrow escape of being stranded—for liquid supplies—for her consignment of wines and spirits brought out from home by the mail steamer *Mirzapore* was seized as contraband. On proper representations the cargo was released by order of the Magistrate.

THE "CATTERTHUN" DISASTER.

WE learn that on the 1st of October the Marine Board of New South Wales decided to suspend the certificate of Mr. Lanfear, the second officer of the steamer *Catterthun*, for six months, for altering the course of the vessel without the authority of the commander.

THE FRENCH MINISTRY.

ON Friday's *Official Gazette* states that a telegram dispatched by the Japanese Minister in France on the 29th ult., and received by the Foreign Department was to that effect that the Ribot Cabinet has resigned in connection with the Southern Railway affair.

THE IMPERIAL BIRTHDAY BALL.

Invitations to the Imperial Birthday Ball have been issued by His Excellency the Minister of State for Foreign Affairs. The 3rd of November falls this year, on Sunday; but Marquis Saionji has not considered it necessary to take that fact into consideration. From a Japanese point of view, all days are alike, and it can not, of course, be reasonably contended that any ideas entertained by Christians with regard to the sacredness of a particular day should necessarily be respected by the Japanese in celebrating the birthday of their Sovereign. Englishmen and Americans, however, will assuredly be pained by the notion of a State Ball on the Sabbath, and the great majority of them will feel constrained to absent themselves from the festival on the 3rd proximo. The Germans, the French, the Italians, and other Europeans in general will not be deterred by such scruples, and there will, consequently, be a division of sentiment. We can not but regret, however, that the possibility of deferring the Ball until Monday was not entertainable, for, after all, not only does the spirit of true hospitality suggest that the sentiments of all the guests should be respected to the utmost, but the success of the entertainment also depends in some measure on the absence of every cause of umbrage. Were it a Ball given by Japanese solely for Japanese, no shadow of question could be raised, but when the Minister of Foreign Affairs is the host, and foreigners constitute a considerable element of the *invités*, it is a pity that any obstacle to universal enjoyment should present itself.

THE BIRTHDAY BALL.

WE are asked to intimate that in consequence of the critical condition of His Imperial Highness Prince Kitashirakawa, the State Ball for which invitations have been issued by His Excellency Marquis Saionji, Minister of State for Foreign Affairs, on the Emperor's Birthday, will not take place.

KOREAN NEWS.

Some of the Japanese correspondents give a rumour, for the accuracy of which we cannot vouch, that before the *coup d'état* took place, the Queen was secretly maturing a political scheme involving the murder of no less than a hundred and twenty persons of the opposite faction. A list of the intended victims is said to have been drawn up. After the wholesale massacre of her opponents, it was her purpose, so the story runs, to reject Japan's friendly assistance and invoke that of Russia. The discovery of this scheme, though the most terrible part of it does not seem to have been at first known, led the Tai Wön-kun and his followers to take a sudden and decisive step to prevent the intended revolution from being carried out.

All letters from Söul agree in saying that the new Korean Government has thus far shown laudable moderation toward men of the fallen party. Not only have they not been persecuted, but efforts have been made to assure them of their perfect security and of the protection of the Authorities.

The intended assumption of the title of Emperor by the king of Korea has ended in a fiasco. The thing is of course ludicrous from a foreign point of view, but a certain correspondent points out that it assumes a very practical aspect in the eyes of the Korean people. Experience has accustomed them to attach a sense of dependency and inferiority to the title of King. They think that if their Sovereign is called a King, while the Sovereigns of China, Japan, and Russia are styled Emperors, it is because Korea is not a free and independent State. Hence when the news went forth that their Sovereign was to assume the name of Emperor, unwonted enthusiasm was excited among the people, who looked upon the new title as the emblem of their country's emergence from a state of dependency.

The *Fiji Shimpö's* correspondent mentions that the Korean Cabinet has decided upon the inauguration of a new system of calling the reign of each Sovereign by an era, *nengo*, after the manner followed in Japan. One of the latest telegrams in the same paper also announces that, from the 1st of January to come, the European calendar will be adopted in place of the lunar one now in use.

It is stated that the Government has under contemplation the issue of an Edict ordering the people to cut their hair in European fashion. The King and the Crown Prince will set the example, as soon as the suits of European dress now in preparation are ready for their royal use. Cho Gi-yen, the new Minister of War, is reported to be one of the most enthusiastic advocates of the projected Edict. He was present with the Japanese Army in Liaotung, and having become convinced of the importance of dressing the Korean troops in the same fashion as the Japanese, he returned home with schemes of reform in this respect, but, ere he could propose them to his colleagues, he was deprived of his position by the machinations of the Queen's favourites.

On the 16th inst., the Korean Minister of the Household issued a proclamation announcing the intended selection of a Consort for the king. According to a time honoured custom, the issue of this proclamation has the effect of prohibiting, for the time being, the marriage of all girls of and above thirteen years of age throughout the country. The Queen elect must be a maid, and in Korea early marriage being the prevailing custom, the choice will be practically limited to girls between thirteen and seventeen or eighteen, at most. Thirty or forty girls are to be nominated, and from among them will be first selected three, and on one of the three the final choice will fall.

Gyo In-chu, who was recently appointed Minister of Finance, is said to be in hiding somewhere. He refuses to make his appearance. It is believed that he has joined the monks at Tok-yu-san in Chollado. His predecessor, Chin Sokun, is also said to have entered the monastery of Kim-kang-san.

Concerning the situation of the new Korean Ministry, the *Mainichi Shimbun's* correspondent

makes some interesting comments. It has hitherto been generally supposed that the new Cabinet called into existence by the recent *coup d'état* is as united and harmonious as any set of Korean politicians can well be. But the *Mainichi's* correspondent alleges that such is far from being the case. In the first place Kim Koshu, the Minister President, is said to be in a distinctly unenviable position. At the head of the Government in appearance, he is really as much under the control of the Court as when the Queen held sway, the only difference being that, instead of a smooth spoken and crafty woman, he has to deal with a fiery and masterful Prince. Kim has been supposed to have been privy to the *coup d'état*, and one of the principal actors in the drama. Privy he may have been, but a principal actor he certainly was not. The *Mainichi's* correspondent even goes so far as to say that he was a reluctant and unwilling participator. Hence he exercises no real influence in the conduct of affairs. The man that enjoys the largest share of the Tai Wön-kun's confidence at present is said to be Cho Gi-yen, Minister of War. He is reported to have been the principal actor in the recent drama. He it was, apparently, that first suggested to the Tai Wön-kun the importance of taking a decided step before the Mins should have completely re-established themselves. As to the Tai Wön-kun himself, his supposed ambition is to elevate his favourite grandson, Li Shun-yo, to the throne of Korea. In all political changes, the one aim uppermost in the aged Prince's mind is how best to promote the attainment of that long cherished object. He would not hesitate to sacrifice even his most valuable partisan on the altar of his ambition. Under these circumstances, the position of the present Kim Cabinet is considered extremely precarious.

While such is the state of affairs in Court and Cabinet circles, the *Mainichi's* correspondent observes that the Mins, whose power of combination is paralyzed by the terrible blow that they have sustained, are sure to collect their strength by-and-by, and commence intrigues for the recovery of power. Even without the Queen, they are still a formidable party, on account of their talent, number, and wealth. To render the situation still more gloomy, there are, besides the Mins, a knot of artful intriguers, that have good cause to wish ill to the present Cabinet and to the Tai Wön-kun. They are An Keiju, Li Kanyo, and some others—men that lost their offices upon the ex-Regent's recovery of power. From these circumstances, the correspondent infers that dark clouds are gathering on the political horizon, and that, one of these days, the public may anticipate storms even more disastrous than those that have perturbed the peninsula during recent years.

Another correspondent mentions that the leaders of the mob that caused some excitement recently in Chhol-wön, have been released from custody on the ground of insufficiency of evidence. Such a singular step on the part of the new Government invites comment, for it seems to indicate that these local disturbances were part of the political intrigue in Söul.

A letter from Fusan, published in the *Fiji Shimpö*, states that the Japanese residents who strongly opposed the opening of Mok-pho, are taking measures to derive advantages from the new port, the opening of which they now not only acknowledge to be unavoidable, but are disposed to regard with high favour.

The same letter mentions that there is an increasing demand for Japanese cotton fabrics. Until very recently a prejudice existed among the Koreans against these goods, which had, consequently, to be sold as the produce of Koreans looms or mixed among Korean fabrics. But the superior quality of the Japanese manufacture has slowly come to be recognized by the Koreans until at present those with Japanese trade marks are specially sought after.

This writer incidentally mentions that the harvest of rice is unusually plentiful, and that the increased purchasing power of the people is already manifested in more than one direction.

FORMOSA NEWS.

Letters describing the march of the Imperial Guards from Chang-wha to Chia-i have just been published in Tokyo. In a former issue, we stated that the Guards left Chang-wha on the 6th instant, but that, we now find, was not correct. It was early on the morning of the 3rd instant that they moved out of Chang-wha. Their exact strength as they resumed their southward march is not given, but one of the correspondents states that the ranks had been thinned to about one half of their original number. Thus we shall not be wide of the mark if we put their number at 6,000, approximately. They marched in four columns; namely, the vanguard under Major-General Kawamura; the right column under Colonel Sakai; the left column under Colonel Naito; and the reserve under the immediate command of H.I.H. Prince Kitashirakawa. The march was attended with serious difficulties, the roads being execrable and many rivers having to be forded or bridged. The advance was interrupted at several places by bands of insurgents who had taken up positions offering more or less natural advantages. It would be tedious to follow the course of these skirmishes; they were of the same pattern—a defiant attitude on the part of the insurgents so long as the Japanese were at a distance, and a precipitate retreat so soon as the assailants came within close range. There were, however, one or two exceptions to this rule—notably on the upper stream of the Kobi, in the vicinity of Yung-lin-sien. Early on the morning of the 7th, the left column reached that place. The enemy had posted themselves at various strategical points on the left bank of the stream. They were easily dislodged from all places except a high entrenchment farthest up the stream, a position said to have been of exceptional strength. The glacis in front was palisaded at different places, while both banks were protected by dense and impenetrable jungles of bamboo. The Guards, in marching to the assault, had to expose themselves to the full fire of the enemy, but taking the utmost advantage of the scanty protection afforded by irregularities in the ground, they slowly though steadily approached the eminence from which the insurgents continued to pour down showers of bullets. Crawling up the slope and cutting through several palisades, they finally charged at the point of the bayonet and took the stronghold, after cutting down a number of the insurgents. The loss on the side of the assailants was five killed, and twelve wounded, of whom one died immediately afterwards. The garrison was three or four hundreds strong; they fled to Yung-hu-sien, or Toroku-mon, as it is more generally called.

The above mentioned place, Toroku-mon, is an important prefectural town. It was guarded by about 3,000 insurgents, but they seem to have been seized with panic as outpost after outpost was driven in by the Japanese. Without offering any resistance, they fled in great disorder toward Chia-i. Forty thousand rounds of ammunition, a large number of rifles, swords, and pennons, and other spoils fell into Japanese hands. Toroku-mon contains five or six hundred houses, and is a flourishing commercial town, the principal article of trade being camphor. This place had been occupied by a small party of Guards when Chang-wha was taken, more than fifty days previously. But being too far removed from the base, it was soon abandoned by the Japanese, whereupon a large number of Chinese regulars and volunteers poured in, committing their usual acts of licence and depredation, so that the town was soon deserted by the terrified inhabitants, of whom only 20 or 30 remained when the Japanese re-entered it on the 7th. At the office of the Prefectural Government, there was discovered the corpse of a Japanese coolie, frightfully mutilated.

Another instance of the barbarous cruelty of the insurgents may be noticed. On the 8th, a body of the Guards, belonging to the left column, passed the night at a place called Sharin-shi-sho, a few miles north of Chia-i. The village presented a scene of dreadful deso-

lation, not a single inhabitant being found. Traces of pillage and wanton destruction were visible on every side. It was learned that the inhabitants, who were for the most part Christians, had incurred the displeasure of a certain rebel leader by advocating the wisdom of peaceful submission to Japanese rule. The offended officer surrounded the place with his troops, and setting fire to the church and houses, pillaged the town and massacred the miserable villagers without regard to sex or age.

At half-past eight on the morning of the 9th, the head of the vanguard under Major-General Kawamura came in sight of the walled city of Chia-i, which, according to popular report, was garrisoned by nearly ten thousand insurgents, regulars and volunteers included. The troops under Major-General Kawamura stopped at a spot about 1,000 metres from the North Gate. Meanwhile, the other columns arrived in the vicinity, and after a short rest, a large number of ladders were constructed of bamboo for use in scaling the wall. The plan of assault was to attack from three sides—north, east, and west. The insurgents had some cannon and machine guns, which they worked with tolerable skill from the top of the wall at the North Gate. It was now half-past eleven in the morning. After bombarding the walls with mountain pieces for some time, the Guards approached the three gates almost simultaneously. The bamboo ladders were at once planted against the wall, but as they proved to be too short, had to be joined together, after which a party of non-commissioned officers and men climbed up, while their comrades in the rear kept up a sharp fire against the enemy on the walls. In this manner the escalade was successfully effected, and the black flags that had been floating over the walls were soon replaced by the ensign of the rising sun, amid resounding cheers for the Emperor and the Empire. The gates being strongly secured, they had to be blown open by explosives. About half an hour after noon the place was completely in possession of the Japanese. The insurgents fled through the South Gate, which had been purposely left unbesieged by the Japanese, directing their course to Tainan and Anping. They were pursued by a party of cavalry for some distance south of Chia-i. The number of the enemy killed was over four hundred, and some five hundred were taken prisoners, while the casualties on the Japanese side were only eleven wounded. A considerable quantity of spoils fell into the victors' hands—cannon, machine guns, rifles, horses, ammunition, and so forth. The whole loss sustained by the Imperial Guards during their progress from Chang-wha to Chia-i, including the casualties of the latter place, was 14 killed and 54 wounded.

As to the troops that landed at Pau-tay-chi, the *Fiji Shimpō's* correspondent, writing from there under date of the 15th instant, alludes to the hard fighting that took place at Toshito, about five miles south of the above mentioned place, on the 12th. Two companies of foot stationed there under Major Okuma, were suddenly surrounded, at 9.50 a.m. on that day, by a force of insurgents aggregating not less than three thousand. Fortunately, the village was encircled by a sand embankment which proved of great service to the Japanese as a breast-work. After fighting for about six hours, the Japanese observed that the circle of insurgents was becoming more and more dense and drawing nearer and nearer. It was also found that the supply of ammunition had been nearly exhausted. Major Okuma then decided to have recourse to cold steel. The firing was ceased on one face until the enemy came within a suitable distance, when a company of the Japanese charged out with fixed bayonets on the north side, and soon made such havoc among the Chinese that they were thrown into confusion and fled southward to Oyakei. At the same moment, the rest of the insurgents were subjected to such a withering fire on the other faces of the embankment, that they, too, took to their heels and retreated in the same direction. The enemy left on the field more than 400 dead, while the loss on the Japanese side was ten wounded. Next morning, the insurgents again

made a show of investing the place, but the experience of the preceding day had deprived them of all stomach for fighting, and after exchanging a few shots, they retired.

The same correspondent mentions that, according to the report from the troops that landed at Tang-liao, a Chinese General Wu, who had been commanding the garrison at Tang-kang, sent two messengers to Lieutenant-General Baron Nogi on the 12th instant, offering to surrender at the head of 1,200 men. The Japanese commander is said to have answered in the sense that Wu should come unarmed to the Japanese camp with his men, before 3 p.m. on the 14th, on the understanding that the should be sent safely to China.

It has already been mentioned that General Wu, one of the insurgent leaders, asked to surrender on the 12th instant, and that he was told to come to the Japanese camp in person at the head of his troops by 3 p.m. on the 18th. From later correspondence, we learn that he did not make his appearance at the appointed date. Moreover, the insurgents that attacked a company of Japanese on the upper stream of the Tang-kang, inflicting a loss of ninety-four in killed and wounded, are known to have been his men. Thus his intimation of a desire to surrender was simply a ruse to gain time. The troops of the Second Division had another occasion to resent the treachery of the Black Flags. A squadron of cavalry, leaving Tang-kang on the 15th, advanced toward Fêng-shan. When nearing that place, they observed a white flag on the top of one of the gates. Concluding that the insurgents were desirous of laying down their arms, the little party of Japanese approached the city, whereupon the flag was taken down and they were fired at.

Liu Yung-fu's letter's to Count Kabayama, proposing terms of surrender, and the reply to it by Viscount Takashima, have been published in the *Fiji*. The Black Flag leader's communication runs in the following strain:—

Governor-General KABAYAMA.

Sir,—On the 4th of July I received a letter from you, and on the 6th I forwarded to you a reply by way of Amoy. I wonder if it has reached your hand? When the war with your country was brought to a termination in April of the present year, all the people congratulated themselves on the return of peace. The treaty, however, contained a clause ceding the island of Formosa; and the people of this island, having long owed allegiance to the Peking Court, objected to being transferred to your country. At that time some officials of my country came here secretly to appease the people, but the latter, being firmly resolved, elected me to the position of Superintendent of the defences of Formosa. I had not then received any orders from my Emperor about the withdrawal of troops, and consequently I had but to comply with the request of the people, my object in doing so being to protect them and not to derive advantages for myself in any way. Indeed, the sufferings of the people since the beginning of the war have been so great as to defy description by words. Desiring, therefore, for the sake of these distressed people, to hand over the island to your country, I hereby beg to offer two conditions, namely, first, that the inhabitants of Formosa, whatever their rank or condition, shall be entitled to considerate treatment from your country and be secured against all sorts of insults and severe penalties, and secondly, that myself and all those following my standard be treated with due respect and be sent back in safety to the mainland by the medium of the Viceroy of Chikiang or Kwantung, or the Superintendent of the Southern Sea. These two conditions seem to be necessary both for securing the welfare of the people and preventing the recurrence of hostilities. Should they be acceptable, I am ready at once to arrange the matter with you. I hope that you will favour me with an immediate reply.

The above letter was brought to the Pescadores by the British Consul. Viscount Takashima, commander of the Japanese Expedition in the South of Formosa, replied as follows in the name of the Governor-General:—

Acting on behalf of Count Kabayama, Governor-General of Formosa, I reply to you as follows: I have received to-day (the 11th) your letter sent by a British warship. I learn from it that you are desirous of a conditional surrender. When this island was incorporated into the territory of the

Japanese Empire, as the result of the Shimonoseki Treaty, Governor-General Admiral Count Kabayama was good enough to point out to you the propriety and wisdom of laying down your arms. But you had the insolence to reject his well meant advice, and unlawfully to continue the occupation of the southern parts of Formosa, all the while causing the insurgents under your command to offer resistance to the Imperial forces and thus disturb the tranquillity of the island. Now that the Imperial army is about to overwhelm you, you are presumptuous enough to ask for peace, and that, too, conditionally, as though a commander of one independent power were dealing with that of another. This surpasses any power of comprehension. If, repenting of your conduct, you really mean to offer surrender, the only course left open to you is to come to our camp and put yourself at our mercy. Let me tell you, once for all, that short of such a step on your part, neither letter nor messenger from you will hereafter be taken any notice of.

Liu Yung-fu subsequently addressed two letters to H.I.H. Prince Kirashirakawa, commander of the Imperial Guards, and another to Viscount Takashima. These letters were couched in language so insolent as to contrast ludicrously with the subsequent conduct of the Black Flag leader. The two epistles received no recognition from the Japanese Generals.

A report from Lieut-General Baron Nogi states that the troops under him are in splendid health, not a single case of contagious disease of any kind having occurred among them.

A telegram from Major-General Terauchi, dated at Amoy on the 26th says that 5,153 of the insurgents have been safely transported to Kemoi (?) Island.

From further telegrams we learn that the Southern Army's Head-quarters entered Mao-chiang-wei on the 19th, Kanpia-chie on the 21st, and Tainan on the 22nd.

The movements of the Guard's Division from the 19th to the 21st are given, but they present no feature of interest.

In the fight near Oyato (?) on the 18th inst, the Fifth Regiment of Infantry, a battery of artillery, and a squadron of cavalry, engaged a force of from 5,000 to 6,000 insurgents, breaking them into two parts, of which one fled toward Tainan and the other toward the sea. The Japanese had 3 killed and 15 wounded, the Chinese left 400 dead and 4 pieces of artillery on the field. Among the Japanese wounded were two Captains and 3 Lieutenants. On the following day another skirmish took place, the Japanese losing 2 killed and 5 wounded; the Chinese 60 killed. On the 20th an entrenched position at Chang-wan-chi had to be carried, H.I.H. Prince Sadanari led the reserves in person, and captured the position by an attack from the right flank. The enemy were about 5,000 strong, armed with Mauser repeating rifles. The Japanese had a Major and a Captain wounded, 2 privates killed, and 9 wounded; the Chinese had 204 killed.

It is stated that as the *Saikyo Maru* was cruising in Anping Bay on the 16th instant, she was struck by a shell from the forts at a range of about 6,000 metres, but no casualties resulted.

The following telegram from Governor-General Count Kabayama, is dated Taipeh, 5.30 p.m., 23rd, October:—

"The Second Division defeated a party of five or six hundred insurgents at Ji-chan-hang on the 20th inst., shooting down more than a hundred of them. On the same day, a foreign missionary, accompanied by a local convert, came to the camp of the Second Division, reporting that Liu Yung-fu had fled to China by a junk on the night of the 19th, and requesting the despatch of troops to Tainan, which had been deserted by the insurgents, for the maintenance of order and tranquillity. The Commander of the Division accordingly sent there a detachment under Major-General Yamaguchi. The detachment entered Tainan on the 21st amid the hearty welcome of the inhabitants.

"The former Fourth Mixed Brigade arrived at Chwan-tsz-tan on the 21st instant. Its right column, consisting of the Fifth Regiment of infantry (minus two companies) and a company of artillery, attacked the enemy, about 3,000 strong, in the vicinity of Chang-wan-chi, killed 1,100

of them. The loss on the Japanese side was 8 killed, including Sub-Lieutenant Reizei, and 21 wounded.

"The Imperial Guards Division reached Chang-chun-chwang on the 21st.

"Vice-Governor-General Takashima, Prince Kitashirakawa, Commander of the Guards, and Baron Nogi, Commander of the Second Division, entered Tainan on the 22nd. The bulk of the army is now staying on the outskirts of the city, engaged in the perfection of their appointments. A detachment will hereafter be sent by ship to Hengchun for the reduction of insurgents there. In spite of fever, bad roads, and difficulties of supply, both sections of the army of the southern expedition steadily pushed on, defeating the enemy all along the way, until they met together at Tainan on the 21st. With the occupation of that place, the work of the reduction of the southern part of Formosa has been nearly completed. The final report on the reduction of Southern Formosa shall be presented after I shall have visited Tainan and made a personal inspection of the state of things in that region."

The following from Governor-General Count Kabayama to Prince Komatsu, Chief of the General Staff, is dated Taipei, afternoon, 24th Oct.:—

"Our fleet has received information that Liu Yung-fu made good his escape accompanied by his immediate followers on the night of the 19th. The sea off Anping having been closely watched by the fleet, it is presumable that they escaped by way of Kapiachang. Precaution was not neglected in that quarter, too, but additional warships have been sent there to search for the fugitives. Early on the morning of its 1st, the *Yoshino*, *Akitsushima*, *Naniwa*, and *Saiyū*, bombarded the forts at Anping and landed a marine party who took possession of two forts, at the same time 5,000 insurgents laying down their arms and surrendering. As there was not enough provision for these captives, they were sent, with the exception of the more important among them, to Amoy or its vicinity by the *Ryōjun Maru*. The above has been reported by Vice-Admiral Arichi, Commander of the Fleet."

THE JAPAN SUGAR-REFINING COMPANY.

The principal promoters of the projected Japan Sugar-Refining Company (*Nippon Saito Kaisha*) held a meeting at the Sakai-n restaurant in Osaka on the 24th instant. Mr. Sano Tsuneki, formerly of the Department of Agriculture and Commerce, read the report of the Investigation Committee, of which he was a member. The Committee recommended the establishment of the proposed company with a capital of 1,500,000 yen, divided into 30,000 shares of 50 yen each. As to the location of the factory, he advised the selection of the vicinity of Osaka, because by careful investigations they had found that its establishment in that region would save the company about 16,000 yen annually in current expenses as compared to its location in either Tokyo or Yokohama, and further because Osaka presented the best advantages for the sale of the produce of the refinery. However, the Committee suggested that in course of time it would be advisable to establish additional factories in the Kwanto and other suitable localities. With regard to the scope of the refinery proposed for location in Osaka, it should be capable of producing at first 12,000 tons per annum and twice that quantity after a number of years. Lastly, they recommended the sending of experts to Europe for the purpose of purchasing suitable machinery and plant. These suggestions of the Committee were adopted after some discussion. Messrs. Shibusawa Eiichi, Yoshikawa Taijiro, Matsumoto Jutarō, Noda Kichibei, Abe Hikotaro, Sano Tsuneki, Motoyama Hikoichi, and Ogawa Zenkichi were elected as a Committee of Organization, and invested with the necessary powers for floating the concern.

THE ARRESTS AT UJINA.

The persons arrested, or to be arrested, in connection with the Korean affair—apart, of course, from officials—belong to various political parties. The following list shows the principal among these suspects:—

MEMBERS OF THE NATIONAL PARTY (*Kokken-to*). Kunitomo Shigeakira. Originally editor of the *Nippon*.

Sato Keida. Member of the Kumamoto Prefectural Assembly.

Sawamura Masao. Son of the Manager of the 151st National Bank.

Mayeda Shunzo.

Ushijima Hideo. Member of the *Kango Shimpō's* staff.

Hirayama Iwahiko.

Katano Takeo. Member of the *Kanjo Shimpō's* staff.

Iyeiri Kakichi. Teacher in the School of Japanese Language.

Matsumura Rinki.

Kumabe Yonekichi. Member of the *Kanjo Shimpō's* staff.

Three others without any special occupation.

MEMBERS OF THE LIBERAL PARTY (*Fiyū-to*).

Four men without any special occupation.

MEMBER OF THE REFORM PARTY (*Kakushin-to*).

Shiba Shiro. A well-known politician.

NOT OPENLY CONNECTED WITH POLITICAL PARTIES.

Sasaki Sei. Correspondent of the *Choya Shimbun*.

Kikuchi Kenzo. Correspondent of the *Kokumin Shimbun*.

Sato Masayuki. Correspondent of the *Chuo Shimbun*.

Yoshida Tomokichi. Correspondent of the *Hochi Shimbun*.

Yamada Ressei. Correspondent of the *Nippon Shimbun*.

Suzuki Junken. Priest of the Hong-wan Temple.

Tsukinari Mitsu. Member of the *Genyosha* (a *Soshi* Association) and elder brother of Kurushima Tsuneki, who threw the bomb at Count Okuma.

Two other members of the *Genyosha*.

One member of the *Tenyukyo* (a *Soshi* Association).

Okamoto Ryunosuke. Military Adviser to the Korean Government.

Two employes of the Korean Government.

This is certainly a motley list. Among the 31 we find three members of the staff of the *Kanjo Shimpō*, and five correspondents of Tokyo journals, all of whom may reasonably be supposed to have been present—if they were present at the *Imoute* in the capacity of reporters. Only four recognised *Soshi* appear upon the list. The National Party is most largely represented, having 13 names. This party has its head-quarters in Kiushu and its members are said to be all natives of that part of Japan. Why so many of them were in Sōul we have no information.

Of course the chief interest of the arrests centres upon the officials that have been apprehended, or are to be apprehended. Lieut.-General Miura and Lieut.-Colonel Kususe Sachihiko are already in the hands of the police, and the same fate awaits Major Umayabara, the officers under his command, Mr. Sugimura Yei, Secretary of Legation, and the other officials that return with him.

AN IMPORTANT CORRECTION.

The following telegram, forwarded by Reuter, appeared in our columns on the 23rd ultimo:—

London, October 21.

Prince Lobanoff, at an interview with the German Emperor, said that Russia cannot tolerate the Japanese establishing themselves in Korea, where their presence would be a continual menace to both Russia and China.

This intelligence naturally caused some excitement in the East, not merely on account of its character, but also because of the circumstances under which Prince Lobanoff was said to have spoken. Several local journals commented on the news, drawing more or less serious inferences from it. We now learn, however, that according to official information received from Berlin, Prince Lobanoff, in his audience with the Emperor of Germany, did not make use of the language attributed to him by the above telegram. It is singular that Reuter should send such statements across the wires as this telegram and his message of the 26th ultimo.

THE PRISONERS IN THE KOREAN AFFAIR.

The circumstances relating to the arrest of the prisoners in the Korean affair have just been published. The first and principal batch of deportees arrived at Ujina on the afternoon of the 24th ultimo. During the voyage, they were under the escort of an officer of Gendarmes and a few non-commissioned officers and privates of Infantry, and they were put under arrest just as they were leaving the quarantine station at Ninoshima where they had undergone the usual medical inspection and disinfection. Hence, strongly guarded, they were conveyed by boat to the landing place at Ujina, and subsequently sent to the Local Court at Hiroshima. The escort consisted of twenty-five policemen, and the road between Ujina and Hiroshima was guarded by a strong police force. It was half-past eight in the evening before the party arrived at the Local Court, where their examination was at once commenced under Judge Yoshioka, assisted by Judge Taniyama. At half-past four the next morning the last prisoner was committed.

Mrs. Okamoto, wife of Mr. Okamoto Ryunosuke, her children and servants came back by the same transport with the prisoners. Though not one of the suspects, her baggage was detained by the police together with that of her husband's. Moreover she was cited, the following day, before the Local Court at Hiroshima as a witness.

Viscount Miura, Lieutenant-Colonel Kusunose, and a few others arrived at Ujina on the 26th. While they were resting in the waiting room of the quarantine station at Ninoshima, a writ of arrest was served upon Viscount Miura by a police sergeant, and upon Lieut.-Colonel Kusunose by Lieutenant Kasa; while the other non-official deportees were simultaneously apprehended in another apartment. Viscount Miura, and the non-official prisoners were conducted by carriages to the Local Court at Hiroshima, while Lieutenant-Colonel Kusunose was conveyed to the head-quarters of the gendarmes in the same place. The military officer was confined in one of the rooms at the Gendarmes' head-quarters, and Viscount Miura was placed in the common prison together with the other prisoners, each being assigned a separate room.

Mr. Miura Torataro, the Viscount's adopted son, and Mr. Mori Seiyemon, a cousin of Viscountess Miura, had proceeded to Hiroshima to welcome the returning Minister, little suspecting that he, too, was destined to be arrested. They were greatly surprised, therefore, when they saw the Viscount land at Ujina under the guard of a strong posse of constables. Subsequently, they were allowed to converse with him in the Local Court, when they received assurance that there was no cause of anxiety on his account. The Viscount's servants, six in all, including a maid, were also conducted to the Local Court, where after a brief examination as witnesses, they were set at liberty.

Viscount Miura, Mr. Okamoto, and other prisoners stand charged with murder and with assembling a mob for seditious purposes. Lieut.-Colonel Kusunose's preliminary examination is now being conducted by the Military Judges, Miyasaki and Inouye. It is reported that, should it be deemed necessary to arraign him before a court martial, Major-General Baron Oshima of the Fifth Division (Hiroshima) will be appointed the President.

There being so many prisoners, the conclusion of the preliminary examinations cannot be expected before about the 20th of this month.

ANOTHER DESCENT.

Mr. Harry Quilter's robust faith in the restoration of purity and sound morals to their old throne, must be rudely shaken when he views the latest departure made by the *St. James's Budget*. We must confess, for our own part, that we never expected to see the day when a series of pictures taken bodily from *Le Journal*

Amusant would be reproduced in a leading English newspaper. Of course there are pictures and pictures in *Le Journal Amusant*. Many of its representations of French rustic and maritime life are not only full of wit, but also beyond all reproach on the score of modesty. It is not so, however, with pictures from the pencil of "Mars." In his productions ingenuity is exerted to its very limit for the purpose of imparting elements of prurency and immodesty to subjects not in themselves absolutely improper, but capable of treatment that renders them conspicuously so. He revels in sea-side scenes where the foreground is occupied by ladies bathing, and he takes the utmost pains to devise costumes such as lend themselves best to his vicious purpose. It would be perfectly possible to portray a sea-beach and a party of bathers without suggesting anything beyond a pretty sense of innocent enjoyment. But that is not what "Mars" seeks to accomplish. His pictures owe their so-called "merit" entirely to features that no modest woman could look at without disgust. From these particular pages of *Le Journal Amusant* to the abominations that figure in *La Vie Parisienne* there is but a short interval, and when we find a journal like the *St. James's*—a journal admitted to all the best houses in England and read by English girls, of every age—reproducing three of *Le Journal Amusant's* least pardonable pages, we begin to think that our countrymen and countrywomen must have departed largely from the traditions and standards of better days. It was hoped that recent occurrences had stemmed the dirty tide, and that waters from purer fountains would soon cleanse away society's temporary stains. But apparently the hope is not to be realized. The *Saturday Review* lends all the force of its satire to ridicule the advocates of regeneration, and the *St. James's Budget* goes for pictorial inspiration to the prurient pages of a pornographic Parisian publication.

COMPARATIVE TACTICS.

It is well to note certain features of military expeditions as managed by Western Powers, so that we may have "something to focus ourselves upon" when we undertake to criticise the methods of Oriental States. In the war between China and Japan the military authorities of the latter Power instituted a censorate to which correspondents of newspapers had to submit their letters before despatching them. That is done by all armies on campaign. General officers cannot afford to run the risk of having their plans and the disposition of their forces proclaimed to the world. But of course there are censorates and censorates. Moreover, there are always folks so ignorant and so prejudiced that the bare idea of a European or American correspondent's letters being scrutinized by an Oriental censor seems shocking to them. However, the thing is done, and sometimes it is done very thoroughly, as witness the following account—taken from the *Spectator*—of the officer commanding the French expeditionary forces in Madagascar:—

His first object was to make a reverse, however slight, impossible, and therefore he moved cautiously, tried and partly failed to utilise the rivers, constructed a road passable for artillery, used ox-waggons instead of mules, and at every step made new preparations to defend himself against any attack on his communications. No matter if disease broke out among men detained too long in the miasmatic jungles of the lowland; no matter if the European "engineers" were worn out wholesale by labour for which they are unfitted; no matter if the conscripts lost all heart at the slowness of the advance, nothing would be fatal to himself or his Government except a reverse or near prospect of one. All correspondents' letters, therefore, must be revised; all officers must be warned to be silent on "military details;" the very sick must be detained, lest they should create among the fathers of conscripts an "injurious impression" of the expedition. Communication with Paris must be limited to accounts of small successes and promises of immediate advance. So complete has been the secrecy observed that the very Government at home is believed to know nothing, and a Parisian caricaturist pictures the President of the Republic anxiously consulting a somnambulist as to what might be occurring on the road to the capital of Madagascar.

CONFLICTING CLAIMS.

Among telegrams published by us within the past few days, the following appeared:—

(FROM THE "N.-C. DAILY NEWS.")

Pekin, October 16.

The Edict of the 29th of September, exacted by the British Minister exclusively, provided explicitly for the punishment of all the officials concerned in the riots. The second Edict, dated the 14th instant, is issued in fulfilment of the engagement thus made with Sir Nicholas O'Connor.

(FROM THE "CHINA GAZETTE.")

Pekin, October 15.

An Imperial Decree has been published in the *Fekin Gazette* stating that all the officials whose names were given to the Tsung-li Yamén on 30th August last by M. Gérard, the Minister for France, and who have been found guilty, after trial by competent courts, of complicity in the Szechuan Riots, have been degraded in accordance with M. Gérard's representations. Liu Ping-chang—ex-Viceroy—was the first name on the list.

These two messages convey totally different impressions. The first indicates that both of the Imperial Edicts punishing the officials of Szechuan were issued in consequence of representations made by the British Minister in Peking. The second attributes the credit entirely to M. Gérard, the French Minister. On its face the latter statement bears the impress of extreme improbability, if not of absolute untruth. For it is obviously incredible that any action taken by the Chinese Emperor, in the nature of degrading or otherwise punishing high Chinese officials, could be openly attributed in an Imperial Edict to the interference of a Foreign Minister. Turning, now, to the Edict itself, we find it quite conclusive. Not the remotest reference is made to the French Minister. Neither is there any reference to the British Minister, for the matter of that. But since we know, beyond question, that Great Britain presented an ultimatum requiring China to take certain steps, and since those steps were immediately afterwards taken by Imperial Edict, there is no room to doubt the relation of cause and effect. We are unwilling to discuss such matters. In the interests of civilization and the Treaties, it does not much matter whether France or England champion foreign privileges in China. But history ought to be accurately written. Here is the Edict, as published by the very journal in whose telegraphic columns it was said to have contained textual reference to the French representative's demands:—

In an edict published some time ago, we have ordered that the former Viceroy of Szechuan province, Liu Ping-chang and other officials for their neglect and mismanagement in failing to prevent rioting in the province and the destruction of Foreign missionary property be punished.

Now, according to the report of Lu Chuan-lin, the Viceroy, and of Kung-show, the Tartar-General of Cheng-tu, a careful investigation has been made into the riots and their causes, and twenty-three of the rioters, including Wang Jui-ting have been arrested and tried. The result of the examination was that six were proved to have taken a leading part in the riots, were at once executed, and seventeen others were punished in various other ways, some being sentenced to imprisonment and to the cangue, some bamboed and others transported, and it is hoped that these severe measures will be sufficient to prevent the recurrence of these deeds of violence in the future. The Viceroy reports that the following officials have been dealt with: Chow, the sub-prefect, and the Sheng, acting magistrate of the Dah-yi district; Shing Yuen-liang; acting magistrate of Mee-ning district; the district magistrate of Shing-tsin, and the district magistrate of Chuhsien. All these officials have been cashiered. An expectant Taotai named Chou and Huang Taoyuen, acting magistrate of Chengtu, are to be cashiered at once and turned over to the Board of Punishments. Other minor officials are to be similarly dealt with. There being so many foreign missions of various nations scattered over Szechuen, We command the Viceroy and his subordinates to use every endeavour to protect them and prevent the recurrence of similar disturbances in the future. The district officials are to post proclamations throughout the province impressing upon the people the necessity of living on terms of peace with their Christian neighbours. If these orders are carried out peace will be ensured over the whole Empire.

POLITICAL GOSSIP.

Various rumours are circulated in the capital about probable changes in the Cabinet, but they seem to be, for the most part, mere hypotheses not worthy of serious attention. Our readers may, however, be interested in a summary of these rumours as published by the *Nippon*, not because it suggests actualities, but because it indicates the trend of non-official opinion in Tokyo. It runs thus:—"A rumour that the Cabinet will resign in a body has been current during the past few days. It appears to be a conjecture based upon several circumstances; first, an idea that the Ministers of State ought to take such a step; secondly, the *Nichi Nichi's* strong advocacy of the theory of Ministerial responsibility; thirdly, the recent meeting of Marquis Ito and Count Okuma; fourthly, Marquis Yamagata's journey to Kyoto; and fifthly, the generally unsettled condition of political affairs. Nothing could be more erroneous than to suppose that what ought to happen will come to pass in the political world at the present moment. As to the *Nichi Nichi's* advocacy of Ministerial responsibility, it must be regarded merely as an ill-considered whim of the editor. From the Government's traditional policy, we may safely infer that it will not take any decisive step until the conclusion of the complication. It is nevertheless true that Marquis Ito has long been desirous of resigning his post, and he may perhaps think that the present is the best opportunity for the purpose without injury to his reputation. This supposition seems not improbable. We may mention a few other stories now current. It is stated, for example, that Marquis Yamagata's journey to Kyoto was for the purpose of conferring with Count Matsukata at the request of the Premier; that Marquis Saionji will resign, or has resigned; should joint resignation be decided upon, it will take place on the return of Count Inouye from Korea; that the Government is of opinion that its resignation at the present moment would awaken the distrust of Foreign Powers; that Marquis Ito has been heard to say that, under no circumstances will he resign until the Diet meets; and that Count Okuma has declared his willingness to enter the Cabinet should Count Kuroda take the post of Minister President."

Other journals publish hypothetical Cabinets likely to succeed the one now in power, but it is obvious that they are all talking in the air. The elements for forming an Administration being limited at present, it is not difficult to combine them in more or less probable ways, and that is about what the newsmongers in the capital are doing.

THE MILITARY PARTICIPATORS IN THE KOREAN "COUP D'ÉTAT"

It is stated that Lieut.-Colonel Kususe and his subordinates are arraigned under the 84th Article of the Military Penal Code, which provides that, in the event of a number of soldiers' assembling for purposes prejudicial to public peace and good order, their leader shall be liable to major confinement for from 2 to 5 years, and the others, to major confinement for from 1 month to 1 year. Officers convicted of such conduct lose their commissions.

Major Umayabara, and those suspected of complicity in common with him—namely, 4 officers and 46 of inferior grades—will, it is stated, arrive in Japan in a few days, and be arrested immediately on landing.

Some people appear to have difficulty in understanding how Japanese subjects can be arraigned before Japanese tribunals and punished for taking part in a political *éméute* in Korea. The matter is very simple. An analogous case would be that of British subjects acting in a manner prejudicial to public peace and good order in Japan. They would, of course, be tried by a British court so long as Great Britain retains extraterritorial jurisdiction in this country.

THE KOREAN AFFAIR AND THE OPPOSITION.

The *Chuo Gi-in Kai*, an association of members of the Diet belonging to the *Kaishin-to* and other Opposition parties, has just issued a manifesto on the subject of the Korean Affair. The document sets out with an allusion to the intimate political relations existing between Japan and Korea, and to the paramount importance of the latter's independence in the interests of the former. Its signatories are profoundly grieved and highly indignant at the disgraceful conduct of the members of the Legation and other Japanese in Seoul in connection with "the barbarous *émeute* of the 8th instant, for which few parallels are to be found in the annals of the world." They heartily approve the Government's decision to show no mercy to the men that have injured their country's good name by associating themselves with such a savage incident. Should it be the Cabinet's idea, however, that the honour and dignity of the country will be amply vindicated by the punishment of Minister Miura and the others, the signatories of the manifesto will have to differ from the Government in the most emphatic manner. What happened at the time of the Otsu incident? Were not two Ministers of the Crown and a local Governor compelled to bear the responsibility? What measures, then, are essential to restoring the country's reputation when its representative has been concerned in the murder of the Queen of a neighbouring State, and when its troops have taken part in a treasonable *coup d'état*? Nothing short of the resignation of the whole Cabinet will answer the purpose. The Premier, Marquis Ito, is specially pointed to as the official most responsible, since the direction of foreign affairs is really in his hands, and he has to answer for sending to Seoul a Minister without the least diplomatic experience, and who has proved himself utterly incapable of discharging the duties of his important post.

CURRENT TOPICS.

Rumours are rife in the capital about probable changes in the Cabinet. A great deal of importance is attached to Marquis Yamagata's visit to Kyoto, it being generally believed, whether with or without reason, that the object of his journey is to confer with Count Matsukata on the subject of a new Ministry. The two statesmen have met at Kyoto, but it is not known what was the result of their consultation, or indeed whether their meeting had any political significance at all. Judging from precedent, the chief of the new Cabinet, supposing there is to be a change, is likely to be a statesman of Satsuma extraction. There are at present three Satsuma men eligible for the post, namely, Marquis Saigo, Count Kuroda, and Count Matsukata. The first is believed to be positively averse to the idea of presiding over a Ministry under any circumstances, and particularly at the present juncture. The choice therefore lies practically between Count Kuroda and Matsukata. With either of these statesmen as Minister President and Count Okuma as Minister of Foreign Affairs, it would not be impossible to organize an exceedingly able Cabinet. Not that such programme is actually under contemplation, so far we know. We merely re-produce rumours.

It was supposed that the day had long since past for the re-appearance of Count Oki in the field of politics. But some people seem to think otherwise; for certain papers deem it worth while to insert a report of a meeting said to have recently taken place between that statesman and Count Goto, even adding a comment that these two are on the alert to take advantage of the first wind favourable for floating them once more into the haven of officialdom. Whatever may be Count Goto's chances, those of the ex-Minister of Education must be counted extremely slender.

Concerning the recent meeting between Marquis Ito and Count Okuma, the *Kokumin-no-Tomo* has a very misleading version. "A

certain advocate of reconciliation between men in office and those out of it," says that journal, "took much pains to smoothe matters between Marquis Ito and Count Okuma. Through the medium of this individual, the Premier asked for an interview with the Progressionist leader. The latter at first rejected the proposal on the ground of the political agitation in connection with the so-called Ministerial responsibility question, but subsequently went so far as to say that, if the Premier was really desirous of an interview, he should come to see him, as he was not in the habit of paying visits since the accident to his leg. The Marquis thereupon visited the Count at the latter's residence." The *Nichi Nichi* gives the lie direct to the *Kokumin*, and writes as follows:—"Count Okuma, on the expiration of the usual term of mourning for his mother, paid a visit to Marquis Ito, when the latter being not at home, no personal interview took place. The visit was subsequently returned by the Premier, when, Count Okuma being at home, the two friends had a conversation. The meeting was thus simply an exchange of courtesies, and had no political significance at all. Perhaps the followers of the Count may desire to suggest that it had, but political considerations never entered the minds of either the host or the guest. It is true that some individual once busied himself to effect a reconciliation between the two statesmen, but his efforts do not seem to have received serious consideration from either of them. The recent meeting was not the result of any exertions by a third party. Under such circumstances, nothing could be more untrue than to speak as though an offer of office had been made by the Marquis to the Progressionist leader."

ECONOMICAL AND INDUSTRIAL.

The revival of business prosperity is steadily going on. Wholesale dealers in Tokyo are said to have on their hands so many orders from provincial districts that they find difficulty in filling them. According to information obtained from the Nippon Tetsudo Kaisha, the quantity of merchandise carried over the company's lines during the month of September showed an enormous increase when compared with the returns for the same month last year. The rate of increase was 36 per cent. in dry goods, 44 per cent. in foot-gear, head-gear, and other things usually classed as *komamono*, 20 per cent. in imported liquors, 16 per cent. in sugar, and 20 per cent. in various agricultural produce, especially Chinese beans. On the other hand, there was a decrease in articles of necessity, such as salt, marine products and manures.

The Tokyo Woollen Cloth Manufacturing Company recently held an extraordinary general meeting at which it was decided that the capital, at present 350,000 *yen*, should be increased to 1,000,000 *yen*. Of the new fifty-*yen* shares 13,000, are to be taken by the present shareholders, only 400 being offered for general subscription.

The total capital invested in banks, railways, and various other companies, during the period from January 1st to October 8th of the present year, was 85,621,000 *yen*. This total was divided as follows:—14,265,000 *yen* in banks, 59,105,000 *yen* in railways, and 12,251,000 *yen* in various companies.

A combination is being formed among Japanese cotton-spinning companies for the rejection of the "wet cotton" imported by Chinese merchants. According to the computation of experts, nearly 800,000 *yen* is said to have been paid to the Chinese last year on account of the moisture with which they had dishonestly saturated their cotton. Mr. Sugauma Masatsune, manager of the Cotton Spinners Association at Osaka, recently came up to Tokyo specially for the purpose of arranging matters with the representatives of the factories in the Kwanto district. We hear that his efforts have been successful.

The sudden rise of Shanghai as a cotton-

spinning centre attracts widespread attention in Japan. The *Fiji* calls attention to the fact, and observes that, while it has taken some years for Japan to bring up the number of her spindles to its present point, 800,000, Shanghai is shortly to have 300,000 spindles in full operation. As to Japanese schemes for establishing spinning factories in Shanghai, there are two, one in Tokyo and one in Osaka. The Tokyo project was originally on the basis of 20,000 spindles, but has since been increased to 30,000; while the Osaka company purposes to set up 50,000 spindles.

A project for establishing a commercial agency in Tokyo is making slow progress. A Committee appointed to carry on the necessary investigations has already submitted its report, which has to be considered at a general meeting of the promoters, so that we can not as yet predict whether the agency will become an accomplished fact.

The 14th half-yearly meeting of the shareholders of the Kyushu Tetsudo Kaisha was held in Moji on the 25th instant. The statement of accounts for half-year ending on the 30th of September last, was as follows:—

INCOME.		Yen.
Traffic receipts	501,649.200	
Miscellaneous receipts	14,027.925	
Special subsidy	84,200.000	
Brought forward from last account.	15,824.619	
Total.....	615,692.744	
EXPENDITURE.		Yen.
Bussiness expenses	208,281.329	
Balance	407,411.415	
METHOD OF EMPLOYING THE PROFIT.		Yen.
Reserve fund	16,000.000	
Fund for equalization of dividends	84,200.000	
Rewards	13,000.000	
Dividend (8 o/o per annum)	276,450.000	
Carried over to the next account...	17,761.435	

After the passing of the accounts, Mr. Takahashi, President of the Company, addressed the meeting on the future prospects of the enterprise and on the construction of the remaining sections of its lines. He congratulated the shareholders on the splendid prospect lying before them. All the State and private lines, more than ten in number, that are to be constructed in the island of Kyushu within the next few years, will be connected with those of the company at different points, so that the shareholders may safely look forward to a state of ever increasing prosperity. As to the construction of the unfinished portions of the lines, he hoped that the work would be completed by June, 1898. After a short recess, an extraordinary general meeting was opened, at which it was decided that the Board of Directors should have power, at their discretion, to meet any demand for funds that might hereafter arise in connection with the new works of construction, by raising loans bearing interest at a rate of not more than 6 per cent. per annum, instead of by calls on the present shareholders.

There is a project in Tokyo for the establishment of a warehouse banking corporation, with a capital of 2,000,000 *yen*. The principal projector is Mr. Kitaoka Bumpei, and the warehouses are to be located in Minami Senju. Capitalists view the principle of the scheme with favour, but hesitate to join it, partly because the site selected for the warehouses is inconvenient, and partly because Mr. Kitaoka is suspected of having an exclusively selfish aim, the ground to be occupied by the warehouses being his property.

Mention has already been made of a scheme for the formation of a large steamship company by uniting the leading private ship-owners, such as Mr. Asano Soichiro, of Tokyo, Mr. Baba Michihiso, of Etchu, and Mr. Hamanaka Hachisaburo, of Osaka. It is believed that the difficulties connected with an equitable valuation of the ships owned by these different persons may perhaps prove an insurmountable obstacle to the success of the project.

The Chugoku Tetsudo Kaisha, which has just been organized with a capital of 5,000,000

yen, is regarded as one of the most promising among the railway companies established in Japan. Its line is to connect Okayama with Yonago on the Sea of Japan. Rumour says that the company will be able to secure the services of Mr. Saito Shuichiro as its President. The association of the ex-Vice-Minister of Agriculture and Commerce should bring success to any enterprise.

The next general meeting of the shareholders of the Nippon Yusen Kaisha, advertised to take place at the end of November, is looked forward to with peculiar interest, for the company observes secrecy as to the manner in which the special income (1,350,000 yen) obtained from transports requisitioned by the Government is to be spent. It is rumoured that part of the sum will be divided among the shareholders as a special dividend, in addition to the ordinary dividend of 10 per cent. The rate of this special dividend is believed to be 20 per cent., so that the aggregate dividend for the year will be 30 per cent. The residue of the special income is expected to be set aside as a fund for the extension of the company's business operations. We fail to understand how these figures are arrived at.

The Mexico Emigration Company, projected by Viscount Enomoto and others, will shortly be organized with a capital of 50,000 yen. Its organization is to be on a partnership basis. There are already more than thirty applicants for membership.

MR. KANO AND MISS ABBOTT.

According to the *Yorozu Choho*, Mr. Kano Chigoro, President of the Higher Normal School, has exposed Miss Abbott's methods. He is said to have examined her performances at the Kinki-kan on the 15th ult. and his explanation is that the secret of her apparently wonderful feats lies in the skilful application of more than ordinary strength of fingers and arms. Mr. Kano is represented as having demonstrated the correctness of his theory by experiments with some of his disciples in the art of *ju-jutsu*. A few examples are given by our contemporary. First, as to the holding up of a chair in defiance of attempts to pull it down, the feat is effected, according to Mr. Kano, by pressing the chair against the person attempting to draw it down, so that he is compelled to fall backward. Next, with regard to pushing the shoulders, the performer places her fingers upon the body of her assistant while the person attempting to push her forward is made to apply his force at the top of her shoulder, so that the two forces come into play in opposite directions along the same line, and thus neutralize each other. Keeping this in mind, Mr. Kano is reported to have pushed Miss Abbott, not at the top of her shoulder, but a little below it, whereupon she was easily forced forward. As to the increasing of bodily weight, that is done by pressing her fingers against the neck of her assistant and using her arm as a lever to resist the force applied to raise her upwards. Mr. Kano is said to have successfully accomplished these and other feats in the presence of a representative of the *Yorozu*.

Mr. Kano, whom our readers are not likely to have heard much about, is not only well known in the field of education, but has also associated himself closely with the gymnastic science called *ju-jutsu*, in which he enjoys the reputation of being thoroughly versed. Hence he is exceptionally competent to speak on such a subject as the above, and his remarks have doubtless been read with much interest by the Japanese public. As for his reasoning, however, we do not find it convincing. When Miss Abbott made her *début* in the West, her feats provoked much controversy, and certain men, very learned or very skilled, undertook to prove that the secret of her performances lay wholly in a clever application of muscle. But their arguments never convinced the public, nor do we think that Mr. Kano's will accomplish much more. The explanations that he gives appear insufficient, and are obviously partial. Consider the chair trick, for example. Miss Abbott raises a

chair without grasping it and invites the strongest man in the audience to pull it down. At least half a dozen men make the attempt on every occasion, but none succeed. Mr. Kano asks us to believe that all these persons are befooled; that instead of pulling the chair out of Miss Abbott's hands, they support it with their own bodies and then vainly essay to drag it down. If any one that has witnessed the feat accepts that explanation, we shall be surprised. We have seen a man of medium strength literally suspend himself from the back legs of the chair without overcoming the resistance offered by the hands of the frail woman holding it. There could have been no question of resting the chair against his breast in that position. Besides, even though Mr. Kano's argument hold in the case of a chair, which might possibly lend itself to such a trick, how can it apply where a stick is held upright by Miss Abbott in defiance of the strength of four or five men attempting to lower it? Still more difficult to comprehend is his explanation of the feat in which the lady performer stands at arm's length from a pillar, resting the tips of her fingers against it, and resists the combined strength of eight or nine men endeavouring to push her forward. Mr. Kano, if we rightly comprehend his interpreter, is represented as saying that the strength exerted by the men pushing is neutralized by a force acting in the opposite direction along the same line. If that be so, it must be an equal force, and the question then arises, where does it come from. Is it put forth by Miss Abbott, or does it emanate, as Mr. Kano hints, from her assistant? Either hypothesis is untenable, with regard to a mere exertion of muscle. Besides, Miss Abbott's assistant takes no part whatever in this particular feat: he stands at some distance away. Then there is the specially noteworthy fact that when Miss Abbott applies lifting force, or strength of resistance, using as a *point d'appui* the hand of another person, the latter is not sensible of any pressure. Thus, when she raises a chair with six men heaped upon it, she applies her hands to the wooden back over the hands of one of the audience; and when she resists a push from eight men by standing with her finger tips touching a pillar, an outsider's hand is interposed between her fingers and the pillar. In each case alike the interposed hand is sensible of no pressure whatever. Can that be accounted for by reference to *ju-jutsu*? And can any professor of *ju-jutsu* tell us how a few mesmeric passes and an emphatic suggestion are capable of adding unlimited weight to the body of a child of eight or nine years? Mr. Kano alleges that Miss Abbott does not make her own body immovable, when she resists the lifting power of a strong man, but that she defeats his power by the skilful leverage of her arm. Are we to understand that such an explanation applies to the case of the children upon whom she operates, and that when four children form links in a ring of persons holding each other's hands, with Miss Abbott at the opposite side from the children, and when four men fail to lift the children in that position, some operation of arm leverage is the secret of the feat? Truly that theory makes too large a demand upon our credulity. It is very probable that Mr. Kano is imperfectly reported in the *Yorozu Choho*. Possibly he is really in a position to elucidate the mystery. But the explanations attributed to him leave us much in the dark as ever, and the foreign public would be greatly interested by a more detailed account. Our own inquiries go to show that Mr. Kano and his pupils succeeded in overcoming Miss Abbott's mysterious power, whatever it may be, by doing everything that they were requested not to do, and that the poor lady performer emerged from the ordeal with livid marks on her arms and back. Indeed from first to last the system used by her would-be exposers is said to have been little short of brutal; quite incompatible with the most elementary canons of courtesy. If this very curious performance is a mere trick, by all means let it be exposed. But since Miss Abbott offers herself freely for any fair test, let the test be applied fairly, and let there be no such disgraceful exhibitions as those that recently took place at

the Kinki-kan. We do not pretend to speak as experts, but by the light of simple reasoning we find Mr. Kano's explanations quite as inexplicable as Miss Abbott's feats, and we experience only amusement at the delightful assurance of a Tokyo contemporary when it says:—"To think that this little lady should have travelled the world over and hoodwinked hundreds of thousands of people, only to be finally exposed by Japanese scientific intelligence."

THE BIRTHDAY BALL.

We have a word to say to "X," as well as to others that have written on the subject of the Birthday Ball. "X" expresses "surprise" at our "strictures on the propriety of observing the 3rd proximo, irrespective of its falling on Sunday," and asks, "shall a National jubilee be postponed for a day to satisfy the idea of a handful of aliens?" We must assume that these words were hurriedly penned, without due regard to their accurate meaning. For we have never passed any "strictures on the propriety of observing the 3rd proximo," neither have we anywhere suggested the "postponement of a national jubilee to satisfy the idea of a handful of aliens." On the contrary, to guard against any such interpretation, we expressly wrote:—"From a Japanese point of view all days are alike, and it can not, of course, be reasonably contended that any ideas entertained by Christians with regard to the sacredness of a particular day, should necessarily be respected by the Japanese in celebrating the birthday of their Sovereign." It is strange that "X" should have omitted these words of ours, while quoting the sentences immediately antecedent and consequent; that he should not have employed the usual means of denoting an omission, and that he should thus charge us with advancing the very claim explicitly disavowed in our note. We see just reason to complain of such treatment, but we let the matter pass, being persuaded of our correspondent's sincerity. We repeat, however, that no such extravagant idea ever entered our minds as that attributed to us by "X." We are not so extremely silly as to imagine that any nation should defer to the sentiments of "a handful of aliens" in celebrating the birthday of its Sovereign. Our point is simply this, that whereas all foreigners honoured by receiving an invitation to the State Ball on the 3rd proximo, naturally desire to attend, for the purpose of showing, first, their respect to the Emperor, and secondly, their appreciation of the courtesy extended to themselves, many will unfortunately be prevented from attending because the day is the Sabbath. It is further a pity that the hospitality of the Japanese should be marred by any *contretemps*, and from that point of view the Minister of Foreign Affairs would doubtless have been pleased to postpone the ball had such a step been possible. Evidently it was not possible, and we presume that neither "X" nor anyone else will object to our regretting the fact, or that our Japanese readers will misconstrue us as our correspondent has done.

PRINCE KITASHIRAKAWA.

The news that H.I.H. Prince Kitashirakawa, Commander of the Guards, is seriously ill, has caused great anxiety in Tokyo. While the Prince was on his way to Tainan on the 18th instant, symptoms of malarial fever exhibited themselves. The latest report, dated Tainan, 24th ultimo, speaks of his condition as follows:—"His Imperial Highness's temperature rose yesterday at noon to 40.3° C., but began to fall from nine in the evening and descended to 39° this morning. Blood pressure has somewhat increased. Slight congestion is noticed in the bronchial tubes of the right lung. There is also congestion in the back part of both lungs. The number of inspirations is 24. No expectoration. Surgeon Colonel Taniguchi has now chief charge of the Imperial patient; but Surgeon-Major Saigo, who is expected to arrive tomorrow, will undertake the case."

THE TOKYO MERCHANTS & MANUFACTURERS' ASSOCIATION.

The general meeting of the Tokyo Merchants and Manufacturers' Association was held at the Imperial Hotel on the 27th inst. Mr. Oku Saburo bei was in the Chair. There were present Messrs. Oye Taku, Masuda Takashi, Sonoda Kokichi, Watanabe Hiromoto, Tanaka Heihachi, Umeura Seiichi, and several others. Mr. Umeura read a report on the general condition of the Association during the past year, while financial matters during the same period were reported by Mr. Nakazawa Hikokichi. The next business was the consideration of a proposal for modifications in the rules of the Association. It was adopted after a short debate.

After the regular business was over, Mr. Kaneko, Vice-Minister of Agriculture and Commerce, one of the invited guests, addressed the meeting on the subject of the economical condition after the War. The speaker commenced with the remark that war and commerce are the two means by which nations gain their greatness and prosperity. His countrymen have proved themselves capable of maintaining their part with credit on the field of war, but they have yet to demonstrate their ability in the no less important sphere of commerce and industry, and the solution of the problem devolved upon the shoulders of the audience he had the honour of addressing. He then proceeded to consider the question whether the Japanese should go forth to all parts of the world like the English, or stay at home, like the French, and invite other peoples to come and trade with them. Mr. Kaneko tried to account for the peculiar characteristics of these European races. The French, he said, stayed at home, first, because they had been deprived of their colonial possessions by the English; secondly, because they were by nature more subject to home-sickness than the English; thirdly, because their country's geographical situation made it the centre of European activities; fourthly, because the climate being healthy and mild, foreigners were naturally attracted to their country; fifthly, because their country was fertile enough to produce all they wanted; sixthly, because their close attention to business enabled them to find profitable fields at home; and seventhly, because their skill and resourcefulness in industry made them the originators of fashion in Europe. The English, on the other hand, go forth to foreign countries, first because they have vast colonial possessions and enjoy supremacy on the sea; secondly, because they are by nature adventurous and delight in developing the resources of new countries; thirdly, because they have a peculiar aptitude for planting and maintaining colonies; fourthly, because their native islands being a little outside the highways of Europe, they have to go abroad in quest of fortune; fifthly, because their country is not extensive enough to produce the means of national sustenance; sixthly, because they are naturally better adapted for foreign than domestic business. Now to which class of these representative races do the Japanese belong? Mr. Kaneko had little hesitation in saying that his countrymen were more like the English than the French. Three centuries of seclusion have checked the naturally development of the seafaring and adventurous character of the Japanese; but a glance at the enterprising achievements of their forefathers in the latter part of the sixteenth and the beginning of the seventeenth centuries, is sufficient to show that they are not naturally deficient in the qualities essential for a seafaring and colonial career. The geographical position of the country is very like that of England, and this simple fact is fraught with far-reaching significance. Mr. Kaneko thus thought it beyond all doubt that his countrymen were destined to play a part like that of the English. He urged on his hearers the importance of directing both capital and energy to enterprises abroad, and thus avoiding the disastrous experience of Germany after the war of 1870-1. The speaker then went on to consider various practical measures necessary for the development of the country's foreign trade. He alluded to such

subjects as the extension of steam routes; the insurance business; the exchange business; the establishment of branch-offices abroad; the despatch of commissioners abroad for the study of business conditions; the sending of apprentices to well-known business houses and manufacturing in foreign countries; the improvement of the guild system, so that any large orders from abroad may be received and executed by a guild; the establishment of commercial exhibitions; the establishment of technological and commercial schools; the improvement of Chambers of Commerce, and so forth.

After dinner, Mr. Mochizuki Kotaro spoke on the subject of the future development of Japanese commerce and industry.

THE LANGUAGE AND LITERATURE OF JAPAN.

The following letter on the above subject appears over the signature of Ernest W. Clement in *The Dial*, No. 221, a Chicago semi-monthly journal of literary criticism, discussion, and information:—

An interesting controversy is going on, in the columns of the literary magazines of Tokyo, on the question of the abolition of the Chinese ideographs in the written language. The weight of centuries of usage and of economy, through conciseness in the expression of ideas, is in favour of their retention. But they are so complex and so cumbrous, and require so much time for study in a curriculum tremendously overcrowded, that they are felt to be a great drag upon popular education. And especially do they seem to be entirely unsuited for the new career for which Japan is evidently destined. There is a strong feeling among thinking men that the Japanese language and Japanese literature cannot adapt themselves to modern thought and attain the possibilities of modern civilization with such inconvenient and impractical modes of expressing and communicating thought. It is argued, therefore, that a more simple and easy alphabet must be substituted for the present mixture of Japanese characters and Chinese ideographs, if Japan wishes to maintain communication with the world at large.

But the reformers are thus far unable to agree upon a substitute. Some urge the adoption of Roman letters; others are in favour of using only the Japanese *Kana*; while yet others propose modifications of the *Kana* so as to meet requirements of transliterating foreign names. These last, who seem to be supported by a majority of the literary reformers, also recommend the mode of writing from left to right in the European fashion.

It is also proposed to make "radical changes in the grammar of the Japanese language," so as to recognize constructions that have lately been introduced through imitation of Western modes of thought. This proposal has, of course, evoked a loud protest from the votaries of classical Japanese, but is "welcomed by the literary public in general."

These attempts to conform the Japanese language to the requirements of foreign intercourse are accompanied by an increased interest in the study of foreign languages. This extends, in the first places, to the Korean and the Chinese languages, and reaches, also, even in spite of political prejudices, to the Russian language and literature. "But the language whose status has been most extensively and permanently improved is English," the importance of which, "as a medium for conducting business transactions and international intercourse," is now more fully recognized.

This same tendency to emphasize the necessity of "modernizing" is apparent in a recent address on "The Future of Japanese Literature," by Professor Tsubouchi, "one of Japan's foremost literati." He spoke along this line:—

"At the present time, unfortunately, there are no standard works in the realm of Japanese literary thought. Those works which foreigners read in a translated form, believing them to be the finest literary products of Japan, are without exception old classics, and have nothing in common with the trend of modern ideas. It is impossible to rest satisfied with this state of affairs; we cannot hope that Occidentals will ever rightly understand the Japanese people if they are to have nothing better than these antique and obsolete works as their standards. The encouragement of a national literature is thus at the present moment of prime importance. It is the only means which will serve to promote an intimacy with the Western world. We have now to produce a series of master-pieces that will show us in the true light—the progressive, invincible Japanese of the 19th century."

It will certainly be interesting and instructive for all scholars, especially for comparative philologists, to watch these attempts to reform a language and a literature that are not only of old standing, but that for at least two and a half centuries were crystallized. Even though radical reforms may not be accomplished,

great changes will be made, have already been made, in both the language and the literature of Japan.

The controversy to which Mr. Clement alludes has been going on for years, and, as far as we are able to judge, has led to no satisfactory results. The cumbersomeness of the ideographs now in use compared to the signs employed in countries that can boast of an alphabet, is admitted on all sides. But it is a mistake to think that well educated Japanese are as deeply impressed with the inconvenience of the present system of writing as are foreign students of the Japanese language. The majority of western writers on this subject, while pretending to represent Japanese public opinion, unconsciously state the difficulties that they themselves have felt when commencing to study the language. The facility with which a Japanese lad acquires an extensive knowledge of Chinese characters and their meaning has often astonished us. May not this fact account for the indifference with which the leading Japanese of the present day regarded the subject of ideographic reform? They do not seriously agitate for a new system of symbols because they are not thoroughly conscious of any great inconvenience attaching to the system now in use. Mr. Clement says:—"There is a strong feeling among thinking men that the Japanese language and Japanese literature cannot adapt themselves to modern thought and attain the possibilities of modern civilisation with such inconvenient and impractical modes of expressing and communicating thought." This observation furnishes an apt illustration of the remark we made above. Mr. Clement is expressing his own opinions; and not those of the Japanese. A somewhat extensive acquaintance with educated Japanese has led us to an opposite conclusion to that expressed by Mr. Clement. The difficulty of adaptation to which he alludes exists only in his imagination. We know of no philosophic, scientific, or political treatise of modern times that may not be rendered into Japanese with perfect ease and accuracy. We ourselves have repeatedly tested the capabilities of the Japanese language in the very particulars to which Mr. Clement alludes, and have discovered in it neither the inconvenience nor the impracticality of which he complains. What Mr. Clement says about orthographical reform is somewhat misleading. His words are calculated to produce the impression that there exists an influential party in favour of a change. Here again in Mr. Clement's mind the wish is father to the thought. The men that "urge the adoption of Roman letters," and the "others that are in favour of using only the Japanese *Kana*," are too insignificant and too few to effect a reform of the magnitude desired by Mr. Clement and his fellow-thinkers.

Mr. Clement cites a passage from Professor Tsubouchi's address in which the Professor is made to say that there are no modern Japanese books of a character calculated to convey to the foreign student a correct impression of the progress the nation has made. Nothing could be further removed from the truth. One has only to glance at the pages of any of the modern magazines devoted to literary criticism to see notices of scores of such books, many of which have been written by men of acknowledged scholarship and literary ability. To suppose that the Western student of modern Japanese has no other literary source of information than that furnished by works designated by Professor Tsubouchi "old classics," is so odd a notion that we cannot wonder that Mr. Clement took the trouble to transmit it to the city which has so lately figured as an emporium of the world's curiosities.

Over fifty members of the Tokyo Medical Society held a meeting on the 28th ult., and after a lengthy discussion decided that unless the Superintendent-General of the Metropolitan Police accepted the representation of the Medical Society and impartially punished the police surgeons said to have failed in distinguishing between cholera cases and maladies of a similar nature, they should advise the members of the City Assembly not to consent to the sanitary expenses.

HIS IMPERIAL HIGHNESS PRINCE KITASHIRAKAWA.

THE Ball that was to have been given at the Akasaka Detached Palace on Wednesday evening having been postponed, and the project of a State Ball on the Imperial Birthday abandoned, nominally in consequence of the condition of His Imperial Highness Prince KITASHIRAKAWA, the gravest fears began to be entertained by the public, on the 29th ultimo, as to the issue of the Prince's illness, and it is now pretty generally known that these fears were only too well founded. The etiquette of the Japanese Court does not permit that deaths in the Imperial Family should be officially announced until various preparations have been completed, and we may therefore assume that a delay similar to that which took place in proclaiming the demise of His Imperial Highness Prince ARISUGAWA and the little Prince MITSU, will occur in the present instance also. But as to the event itself, there remains, unhappily, no room for doubt. The Prince fell a victim to the terrible malarial fever of Formosa. The disease declared itself on the 18th Oct., His Imperial Highness being then with the Guards at Taiwan. At first, favourable intelligence was transmitted as to the progress of the malady, but whether a relapse took place, or whether dangerous symptoms were suddenly developed, the telegraphic bulletins quickly assumed a grave tone, and within ten days from the date of the seizure, the ominous word "*Kitoku*" was sent across the wires. In such cases *Kitoku* is to be interpreted as death, and when it subsequently became known that His Imperial Highness had been carried on board a man-of-war at Anping, and that the ship would proceed direct to Yokohama, without touching anywhere *en route*, men understood that the vessel's freight was a corpse. The deceased Prince was only in his 49th year, having been born on the 1st of April, 1847. At the age of 23 he proceeded to Europe, and devoted seven years to study, most of which time he spent in Germany, acquiring not only a sound knowledge of military strategy and tactics, but also a good acquaintance with the German language. Of medium stature, he possessed a handsome and highly intelligent face, and was noted for the genial courtesy of his address. All scientific subjects and everything connected with intellectual development, interested him keenly, and as the president or a member of various learned associations, he contri-

buted materially to the cause of progress. He presided over the Second and Third Industrial Exhibitions, as well as over the Tokyo Geographical Society, the Japan Agricultural Society, and the Fine Arts Society, and in every case his zeal on behalf of those bodies helped sensibly to secure their success. Despite his scientific tastes, however, the Prince chose a military career, associating himself closely with the army and paying constant attention to his duties as a soldier. Passing through the various grades, he attained the rank of Lieut.-General and the command of the Fourth Division, from which he was transferred last year to the command of the Imperial Guards after the promotion of their previous commander, Field-Marshal H.I.H. Prince KOMATSU, to be Director of the General Staff. He went to Formosa with the Guards, and took an active part in the whole campaign, sharing with his men hardships that probably undermined his constitution and invited the malady to which he fell a victim. Thus the war with China has cost Japan the lives of two of her most illustrious Princes, for though the late H.I.H. Prince ARISUGAWA did not actually take the field, and therefore cannot be said to have contracted the fatal illness while campaigning, there can be no doubt that his residence at Hiroshima during the heat of summer, and his arduous duties as head of the Staff were indirectly responsible for his sickness. It will be regarded by the nation as a striking fact that Prince KITASHIRAKAWA, landing with the Imperial Guards on the north-east of Formosa, commanded them throughout the whole of their difficult advance southward, and that his corpse was put on board ship at Anping, the last objective point of the campaign. The Prince is succeeded by his son TSUNEHISA, born on the 26th of September, 1882. His untimely death just on the eve of his troops' return home will be profoundly mourned by the nation.

THE SECRET TREATY BETWEEN RUSSIA AND CHINA.

BARON REUTER sent us, on Monday, a piece of intelligence that certainly does not look worth the cost of wiring. It seems to have emanated from Hongkong, which fact alone suffices to discredit it, for, on the subject of a secret treaty between St. Petersburg and Peking, it is inconceivable that Hongkong should have any monopoly or priority of information. Putting that aside, however, the alleged contents of the agreement appear inconsistent with any reasonable estimate of Russian statesmanship, as well as op-

posed to possibility. Russia is credited with a great variety of schemes of aggrandisement, and many hypotheses have been hazarded as to the reward that she expects to receive from China for contriving the restoration of the Liaotung Peninsula. We do not pretend to decipher the true from the false in all this catalogue of suppositions and suspicions, but we do feel pretty confident that if Russia contemplated concluding with the Chinese Government a treaty dealing with the future of Liaotung, above all a treaty securing to herself exclusive privileges of the kind indicated, she would wait until the negotiations between Japan and China were ended, and until the peninsula was finally restored to China's possession. The so-called "secret" covenant said to have been now concluded would put an immediate stop to the progress of the negotiations in which Mr. HAYASHI and Earl LI are to-day engaged, and would compel Japan to reconsider her engagement to restore Liaotung. Besides, we have to remember that Russia is not the only European Power directly concerned. Germany and France are acting with her, and to suppose that they are parties to the reported treaty involves us in a maze of speculations scarcely imaginable. Further, in times of peace Russian war-vessels can always go into Port Arther and anchor there. Hence it follows that if China conceded the right of anchorage at all times, the agreement must have direct reference to belligerent contingencies, and must consequently be construed as a distinct declaration of unfriendly purpose toward Great Britain. Russia is not in the least likely to invite such a declaration, nor is China to make it. In fine, the farcical character of the whole story is thoroughly established when we read that Russia has secured advantages outside the most-favoured-nation clause. China could not grant such advantages without openly flouting all the Western Powers. She is explicitly bound by her treaties not to favour any one State at the expense of the rest, and to do as she is alleged to have done would be to tear up the treaties, a performance pretty sure to be followed by the tearing up of herself. Reuter leads us to think that the Hongkong telegram has been regarded seriously by the London journals, and has provoked them into making a momentous declaration. We think that the London journals have too much discrimination to be so easily misled. A becoming tail to the canard is that the Foreign Office in London has no information on the subject. That is more than probable.

Viscountess Kono Kiku-ko, residing at Tamachi, Ushigome, Tokyo, succumbed to cholera on the 23rd ult. Her daughter, Lady Sada-ko, was attacked by the epidemic the following day, and is receiving medical treatment at the Hiro-o Hospital.

SOMETHING LIKE A NATIONAL VERTIGO.

THE *Fiyu Shimbun* has procured for itself the distinction of being suspended in connection with the Korean affair. Its offence is that, for the purpose of combatting the theory that the Cabinet should be held responsible, it condoned the *coup d'état* of the 8th instant. We do not remember any previous instance of a newspaper suffering suspension because of utterances prompted by a desire to vindicate the Government. Indeed the principle generally suggesting suspension is directly opposed to such a measure, for the prejudice that journalistic utterances can do to public peace and good order consists in attacks upon constituted authority not in efforts to support it. Hence the *Fiyu's* punishment must be interpreted as an evidence of the Government absorbing desire to show themselves radically abhorrent of the affair of the 8th instant, its motive, its methods, and its incidents. The *Fiyu* being no longer a recognised organ of the Liberal Party, its suspension has no special political significance, and will be considered by the public purely on its merits. In the temper of the nation to-day, the Government's action will doubtless be approved, but to us it seems that something like a popular vertigo threatens Japan at the present moment. Men speak in bated breath of the occurrences in Söul on the 8th instant, and raise hands of horror when any mention is made of those concerned in them. Yet, if we put together the nefarious elements of the affair, only a brief catalogue results. Very shortly after Count INOUE's departure from Söul, an almost desperate situation confronted the advocates of administrative reform. The QUEEN, re-asserting her influence over the puppet KING, had recovered the political supremacy, and was using it not merely to fill the highest offices of State with relatives and partizans of her own, proved representatives of corruption and extortion in every form, but also to re-establish an administrative system embodying all the abuses that it had been the prime object of the reform party to abolish. What was to be done under such circumstances? An appeal to the KING would have been useless. HIS MAJESTY being completely under the control of his Consort, not only refrained from opposing her designs but even contributed openly to their furtherance. An appeal to the QUEEN would have been no less frivolous than mischievous, for while it might have precipitated her schemes, it certainly would not have checked them. What then was to be done? The "Independents"—that is to say, the advocates of progress—had to choose between two courses: they had either to surrender at discretion and sit with folded hands while the country drifted back into

all the abuses and disgraces of former days; or they had to organize some forcible means of destroying the QUEEN's influence and driving her creatures out of office. Suppose that, having selected the latter alternative, the Japanese Representative had placed himself in communication with the TAI WÜN-KUN, and had arranged a *coup d'état*, having for its purpose the restoration of the latter to power. Suppose further, that he had agreed to employ Japanese troops and police not merely for the sake of the military strength thus secured, but also to hold in control any unruly elements taking unbidden part in the affair. And suppose finally that the *coup* had been made openly, in daylight, and that it had resulted in the deposition of the QUEEN, the disgrace of the Min partizans, and the Kingdom's thorough committal to the programme of reform. We do not think that, under such circumstances, the world would have been greatly shocked. That Japan had resolved to carry things with a strong hand, would have been generally admitted, but since it is plain that without some recourse to the strong hand, Korean reform must remain a farce, there would have been obvious excuse for a *coup d'état*, though it might, and probably would, have involved serious complications. It results then, if these views be correct, that the radically reprehensible features of the affair, so far as concerned its conception, were, first, the choice of time; and secondly, the admission of the *Soshi* element. Armed entry into the Palace during the hours of night at once imparted a disreputable character to the performance, and from the moment that the participation of *Soshi* was allowed, no effective provision could be made against sanguinary incidents. It is difficult to conceive a Minister sufficiently devoid of prudence to take a leading part in a drama so ill-conceived, with actors so dangerous. But to choose a bad time and to employ questionable agents are errors of judgment, not criminal offences, and though the perpetrators of such errors must be held indirectly responsible for any resulting catastrophe, we must not, in estimating their guilt, allow our sense of proportion to be disturbed by sentiment. The QUEEN's assassination was a shocking incident, but there is not the least warrant for supposing that anything of the kind entered into the original plan, or that the Japanese officials now under arrest were for a moment privy to it. The Government are undoubtedly placed in a most embarrassing position. They have to employ every available means of dissociating themselves from an affair not merely disreputable in itself, but also indicative of a policy that Japan can not afford to follow at present. We doubt whether such an extreme measure as the arraignment of Viscount MIURA before a Court of Law was necessary, but apart from the Government's procedure, it seems to us that the

nation is in some danger of being carried away by a vertigo, and that the incidents of the 8th of October will not stand out from the pages of history in such shocking salience as many folks are now disposed to think.

SUSPENSION OF THE "NICHU NICHU SHIMBUN."

THE *Nichi Nichi Shimbun* was suspended on Wednesday. We are not quite clear about its offence, but apparently its advocacy of Cabinet responsibility in connection with the Korean *coup d'état* has been deemed prejudicial to good order. There is always some difficulty in placing oneself at the Japanese point of view in politics: a special element of sentiment has to be appreciated. So far as we can gather from the writings of the journals, their idea in this matter is that the error of choosing an untrustworthy Representative like Viscount MIURA ought to recoil upon the heads of the Cabinet Ministers. But to us that doctrine bears the semblance of expiation rather than responsibility. And, indeed, we strongly suspect that the average Japanese fails to draw any clear line of demarkation between expiation and responsibility. In Europe or America no Government is held responsible for the acts of its agents unless it endorses them. That is a perfectly rational and simple principle. Numerous instances are on record of a Representative exceeding or misinterpreting his instructions, but in such cases his recall and the disavowal of his acts by the home Government, are held not alone to be fully satisfactory to the Court to which he was accredited, but also to relieve the accrediting Government of all responsibility. In these days, of "universal articulation" it is hard to conceive how such an incident as that of October the 8th could occur at the instance of a disciplined European or American Representative, unless his Government were a consenting party: the telegraph would direct and restrain him too effectually. But in the East, above all in Japan, men retain a good deal of the heroic independence that regards self-sacrifice as expiatory of any departure, however radical, from implicit obedience. Viscount MIURA took a course diametrically opposed to his instructions. He went to Söul with the well defined object of following implicitly the policy adopted by his distinguished predecessor. A leading feature of that policy was to contrive a coalition between the QUEEN's partizans and the Independents. Experience had shown that every attempt to exclude the QUEEN from the field of politics was doomed to provoke secret intrigues, not only dangerous in themselves, but also exceedingly difficult to deal with owing to the fact that the QUEEN's influence over the feeble-

minded KING enabled her to work always under the latter's apparent sanction. Hence Count INOUE's resolve to recognise and authorise HER MAJESTY'S interference, depriving it of its pernicious and disturbing elements by converting it into an open factor of the administration and by identifying its interests with those of the party of progress. In the Count's master hand the threads of this complicated programme could be held without tangling, but they appear to have eluded Viscount MIURA's weaker grasp. He saw no course except to eliminate the QUEEN or to surrender to her, and he chose the former, although he knew it to be a complete subversal of the policy mapped out by Count INOUE, approved by the Japanese Government, and embodied in his own instructions. With his recall and the thorough disavowal of his acts, to say nothing of his indictment before a criminal court, the Japanese Cabinet's responsibility seems to us to be fully discharged. It is significant that at the time of Viscount MIURA's appointment, not a single leading journal, whatever its political affinities, attempted to criticise the nomination. On the contrary, the whole press approved it unqualifiedly. If to choose him for such a post was an error, why did no voice of protest make itself heard? Little faith can be reposed in the sincerity of newspapers that laud a man's fitness for office at the moment of his appointment, and then charge his nominators with lack of discernment so soon as he blunders. There is neither reason nor justice in all this outcry. It is inspired either by party politics or by the idea of expiation. We are reminded of the Otsu incident and of its singular effect upon the fortunes of the Minister of State for Foreign Affairs. The most specious casuist could not have traced any chain of responsibility from the Minister in Tokyo to the maniacal constable that raised his sword against the CZAREWITCH in Shiga. Yet the Minister lost his portfolio. There may have been, in that case, considerations not apparent to the public. But in the present instance the resignation of the Cabinet would so far exceed the needs of the situation as to invite ridicule. Japan must not sacrifice her dignity to save her reputation. She is not arraigned at any bar save that of public opinion, and if she disavows, as she has amply done, the acts committed by her people in Söul on the 8th of October, no further expiation is demanded of her. To admit in practice the theory advocated by the press of Tokyo, namely, that the Cabinet's tenure of office should depend upon the conduct of every Japanese Representative abroad, however, widely he depart from his instructions, would be to reduce the stability of Administration to a vanishing quantity. Is there anything that demands such an extreme measure at Japan's hands? Is there any danger that she is required to avert by imparting an extravagant and unprecedented principle into her system of government?

THE EVENTS OF 1870.

IF any of our readers possess files of the leading London journals for 1870, we invite them to turn to the *Spectator's* article on "The European Crisis," published on July 16th in that year. It is an article that has always remained fresh in our memory because of the curiously Delphian utterance with which it concludes:—"With France in the field, it is folly to predict defeat or even repulse; but if past history ever justifies prediction about the future, Germany will not be unmade, and the NAPOLEONS will be found to have wearied the patience of Heaven out." A more carefully prepared fence on which to sit, ready for a leap to whichever side ultimately glittered under the sun of victory, could scarcely have been constructed. That, however, is by the way. We mention it merely to explain why our mind reverts to the *Spectator's* article. It contains an exceptionally clear *exposé* of the reasons of the Franco-Prussian war—an *exposé* then regarded by Englishmen generally as strictly accurate, but now thrown under the shadow of a doubt. The London journal, after briefly cataloguing events that rendered it imperatively necessary for the Emperor of France to re-establish his prestige and divert the eyes of the French people from domestic politics to foreign fields, proceeded in this strain:—

Accident gave him a magnificent opportunity. Among many candidates for the Spanish throne, Marshal Prim had turned his eyes to the nearest magnate of the Braganzas, Leopold of Hohenzollern, had mentioned his idea so publicly that many weeks ago M. J. Lemoine criticized it in the *Débats*, and had, when pressed by the ex-Queen's abdication, attempted to make his selection a reality. Aware, however, that the Empress Eugénie would move heaven and earth for the family whose subject she was born, he kept his negotiations secret, trusting that when the choice had been made the Emperor, who had only interdicted the Orleanists and the Republic, would tolerate a Catholic German of Portuguese connections. He offered the Crown to the Prince, therefore, through a secret agent; but the secret was betrayed by the seizure of a telegram *en route*, and Napoleon found his opportunity. His Ministry were initiated to find how stupid their Embassies had been. His Generals were initiated by the thought of an alliance which might threaten the Southern frontier. His people were initiated to find that Bismarck, Bismarck the betrayer, Bismarck the bogey, had for the twentieth time clutched a prize in the diplomatic game. At a hint the inspired journals raved of danger to France from the "aggressive ambition" of Prussia; the public, always thinking of Sadowa, responded eagerly; the army grew savage with excitement; the Legislative Chamber shook with enthusiastic cheers at the first mention of war, and as his first act the Emperor proposed an ultimatum to Berlin. Prince Leopold should not reign in Spain under penalty of war. It was believed at the Tuileries that this demand, if proffered with sufficient rudeness, with talk about hours, and fanfaronade about susceptibilities, would evoke a refusal; but the Tuileries had not understood the nature of Teutonic pride. The soldierlike old King who has made Germany, met all this arrogance with cold disdain, ordered his Press to ask what all the pother was about, declined at first to interfere with Spanish affairs one way or another, and finally, when convinced by the agitation of Europe that the menace was serious, refused to let Germans die for a remote dynastic interest of his own. As King he would do nothing, as head of the Hohenzollerns he would disapprove the candidature. Accordingly the candidature ended, Prince Anton, father of Leopold, withdrawing his son, while the Spanish Government announced that they had abandoned their intention of electing him. There seemed a chance of peace, and Napoleon, at the cost to Europe of a

few score millions of movable property, had triumphed over Spain. This, however, was insufficient. Sadowa was not avenged because Sadowa fled; there must be at least some open humiliation of Prussia; and accordingly France demanded that King William as King should pledge Prussia never to allow any member of her Royal family, however distant, to ascend the throne of Spain,—that is, should acknowledge that he had commenced and had failed in a gigantic intrigue. To make sure of repulse, the French Ambassador, M. Benedetti, received instructions which induced him to assail the King on the public promenade of Ems, with this demand, an affront which, even in the history of French diplomacy, always able, but so often arrogant, is almost without a parallel. It was met with haughty dignity, the King, looking steadily at M. Benedetti, ordered the aide-de-camp by his side to inform him that he declined to receive him, having no further communication to make,—and the Emperor had at last succeeded. He had aroused the German heart at last. It was, then, insult that he meant, to be accepted under penalty of war, and Germany stood up ready for the inevitable conflict. Cool, cynical Berlin, which believes in no one, Hohenzollerns and Providence included, no sooner heard of this incident than it rose storming for war, and before these words reach our readers the orders will have been issued which call into the field the army which won Sadowa.

Our readers will observe that in this account Comte BENEDETTI is represented as having adopted the extraordinarily uncereemonious step of presenting the Emperor NAPOLEON'S vexatious demand direct to the King of PRUSSIA on the public promenade of Ems, and the KING is shown as treating the insult in a kingly manner. But it appears that such a story was not destined to pass unchallenged into the pages of history. M. BENEDETTI himself now comes forward to contradict it. He has in the press a volume on his Ems mission, concerning which the Paris correspondent of *The Times* writes as follows:—

It is well known that the Franco-German war broke out because Prince Bismarck, by altering the telegram sent to him from Ems by the King of Prussia, left the impression that M. Benedetti had been insulted by the King of Prussia. It was known, and Prince Bismarck himself has since confessed it, that no such insult occurred. M. Benedetti has always protested against any such thing, and he has declared to me personally that the King of Prussia never treated him save with the utmost courtesy, adding:—"If the King did not wish to return to our conversation at the moment of leaving Ems, the precise reason was that he might not be compelled to reply to demands which he held to be offensive by a refusal which would have brought about a rupture." The book which he is publishing explains this phrase.

The King had declared to him in the morning that he expected the renunciation of the Hohenzollern candidature, that he unconditionally approved it, and that he would communicate it as soon as he had it in his hands. But meanwhile the Prussian Ambassador in Paris communicated a conversation with the Duc de Grammont, the upshot of which seemed to be a desire to impose upon the King of Prussia the duty of writing something like a letter of excuse to the Emperor. Whereupon King William, while maintaining his promised adhesion to the renunciation of the Hohenzollern candidature, no longer desired to meet M. Benedetti, whom he supposed to be authorized to transmit to him the fresh demands of France. He did not wish to be exposed to an offensive communication on the part of France, or rather of the Duc de Grammont.

The enormous difference between the pretended insult of which the French Ambassador was supposed to have been the object and the dread of himself being exposed to an insult, must be evident to all. Owing, therefore, to the misrepresentations of Prince Bismarck, two Sovereigns who did not wish to fight, two nations who had no desire for war, entered upon the most terrible of struggles. Those two nations to-day, having become enemies, trouble by their irreconcilable hatred the peace of the world. It must not be forgotten that if Prince Bismarck, in speaking of France, could one day say that he preferred to be feared rather than to be loved, it may be said to-day that Germany here is no longer feared, but no more is she the object

of affection. What excuse has Prince Bismarck had so far? That of success, the success which von Roon and von Moltke prepared. But if, owing to some unexpected circumstance, owing to one of those chances of battle that surprise the cleverest tacticians, the fortune of war had turned against Germany, the name of Bismarck would have been doubly execrated. This is a conclusion which should not be forgotten by those ambitious persons who warp the consciences of peoples.

But, on the other hand, we must not be unjust. Napoleon, his health already undermined and himself doomed to a speedy end, had no will left. Unfortunately there was an ambitious, ignorant, and powerful coterie, which believed blindly in victory and dreamed only of transferring the power to the Prince Imperial under a prolonged Regency, when all their unbridled ambitions might be satisfied. The coterie detested the Liberal Empire and hoped by victory to bring back the old autocratic Empire by the appointment of youthful dignitaries to all high offices of State. It was this party that seized greedily upon the falsified telegram. They fought tooth and nail against M. Emile Ollivier and his Liberalism, against the relative liberty recovered by the country, and the old *entourage* of the Emperor that wearied everybody. Thus it was that this horrible war was rendered possible between two Sovereigns and two nations to whom it was equally distasteful. On the one hand were men of unwitting, ignorant, ambitions; on the other, a man of utterly unscrupulous ambition, upon whom his young pupil and master has so brusquely and so cruelly avenged the conscience of humanity.

It is never prudent to take M. BLOWITZ *au pied de la lettre*. His writings are all pervaded by a subjective element. Let us add, therefore, what M. BARTHÉLEMY SAINT-HILAIRE says with reference to Count BENEDETTI'S book:—

What is this talk about a forged telegram? Were not the very terms of the Convention which M. Benedetti presented to the King of Prussia enough, as he reports them, to turn the Sovereign against us? To ask Prussia, victorious Prussia, after Sadowa to renounce for ever all claims to Spain and thus preclude in advance any possible action in a future of which she knew nothing—was this reasonable or prudent? Was it not to proclaim that a war was desired, even sought for? Prussia would have undoubtedly left us in peace, but the Emperor and the Empress were too much bent upon making this dynastic campaign. Did not Napoleon III., when he was still merely Prince Bonaparte, declare that his life had but one aim—namely, to take vengeance upon Germany and England for the check of Waterloo and of Trafalgar? All that ended in Sedan, and in the breaking of that understanding which was so necessary between the three nations which represent in Europe real civilization. No. Let no one try to take us in. The inspirer of the war, the only person to blame, is the Emperor himself.

Here we have the broad view that can scarcely fail to be accepted by the public. The EMPEROR of the French wanted to force a quarrel upon Prussia, and he succeeded. But though the offence was bound to come, we can not forget the anathema, "woe to him by whom the offence cometh." Was Prince BISMARCK guilty of the act charged against him, and are we to find in the fact a prominent, if not the chief, reason for the disfavour into which he has fallen with the present Sovereign of Germany? M. BARTHÉLEMY SAINT-HILAIRE passes over in complete silence the assertion of M. BENEDETTI that from first to last he was treated with marked courtesy by King WILLIAM, and that the reported insult was never offered. Moreover, according to the *Spectator's* account, and according to the belief everywhere entertained up to the present, the first insult came from M. BENEDETTI, who, acting under instruction, chose a markedly unsuitable place and time to prefer a monstrous demand. We must await the production of fuller evidence on each side to elucidate this most interesting page of modern history.

ORIGIN OF THE JAPANESE LANGUAGE AND RELIGION.

PROF. B. H. CHAMBERLAIN'S late inquiries into Loochooan show that a dialect of the Japanese is spoken in Loochoo. From this fact we learn that that archipelago was peopled from Japan. The direction of migration has been from north to south. From this we derive fresh confirmation of the opinion that the Japanese came from the mainland of Asia, as on other grounds is the common belief. They reached their islands from the Asiatic continent, and when they came they brought with them to their new home the traditions, customs, and religious belief of their former abode. This being the origin of the Japanese, their traditions and religious belief should be compared with those of nations on the mainland. The more so because after the main body of the emigrants left the mainland, travelling doctors, rain makers, fortune tellers, merchants, religious teachers, would occasionally arrive. Such visitors would proceed to Japan at any time from a period quite four thousand years ago till the present day.

When written tradition fails us, we judge of the Japanese by anthropology, language, and oral tradition. Judged by these tests, including shape of hands and feet, colour of hair, skin, and eyes, with other particulars, they belong to the continent. Their religious traditions are partly of Chinese origin and partly derived from other sources. It is not to be forgotten that the presentation of horses to the sun and the tell-tale name AMATERASU (MITHRAS)¹ point to the early introduction of as much of the Persian religion as travelling *magi* in early times were likely to take with them. Neither in VIRGIL nor in HOMER is there any allusion to the worship of MITHRAS. This form of worship was not known in the early days of Greece and Rome. HESIOD says nothing of it. At the time of our LORD'S birth we have a clue to the date when the *magi* were travellers. In the Gospel of MATTHEW some of the *magi* travelled to Jerusalem to seek the new born king of the Jews. The worship of MITHRAS spread in the empire from about that time with the Chaldean astrology, medicine, and, divination. The Buddhists took with them to Japan the astrological art, and, as we must suppose, the worship of MITHRAS. The Shingon or Mantra sect taught the Mandala or circle, divisible into two parts, the Diamond element, and the Foetus element. They had what is called the secret teaching or *mits kyo*. This sect spread itself in Japan in the ninth century. If I am right in this view, that the worship of AMATERASU is due in part to the influence of the Shingon teaching

on the Shinto priests, it would be in the ninth century that the worship of the Sun Goddess spread in Japan. I found the name in books belonging to a Shingon temple at Unzen. BUNYU NANJIO tells us it was in the ninth century that the Shingon sect was introduced to Japan. The worship of MITHRAS in the Shinto form of it may have gone to Japan therefore at any date after the Christian era, and it was greatly promoted in the ninth century.

The Japanese vocabulary, like that of all languages, is a large collection of borrowed names of ideas, a long succession of loans in fact. The Japanese borrowed an enormous mass of words from China a thousand years ago. If we take the words existing before that period and compare them with the vocabularies of the mainland races, we find they are the same, and that there is nothing original in the language except the modern upgrowth of grammar and a certain number of derived meanings of roots. I open HEPBURN at page 319. The eye falls on *mikake*, *mikata*, *mikabashi*, *mikaye*. *Mi* is *miru* see, *me* eye. The Mongol has *nidun*, eye, Korean *nun*. The Korean has *pol* to see. *Mikata*, friend, is from *kata*, side. This with *kabashi*, exchange, *kaye*, back, return, are all easily identified on the continent.

The two languages spoken in the islands of Japan and the peninsula of Korea are, it may be shown, very closely connected, and though this appears less in the vocabularies than in the grammars, there is no lack of evidence in either. ASTON'S² "Comparative Study of Japanese and Korean" will be found most useful by the student. The examples he gives of identity in words are quite numerous (more than a hundred.) With initial *h*, which corresponds to *b*, *p*, *j* in mainland languages, he has *hato* "pigeon" K. *pitaike*; *haru* "to paste," K. *pallil*; *haji* "shame" K. *peus*; *harafu* "to clear off, sell," K. *peal*; *ha*, distinctive particle, conjunctive particle affixed to verbs, and to *wo*, K. *pa*, "that which;" *heso* or *hozo* "navel," *hara* "belly" K. *pe*; *ifu* "to speak" K. *ip*

² Mr. Aston has, in my judgment, unwisely retreated from the position he held when he wrote this paper, 1879. He now, writing from Seaton, Devonshire, in March of this year (*Japan Mail* of May) says he has ceased to hold that Japanese is in connection with Aryan languages or with the languages of the mainland, if I understand him rightly. Twenty years ago he proved the connection satisfactorily. He lately contributed a brief article on Korean writing to the Asiatic Society's journal. Here he does not allude to comparison in languages in any form. I infer that his mind has not for a long time been directed to the question of genetic relationship in languages of the sort here referred to. Perhaps, he only denies Aryan relationship. If so, I observe that a negative is very difficult to prove, and that the public would like to know what reasons he has for this view. Mr. Aston, it is true, used the word "conjecture" in regard to the connection of Japanese with Aryan languages. The examples he gave are facts which prove the connection. He ventured the suggestion that the Latin *mare* may be the same word with *midu* "water." My view is that we must deal with the fact that the words are identical and modify our philology in accordance with it.

¹ Mithras or Mitra was worshipped far and wide in Europe under the Roman Emperors.

"mouth;" *hachi* "bee" K. *pul*; *hoshi*, "star" K. *pyul*; *hoshiki*, *hoshigaru*, "to wish, desirous," *horu*, *hossuru*, "wish" K. *pil*, *pala* "to pray, request;" *hashi*, "beak of a bird," K. *puli*; *hiji*, "arm," K. *pal*; *hisa* "knee" K. *pal*, "foot;" *hajimete* "beginning" K. *pirosam* "for the first time," *pirotta*, "begin;" *hagu* "to strip off" K. *pahil* "to pluck out."

This is a very good proportion of cognate words for only one initial letter. It is possible to obtain specimens of words with either of the initials in the same manner. This shows that it is a mistake to regard the Korean and Japanese vocabularies as unlike. Take, for example, words beginning with *m*. *moto*, "bottom" *mis*, "bottom;" *masani* "exactly" *machhil*, "to hit;" *mura* "village" *muri* "flock;" *muragaru*, "assemble" K. *muri* "assemblage;" *mi* "body." "I," "ego," K. *mom* "body." The force of the argument for identity is very strong because the grammar is allowed to be much the same in the two languages.

But let the reader take note that if he once admits the identity of the Korean and Japanese vocabularies, he will find it difficult to keep his mind away from the concession that Aryan words are also the same. For instance, *moto* "foundation" is *botton*, *boden*. The Chinese comes in too as a witness here, *本 pen* is *pun* in old Chinese. This is the Manchu *fulche* root, Manchu, *bade* "place," Mongol, *bariho*, "hold," *bato* "firm." The word *firm* in Latin comes from this as a root. In SKEAT the root is not given. FICK, a great authority, says bottom, abyss, fundus, profound, may be referred to a root *bhudno*, *boden*. G. CURTIUS traces abyss to *βάθυσ*, as also *βυθός*. The meaning of the root in Chinese and Japanese tells us that basis cannot be referred to *βα* "to go," as CURTIUS refers it, but belongs to the same root with *moto* in Japanese, *bato* "firm" in Mongol, Eng. "bottom." In SKEAT we read that the root of basis is *βα* "to go," and the original root is *ga*. Under the light of Chinese and Japanese philology this derivation is quite impossible as it seems to me. We are relieved from any need for it by looking for the roots in languages further east.

It is the same with all the Aryan roots. They are all here and can be found by every one that possesses ordinarily good philological training. There is nothing fanciful in this statement. Take *hashiru*, "to flow, fly, and float." In Japan *afureru* is "flood" and the same with a *bure* "overflow." *Bur* is the Japanese root of a *bure* "flood, overflow." In float, flow, fly, the root is *fol* from *pot*, and this is the Japanese *bur*. The philological process here is perfectly safe and defensible, as can be shown by taking any other example. Let it be asked what is build in Japanese. The answer is *fushin suru*, as in *ie wo fushin suru*, to build a house. F is *b. sh* is

2. The Aryan philologists derive it from *bhu* "to be." We can test this etymology. We have the word *to be* in the Tartar languages very fully developed. Among the derivatives of *bu* "to be" in Mongol is *bolba soragol ho* "build," "create." Also *buto hu* is "to complete." Here is the root, and it becomes evident that the word build is derived from *bhu* "to be." It is the same thing with other words. The proof is complete. The Japanese vocabulary is really the same as our own and students of the language will find very great advantage in adopting this theory as a working hypothesis. JOSEPH EDKINS.

NOTE 1.—*Mori* "guard" is the Korean *pol*, "gage," surety *保 pau*, "to guard." Such an identification supports the statement that J. *miru* "see" is K. *pol* "see."

NOTE 2.—In every example of real identity it is possible to find corroboration in other words. Some one might object to *mom* which Mr. Aston identified with *mi*. But it may pass, because repetition of the initial is a common phenomenon. *Beye* (for *bede*) in Manchu and Mongol is "body." This is certainly the Japanese *mi* "body" and just as certainly it is our own body and our own reflexive pronoun *me*. These are the facts which nature presents. They are accounted for 1. by the early nomad life of owners, ancestors, 2. by the destructibility of words, 3. by the tendency to borrow names of ideas, 4. by the remarkable mixture of races in the Indo-European family.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"SECULARIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I certainly had no thought of reflecting on the Editor in supposing that the two correspondents from Kobe were in reality only one person. In so far as the supposition may seem to have this bearing I hasten to offer my apology. Nor have I the least desire to be correct in so thinking. A very simple and speedy way to set me right in this matter is for the Editor to send me the names and addresses of Messrs. "Earnest Inquirer," and "Secularian," not for public print but for my own assurance that I was mistaken, since the Editor has not specifically said these are two correspondents. It seems to me this is but fair, especially since I, whom they oppose, have made no effort at concealment.

Further, it seems to me the Editor does not speak with a due degree of equity when he says my opponents show prudence in withholding their names to avoid the "danger" of "opprobrium." Now in all this correspondence I ask for the citation of a single sentence from any of the letters that shows discourtesy, unless it be the one quoted in yesterday's *Mail*. And this can only be discourteous in being untrue, which when shown I shall apologize for. If there has been any "danger" of "opprobrium" from my pen thus far, it has arisen from the fact that my critics did not sign their names, which points to the wisdom of each writing over his true signature.

As to avoiding personalities, I hope the Editor is not labouring under the impression that I hold any ill-will against these gentlemen, or any one else as for that matter. Indeed, I should like to make this question so specially personal with these gentlemen as to be able to sit down with them by their own firesides with the open Bible and talk face to face on this most important theme. And if they are really in earnest and will invite me to do so, I will go all the way to Kobe to have this privilege.

I remain, most faithfully yours,

J. M. McCALEB.

12, Tsukiji, Tokyo, Oct. 25th, 1895.

[If our correspondent is not satisfied with our assurance, he must remain dissatisfied. We have no inclination to offer proofs in support of an assertion that we are in a position to make with absolute certainty, neither have we any right to offer the proofs required.—Ed. J.M.]

THE IMPERIAL BIRTHDAY BALL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With much surprise I read in your issue of the 26th inst. your strictures on the propriety of

observing the 3rd prox. irrespective of its falling on Sunday because of the religious scruples of English and American sentiment. You say: "Invitations to the Imperial Birthday Ball have been issued by His Excellency the Minister of State for Foreign Affairs. The 3rd of November falls this year on Sunday; but Marquis Satonji has not considered it necessary to take that fact into consideration. Englishmen and Americans, however, will assuredly be pained by the notion of a State Ball on the Sabbath, and the great majority of them will feel constrained to absent themselves from the festival on the 3rd prox." If such be the case what matters it? Shall a National jubilee be postponed for a day to satisfy the idea of a handful of aliens, although they may be English or American? The sentiment of Englishmen and Americans in some cases, where their religious professions protrude themselves conspicuously, may refrain from enjoying the ball to which they may have been invited. I desire to make this an occasion to hold up the mirror of consistency to the English and American professors of Christianity who are resident in Yokohama. If they cannot dance on Sunday why is it that they desecrate the Sabbath, every week in the year if their monetary interests are involved? There is not an English or American commercial or shipping concern in Yokohama that does not utilize Sunday for the loading and unloading of ships, purchasing the opportunity so to do from the Customs authorities. A grievous howl would be heard from them did the Government forbid the entering and exporting of foreign merchandise on Sunday. It would be claimed that one of the rights under the treaty stipulations, enjoyable by foreigners, was denied them if the Custom House officials were not on hand to facilitate their commercial transactions. The profession that the Sabbath is a day sacred to the worship of God is profession only in Japan. No ship Captain of either English or American nationality arriving in Yokohama would dare to abstain from working his ship on Sunday; agents and owners expect it of them. There is no demand to amplify on this matter. The community that can condone the desecration of the Sabbath in the interests of money profits cannot with very good grace take exception to innocent recreations appertaining to the Imperial Birthday Ball. If His Excellency Marquis Satonji thought of the matter at all he sized up the situation correctly; with the most of us Sunday is as other days, no better nor worse, being good for psalm singing or dancing according to preference.

Yours truly,

X.

"NOTES ON HABITUAL MISTAKES MADE AND COMMON DIFFICULTIES MET WITH IN SPEAKING ENGLISH."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am so conscious of many imperfections in the above named book (especially in the first thirty pages, which were hurriedly printed for immediate use), and so grateful for many valuable suggestions in a review of the book in the *Japan Weekly Mail* of the 19th inst., that it is somewhat ungracious to take exception to two of the criticisms of the kindly reviewer.

First of all I would acknowledge that the calling of my attention to "mistakes, the incorrectness of which is obvious" gave me that same feeling of amused mortification caused sometimes by absurd expressions of my pupils. Even one who essays to teach English is conscious of many infelicities of style, crudities of expression, and even gross errors in his writing and speaking, and it is but little excuse to say that in the expression of his thoughts he is hampered by the haunting fear that his meaning will be either misconstrued, or not understood at all. The viciousness of sacrificing good English in the desire to be understood is made plain when the vice appears in an exaggerated form in a Japanese speaking impossible Japanese to an unhappy foreigner.

The notes on the use of the present perfect tense, and on the use of articles, are incomplete, and the matter should be, as suggested by the reviewer, considered in the light of an examination of the differences of the two languages. It is difficult to write in such a way as to please teachers and, at the same time, to instruct students whose working knowledge of English is small and whose stock of patience is less.

The reviewer objects to my practice of spelling the verb *practice*—for there is such a verb—in the same way that I spell the noun of the same pronunciation. In this connection I am reminded of a question put to me by a boy born in China of English parents, "Do you speak American?" he asked. I had to confess that I did speak that

tongue, for, though I had the goodly heritage to be born in London itself, I lost all by having to learn my use of language chiefly in the United States. "I don't," the little Englishman rejoined. "I speak only English and Chinese."

In speaking this "American" Webster is allowed to be a good authority, and—somewhat oddly—his dictionary is the one perhaps most used in Japan as authority in disputed points. Webster gives the preference to the spelling *practice*, and the Century Dictionary allows that spelling of the verb. There are enough anomalies in the spelling of English without insisting on the preservation of one from which Japanese students may be delivered.

The reviewer doubts my theoretical cognizance of the difference in the use of the relatives *which* and *that*, though he is assured that my practice is wrong. He finds fault, for instance, with the expression "Across is a preposition *which* is often misused." My practice and my theory must stand, or fall together, because, in Art. 99, in treating of the use of *which* and *that* I give a quotation from the Century Dictionary which, together with some parts omitted in the book, is as follows:—

"Some recent authorities teach that only *that* should be used when the relative clause is limiting or defining: as, the man *that* runs fastest wins the race; but *who* or *which* when it is descriptive or coordinating: as, this man, *who* ran fastest, won the race; but, though present usage is perhaps tending in the direction of such a distinction, it neither has been nor is a rule of English speech, nor is it likely to become one, especially on account of the impossibility of setting *that* after a preposition; for to turn all relative clauses into the form 'the house *that* Jack lived in (instead of 'the house *in which* Jack lived') would be intolerable. In good punctuation the defining relative is distinguished (as in the examples above), by never taking a comma before it, whether it be *who* or *which* or *that*."

Now, if good authorities allow that the relatives in question may, except in one case, be used interchangeably, and if, as the reviewer asserts, many people do thus use them interchangeably, why should we put a yoke upon the neck of the Japanese which we ourselves are not able to bear?

I am, Sir, yours truly,

FRANK MULLER.

Etajima, October 24th, 1895.

COLONEL COCKERELL ON MISSIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Being away on a tour round my district, I did not get reading your issues of this month till yesterday. But as I see that in your issue of October 2nd, you have inserted an article by Col. Cockerill published in the *New York Herald*, and do not see any subsequent answer from Rev. J. Batchelor, I feel it due to him (Mr. B.) to correct the mis-statement regarding my own district and work. All other false ideas contained in the letter I leave for others, if desirous, to answer. In the aforementioned article three mistakes are made in regard to me and my work: viz. (1) A title has been given me to which I have no claim, being only the "Rev. D. Marshall Lang." (2) I have only about 7 baptized Ainu under my ministration, the large number stated being under that of Rev. J. Batchelor. Would that I had as many! Then (3) The one "graduate" from the Hokkaido Industrial School is now working under Rev. J. Batchelor, while I have a scholar of the school to help in the Ainu Schools in my (Kushiro) district, who teaches 3 months, then returns to the school for his course, and I have others in succession on similar terms. Such are the mis-statements. Begging your indulgence for thus encroaching on your space.

I remain, yours faithfully,

D. MARSHALL LANG.

Hakodate, October 26th, 1895.

N.B.—If the Colonel would make as public a short sketch of the history of "Yezo" during the 20 years missionary work has been started there, I think he would find that the work on the whole has not been so very "slow and somewhat discouraging." And perhaps if he included the present number of Ainu baptized he might find his number somewhat short of facts.

THE GERMAN BAZAAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We beg leave, by your kind permission, to thank, through your columns, the many friends that have patronized the bazaar of the German Mission in Tokyo. In this connexion we would thank their Highnesses the Princesses Iwakura

and Konoye, the Marquises Nabeshima and Ito, the Countesses Tsugan and Toda, and the Viscountess Hijikata, as well as the many other Japanese and foreign ladies and gentlemen that have honoured the occasion by their presence or were represented by proxy. It gives us satisfaction to state that the German community of Tokyo was fully, the English and American community largely, represented. The result was in consequence highly gratifying. The sum of 800 yen was secured for the purposes of the bazaar, and we take delight in thanking once more, on behalf of the mission, all those that have contributed to this satisfactory result.

Yours sincerely,

KAETHE CHRISTLIEB.

Tokyo, October 30th, 1895.

A CORRECT MISTAKE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If the critic of Mr. Muller's little book on "Mistakes in Speaking English" will refer either to the International or to the Century dictionary, he will find that there is such a verb in English as "to practice." Mr. Muller is in the company of Landor, Pope, Macaulay, Milton, and Shakspeare.

Saga, October 23rd, 1895.

CHINESE CHARACTERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Please allow me a few more remarks on the subject of "Chinese Characters" in reply to the letter published on the 10th inst.

I see that the author still persists in his endeavours to prove that his *on* are better than mine. The case is as follows. In my first letter I gave 18 examples in which his *on* are different from the *on* in common use. In all these examples (with the sole exception of 差) he had omitted the principal *on* in favour of another form which is seldom or never used, which if it had been given together with the usual *on* I would have said nothing against, but when given exclusively as the only *on* in use must be pronounced to be erroneous. Now, instead of acknowledging his error, he attempted in his first letter to prove 12 of his *on* to be the better forms, nay even in some cases to be the only forms in use, whereas in the case of the remaining 6 examples he gave his acquiescence as usual by simply passing them with silence. Thereupon I refuted his arguments by referring him in my second letter to the Dictionary of Gubbins, which contains only *on* in actual common use, and which I found in every and each point to be on my side, also in those cases where I did not make special reference to it. An *on* which is not to be found in that Dictionary may for all practical purposes be supposed to be, if not altogether unusual, at least of very rare occurrence. He has now, in his second letter, produced a few examples for each of those 12 questionable *on*. But what is to be proved by that? Is it to be a proof that the *on* he gives in his book are the better ones, especially better than the *on* in the Dictionary of Gubbins? That he was right in omitting the latter which form numerous compounds in general daily use, and giving instead of them his *on* for which he, evidently after long researches, at last succeeded to bring forth a few examples, the most part of which is of rare occurrence; the very pronunciation of which as given by the author appears sometimes doubtful, 拐帶 for instance as already mentioned being read in Gubbins *gaitai* and not *kaitai*, 拐騙 being read by all Japanese I consulted *gaihen*, not *kaihen*, but as a rule not pronounced after its *on* at all, but read *katari*? I heard also 旁午 and 旁昧 pronounced by them not *hōgai* and *hōrai*, but *bōgai* and *bōrai*, as they are also pronounced in the Dictionary of Gubbins; 曩昔 and 曩者 every Japanese will read *jōseki* and *jōsha*; his very first example 差殊 is read in the *Daizōhokango* (大増補漢語), one of his authorities, not *shi-shu*, but *sashu* (page, or rather leaf 138); 牀蓐 is, according to Gubbins, not *shōjoku*, but *jōjoku*; in 竄匿 the first character is pronounced, in Gubbins as well as in the *Daizōhokango*, *san*, not *san*; 播棄 is according to both authorities (Gubb. p. 167, *Daizōhokango* p. 180) *hanki*, not *haki*. But it is scarcely worth while to examine these examples further; even supposed, but not granted, for argument's sake that their pronunciation and frequency of occurrence were all that the author could wish, would he be excused for having omitted the other *on* which are of so incomparably much greater importance? There is no course left for him but either to acknowledge his error, or

to declare openly that he omitted all these *on* purposely—perhaps as "purposely" as he made no attempt to distinguish between *Kanon* and *Goon*, perhaps also for the same excellent reason that to give these *on* was "beyond the scope of the book."

He also states again that 𠄎 is said by Williams to be a Chinese character. I should like to know how that can be, seeing that Williams gives as his opinion on the origin of 𠄎 the passages quoted in my second letter. I know very well that 𠄎 occurs in Buddhistic works in China, but to maintain that it is a Chinese character is very much the same as if one would pronounce 𠄎 to be of Japanese origin, because in certain recent prints they are used in the sense of the particles *ka* resp. *yo*.

When the author does me the honour to quote passages from my letters, he ought not to omit essential portions of them, as he does in the case of 渠. Of this character I have said that "in its present form it more naturally belongs to 木, like 染 and 梁." To omit the italicized words "in its present form" is to alter the whole meaning of my remark. As Williams says, this character "was formerly composed of 水, water, and an old form of 矩, a rule." This circumstance, and this circumstance only, explains why 水 resp. 𠄎 is now given as its Radical, which could never have been done had its form always been the form now used. No exception whatever can therefore be taken at my remark that in its present form 染 belongs more naturally to 木 than to 𠄎, like 染 and 梁. Again, why did he quote my sentence "But setting apart this suggestion *which scarcely can be called an 'unreasonable' one*, I do not find fault with the list in question" without the italicized portion? His statement was: "He finds fault unreasonably with my selection of *nanori*." I protested against the expression "unreasonably," and besides employed the phrase "find fault," which I also might have given in quotation marks, deliberately, as it was my intention to make it understood that there was no question of "fault finding," but only of stating a defect which must strike every one who peruses the list. But although I emphasized that I did not find fault with it, I was very far from "admitting" its "serviceability." I only said that I thought the list contained most of the characters occurring in *nanori*, and even this was perhaps more than I ought to have admitted, seeing that his list contains only 254 characters all told, whereas another list before me, the 増補名乗字引, contains about 2,600 different characters used in *nanori*. As to the question of serviceability it was not touched at all, but if I am to give my opinion on that point, I think that to be serviceable the list ought to give not its 201 *nanori*, but its 254 characters arranged after the alphabetical order of their *yomi*, so as to avoid the numerous useless repetitions of the same characters, and to show at a glance which *yomi* resp. characters are in the list and which not. Again, I have not once made the pretension to go back to "original" forms. I ask him where I have "produced arguments about 'original' forms," or where I have spoken of "original" forms at all. I have spoken of "principal" and "secondary" forms only—"principal" and "secondary" as to Japan—and not of "original" forms. On the contrary it was he who went back to the original Chinese of Williams to prove that his forms, and in one instance even that his pronunciation of a character, were right.

There are in his letter a few more passages which I cannot leave unnoticed. He says my admissions "might have been a little more candid." In reply I would ask him where his admissions are to be found, so that I might learn in what terms candid admissions must be couched. My want of candour is found in the circumstance that I have pronounced 𠄎 to be "better than 𠄎," instead of "the only correct form, 𠄎 being another character with a totally different meaning." He ought to know that 𠄎, when used in Japan, is used as a secondary synonymous form of 策, *zaru*; the wording of my admission consequently was quite correct. As to candour, he must be well aware that in all cases where I had to make an admission, I have made it, whereas I could so far not obtain so much as a single acknowledgement of the author's errors except his numerous "and so on's," which in his first letter are synonymous with as many "the other objections are undisputable even for me." Perhaps it is more candid to make no admissions at all and to pass with silence all points where an opponent is right. There are exactly 60 errors and omissions pointed out by me in my first letter of which he preferred to say *not a single word*—always except "and so on." And yet he

now comes forth and says that I ought to have been "more candid." Another admission I have made, as he says, "only in a footnote." It then seems that there is something objectionable in such admissions, but I fail to understand what it may be. Again he remarks about the misprint 汗 for 汗 that "misprints on the part of such a capacious critic are inexcusable, especially when the result is that one character is transformed into another of entirely different meaning." The latter part of this charge is somewhat obscure, misprints generally occurring not in characters with similar meanings, but with similar forms. I am very sorry that misprints on my part should be "inexcusable." As to the expression "capacious" I will say nothing. His own letters are by no means free from inaccuracies and misprints. In his first letter one reads "Sansuisha 撒水者 Misumaki-guruma, or water cart," which I then left unnoticed as a mere slip of his pen and would also leave unnoticed now, had I not been taught by him that such things on the part of "capacious critics" are "inexcusable." He has either made the error of writing 者 instead of 車, or, if he meant to write 者, then his translation *kuruma, cart*, is erroneous. Then there was his confounding of 平 with 平, 葬 with 葬, 叫 with 叫, 弊 with 弊 and 基 with 基. Not is his second letter free from inaccuracies. 帳 and 帳 are misprints for 惆 and 悵. In 旁睽 the second character is a misprint for 睽. Two lines farther he speaks of four characters instead of three. He once again confounds 卐 and 卐, for he makes me say that "卐 is the *swastika*," whereas I have declared 卐—not 卐—to be the *swastika*, and 卐 to be the *sauwastika*—not the *swastika*. All these errors and inaccuracies, to quote his own words, "a little more care might have prevented."

Referring to his statement "旁 is *hō, bō* is used, but some dictionaries only give *hō*" I had ventured to say that "then some dictionaries are wrong," which remark evidently displeases him. But why should only dictionaries be exempted from the liability to omissions, misprints, and other errors? He before others ought to know better. As to the bringing out of "standard dictionaries," I think, after mature reflection, I had better leave it to others who may already have given proofs of their being qualified for such undertakings by previous publication.

I remain, Sir, yours faithfully,

P. EHMANN.

Tokyo, October 15th, 1895.

THE LU-CHU ISLANDS.

TO THE EDITOR OF THE JAPAN MAIL.

SIR,—Your review in last week's *Japan Mail* of Mr. Chamberlain's brochure on the Luchu Islands was full of interest. Now that Formosa has been added to the Japanese Empire, the Luchu Islands, forming, as they do, stepping stones between Kinshu and Formosa, will grow in importance and will attract more attention than they have heretofore. In order that your readers may have the benefit of a very interesting and instructive article on these islands, I enclose a clipping from an American Missionary magazine written by one of the best known missionaries in Japan, who is an exceptionally fluent Japanese speaker, and who visits those islands frequently in the interest of Christian mission work. The article is not only interesting as to general information about the islands; but the "open door" and "ready fields" for Christian thought and truth which Dr. Correll speaks of will fully answer your question about the "completely deaf ear to the tenets of the Nazarene," that seems to be manifest among the people. I hope you can find space for this article.

I would like, too, to state here, by way of parenthesis, that the hundreds of missionary periodicals published in Christian lands contain a vast amount of reliable information obtained first hand by missionaries who travel and preach in the nooks and corners of these eastern countries. And this information never meets the eye of the average layman, but if it could be published in the secular papers it would open the eyes of many people who know little of Christian mission work except what they get from the over-and-over-hashed rattle-prattle of ignorant but assuming critics, such as are met with on steamers and elsewhere.

Yours truly, W. P. TURNER.
Kobe, Oct. 7th, 1895.

THE LIU KIU (LOO CHOO) ISLANDS.

(BY REV. IRVIN H. CORRELL, NAGASAKI, JAPAN.)

As the Spirit opened the eyes of the prophet of old, so

that he could look into the future, he cries out in the Holy One, "Surely the isles shall wait for me." How rapidly indeed are the islands of the sea becoming the habitation of our God! The group formerly known as the Loo Choo Islands, but now commonly known as the Liu Kiu Islands lie southwest of the Japan group proper, and have had rather an interesting history. Situated between China and Japan, the people were brought more or less under the influence of each of these nations. It was undoubtedly the desire of the government to perpetuate an independent monarchy, but on the one hand was China asserting its supremacy, and on the other hand was Japan paying occasional visits and demanding allegiance, so that in the face of these two formidable powers this weak kingdom did not feel able to assert its absolute independence, and concluded that the wisest course to take was to try to please both parties. About fifteen years ago, however, the matter having been amicably settled with China, the Japanese government took the islands under its control, organizing them into a prefecture, and calling it *Okinawa ken*. There are at present 38 islands included in the *ken*, but there were quite a number more belonging to the original kingdom. The island of Oshima, situated about midway between Kiushiu and the main island of the Okinawa group, together with a number of smaller ones in that vicinity, originally belonged to the Loo Choo group. "Oshima" means Great Island. The Daimyo of Satsuma, the most southern province of Kiushiu, who was very powerful in his time, attached this island, together with the immediate surrounding ones, to his domains several hundred years ago, and the king of the Loo Choo could do no other than submit.

The influence of both China and Japan is plainly visible in the customs of the people, but there is undoubtedly a preponderance of Japanese customs. The language seems to have little resemblance to either. They have no written language of their own; the Chinese language was introduced some centuries ago, but is read by only a few of the upper classes. With this also came the teachings of Confucius, which made more or less impression on the life of the nation; practically, however, the people may be said to be without a religion, but they are not without objects of worship. Confucianism gave them ancestral worship, but aside from this the superstitious worship of a god called Yuda has a much wider influence over the masses of the people. All suffering or trouble of whatever kind is supposed to be the result of his displeasure, and his priests or priestesses are called upon to inquire what will appease his wrath. The most absurd things are frequently ordered to be done under these circumstances as absolute necessities for salvation from the overhanging troubles. Until a few years ago Confucianism was the only system of religion, if indeed we may call it such, that has had any representation in the country; so that it has had abundant opportunity here to show its power to purify a people and make them morally strong. If we may then take this people as an example of its effectiveness as a religion or ethical teaching in elevating a people and making real men out of a corrupt humanity, we are obliged to say that it has been weighed in the balances and has been found wanting. It would be difficult, I presume, to find a more foul and loathsome mass of moral corruption anywhere amongst a people who make any pretensions to be civilized than is to be found here, and the worst cesspools are where the power of this system ought to have been most plainly manifested. Corrupt morals of the deepest dye are easily detected all over the islands, but there are not to be found elsewhere the organized evil that is established in Shuri, the old capital, and in Naha, the chief seaport, only two miles from the capital. It is said that in Naha, with a population of about 40,000, there are 3,000 legalized prostitutes, and there is scarcely a young man to be found who does not frequent houses of ill fame. Truly, a religion that cannot do more than this for the elevation of a degraded humanity has no claim on our confidence or respect.

Since the islands have been attached to Japan much has been done for the education of the young people. About 100 public schools have been established, and about 13,000 children and youths are in attendance. A special Girls' School was opened in Shuri, and has an attendance of about 120 students. A Normal School and an Academy have also been established there and are quite well patronized. The plan of the government is to prepare the young men here as soon as possible to become the teachers of their own people. The Japanese language is the one taught in the schools, and children are discouraged from using the native tongue, so that any one able to speak the Japanese language can find on any of the islands quite a number who are able to understand his speech. Formerly each island of any size had its own dialect, but it is the purpose of the government to unify the language. The people seem to appreciate the efforts of the government in the line of education. In one of the islands which the writer has just visited there has been considerable trouble in collecting the taxes from the people because they were feeling them to be very burdensome, but when told that these taxes were necessary for keeping up the schools, etc., they willingly submitted, saying that if the taxes they were paying were to be used for such purposes they were ready to pay them. The teachers report the students not only as studious, but also as quite capable, so that the future along these lines seems hopeful for them. In view of these facts, however, the call for Christian work to be done amongst them is all the more imperative.

The monarchical form of government which existed formerly was quite similar to the old form of Japanese government, excepting that there was no shogun at the head. There were officials known as Anzo, who corresponded somewhat to the Daimyos of the old feudal form. These had their retainers, who held the rank of Samurai under that government and have been recognized as such under the present régime. They regard themselves as the gentry of the land, and are exceedingly proud. By a special appropriation made them by the government they have been able to live without doing anything for their support, but this appropriation is about exhausted in the majority of cases and the question of what they are to do for a livelihood is staring them in the face. They feel it entirely beneath their rank and dignity to engage in manual labour, and they know nothing at all of business life, so that nine out of ten, if not ninety-nine of a hundred, would completely fail if they undertook any business enterprise. It really is quite a serious question what is to become of

them. There are large tracts of very fertile land still uncultivated on all the main islands. The climate is delightful, the average temperature is about 70° Fah., and nowhere does it rise in the hottest weather higher than 100 degrees. The present method of cultivation is very primitive and imperfect indeed. So little effort is required to produce what the people feel they need to sustain life that they simply scratch around in the ground a little, plant their seed, and in due time the crop they require is forthcoming. The chief article of food is the sweet potato. Various tropical fruits, such as the banana, cocoanut, etc., can be produced, and during recent years an excellent quality of tobacco has been cultivated. The soil and climate are exceedingly well adapted to the production of sugar cane, but up to the present nothing but a very dark kind of sugar has been made. There is not the slightest reason why any of the people should be in want temporarily. There is ample room for more than double the present population. According to the most reliable information attainable the population is estimated at 400,000. About 120 years ago a tidal wave swept across one of the islands, and is said to have carried with it about 10,000 people; the number of inhabitants was thus greatly decreased, and various diseases decreased the population still more, so that the number was reduced from about 35,000 to a little over 10,000. In some parts of the islands the population is increasing, but in others it is decreasing, so that the only hope of properly developing these islands is by the introduction of new blood, and we may add, a new life. The Japanese people have, therefore, an interesting problem before them, and we can but wait and see how they will solve it. There are extensive fields of excellent coal, which as yet have scarcely been touched. The islands are all of coral formation, so that the mineral resources will possibly not be very great.

The natives seem to have little or no thought of the sacredness of the marriage relation. A man takes a woman to live with him as long as she does his bidding, but if in any respect she does not prove to be what he expected or desired, he sends her back to her former home and seeks another. The care they take of the dead is, however, a matter of great interest. On approaching the main island one is attracted by the numerous white buildings, as they appear to be, which dot the hill side. On inquiring about the same he is, however, surprised to be informed that these are the dwellings of the dead. Truly they are whitened sepulchres. Similar to the custom prevailing amongst the ancient Jews, these tombs are found along the hillside and are frequently hewn out of the rock. There is quite a large excavation made in the side of the hill, and a substantial building, usually of stone, is erected over the front or in front of it. Some of these tombs cost considerably more than the houses in which the people live. They really are good-sized houses, as houses are built in this country. Some of the rooms thus formed are as much as 23 x 25 feet; indeed this may perhaps be said to be the average size. The entrance is about 24 x 33 feet in size; the inside is arranged in ledges or shelves. When a member of a family dies he is placed in a coffin, simply a square box, and put into the tomb. The entrance is then tightly sealed and the corpse remains in the tomb undisturbed until all the flesh has decayed. The government compels them to leave the tomb closed for seven years. At the expiration of this time the bones are carefully washed and put in an urn, which is then put upon one of the ledges in the tomb, to remain there until the end of time. Thus generation after generation of the one family are kept in this one tomb. The most conspicuous ceremony at the funeral service is the weeping and the wailing. It may seem somewhat strange to speak of this as a ceremony, but this is all that it can be called. In fact this begins immediately after death, and is kept up at intervals until the corpse is interred. The weeping women are very prominent characters in this performance. Their heads and faces are covered with a garment made of the bark of the banana tree. For seven days after the burial the tomb is daily visited by the mourners, and after that every seventh day for seven weeks. It is impossible to witness these ceremonies without having at least the suggestion of some possible connection with God's ancient people present itself to the mind.

The fact that these people are to-day without any system of religion appeals very strongly to us, and is a very loud call to the followers of Christ to give them the gospel. It is exceedingly difficult to learn anything about their past history. They also, like their neighbours on the northeast, claim to have have a heavenly origin. Perhaps it may be possible to learn more of their past history in future years, but up to the present the information that has been gathered is very meagre indeed. About forty years ago an effort was made to evangelize these people. Dr. Bettelheim, a German by birth, was sent out by the Church Missionary Society, and resided in Naha for about five years. He had great difficulty in securing a landing, and greater difficulty still in gaining permission to remain in the country. During the time that he spent in the country he was subjected to many humiliations. Judging from his letters he was very deeply interested in the people, and his one absorbing desire was to bring them to Christ. For this he laboured and seemed ready to give his life. The King was, however, opposed to the introduction of this new religion into his realm and determined to prohibit it, although he did not do so openly. After a time Dr. Bettelheim was informed that the king considered it dangerous for him to live in his country without being well guarded, and consequently he provided guards for him. These were intended, however, rather to protect the people from the attacks of Dr. Bettelheim's Christian doctrines than to protect him from any attacks that the people might make on him. During the latter part of his stay here the people seemed to avoid coming in contact with him in any way whatever. When he went out into the street they would secrete themselves in their houses and refuse to have anything what ever to do with him. At that time there were at least two Romish priests here also. There is no trace of the work of either of these missionaries to be found now. Great changes, have, however, taken place. The writer has been permitted to proclaim the blessed message of salvation through Christ in three of the main islands. The officers of the government now in power have shown great kindness and every needed attention everywhere. The door is open and the field ready for the sower and reaper to follow soon after. The Methodist Episcopal Church

commenced work here in the latter part of 1891, the Baptist Church about the same time, and the Church of England very soon after. These three denominations are now working here, and although as yet there have been no great results, the workers know that the Lord is with them and they have sufficient encouragement at this early day to lead them to expect to gather some of the fruit of their labour in the near future.

LETTERS FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Takow, October 16th.

To describe the capture of Takow, I will anticipate the arrival of the Japanese and describe the state of affairs while the Chinese were in possession.

During the early days of the Republic, about 5,000 Chinese soldiers were stationed at Takow, most of them being Liu Yung-fu's redoubtable "Black Flags" under the command of his adopted son. But as the Japanese were slowly and surely approaching southward, General Liu seems to have felt that it would be impossible to withstand an attack made by them on Takow, for we find him gradually withdrawing his troops, and on the arrival of the Japanese Fleet, only about 500 Chinese soldiers were left to man the forts. It is said that a telegram was sent by General Liu at Anping to his son, ordering him to hoist the white flag, not apparently with the idea of treating with the Japanese, but as a *ruse de guerre* to cover his men's retreat. On the 14th inst. it is stated that another telegram was received from the same source ordering the Commandant to haul down the white flag, and when the Japanese were in range to fire a few shots and then retreat and reinforce the main body of troops at Tainan and Anping.

The residents at Takow speak highly of the discipline preserved among the Chinese troops by General Liu, for in no instance has there been any cause for complaint. However, for the past three months the soldiers have only been paid with General Liu's paper notes, which became absolutely worthless some three weeks ago, thus causing so much dissatisfaction amongst the soldiers as to amount to a mutiny.

On the 12th inst. three Japanese men-of-war appeared off the fort, and H.M.S. *Tweed*, Lieut. Ward commanding, conveyed the British Residents to a safe position outside, as it was expected that the attack would be made at once. However, on Lieut. Commander Ward's boarding the Japanese Flagship (*Yoshino*) he was informed that no bombardment would take place that day, but the Admiral requested that all foreign residents would leave Takow by 7 o'clock the next morning. Accordingly, H.M.S. *Tweed* embarked all the foreign residents, and proceeded, accompanied by the British tug boats *Siu Tai Wan* and *Takow*, to a safe position to the northward of Ape's Hill. At 7 a.m., true to time, the Japanese opened fire on the Takow forts at a range of, I have should say, 6,000 yards. For the first half hour the forts responded, but after that their guns were silent and it was evident that Liu's soldiers were carrying out their preconceived plans, evacuating the forts and retreating inland. Altogether I should say the forts fired 24 rounds, the best shot being from the 8 inch B.L. Armstrong gun in Ape's Hill Fort, which struck the water about 500 yards from the *Naniwa Kan* at 2.15.

The Japanese Fleet, consisting of seven ships including the *Tsi-yuen*, the Armstrong cruiser captured from the Chinese at Port Arthur, neared the shore to the southward of Saracen's Head, and at two p.m. 25 boats manned and armed were seen proceeding in parallel lines to the beach, steering for that portion immediately under Saracen's Head Fort. At half-past two the foremost boat's bow touched the beach, and five minutes afterwards the Japanese sailors were in possession of the Fort without meeting any resistance whatever, the Japanese ensign being hoisted at the Flagstaff. But now a more difficult task had to be performed, namely the taking of Ape's Hill Fort, and with any other nation than the Chinese this would have been extremely difficult. But here, as before, there was no resistance, and the Japanese flag was floating proudly from the fort flagstaff at 4 p.m.

Takow was then in full possession of the Japanese. The loss of life amounted to 4 men on the Chinese side, two being killed in Kiow village, and two in Ape's Hill Fort. It is hardly necessary to state that the casualties on the Japanese side were nil. The damage done to Foreign property by the bombardment was infinitesimal, and a British Naval officer who has seen more than one bombardment, and whose opinion must therefore carry some weight, stated he was surprised to see so little damage to the houses on shore. I may say that he further stated that he thought

it arose from the Japanese Admiral's consideration. As soon as the Japanese flag was hoisted on Ape's Hill Fort the Japanese Admiral courteously informed Lieutenant-Commander Ward that he was at liberty to proceed once more into the inner harbour and land the foreign residents: which he accordingly did. H.M.S. *Tweed* is now moored in the inner harbour and the foreign residents are once more installed in their houses, and apparently very glad to exchange the Black Flag régime for that of the Japanese. It may be of interest to state the names of the Japanese warships actually engaged in the bombardment. I accordingly append a list. *Yoshino*, bearing the flag of Vice-Admiral Arichi; *Naniwa*, *Akitsu-shima*, *Lai Yuen*, *Yamato*, *Yae-yama*, *Hiyei*, and two transports, one of which (*Saikio Maru*) the Japanese Admiral kindly placed at the disposal of the Foreign Residents. From information that I have received, I may state the Japanese fleet kept up a heavy fire for seven hours. The very long range adopted by the Japanese will probably account for this. The Second Division of the Imperial Japanese Army is now about three miles inland of Takow under the command of Lieut.-General Baron Nogi, and I think that Anping will be shortly occupied by the Japanese troops.

Takow, October 18th, 1895.

At four p.m. on October 3rd the *Kyoto Maru*, steamed out of Kelung Harbour for the Pescadores with General Baron Nogi and his staff, two companies of soldiers, and a few civil attachés, two or three Japanese correspondents, and myself. The trip was exceedingly pleasant, and we arrived at the Pescadores about 1.30 p.m. The *Kyoto Maru* is one of the smaller transports engaged in the service, her close and crowded quarters being thoroughly uncomfortable; and I was greatly surprised to find the General and his Staff placed on such a ship when some of the more luxurious steamers made the trip with empty cabins. On arrival at the Pescadores we found several transports and men-of-war already anchored in harbour, and for the next four days others arrived, until nearly 50 ships were assembled there, including the *Sai Yen* which was formerly the *Tsi-yuen* belonging to the Chinese. This cruiser looked spick and span, and will undoubtedly give a good account for herself if the Anping forts allow her the opportunity.

On the 8th I changed to the transport *Satsuma Maru*, as I thought the trip would be more pleasant by joining my old friends the foreign officers of the vessel. Early in the morning of the 10th the northern expedition, conveyed in about 28 ships, departed from the Pescadores for the landing place at Paw-tay-chui, which is between 23 and 26 miles north of Anping. General Takashima is in command, and several of the higher civil authorities from the capital city Tai-pei-fu accompanied him. His force consisted of one division and one mixed brigade. At 2.45 in the afternoon our expedition steamed out of harbour for Pong Liao, about 24 miles south of Takow, arriving near the landing place at daylight. The men-of-war that accompanied us at once landed marines in boats having quick-firing guns mounted in their bows. No Chinese soldiers were seen, however, and the Japanese Naval Flag was soon flying from a mound near by. The soldiers from the transports were then landed, and in about two hours the whole fighting force of the expedition, consisting of about 8,000 men and 2,500 horses, was in readiness to take the field. A wharf had been quickly built, and the coolies, to the number of about 5,000, were soon bustling about unloading the supplies from the transports with remarkable celerity and without mishap. Three steam launches, 72 Japanese sampans, and 10 big cargo-boats were the means used of transporting men and stores from steamer to land. No one who witnessed the landing of this expedition could ever accuse the Japanese of being slow. The men-of-war cruised along the coast a short distance ahead of the army on shore, and the few scattered bands of soldiers that came in sight were quickly dispersed by an occasional shell from their guns. Two companies were sent at once to the South, where some Chinese soldiers were found, and after exchanging a few shots, the latter retreated in the direction of Ka-tong-ha (Ka-to-kiaku). Two companies of infantry were also sent along the beach road, but finding none of the enemy in that direction they marched towards Ka-tong-ha, a small village surrounded by a low stone wall loop-holed for rifle fire. Several cannon mounted behind the wall converted the place into quite a formidable stronghold, and, after the Japanese had surrounded the village, the stubborn resistance made by the Chinese showed that the latter intended to take full advantage of their position. A pond of water, which nearly surrounded the village, greatly hindered the Japanese in attacking at close range, the enemy being so well

protected that it was only a waste of ammunition to continue the fusillade at a distance. Several charges, however, were made by the Japanese, but at such a cost that it was finally decided to resort to other methods. At length a battalion-commander and one company, succeeded in gaining an entrance through one of the gates through not without some loss, and set fire to some of the houses. A strong wind blowing in the right direction carried the flames quickly towards the Chinese, who, for the first time in the Formosa war, showed true bravery in defending their position. As the flames crept nearer, with the Japanese guarding the only exit, but one course was open to the enemy, namely to come out into the open field and face the Japanese, and although the beleaguered in the village outnumbered their assailants by two to one, the outlook for the Chinese was not a rosy one. It was a fearful scene. The cracking of the bamboo, the falling houses, the awful roaring of the fire as it swept nearer and nearer to the horror stricken braves now augmented by the more cowardly crowd driven out of the houses in which they had sought shelter. The cries of the Chinese could be heard above the uproar, and the poor wretches crouched closer and closer to the stone wall taking advantage of pits or trees and bushes already smouldering, to protect them from the stifling heat of the conflagration. At last the crisis was reached, and, with a yell of terror, they threw themselves over the wall and made a mad rush for the scrub and jungle in the north. Many fell by the way but the majority made good their escape.

This affair was serious for the Japanese, who lost 77 men, 16 killed and 61 wounded, including 3 officers, by far the greatest loss yet sustained by them in Formosa. Seventy bodies of Chinese were found, and probably a few others were consumed by the flames. Twelve cannon, several rifles, and some ammunition were captured by the Japanese.

The Chinese taking part in this engagement were not entirely Black Flags, but the force was composed mostly of native levies. Their courage contrasts greatly with the cowardice of the Black Flags who, as will be seen hereafter, are solely responsible for the fiasco of the engagement at Takow a few days later.

For the benefit of those imaginative writers who take special delight in giving publication to thrilling descriptions of blood-thirsty atrocities, I may here mention that the inhabitants of this village had all retreated to the hills as the Japanese approached, and only fighting men fell at the hands of the attacking troops. The only misfortune in this case was that of the Chinese soldiers being so ignorant of even the most common usages of modern warfare. Even a slight knowledge and some confidence in the humanity of the Japanese would have probably led to a surrender and thus have saved many lives and much property.

One company of infantry was quartered near the village the night following and in the afternoon of the next day a skirmish occurred with a few Chinese, but they retreated with but slight loss. Perhaps the greatest enemy of the Japanese, and the one that succeeds in creating considerable excitement and some terror, is the water buffalo. It is extremely amusing to see the scramble to get out of the way of these anti-foreign beasts. I myself have been driven with considerable speed, usually in the direction of the nearest tree, several times.

While walking along the beach late one afternoon I saw a headless corpse which had been washed up by the tide. I understood later that it was body of a Chinaman who had pointed a revolver at a gendarme, and who, proving himself an extremely dangerous character, had been beheaded. The next morning I again passed the place and the naked corpse was still lying on the sand in the sweltering sun. Troops and officers were passing by in constant succession, but it seemed to be no one's business to bury or cremate this body, now beginning to fill the air with its poisonous fumes. It was attended too late on, but why the body should have been thrown into the water and not disposed of at once is unaccountable.

October 12th.—In order to reach Tang-kang the main army was obliged to cross two rivers of considerable size. Pontoon bridges had been constructed. The Formosan bamboo catamaran, which consists of from eight to twelve bamboos placed side by side braced by cross-bars and all securely lashed, fortunately has such shape and size that a number of them can easily be covered into a most satisfactory bridge by merely connecting them side by side, and protecting the bamboo by laying a path-way of boards, covered with straw, across them as they reach from bank to bank. With two bridges thus constructed the whole army, including heavily laden pack-horses, passed over in safety, and

were camped in the city of Tang-kang for the night. Their entrance met with no opposition, the Chinese troops having deserted the place long before the arrival of the Japanese. Tang-kang has a population of about 20,000 Chinese, and is the most flourishing city south of Takow. With a good harbour, open for junks only, much rice and sugar is exported. The Chinese force formerly consisted of 1,000 men divided into two camps.

October 13th.—A Chinese General sent to General Nogi an offer of unconditional surrender. It is thought these were the troops formerly at Tang-kang, with perhaps the addition of the other camp, the occupants of which had probably joined them from the South. General Nogi accepted the offer and waited, delaying his troops all day of the 14th, but no peace-seeking Chinese appeared.

October 14th.—A troop of cavalry reconnoitering to the North reached the big walled city of Pi-than (Ho-zan) and were agreeably surprised to see white flags floating from the houses, and a large white flag over the city gate. On attempting to enter, however, they found the gates closed. So they scaled the wall, but were astonished at being greeted with a vigorous fusillade from several sections of the city. They thereupon beat a hasty retreat pursued by about 200 Chinese soldiers. On the same day a company of infantry, while on its way to Choh-sui, met the enemy before reaching that village, and our men were so outnumbered that they were easily surrounded. It seemed probable at the outset that the engagement would prove fatal to the Japanese, but "old custom" prevailed, and a few volleys from the Japanese rifles sent the enemy scampering away! It was thought this Chinese force was the same that made the offer of surrender on the 13th.

October 13th.—One company of infantry was sent to attack Takow, but upon arriving the flag of the Japanese Navy was already flying from the forts, so they started out to return to the main army. After going a few miles to the east they came to a large walled city whose inhabitants resisted them; and after some fighting the Chinese retreated and the Japanese entered the city triumphant. To their surprise they found they had captured the city of Pi-than (Ho-zan), the very place the main army was preparing to attack, and where they anticipated considerable trouble.

On the 16th the Army and Head-quarters advanced to Pi-than (Ho-zan) encamping north of the city, where they are stationed at the present. The Army moves early to-morrow morning and the attack on Anping and Tainan-fu will no doubt take place on the 23rd or 24th.

The latest news from Anping just received is that a riot nearly occurred at Tainan-fu between the Black Flags and the merchants, the latter refusing to supply rice in exchange for Liu Yung-fu's paper notes.

THE HISTORY AND DEVELOPMENT OF THE RAILWAY SYSTEM IN JAPAN.*

BY FRANCIS H. TREVITHICK, ESQ.,
M.I.C.E., ETC.

The Empire of Japan consists of a number of islands, extending from north-east to south-west about 1,250 miles; and its breadth varies from 75 to 150 miles. The name of the main island is Honshiu. It occupies the central position, with Shikoku to the south, Kiushu to the west; and the Hokkaido to the north. Railways have been constructed in these four Islands, and extensions are being carried out, and are under consideration.

The country is hardly suitable for an extended railway system. It is volcanic and hilly, the centre being occupied by ridges whose peaks attain heights of from 7,000 to 10,000 feet, and whose spurs extend to the coast. The celebrated mountain of Fuji, an extinct or dormant volcano, is a cone of 12,365 feet in height, in an almost isolated position near the coast. Rivers are numerous, but not of great length. They are generally subject to violent flood either in early summer from melting of snow on the mountains, or in autumn from general heavy rains. In many places the beds of the rivers are above the level of the surrounding country, and the breaking of the banks in flood-time occasions great destruction of property and ruin of agricultural land by deposit of sand and gravel.

The climate varies as regards the Winter, only slight falls of snow occurring south of the central mountains, while on the north-west a fall of eight feet may not be considered uncommon, and in con-

sequence every year the train service there suffers serious interruption from a snow blocked roads in spite of the large sum annually expended in endeavouring to keep the lines open. In all districts the summer is hot.

It was not until the year 1869 that a proposal to construct railways was approved of by the Emperor, and a plan prepared for carrying out the scheme. Railways met, however, with such strenuous opposition from the large party which always endeavoured to impede any progress towards Western civilization, as well as with other difficulties of a nature similar to those which retarded the introduction of railways into England, and other countries, that it was only in the year 1870, that, thanks mainly to the persistent and enlightened efforts of Mr. (now Marquis) Ito, at that time Assistant Vice-Minister, and of Mr. (now Count) Okuma, then Vice-Minister of the Home and Finance Departments, this great step towards the opening up and development of the country was eventually started.

It was decided to make a trunk line from Tokyo to Kyoto, the new and old capitals of the Empire, by the Nakasendo route, and thence to Osaka and Kobe, with branches to Yokohama and Tsuruga, and to complete the whole in from three to five years.

The work on the line between Tokyo and Yokohama was begun in April, 1870, and that between Kobe and Osaka in November of the same year. The section between Osaka and Kyoto was commenced in December, 1873, and completed in February, 1877, when His Majesty opened the line between Kyoto and Kobe. As the times did not favour further extension, several years were spent in simply maintaining the 40 or 50 miles of open lines, and while the railways were thus circumstantially disturbed, disturbances occurred at Kumamoto and Hagi, followed by the Formosan Expedition, and the Satsuma Rebellion. During this interval the Government being fully occupied in dealing with these momentous matters, were not able to give attention to railways. As for the people, they were yet not in a position to form an opinion as to their advantage or otherwise, so to wait anxiously was the only thing the railway authorities could do.

In April, 1878, the Government decided upon the extension of the line from Kyoto to Otsu, and when this was about completed it sanctioned the proposal for the construction of the Tsuruga line in October, 1879. In April, 1882, the Government approved the scheme of extending the Tsuruga line from Nagahama to Sekigahara, upon the completion of which, it further sanctioned in August, 1883, another extension from the latter town to Ogaki. From this it may be noted that the revival of railway extension began in 1878, but by no means to any active extent, as may be judged by the fact that some 5 or 6 years were spent in making less than 50 miles of railway. At the close of 1883 the construction of the Nakasendo Railway was decided on, and the following remarks as to why the Trunk Line between Tokyo and Kyoto was altered from the Nakasendo to the Tokaido may be of interest.

In 1870, when the construction of railway lines was first contemplated by the Government and a general plan of the future railway system was decided on, it was determined that a trunk line should run between Tokyo and Kyoto by the Nakasendo; but considering the requirements of the times and discriminating as to the proper order of carrying out the work, it was resolved first to commence operations on the Tokyo-Yokohama, and Kobe-Osaka sections, the latter being subsequently extended as far as Kyoto and afterwards to Otsu. Later on a line was laid between Tsuruga and Ogaki. About the close of 1883, the Bonds for the Nakasendo Railway Line were placed on the market. Next year, work was commenced, on the one hand, between Ogaki and Nagoya, and, on the other, between Takasaki and Yokogawa. But in order to reach the middle sections of the Nakasendo, the difficult pass of Usui had to be cut through in the east, while in the west the large rivers of Ibi, Nagara, and Kiso had to be spanned, and great difficulties were met in transporting necessary materials. Apprehending therefore much waste of time in procuring those materials, it was found necessary, for the purpose of facilitating transportation to construct in the east a line from the port of Naoetsu to Ueda in the Province of Shinano, and in the west one from Taketoyo to Nagoya in the Province of Owari. Not only was the laying of these lines a necessary step for the carrying on of work in the middle portion of the Nakasendo, but they were in themselves valuable for the purpose of facilitating trade in the respective localities. Accordingly, the proposal for the building of these lines was submitted to the Government, and an order for the construction of the Naoetsu line was obtained in March, 1885, while sanction for the Taketoyo line

was obtained in June the same year. These lines were at once commenced. In the course of the following year, when a working survey of the middle portions of the Nakasendo had been completed and a general plan of the route considered, it was discovered not only that there were serious obstacles requiring an enormous expenditure of money, but that the speed of the trains would have to be reduced so much as to greatly enhance the working expenses, and that consequently the line when constructed would not fulfil the practical purposes of a railroad. It was, therefore, concluded that it would be better to run the line along the Tokaido, thus connecting the Tokyo-Yokohama line with the Nagoya line. The matter was fully reported to the Government, and in July of the same year instructions were received to the effect that operations on the central portions of the Nakasendo road should be discontinued and that a line should be constructed along the Tokaido. Work on the new line was commenced in the end of the same year, 1886. In January, 1888, instructions were also issued for the construction of a line connecting Otsu with Nagahama along the eastern shore of Lake Biwa, and operations on that line also were at once begun.

According to calculations made at the time when the construction of the Nakasendo trunk line was decided upon, the distance between Takasaki and Ogaki was estimated at 220 miles, the cost being set down at Yen 20,000,000. The total amount to be actually transmitted to this Department after the issue of the Nakasendo Loan was fixed at Yen 18,220,000, which was the sum to be realised by the issue of the loan. From this amount Yen 458,000 was to be set aside as an auxiliary fund for the construction of the line between Tsuruga and Ogaki. Consequently the amount that remained for employment on the Tokaido line between Yokohama and Ogaki (including the Take-toyo line) and on the Takasaki Naoetsu line, was represented by about Yen 17,760,000. The length of lines that has been laid with this amount of money is 368 miles in all. Comparing this length with the 220 miles of the Nakasendo, an increased mileage of 60 per cent. is arrived at. Comparing the actual cost with the original estimated sum of Yen 20,000,000, we find a decrease of nearly 13 per cent.

If to this we add the 48 miles of the Kobo line (which runs along the eastern shore of Lake Biwa), the total distance of lines constructed reaches 416 miles, which is an increase of 95 per cent. over the originally projected distance of 220 miles. The total cost will be represented by about Yen 18,000,000 a decrease of 10 per cent. as compared with the estimated cost, Yen 20,000,000.

Besides the lines thus far alluded to, there remains the Yokosuka line, with a total length of 11 miles. Adding its length to the above mentioned figures, we get a total of 427 miles. The cost of this line was Yen 450,000, which, when added to the above mentioned amount of Yen 18,000,000, raises the total to Yen 18,450,000.

From the year 1884 a turn took place and a period of activity set in. Several hundred miles were constructed within three or four years, and the final consummation of the programme originally laid down was accomplished in the year 1890, the trunk line, together with all the branches, amounting then to the total length of 540 miles. That 20 years were spent in completing this work does not indicate great speed in construction, but it will probably be seen that this tardiness was in consequence of the times, and that it was unavoidable.

In a word, the three years from 1870 to 1873 were a period of activity. The Tokyo-Yokohama Section was begun in April, 1870, and completed September, 1872; a distance of 18 miles. The Kobe-Osaka Section was commenced in November, 1870, the extension to Kyoto was taken in hand in December, 1873, and it was opened in February, 1877, by the Emperor; a distance of 47 miles and a further extension to Otsu was completed September, 1879, making this line 58 miles. From 1874 to 1877 was one of extreme dullness, ending finally in a complete standstill. In 1879 affairs improved a little. The construction of the Tsuruga-Ogaki Section was begun in May, 1880, and completed in July, 1884, a distance of 49 miles. In 1884 the sudden change set in favouring activity and speedy progress, and this has continued, although since 1890 the Government Railways have not increased in mileage. The Takasaki-Naoetsu Section (Usui-toge excepted) was commenced in October, 1884, and completed in December, 1888, a distance of 110 miles. The Yokohama-Ogaki Section of 258 miles was constructed between August, 1885, and April, 1889; Ofuna-Yokosuka Section of 10 miles, commenced in January, 1888, and completed July, 1889. The Otsu-Nagahama Section of 48 miles, commenced

* Abstracted from a paper read before the Asiatic Society of Japan, 12th April, 1894.

in February, 1888, completed July, 1889. And the last Section of the Government Lines, connecting Kamizawa Station with Yokogawa Station over the Usui-toge on the Abt Railway System, was begun in March, 1891, and opened to the public April 1st, 1893, having a distance of 7 miles. Total length of open lines being 558 miles. This completes an outline of the Government Railways, and now the Private Railways must be considered.

A short mineral railway was constructed in Iwate Ken to supply fuel and iron-ore to the puddling furnaces, built at Kama-ishii. The line was made in 1879, and the gauge, 2 feet 9 inches, laid for the most part with flat-footed rails weighing 85 lbs. to the yard, spiked to cross-sleepers, and with fished joints. The gradients were heavy, the ruling gradient being an incline of 1 in 31 for two miles, on which were curves of five chains (330 feet) radius. Three engines were manufactured by Messrs. Sharp, Stewart, & Co. in England, with four-wheels coupled saddle tanks, having a wheel-base of 5 ft. 9 inches; the diameter of the wheels 2 ft. 6 inches; the cylinders 1 ft. 6 inches stroke, and 1 ft. diameter, and having a working pressure of 150 lbs. to the square inch. The weight of each engine fully loaded with coal and water amounted to 18 tons 15 cwt. As the mines proved a failure, the railway ceased working, and the rails and engines are now used on the Hankai Railway (Osaka to Sakai). The Hokkaido Railway runs from Temaya (Otaru) to Sapporo and Poronai.

A few years back, the Government being willing to sell the coal mines in the Poronai District of the Hokkaido, also the railway, a company was formed and bought from the Government the mines and railway, and it is now known as the Tanko Railway, and is one of the private lines having a mileage of 204½ miles.

The first charter to a private company was issued in November, 1881 (11th month of the 14th year of Meiji), and it was called the Nippon Railway Company, and in accordance with the conditions agreed upon, the Railway Bureau was entrusted with the work of construction. This accounts for the remark, "a time of greater activity," though still, so far as Government railways were concerned, the advance was slow. The Railway Bureau having constructed the line to Mayebashi and Aomori, besides branches, the conditions agreed upon in 1881 were finally cancelled, and the Nippon Railway Company took over the whole control of the management, and of further extensions, also such officials who although working for the Company were on the books of the Railway Bureau, had either to resign, or return to the Government Railways. This change took place on the 1st April, 1892.

In connection with this first Railway Charter, it is well to note a circumstance concerning which there appears to be some misapprehension. It may be generally supposed that the roads of the Japan Railway Company were surveyed and built by the Company itself, whereas the truth is that until these lines were ready for traffic, the Company had nothing to do with them beyond furnishing funds. The whole work was carried out by the Railway Bureau. The position of the Japan Railway Company was indeed a very happy one. It received from the Government the right to construct and own railways in certain populous districts; it received also a guarantee of 8 per cent. upon all its subscribed capital; and finally, the whole trouble and responsibility of surveying and constructing the lines was assumed by the Railway Bureau, the Company stepping in and undertaking the management when everything had been completed. The days are past when associations of capitalists can hope to obtain such privileges. The Japan Railway Company was, in a sense, the pioneer of private railway enterprise in this country, and it reaped a reward that looks large by the light of existing conditions. The charter of the Nippon Railway Company is for 99 years; although the guarantee of 8 per cent. on the capital by the Government is for 15 years only.

As might be expected, after the generous terms granted by the Government to the Nippon Railway Company the spirit of railway enterprise grew quickly with the people. Public opinion was soon in favour of the promotion of railways by private companies, and companies sprang into existence throughout the country. It may be said that by 1887 that the spirit of railway enterprise had become almost a mania; 17 projects had by this time received sanction in accordance with the Government regulations; with a total length of about 1,375 miles, and a proposed capital of nearly 50,000,000 yen. By the end of March, 1893, the length of private railway companies then in operation was 1,319 miles 36 chains; that of Private Railways either under construction or for which surveys had been made and charters granted, and hence possessing the right of construction, was 611

miles 6 chains, making a grand total of 1,930 miles 42 chains.

The mileage of all the Railways in operation on the 31st March, 1893, was 1,877 miles, 5 chains; of which 1,319 miles 36 chains belonged to Private Railways, and 557 miles 49 chains to the Government.

The advantageous terms granted to the Nippon Railway Company were not granted to the other Companies; although in other ways help was given, in some cases a certain sum of money being given for every mile of line opened, besides other official support.

It may here not be out of place to make some remarks in reference to a few points of importance bearing on railway construction. These apply more or less to both the Private Railway Companies and to the Government Railway.

In the construction of railways a very large amount of capital is required, and many difficulties must be contended with. Even after a line has been completed the work of carrying it on is no easy one. It is therefore imperatively necessary that projectors of railways should make themselves acquainted at the outset with the nature of the operations which will be called for, should properly understand the obstacles with which they have to contend; and satisfy themselves as to the amount of the proceeds likely to result. As a matter of fact, however, most of those who initiate railway enterprise in this country seem to think that they have made an ample estimate of the cost of construction when they reckon with an expenditure of thirty to forty thousand yen per mile, without taking into account the nature of the locality through which their railway is to run; that they sufficiently provide for the cost of carrying on their road if they set apart half of their revenue for the purpose, no matter how much or how little that may be; and that industrial and other advantages must at once follow upon the opening of a line.

The Government has formed a Railway Committee of twenty-one members. These members represent the different departments of the Government, and special members representing other interests. When the committee is sitting it meets at the Teishinsho (Department of Communications), and all applications, plans, etc., for an extension of the present railway system, Government or Private, or for a new charter for new railways, are considered by this committee, and reported on to the Government.

The standard gauge is 3 feet 6 inches; and no doubt this decision was greatly influenced by the discussion at the time taking place in England and India on the relative advantages of building all future railways in India on the metre gauge. The arguments then adduced in favour of the building of all future railways in India on the metre gauge, on the ground of economy, both in construction and working, and also the arguments in opposition to the introduction into that country of the break of gauge, were such that on 14th January, 1873, at which date 5576½ miles of railway of the 5 feet 6 inches gauge were in existence, the Indian Government determined to adopt the metre gauge, for the Rajputana-Malwa State Railway. The present railways in India may be thus classified by gauges on the open lines on 31st March, 1892; 10,103½ miles of 5 feet 6 inches 7,171½ mile of metre gauge; 288½ miles special gauge; making 17,564 total mileage. This shows in 20 years that the Indian Railways increased 4,527½ miles of 5 feet 6 inches gauge to 7,171½ miles of metre gauge.

The policy of making provisions for doubling the lines at dates admittedly before the traffic rendered the laying of a double line of way necessary was discussed in Japan during 1873; at the same time also the question of the alteration of the gauge from 3 feet 6 inches, to 4 feet 8½ inches was fully considered.

By many it is regretted that the change of policy in Railway Construction discussed in 1873 was not adopted; and that the embankments, cuttings, tunnels, culverts, and piers for the bridge (excepting only the girders) for a double line was not adopted, as it is manifest that they can better, more economically, and more conveniently, be arranged during the construction of the line than at any subsequent period; and it is thought that this would have gone far to outweigh any loss of interest on the unproductive capital which would have been thus entailed. An argument in opposition is that Japan was not then in a position to find the necessary capital. Consequently the policy of Japan and India has been similar; India, with over 7,000 miles of metre gauge, has hardly a mile laid with double line; and no preparation made for doubling the lines.

The alteration of the gauge from 3 feet 6 inches to 4 feet 8½ inches (when there was not 40 miles of

line laid), might have been feasible in 1873, but not having been then altered, it is too late now that there are over 2,000 miles of line laid, and for people to talk seriously about an alteration of gauge at the present time is foolish, besides showing their ignorance of the nature of the work involved.

If the expenditure required for altering the gauge was used in doubling the present line, it would then carry a larger traffic, and at a quicker speed, than a single line of the 4 feet 8½ inches gauge or even the 7 feet gauge, as is known to those who have travelled over a single line of the latter gauge.

If 200 miles of the line between Tokyo and Kobe was doubled and proper discretion used in the parts doubled, there should be no reason why through trains should not make the run at average 25 miles per hour between two places including stoppages.

Another point is the rolling stock not being as large as the 4 feet 8½ inches gauge. There are engines running on this line weighing 45½ tons on the banks, and 40 tons on the level lines. The large carriages weigh 15 tons; the small carriages between 5 and 7 tons. The goods waggons have a carrying capacity of 15 tons, although supposed to carry 10 and 7 tons; these weights and sizes are equal to the ordinary rolling stock of the wider gauge; the lines are able to carry all the traffic and goods required; and it is capable of carrying much more, if the rolling stock is increased, and if the principal lines have a double track. The principle underlying all questions of gauge is, that a machine is comparatively speaking economical only when working at its full power. The best gauge for any particular railway is, therefore, merely a question of the amount and description of traffic that will probably come on the line, not on the cost of the construction, but on the cost of working, including the interest on the capital expended.

The great earthquake which occurred on the morning of the 28th October, 1891, has caused the railway engineers to consider the effect of earthquakes when making their plans for bridges and other structures.

The Tokyo-Kobe Railway suffered greatly from this tremendous earthquake, on the section between Hamamatsu and Maibara (Hamamatsu 167 miles 56 chains, and Maibara 284 miles 32 chains from Tokyo). The railway embankments within this district sank at 45 different places, and some of the greater depressions measured over 13 feet in depth. The ground was cracked at innumerable places, and the rails were shaken out of position to the extent of being forced at many places to assume a serpentine shape. Sixty-three bridges, including the large bridges over the Kiso with nine spans of 200 feet; the Nagara with five spans of 200 feet and four spans of 100 feet, and the Ibi with five spans of 200 feet; and the wing walls of 41 culverts were wrecked. The abutments of many of these bridges were split right through, and in some cases the piers were demolished and the upper-structure overthrown into the rivers. The buildings at all the intervening stations suffered to a greater or less extent; some were totally crushed, others were left in inclining position, and none escaped scathless. Indeed, the destruction wrought by this earthquake particularly between Atsuta and Ogaki, was so appalling as to be indescribable.

The traffic between Hamamatsu and Maibara having been brought, on this account, to a sudden standstill, no time was lost in making the necessary distribution of the staff, and the work of rendering the railway serviceable by repairing the damages, both to the road and the bridges, was vigorously proceeded with. Rough buildings were put up to serve for the time being the purposes of those which were destroyed, and such portions of the line as had been sufficiently repaired to admit of the resumption of traffic were opened at short intervals as the work progressed. However, the speedy resumption of traffic over the portion of the line between the Kiso and the Ibi rivers was not possible, for both of the important bridges spanning these wide rivers, as well as other large bridges situated in the interval, had sustained damages which precluded their expeditious restoration. Before the work of repairing or reconstruction proper could be taken in hand, the actual nature of the injuries sustained had to be ascertained by removing the enormous piles of brick forming the piers and abutments, and while this preliminary work was going on, the weighty superstructures had to be kept in position by means of temporary supports. In the case of the Nagara river bridge, the cast iron piles upon which the girders rested were demolished, and their entire reconstruction was unavoidable. Brick piers over well foundations of the same material were adopted to replace the broken piles. The positions of the

NOTE.—Those interested in this controversy should read Paper No. 234 of the Institution of Civil Engineers, 23th March, 1880: India Railways: The Broad and the Narrow Gauge Systems Contrasted.

piers had to be shifted, which necessitated the provision of an additional span of 60 feet girder. When the erection of the new piers was completed, the 200 feet girders, which had been overthrown into the river had to be restored in position on them. It has been found that in carrying out reconstruction works of this kind, the difficulties to be surmounted amount to as much again as those usually met in the undertaking of new works. However, taking the different works as a whole, it may be said to have been finished within the space of five months, that is the repairs of the earthquake damages. The traffic on the section between the Kiso river and Gifu station was opened on the 12th March, 1892, and the reconstruction of the Nagara river bridge which had been pushed forward with the utmost rapidity, was completed on the 30th of the same month. As the rebuilding of the Stations at Nagoya and Kiyosu was the only work remaining unfinished at that date, the resumption of through traffic between Tokyo and Kobe was commenced on the 16th of April.

The Taketoyo and the Tsuruga lines likewise suffered from the effects of the earthquake; embankments crumbled down, and bridges, culverts, wing-walls, and the station and other buildings were injured more or less. The traffic on the Taketoyo line was suspended. The necessary repairs were conducted with all possible speed, and the line was in a condition to be reopened by the 21st of December.

The principal works done may be summarized as follows:—Earthworks for the repairing of embankments, 15,730 tsubo; masonry for repairing stone walls, over 1,000 tsubo; sods laid on embankments, 2,590 tsubo; temporary railway lines laid, 28 chains 30 links; bridges of all sizes, the piers and abutments of which were reconstructed, 35; wing-walls of bridges and culverts repaired, 207; culverts reconstructed, 5; buildings reconstructed or repaired, 34; with the aggregate area of 2,262 tsubo.

It was on October 28th, 1891, at 6h. 37' 11" in the morning when the first shock of the great earthquake was experienced, that being far and away worse than any of the many which succeeded it. It brought down the heavy tiled roofs and stone laden thatches, and in a moment buried thousands of living people beneath them, and then fires broke out amongst the ruins. At Nagoya, Kasamatsu, Gifu, Ogaki, and other towns near to the railway, suffered severely. A train had only a few minutes previously crossed the Nagara bridge and at the time of the earthquake was at Gifu station. The statistical account of damage in the six provinces through which the railway runs and coming under the five Prefectures of Gifu, Aichi, Fukui, Miye, and Shiga, is as follows:—

Provinces.	Wounded.	Killed.	Buildings entirely destroyed.	Buildings half destroyed.	Burnt.	Shattered and Burnt.
Mino	12,311	4,889	114,616	30,994	249	5,934
Owari	4,877	2,357	80,845	43,845	196	—
Mikawa ...	49	13	1,020	1,464	—	—
Echizen ...	98	12	1,080	1,118	—	—
Omi	47	6	153	366	—	—
Miye	11	2	223	439	—	—

Total.....17,393 7,279 197,530 78,296 445 5,934

The principal casualties in connection with the traffic is due to floods; and yearly through communication is stopped for a time on most of the railways. The Sanyo Railway has been the most unfortunate, then the Kansai-Naoetsu Line, the Nippon Railway, and the Tokaido Railway. Allowing for the nature of the country, and the heavy rain storms, yet if the engineers had used more care in considering the effect of floods in the district through which the railway was to run and then provided ample room for the flood water to pass through the culverts and bridges, the annoyance to passengers and the expense to the railway companies would have been much less.

The railway fund granted by the Government from the first establishment of railways (March, 1870) up to the close of March, 1893, amounted to yen 37,563,836. The total length of open lines, miles 551. The average cost per mile, yen 60,667. This does not include the Usui Mountain Railway, as it was not in operation. The cost of this line is about yen 2,000,000, the distance 7 miles, so the average cost per mile is yen 285,714.

The following statement shows the area, population, and coast line of the four islands which have railways:—

Division.	Circumference. Ri.	Area. Sq. Ri.	Population.	Per Sq. Ri.
Honshiu.....	2,475.46	14,571.12	30,715,265	2,108
Shikoku	675.81	1,180.67	2,879,260	2,440
Kyushiu.....	1,846.86	2,617.54	5,755,958	2,199
Yezo	628.51	5,061.90	293,461	48
Total of Japan	7,029.11	24,794.39	40,453,461	1,632

Note.—1 ri=0.44 English Miles.

In accordance with the provisions of Law No. 4 for the Construction of Railways promulgated in June, 1892, and the authority given under the Minister of State for Home Affairs' Order No. 434, relative to the Expenditures for the prosecution of surveys of railway lines throughout the Empire, a Board for the Investigation of Railway Routes was established in the Railway Department. Under the supervision of this Board, the surveys and examinations of the different lines of railway to be laid within the first construction period specified in clause No. 7 of the Law for the Construction of Railways, were begun in the early part of August, 1892. The field work was brought to an end in December. The compilation of drawings and statistics was then proceeded with, and a complete report of the results of the surveys and of the investigations of 1882½ miles was drawn up last February. Of these lines the construction of the Tsuruga to Toyama (123½ miles), and the Fukushima to Awomori (298½ miles) has been commenced.

The total mileage of railways in operation at the end of March, 1895, was 2,130 miles; that of lines under construction or projected was 1,042 miles 57 chains, and the number of railway companies was 29. The following table shows the names, capital, total mileage, and mileage open to traffic of the various lines in actual operation, State railways being excluded:—

Name of Railway.	Capital Yen.	Total Miles.	Lines opened for Traffic Miles.
Nippon Tetsudo	30,000,000	799-66	596-66
Sanyo Tetsudo	13,000,000	307-47	191-46

"Virginia," writing in *Black and White* in the column devoted to "The Diary of a Daughter of Eve," says:—I stayed to dine with Julia and was delighted to note an unusual amount of flavour about her soup and sauces, and while congratulating her upon my approval of her presumably new cook, I learnt that it was Liebig who deserved my commendation. The despot who rules her kitchen has been pleased to recognise the virtues of the Liebig Company's Extract of Beef, has, indeed, taken to it with enthusiasm. She does not, of course, confess the secrets of her prison house, but when Julia pays her diurnal visits downstairs she observes the tell-tale jars with their unmistakable blue signatures across the labels.

H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge.

FRIDAY, October 25th, 1895.

J. BIBBER AND BRO. VERSUS THE CHINA NAVIGATION CO., LIMITED.

This was a claim for \$1,079.28, damages alleged to be sustained by plaintiffs at the hands of the China Navigation Co., Ltd., in respect of a shipment of leather on the *Taiyuan*.

Mr. G. H. Scidmore appeared for the plaintiff, and Mr. A. B. Walford represented the defendants.

Mr. Scidmore said this was a claim for \$1,079.28, damage done to some rolls of leather shipped from Sydney, Australia, to Yokohama, Japan, on defendants' steamer, the *Taiyuan*. He would read the petition if his Honour wished.

His Honour said he had read the petition and answer in the case.

Mr. Scidmore—Then the only question at issue between us is the origin of the damage.

His Honour—Does the defendant admit the damage?

Mr. Walford—We admit that it is damaged leather, but it was manufacturer's damage, and not damage done after the leather was shipped.

Mr. Scidmore—And we say that the damage was done after the leather was shipped. I propose to call my witnesses.

Mr. Walford—I have no idea of the nature of plaintiffs' case; unless it is opened we do not know what case we have to meet.

Mr. Scidmore—My case is that we shipped the goods in good order and condition, and that they were landed here not in good order and condition—that is the *prima facie* case. We claim that the damage to the leather was done after the leather was shipped.

His Honour—Have you no authority at the moment to refer me to.

Mr. Scidmore—My first authority is to be found in Carver's Carriage by Sea, section 73, page 83, 2nd edition:—"The general statement in the bill of lading that the goods have been shipped 'in good order and condition' amounts to an admission by the shipowner that so far as he and his agents had the opportunity of judging, the goods were so shipped." I will now call witnesses.

Maurice Bieber, who took the oath in accordance with the practice of the Jewish religion, said—I am manager of the plaintiff's firm. We do an import and export business. We have dealt in sole leather for about seven years. I produce the bill of lading for the goods mentioned in the bill of lading. The steamer arrived here between the 22nd and 23rd April, of this year. On the 24th April I went down to the Customs hatoba to see if any goods were landed. I found a part of them on the hatoba, badly damaged—the sole leather. In the shed there were about 30 rolls of the leather, and some of the rest was in Mr. Weston's godown. The sole leather was more or less badly damaged. The leather looked black, as if it had been scorched. I noticed no other damage at the moment. I went at once to the agents, Messrs. Butterfield and Swire, office, and saw Mr. W. J. Robinson. I told him that the leather had been damaged and arranged with him to go next day at 9-15 to examine it. He told me to send the complaint in writing, and I did so.

Mr. Scidmore I have copies of the documents which passed, which I put in.

Witness continuing—I went next day with Mr. Robinson to the godown at the hatoba, and we examined it. One roll was opened, and we found the interior covered with coat dust, also badly stained. We put our hands on it, and they were blackened with the dust. Mr. Robinson examined the interior of the roll with me, and after he had seen it, he said he would write to the captain and inquire where the leather had been stowed. Later in the day I went to Messrs. Butterfield and Swire's and Mr. Robinson said that the Captain had replied that the leather had been stowed in the silk room. He then said: "Mr. Bieber, you imagine you have a big claim, you had better go down and examine the leather again." I told him if he gave it to me in writing I would do so. This he did. [Document read.] After receiving this I took the Japanese purchaser, who had contracted for the leather, to see it. We opened two or three rolls of the leather, and I asked at what price he would take the leather over. He said at about \$35 per picul. I then went again to the steamer's agents, and asked if they admitted a claim for damage. Mr. Robinson said: "Yes, we admit a claim for damage of coal-dust, but you must make it very light." I told him then that the damage was pretty heavy, and would be over \$700. This was before the official survey was made. He said:—"If you open your mouth so wide, we shall have to get some one to go through the leather

NOTE.—A tsubo is 6 feet cube, 8 cube yards; or 6 feet square. The expenditures on account of repairing the damage to railway property caused by this great earthquake represents the large sum of Yen 478,016; from which inference may be made of the extensiveness of the damage wrought. To this must be added the loss of revenue caused by the through traffic being suspended during five months.

thoroughly." He told me that I need not be present when the examination was going on, but I made it my business to be present on the 27th April. I there met Mr. Dodds, Mr. Robinson, and Mr. Stone, of No. 28. This was to Messrs. Weston's godown, at the *hatoba*. Ten rolls were taken out of the godown for examination. Mr. Stone asked for a bucket of water and a rag to wash the leather. He tried to wash the coal-dust off, but it left dark stains after washing. Mr. Dodds then came to me and said that as there was no convenience at the *hatoba*, would I remove the leather to my godown. Every roll—there are ten hides in a roll—had to be opened and each hide examined. I remarked to Mr. Stone, "the leather is badly damaged." He said: "Yes, it is badly damaged." Mr. Dodds also remarked: "If the leather had had coverings, it would not have been so badly damaged." It is not usual to cover this kind of leather. During the past seven years, sole leather shipped to me has come in good condition and has never been covered. I have imported leather, as samples, from Australia, once previous to this. It was picked flat, but there was no outside covering. Two consignments came after this from Australia, but I have not had the handling of it. After this conversation all the business went on by correspondence. A survey was afterwards made, by subsequent agreement, in my own godown by Mr. Stone and Mr. Lubowsky. Their survey was made on May 2nd. Mr. Stone said he could not tell the exact state of the damage unless the leather was analyzed, so he cut off a piece of the stained leather and another piece which was covered by coal-dust. Mr. Schedel was to conduct the analysis. Mr. Schedel came and looked at the leather in the godown, and then made a report that he could not find what had caused the damage. I made a claim for \$1,544.90, and on the 11th May, Messrs. Butterfield and Swire wrote, enclosing the surveyer's report, and repudiating liability in regard to my claim. I myself then took a piece of the leather to the Imperial Hygienic Laboratory in Yokohama for analysis. They asked me to bring a whole side, so as to have good and bad leather to compare. They later sent in their report. Mr. Lubowski estimated the damage to the leather at 50 per cent. Mr. Lubowski is a tanner.

Mr. Walford said that this was not evidence.

Mr. Scidmore said that Mr. Lubowski was a practical man, and his appearance was very necessary to plaintiffs' case. He was too ill to appear that day.

His Honour—I cannot take this witnesses' evidence for a statement of what Mr. Lubowski said at this point.

Witness continuing—It was as the result of Mr. Lubowski's report that I made my claim. I had an offer of \$30 a picul for the leather. I informed the defendants of this, and they said I might do what I liked with the leather as they had no concern with it—they repudiated all liability. These letters passed on June 4th, 1895. The market value of sound leather was assessed by my surveyor, Mr. Lubowski, at \$46 per picul: Mr. Stone also remarked that this was the market price of such leather. The difference is \$16 per picul, and \$15 out of the claim of \$1,064.28 is for short delivery—this was for pieces cut from the leather and stolen on board ship. Mr. Robinson stated that defendants would pay this shortage. The outward appearance of the leather as delivered was very different to ordinary good leather; it looked as if it had been laying in the gutters, and appeared damaged to an extent of 40 or 50 per cent. The roll of leather in court is a fair sample of what was delivered; sound leather would be light brown colour, while this looks dirty.

Cross-examined by Mr. Walford—I am a partner in the firm as well as manager, my brother is the other partner. The leather was contracted to be sold to the *Sakura-gumi*, the contract being made in December last for 100 rolls. I sent to Australia and ordered a hundred rolls—1,000 sides. The leather arrived in three different shipments, this being the first. The *Sakura-gumi* refused this shipment; they also refused the other two. I can not say whether the other two shipments were all damaged in the same way. Some were damaged in a similar way certainly, but 20 or 30 rolls were delivered in good order. The third shipment was all damaged. I sold the leather to Yuroziya on June 3rd. I sold them 45 rolls, and one roll was kept back by him for me. The roll in Court I obtained yesterday from Yuroziya. I am not acquainted with the leather business, and cannot say what damage can be done by coal-dust. I saw that the coal-dust left stains when the leather was washed. The Hygienic Laboratory made no mention of coal-dust in their report. The damage done to the leather was something of the same nature as the stains which appear on the hide now

shown me—[a skin purchased of Yuroziya by defendants from the same shipment]. There was more or less damage on every hide. I do not remember whether the leather was landed dry or not.

This concluded Mr. Bieber's examination by Counsel.

Kamiyama Masuo, cautioned, deposed—I am an analyst in the Hygienic Laboratory of Yokohama, I remember making an examination of some leather for Messrs. Bieber and Brother. I identify my report upon the leather now shown to the Court, and also its English translation.

Mr. Walford objected to the papers being put in. After reading the report he could not understand the document. If the plaintiffs wished to prove that the staining was due to iron tannid; defendants quite agreed with them.

Mr. Scidmore said he relied on the last paragraph in which the report stated that the stains were largely due to water.

Witness, continuing—I cannot say for certain whether the iron-salt, which produced tannid of iron, was caused by ordinary fresh water or by salt water, but there are considerably more traces of salt water—more constituents or elements of salt water.

Cross-examined by Mr. Walford—The leather brought to me to analyze had black stains upon it. The leather now shown me bears similar stains, both darker and lighter. Those stains in my opinion are caused by tannid of iron.

Mr. Walford (to Mr. Scidmore)—Do you admit that tannid of iron is produced by the tannin in the leather coming in contact with iron in solution?

Mr. Scidmore—I am not prepared to admit anything having such a scientific look about it.—(Laughter.) Perhaps the witness could tell us.

The Witness—Yes, that is so.

Mr. Walford—And your Honour doubtless has it that iron in solution must necessarily be moist.—(Laughter.)

Mr. Scidmore said that he had one other witness to call, Mr. Lubowski. Unfortunately he was ill, and it was not known when he might be able to appear. Still in this witness's absence, he (Mr. Scidmore) had no objection to the other side going on with their case.

Mr. Walford said he could not very well open his case until the other side had finished.

His Honour—Perhaps Mr. Scidmore could tell us what he proposes to prove through Mr. Lubowski's evidence.

Mr. Scidmore—Mr. Lubowski is a practical tanner, and he can prove that the stains on the leather could not arise during the process of tanning. Indeed, his testimony will prove that exactly the opposite was the case.

Mr. Walford—I cannot very well open my case until the other side have closed theirs, but if they have no objection to my calling the ship's witnesses—the ship being now in port—I should be glad to do so, and so save time. But I cannot open my case now.

His Honour—Quite so. The other side are willing to allow you to call the ship's witnesses without opening your case, I understand.

Mr. Scidmore—Perfectly.

The Court then adjourned till 2 o'clock.

Upon resuming,

Mr. Walford asked that plaintiffs should pay the costs of the adjournment. He should require at least five day's notice to call together his witnesses.

His Honour—That notice will no doubt be given you.

Mr. Scidmore said that he had no objection to defendants' calling all their witnesses before they opened their case.

Mr. Walford—But we have a strong objection to doing anything of the kind.

His Honour—I think we will proceed.

William Hugh Spark, sworn, deposed—I am a ship's officer in the employ of the China Steam Navigation Company. I was second officer of the *Taiyuan* on the voyage in question. In March, 1895, I remember 45 rolls of leather being shipped at Sydney for Yokohama. There was no other leather on board for Yokohama that voyage. It was my duty to tally it on board. I did so and passed it without remark. It was upon the signature of the Chief Officer upon my signature that the bill of lading was signed. I signed one part of the shipping order, and the Chief Officer signed the other. The rolls were unprotected. They did not appear to me to be damaged in any way. I should look out for any wet, or if the package was not securely made up. I have no experience of leather, and should take no notice of the colour of the leather to make a note of it. I noticed merely that the rolls were a dull brown. They were quite dry on the outside. I did not open any of the rolls. The roll in Court does not look any different to others

I have seen. I do not notice whether it has been damaged or not. If it was offered to me for shipment I should make no note about it on the shipping order. These forty-five rolls of leather were stowed on the fore side of the No. 4 'tween decks hatch across the ship, on top of other dry cargo—bags of bones, glue-pieces, sinews, bales of dry fungus. Four of the rolls were on the bottom tier on the top of dunnage, with other leather above them. There were about three and four inches of dunnage, and mats on top of them. There are two decks to the ship, and the leather was stowed as high as possible. [A plan of the ship was here handed up to the Bench.] There was nothing on top of the leather. The rolls were from 20 to 25 feet away from No. 3 hatch. There was no liquid cargo in the 'tween decks. At no time during the voyage between Sydney and Yokohama was there any liquid cargo stowed there. The voyage began in March. The 'tween decks were perfectly dry the whole voyage. Some of the leather was moved in Hongkong; it showed no sign of being damaged, and was perfectly dry. I can't say how much was moved: it may have been 20 rolls. It was moved to No. 3, in the silk locker—the silk-room. This was also a perfectly dry place, and the leather remained there until the ship arrived in Yokohama. The rest of the leather remained where it had been originally stowed. The whole cargo in the 'tween decks was dry, the voyage being very fine up. I don't think it possible for liquid or any wet to have got into the 'tween decks. No leakage from any hold could get there, as it is above them all. The leather was discharged in Yokohama in the same condition as first received. It still looked dry.

Cross-examined by Mr. Scidmore—Tea had been stowed in the 'tween decks on the voyage before. The hatch was closed at Sydney and not opened again until reaching Hongkong. At Hongkong it remained open while we were working cargo, about three days. We had fine weather in Hongkong, and there was no rain so far as I remember. There are no steam pipes running through the 'tween decks. There are two water-pipes on the fore side of No. 3. I understand the term "good order and condition" to mean when there is no wet or no broken cases. That is all.

To His Honour—If there had been rain in Hongkong while we were working cargo, it could not have reached the leather.

Donald E. MacKenzie, sworn, deposed—I am the first officer of the *Taiyuan*, and was on her during the voyage in question. As chief officer I have the general superintendence of the stowage of cargo. I remember the leather coming aboard at Sydney. It was stowed in the 'tween decks forward of No. 4 hatch. The rest of the cargo there was fungus, glue-pieces, sinews, bones, hoofs. Between Melbourne and Sydney the 'tween decks were empty. There was no liquid cargo of any description at any time of the voyage. None of the cargo at any time showed signs of having been in contact with liquid. None of my cargo delivery receipts were signed damaged—all was delivered in good order. It was not possible for any liquid to get at the leather. At Hongkong I directed the Second Officer to remove some of the leather into the silk-room; that was the only change made. I saw the leather landed at Yokohama, a few edges were cut, small pieces being taken out.

Mr. Walford—A claim has been made for that, I think.

Mr. Scidmore—Yes.

Witness continuing—The leather might have had some coal-dust upon it, but it was still perfectly dry; but I did not inspect it.

Cross-examined—In discharging coal from the lower-hold, coal-dust many have floated through to the leather. The fungus I have mentioned, is very light and dry. I think it is the inside pith of a tree. I should accept and pass the leather now in Court, as a roll of leather in good order and condition.

Re-examination—When the coal was being discharged, the cargo was protected by screens of tarpaulin.

To the Bench—Fresh water pipes lead down to the tanks through the 'tween decks. The two tanks are in the fore part of No. 3 'tween decks. They were about 30 or 35 feet away from the leather.

Mr. Walford—That is all the evidence I propose to bring now. I will ask that plaintiffs bear the ordinary costs of the adjournment.

His Honour—But the case would never have been finished to-day even if the other side had its witness here.

Mr. Walford—No, but there are certain costs connected with the adjournment which should be borne by plaintiffs.

His Honour—What are these witnesses of yours, Japanese?

Mr. Walford—Some are foreigners, others are Japanese.

His Honour—Some arrangement perhaps can be made in the matter.

Mr. Scidmore thought it was premature to talk of costs. He should want to be heard on the point at any rate. It was no fault of the plaintiff that his witness was not here that day, rather it might be called "an act of God" which had prevented his production. The plaintiff had done all that could be expected of him.

His Honour thought that Mr. Walford would have ample notice given him when the witness had recovered health sufficient to be present in Court.

Mr. Scidmore said that the other side should remember that plaintiffs were ready to bring the case to trial months ago, it was at the request of defendants that the matter came up at this late day.

His Honour pointed out that he would require more detailed particulars regarding the costs from the defendants' before he could make an order for costs. The Court could not make a general, vague order as to costs. The case would not have gone beyond its present stage, and he had not proposed to sit again till Monday, so the witnesses would have had to go away and come together again next week. He did not see at the moment what right the defendant had to ask for the costs of the adjournment. Had the case stopped earlier in the day it would have been different.

Mr. Walford asked permission to recall the last witness.

His Honour consented, and,

Witness, in answer to a question from Mr. Walford, said—At no time has any liquid cargo been put in the silk room: the room is perfectly dry.

To Mr. Scidmore—The silk-room is located on the starboard side, forward end, of No. 3 hatch 'tween decks.

His Honour—The hearing of the case is now adjourned till Monday week, November 4th at 10.30 a.m.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 26.

A telegram to *The Times* from Hongkong says that Russia has concluded a treaty with China, securing to the former Power the right of anchoring her fleet in Port Arthur, together with other advantages outside the most-favoured-nation clause. The papers regard the news as of very great gravity, and declare that if it is true Great Britain is bound to intervene. The Foreign Office is without information on the subject.

London, October 27.

China pays to the Japanese, on the 8th of November next, thirty million taels for the evacuation of the Liaotung Peninsula.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, October 28.

Her Majesty's ship *Porpoise* has arrived here from Petropaulovsky and leaves to-morrow for Yokohama.

(FROM TONKIN PAPERS.)

Paris, October 14.

The taking of Antananarivo was a warm affair. Six columns were ready for the assault when the Queen parleyed. Six Frenchmen were killed and fifty wounded.

The town of Farafata, near Tamatave, was taken on Thursday.

The Czar has congratulated France.

Paris, October 15.

France is about to establish several more consulates in the South of China.

Paris, October 16.

A man fired a revolver at M. Resseguier, manager of the Carreaux glassworks. The would-be murderer escaped.

Paris, October 17.

Guilhen, a news vendor, the perpetrator of the Carreau outrage, has been arrested.

The foreign delegates constituting the Commission to inquire into the alleged massacre in Armenia have reported that the atrocities were grossly exaggerated and the whole position overstated.

(FROM JAPANESE PAPERS.)

Miyazaki, October 28.

At strong earthquake shock was felt here at 9 o'clock last night.

Kyoto, October 28.

Viscount Torio reached here yesterday; and Count Matsukata proceeded to Mikage to-day.

Niigata, October 28.

Twenty-one cases of cholera have suddenly been reported in this town, and there are signs of further spread.

Söul, October 28.

Li Shun-yo proceeds to-day to pay a farewell visit to the Tai Wön-Kun at Kong-dok-i, and will go down to Ninsen to-morrow, whence he departs for Japan.

Major Umay, Commander of the Japanese guards in Söul, and three other officers left here for home to-day. Prior to their departure they paid their respects to the King, who spoke to them in a very cordial manner, and gave them gifts of money in recognition of services rendered by them. The Japanese officers refused to receive the gifts.

The King has granted *yen* 1,000 to Mr. Ishizuka, a Japanese adviser to the Korean Cabinet, who has been ordered to return home by the Japanese Government.

Shimonoseki, Oct. 28.

Count Inouye, the Korean Ambassador and the ex-Korean Minister to Japan and their suites arrived here by the *Yokohama Maru* this morning. Count Inouye disembarked, and put up at the Daikichi Hotel. The *Yokohama* leaves here at three o'clock this afternoon.

The captured Chinese torpedo-catcher *Fukurio* arrived here from Kure yesterday, and left for Sasebo this morning.

Nagasaki, October 28.

A Shanghai correspondent, writing under date 26th instant, says that Messrs. Shimura, Secretary, and Ariga, Councillor of the Agricultural and Commercial Department, and over thirty Japanese deputies dispatched to inspect the newly opened ports, left there for Soochow on the 25th inst.

The Kucheng Commission return to Foochow on the 27th inst. Further examinations will be carried on at Foochow.

It is stated that the Mahomedan rebellion was created through an endeavour to erect a temple to the late General Tsa, who was killed at Phyöng-yang, being checked by Chang Tsi-tung.

Kagoshima, October 28.

The French flagship *Bayard* left here for Yokohama at 2 p.m. to-day.

Nagasaki, October 29.

The British flagship *Centurion* left for Amoy, and the French gunboat *Lutin* proceeded to Tientsin yesterday.

Miyazaki, October 29.

A violent earthquake was left here at 1.10 p.m. to-day.

Hakodate, October 29.

A strong shock of earthquake was experienced here at 10.10 a.m. to-day.

Fusan, Oct. 29.

The *Asahi Maru* with Prince Wi-hwa, left here for Japan at 9 o'clock this morning.

Söul, Oct. 29.

The Korean Government will send down the Vice-Minister of Home Affairs to Ninsen to receive Count Inouye.

Hiroshima, Oct. 29.

The *Suminoye Maru* is reported to have left Ninsen on the 27th inst. with some Japanese deportees.

Messrs. Sugimura, Secretary, and Horiguchi, an attaché of the Japanese Legation; Police Inspector Hagiwara, Major Umay, Commander of the Japanese Guard in Söul, and a few non-official deportees are on board the *Suminoye*, which is expected to arrive at Ujina to-night or to-morrow morning.

Söul, Oct. 29.

The Government has decided to shortly issue a notification permitting all Korean subjects to cut their hair.

Accepting the proposal of the younger military officers, the Korean Government has resolved to adopt a strong foreign policy.

Söul, October 29.

Suzuki Shigemoto and one other Japanese resident were to-day ordered to leave Korea.

Shimonoseki, October 30.

The *Asahi Maru* arrived to-day with Prince Wi-hwa and his suite. She hoisted the Korean flag.

Prince Wi-hwa disembarked at 11 a.m., and put up at the Shunpo-ro. The Prince cut his hair while on board, and also changed to European dress. One finds it difficult to distinguish him from a Japanese.

Two Japanese deportees, named Adachi Kenzo and Shibuya Katoji, who arrived by the *Asahi*, were arrested, and taken to the police office. They will be sent to Hiroshima to-morrow.

Prince Wi-hwa embarked on board the *Asahi* at 2.20 p.m., and started for Kobe shortly after.

The *Chow Chow Foo* floated into deep water yesterday.

Hiroshima, Oct. 30.

The *Suminoye Maru* arrived at the Nishima Quarantine Station at 10.30 a.m. to-day. The quarantine officials and water police at once proceed to the steamer, and a number of passengers were examined. The process of disinfection was effected, after which arrests were made. The persons arrested are:—Messrs. Sugiura, Secretary, and Horiguchi, probationer in the Japanese Legation, Police Inspector Ogiwara, seven police constables, and Takahashi Seiji, a Niigata resident.

Mr. Ishizuka, a Japanese adviser to the Korean Government, arrived by the *Suminoye*.

Major Umayabara and other deportees will arrive here to-morrow by the *Echigo Maru*.

Söul, October 30.

The departure of Li Shun-yo, the grandson of the Tai Wön-kun, on a foreign tour has been postponed owing to the objection of the Foreign Representatives.

Rumour is afloat to the effect that Ming Eichun is hiding in the capital.

Pekin, Oct. 30.

The second meeting of the commissioners of Japan and China appointed to negotiate upon the return of the Liaotung peninsula took place yesterday. The negotiations have made great progress, and will be concluded at the next meeting.

Osaka, Oct. 31.

Messrs. Ishii, ex-Governor of Wakayama; Kawabara, a big capitalist in Osaka; Sawada, of Hyogo, and others have agreed to construct docks at Osaki, Amabe-gun, Wakayama Prefecture, with a capital of *yen* 500,000.

Ninsen, Oct. 30.

Count Inouye, Mr. Nagasaki, Private Secretary of the Minister of the Imperial Household; M. Inouye, Secretary of the Foreign Department, and the Korean Ambassador arrived here to-day by the *Yokohama Maru*.

Söul, Oct. 31.

Count Inouye and party reached here last night.

Un Han-zen, Commander of the Second Battalion of the *Kunren-tai* has been removed to the reserve.

Kobe, Oct. 31.

Prince Wi-hwa arrived here this afternoon. He will leave for Tokyo to-morrow.

Shimonoseki, Oct. 31.

A Nagasaki telegram states that the Japanese men-of-war are assembling there, and various rumours are circulated as to the cause of their arrival.

Soul, Oct. 31.

The *Kunreitai* has been disbanded, and the newly organized army is divided into two divisions, are being called the *Shinyei*, and the other *Chinyei*. The former consists of two battalions, and guards the Palace. The *Chinyei* is to be stationed at Phyong-yang and Chon-ju.

Mr. Hashimoto Yasumaru, a Japanese interpreter in the War Department, has been ordered to leave Korea.

Kobe, Nov. 1.

Prince Wi-hwa left here for Tokyo by train last night.

Hiroshima, Oct. 31.

Mr. Ishizuka, a Japanese adviser to the Korean Government, was to-day examined in the Local Court as a witness in connection with the disturbance in the Korean capital.

Hiroshima, Nov. 1.

Major Umayu, and Captains Ishimori, Takamatsu, Fujito, Murai, and Maki arrived at the Nishima Quarantine Station last night by the *Echigo Maru*. Gendarmes proceeded there this morning, and brought them to Ujina, whence they were at once conveyed to the gendarmery office in this town.

Japanese now under arrest in connection with the Korean affair include 8 military officers and 44 civil officials and private persons.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

| 2—Q to K 6 ch. | 2—Anything |
| 3—Q or R, mate. | |

with other obvious variations.

Correct answers from Shogi, W.H.S., Digamma, Kr., E. J. King, and J.D.

PROBLEM NO. 202.
By VALENTIN MARIN.

BLACK.

WHITE.

White to play and mate in three moves.

HASTINGS CONGRESS.

GAME NO. 378.

RUY LOPEZ (BERLIN DEFENCE).

- | | |
|-------------------|---------------------|
| WHITE.
Lasker. | BLACK.
Walbrodt. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to Kt 5 | 3—Kt to B 3 |
| 4—Castles | 4—B to K 2 |
| 5—Kt to B 3 | 5—P to Q 3 |
| 6—P to Q 4 | 6—P takes P |
| 7—Kt takes P | 7—B to Q 2 |
| 8—K Kt to K 2 (a) | 8—Castles |

- | | |
|----------------------------------|-----------------|
| 9—Kt to Kt 3 | 9—Kt to K 4 |
| 10—B takes B | 10—Q takes B |
| 11—P to Kt 3 | 11—Q R to Q sq. |
| 12—B to Kt 2 | 12—Kt to B 3 |
| 13—Kt to B 5 | 13—Q to K 2 |
| 14—R to K sq. | 14—Kt to K 4 |

| 19—Kt takes Kt (b) | 19—P takes Kt |
| 20—P takes Kt | 20—Q takes B P |
| 21—R to K B sq. | 21—Q to K 5 |
| 22—B takes P | 22—Q R to K sq. |
| 23—R to B 3 | 23—P to K R 4 |
| 24—R to Kt 3 ch. and White wins. | |

(a) An innovation. Q Kt to K 2 has hitherto been usual.
(b) It matters little. The alternative is Q to K 2; and then White easily wins by Kt takes Kt ch., &c. In this game and in the next the effective simplicity of Lasker's play is remarkable.

GAME NO. 379.

EVANS GAMBIT DECLINED.

- | | |
|--------------------|-----------------------|
| WHITE.
Pollock. | BLACK.
Lasker. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—B to B 4 |
| 4—P to Q Kt 4 | 4—B to Kt 3 |
| 5—P to B 3 | 5—P to Q 3 |

| 14—Castles | 14—Kt to Kt 3 |
| 15—P takes P | 15—Kt takes P |
| 16—Q to K sq. | 16—Q to B 3 |
| 17—B to K Kt 5 | 17—Q to B 4 |
| 18—Kt to B 2 | 18—Kt takes Q B P (c) |
| 19—R takes B | 19—B takes Kt |
| 20—Kt to K 3 | 20—Q takes B |
| 21—R takes R | 21—R takes R |
| 22—Q takes Kt | 22—Kt to B 5 |
| 23—R to R sq. (d) | 23—Kt to Kt 7 ch. |

Black wins.

(a) Castling was desirable, but it is not feasible at once on account of the reply B takes P ch. followed by R takes R.
(b) From this point the game is all in Black's hands.
(c) Very fine, and obvious enough when the plan is disclosed.
(d) Of course a blunder, but there is no good move left for White.

GAME NO. 380.

Mr. Lasker's treatment of a French Defence is of interest in the following game, Round XI. :—

- | | |
|---|---------------------|
| WHITE.
Lasker. | BLACK.
Gunsberg. |
| 1—P to K 4 | 1—P to K 3 |
| 2—P to Q 4 | 2—P to Q 4 |
| 3—Kt to Q B 3 | 3—Kt to K B 3 |
| 4—P to K 5 | 4—K Kt to Q 2 |
| 5—P to K B 4 | 5—P to Q B 4 |
| 6—P takes P | 6—B takes P |
| 7—Q to K Kt 4 | 7—Castles |
| 8—B to Q 3 | 8—P to K B 4 |
| 9—Q to K R 3 | 9—Kt to Q B 3 |
| 10—P to K Kt 4 | 10—Q to K 2 |
| 11—P takes P | 11—Kt to Kt 5 |
| 12—Kt to B 3 | 12—P takes P |
| 13—P to Q Kt 3 | 13—Kt takes B ch. |
| 14—P takes Kt | 14—Kt to B 3 |
| 15—Q to Kt 2 | 15—P to Q 5 |
| 16—Kt to K 2 | 16—Kt to K R 4 |
| 17—K R to Kt sq. | 17—P to Q R 4 |
| 18—Q to R 3 | 18—Q to K sq. |
| 19—R to Kt 5 | 19—P to K R 3 |
| 20—R takes Kt | 20—Q to Kt 3 |
| 21—B to Q 2 | 21—B to Q 2 |
| 22—K to B 2 | 22—B to K sq. |
| 23—R to R 4 | 23—B to K 2 |
| 24—R to K Kt sq. | 24—B takes R ch. |
| 25—Q takes B | 25—Q to Q R 3 |
| 26—Kt (B 3) takes P | 26—K to R 2 |
| 27—B to Q R 3 | 27—Q takes Q P |
| 28—Kt to K 6 | 28—R to K Kt sq. |
| 29—Kt to Kt 5 ch. | 29—K to Kt 3 |
| 30—P to K 6 | 30—P to K R 4 |
| 31—Kt to B 7 dis. ch. and White wins (a). | |

(a) The game is a pretty one, especially towards the close. It must be confessed, however, that White is assisted a little by his opponent, who plays below his proper form. Black's moves—10—Q to K 2, 15—P to Q 5 (shutting out the action of his bishop and so allowing R to K Kt sq., &c., later), and 16—Kt to K R 4, were not quite up to tournament form. At move 29—K to Kt 3 is forced, for otherwise White wins by P to K 6, threatening Q takes R P mate.

GAME NO. 381.

A defeat of Herr Lasker by Bardeleben :—

GAME NO. 383.

TWO KNIGHTS DEFENCE.

- | | |
|----------------------|-----------------------|
| WHITE.
Schiffers. | BLACK.
Tschigorin. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—Kt to B 3 |
| 4—P to Q 4 | 4—P takes P |

5—Castles	5—Kt takes P
6—R to K sq.	6—P to Q 4
7—B takes P	7—Q takes B
8—Kt to B 3	8—Q to Q sq.
9—R takes Kt ch.	9—B to K 3
10—Kt takes P	10—K takes Kt
11—R takes Kt	11—Q to B sq.
12—B to Kt 5	12—P to B 3
13—Q to K 2	13—B to B 4
14—Q to Kt 5 ch.	14—P to B 3
15—Q takes B	15—P takes B
16—R to K sq.	16—P to Q Kt 3
17—Q to K 5	17—K to B 2
18—Kt to K 4	18—Q R to Kt sq.
19—Kt takes P ch.	19—K to Kt 3
20—Kt takes B and White wins.	

It will be seen that Tschigorin is caught in a variation of the two knights, with which he should, presumably, be familiar. White gets too speedy and forcible attacking chances, especially after P to Q 4 by Black, and every blow tells.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

YOKOHAMA: SATURDAY, NOV. 9TH, 1895.

BIRTH.

On 9th inst., at #61, Bluff, the wife of A. H. DARE of a Daughter.

SUMMARY OF NEWS.

THE Directors of the Yokohama Rice Exchange have resigned in a body.

THE Yokohama Literary Society have revised their bye-laws and regulations in accordance

with resolutions passed at the general business meeting.

Two Formosan aborigines arrived at Yokosuka by the *Saikio Maru*.

VISCOUNT YONETSU MASATOSHI, a member of the House of Peers, died on the 30th of November.

THE expenditure for the State funeral of the late Prince Kitashirakawa is estimated at yen 25,000.

THE Tsuchiura-Tomobe Section of the Japan Railway Co. was opened for traffic on the 4th inst.

THE Japanese troops are about to be recalled from Formosa, Manchuria, Liaotung, and Korea.

PRINCE WI-HWA, of Korea, arrived in the capital on the 1st inst. He was attired in foreign costume.

H.I.H. PRINCE KWACHO was decorated with the Grand Cordon of the Order of the Rising Sun on the 3rd inst.

Up to the 31st of last month there had been 55,611 cases of cholera and 38,829 deaths throughout the empire.

SEVERAL foreigners in the employ of the Japanese Government received high decorations on the Emperor's Birthday.

SUNDAY was a very wet day and the celebrations in honour of the Emperor's birthday were restricted to indoor festivities.

THE body of the late Prince Kitashirakawa arrived in the capital on the 4th inst.; the funeral takes place on Monday next.

WINTER has set in in Hokkaido, snow having fallen at Sapporo, Nemuro, and Hakodate. Snow has fallen at Söul and Ninsen, Korea.

THE Miye residents propose to establish a navigation school. Some representatives have reached the capital to petition for Government aid.

THE last sailing race of the year took place on Saturday among the *seido* employed on the yachts of the Y.S.C. The sport was very poor.

THE Chinese Consulate in Yokohama is being repaired. Meanwhile Mr. Tau So-rin, the Chinese Consul, is transacting business at the Chukwa Kwai-kwan.

AN exhibition of South Australian products has been on view in the Chamber of Commerce, Tokyo, during the week, and has attracted considerable attention.

At a meeting of the subscribers to the Yokohama General Hospital it was decided to continue the arrangements with Dr. Mécre for another year.

THE Tokyo Water-works Committee have sent in their resignation in a body in connection with the scandal relative to the iron pipes supplied by the Japan Cast Iron Foundry.

THE *Nippon* was suspended on the 2nd inst., and the *Chuo Shimbun* the following day. The *Nichi Nichi Shimbun* was released from suspension on the 4th inst.

THE Okwa-gumi have secured the contract for the supply of a submarine cable to the length of 594 nautical miles, to be laid between Japan and Formosa, at £65,980.

COUNT INOUE has been received by the King of Korea, and doubt and suspicion as to the part played by Japan in the late *émeute* are said to be completely allayed.

SHORTLY after 9 o'clock on the night of the 23rd ult. over a thousand small birds gathered around the lighthouse at Yajiri, Mutsu province. They

flew against the lantern, and a large number were killed. At 11.10 some sea-gulls collided with the lighthouse and the glass was cracked.

THE Kyoto residents are contemplating the erection of a grand *Daijutsu* at an estimated cost of yen 600,000, to commemorate the signal victories of Japan in the late war.

FROM March to the middle of October last, 92 applications were made to the Government for permission to construct private railways, the total amount of capital being yen 148,594,390.

THE Sanyo and Kiushu Railway Companies propose, it is said, to offer prizes for the best essays on the most practical scheme for bridging the Shimonoseki Strait, the amount of the prizes being yen 10,000.

THE Budget for the next fiscal year and the Estimates for the extension of the country's military defence, are said to have been discussed and decided at a meeting of the Cabinet held on the 5th inst.

THE entertainments given in the Public Hall, Yokohama, by the "Incogniti"—amateurs from Kobe—were very delightful, and the proceeds were devoted to the funds of the charities in both ports.

IT is stated that the Presidents of both Houses of the Imperial Diet will be decorated with the Second Class of the Order of Merit in recognition of their services during the special session of the Diet at Hiroshima.

REUTER telegraphs—The Russian Embassy in London positively denies the statement by *The Times* correspondent in Hongkong with regard to the Port Arthur Treaty as wired on 26th October. The Turks have killed one hundred and fifty Armenians at Baiburt in Armenia. H.R.H. the Princess Maud of Wales is betrothed to her first cousin Prince Charles, second son of the Crown Prince of Denmark. Another Russian cruiser has left Odessa with a contingent of sailors, ammunition, and war material for the Russian fleet in the Pacific. At a Cabinet Council held in London on November 5th, it was decided that all Embassies should be separately urged to demand from the Port immediate measures to terminate the anarchy so hurtful to Christians of all nations; otherwise they must in concert adopt the necessary measures.

THERE is not much to be said about the Import trade. There is a sign of slackness on the part of buyers for the interior, attributed to less enquiry, on account of the harvesting operations which are now occupying the attention a large portion of the agricultural population. Nevertheless, there is still some enquiry for Yarns and Grey Shirtings, though other lines are decidedly quiet. Buyers of Metals are almost dumb, and appear to be fully supplied for the time being. In the Kerosene trade, Importers seem to have made a stand against any further reduction in price, and this attitude has induced buyers to come on to a certain extent, with the prospect that operations of some magnitude appear to be near at hand. In the Silk trade, prices were reduced to a point that enabled a couple of firms to go into the market for a big deal, but this is all that has been done, and matters have again assumed a quiet aspect, with 16,000 piculs on the market and arrivals coming in. In the Waste business, holders have been inclined to be current, and dealing resulted: quotations working in favour of buyers. Prices are unchanged for what Tea remains on offer, but the stock is small. A new feature in the trade is the shipment to Singapore of a few hundred piculs by Chinese. Exchange has been fairly steady, and rates appear to be firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The atmosphere in the political world is full of rumours. There is an impression that the favourite hobby of the *Fiji Shimpō*, namely the union of the statesmen of the elder generation to tide over the present crisis in national history, has now a fair chance of being realized. What lends an appearance of plausibility to this supposition is that recent meeting between Marquis Ito and Count Okuma, as well as the visits that the latter recently received from Counts Goto and Oki, the return of Count Matsukata to the capital, the meetings between the latter and the Premier, and some other circumstances. Whether a coalition Cabinet will be possible or not, it seems to be taken for granted that a political change of some sort is to take place before the assembling of the next session of the Diet.

The death of H.I.H. Prince Kitashirakawa has caused profound grief throughout the country. The death of an Imperial Prince is, under all circumstances, a matter of national mourning, but the feelings of the people have been specially touched by the case of Prince Kitashirakawa, who, it is well known, despite the official announcement, breathed his last in Formosa just after the island had been brought under subjection chiefly through the heroic exertions of the Prince. The language employed by the press reflects the nation's deep sentiment of grief.

Next to the death of the Commander of the Imperial Guards, the fraud connected with the supply of iron pipes to the Tokyo Water-works has attracted wide attention. The case is under legal investigation, but the public is not disposed to give the benefit of a doubt to the accused. Indeed, there seems to be little room for doubt. Hamano and the other prisoners are of course denounced in the strongest language. But still more vehement are the terms in which the municipal authorities, especially those immediately connected with the Water-works, are criticised for negligence of duty. The Board of Aldermen are particularly censured, since they always showed a tendency to be partial to the Iron Foundry Company. Had they strictly carried out the original contract, the company would have long since ceased to exist and the City would have been saved from the fraud and all its disagreeable consequences. The *Nichi Nichi*, the *Fiji*, and other leading journals go a step further, and blame the Municipal Council, as they blamed it at the time, for suffering silly sentiment to interfere with a matter of practical business. Had the Council followed the wise advice of these level-headed papers and relied solely upon imported pipes, the City would have been saved the present scandal, as well as a delay of some three years in the completion of the Water-works. These journals do not maintain that iron pipes of good quality cannot be made in Japan, but they deny that there can be any second opinion as to the folly of relying upon a foundry that had yet to be established. At the time when the question came up for debate there was a strong popular movement toward asserting national independence. Influenced by a mistaken notion of patriotism, no less than by a fear of *soshō*, and by baser motives, the Municipal Council consented to grant very advantageous terms to the Chutesu Kaisha. Perhaps the present example will be productive of good as a standing warning to persons still only too prone to carry patriotic sentiment into the field of practical business. The *Nichi Nichi* also calls the attention of the citizens of Tokyo to the importance of exercising judgment in the election of the members of the Municipal Council.

The Korean question continues to be discussed. As to the legality of the Government called into existence in Seoul by the *coup d'état* of the 8th ultimo, the *Nichi Nichi*, as already stated, has expressed doubt about the wisdom

of recognizing it. But all other papers seem agreed in failing to discover any reason whatever for such a question being raised by foreign countries, especially Japan. The *Fiji Shimpō*, writing on this topic, states that it, too, was at first inclined to regard the King as a sort of prisoner, and consequently to doubt the legality of the new Government. But very detailed correspondence received from a learned Korean belonging to neither of the contending parties and therefore worthy of being listened to, is said to have removed every scruple from our contemporary's mind. That the King should entrust the Government of the country to a set of statesmen connected directly or indirectly with the murder of his Queen, must seem very strange to Japanese and other foreigners. But careful consideration of the peculiar state of affairs in Korea puts another complexion on the matter. The simple truth is, says our contemporary, that the King, though doubtless regretting the sad fate of his consort, is satisfied with the changes effected by the *coup d'état*. His Majesty is said to be now paying more genuine attention to State affairs than he has ever done before. The struggle between his family and that of his consort was of long duration, and had reached its culminating point when the *émeute* of October the 8th took place. There was then reason to fear for the safety of the King himself, and from a Korean point of view the removal of the Queen from the field of politics, and even from the world, probably appeared to be the only means of saving the Royal dynasty. Under such circumstances, the *coup d'état* did not cause any surprise to the Korean nation at large, and for the rest, the new Government is conducting the affairs of the State in a sober and conscientious manner. In short, the country is satisfied with the change accomplished, and things are going on as though nothing unnatural had taken place. Under such circumstances, the *Fiji* sees no reason why the present Seoul Government should not be recognized by foreign Powers.

Concerning the rumoured withdrawal of troops from Korea, the *Mainichi Shimbun* strongly opposes such a step. Japan, says our contemporary, has a well recognized right to station her troops in the peninsula. When, by the Convention of Tientsin, she agreed with China for the sending of troops to Korea in case of emergency, no foreign Power objected to the compact. This shows that the Powers recognized the peculiarity of the relationship between Japan and Korea. The Tientsin Convention has ceased to be binding on either party, but that fact in no way affects the tacit recognition that Western Powers have given to Japan's right to send troops to the peninsula. As to their continued presence there, it is absolutely necessitated by the unsettled state of the country, a fact acknowledged by all Koreans. Concerning the share that a part of the troops stationed in Seoul played in the recent *émeute*, the responsibility is said by the *Mainichi* to rest entirely upon the principal functionary under whose instructions they acted. At all events, whatever may have been the nature of their conduct, it can not affect the question of the necessity of their presence at present in Korea.

The *Fiji Shimpō* strongly urges the Government to prohibit the use of opium in Formosa, now that the whole island has been brought under the rule of the Governor-General. Our contemporary urges this step with all the more earnestness because it is reported that some of the Japanese coolies have acquired the vicious habit. It may be remarked, by way of objection, that the prohibition of the evil practice would lead to such an exodus of the original population as to cause serious inconvenience in the future development of the island. In the *Fiji's* opinion, such an exodus is exactly what should be desired by the Japanese, since it would create a better chance for the immigration of the surplus population of Japan. It may be added that the measure so strongly urged by the *Fiji* and other journals in Tokyo has just been taken by the Governor-

General of Formosa, who has prohibited the use of opium under heavy penalties.

The *Kokumin Shimbun* deserves all praise for devoting much attention to the educational question. In a recent issue, it deplores the fact that very few men of ability and worth are tempted to teach in the primary schools. When, by some accident, a young man of talent accepts the position of a teacher, it is inevitably for the purpose of maintaining himself until he succeeds in obtaining a better place elsewhere. The majority of the primary-school teachers are young men preparing themselves by private study for the bar, the bench, or literature. It is, consequently, very rare to find teachers engage in the profession for above five years. How can good teachers be induced to remain at their posts for a reasonably long period of time? The *Kokumin* answers by suggesting first, that the selection and appointment of teachers should be left to the discretion of the local Communes; secondly, that the teachers should be independent of the vexatious interference of the District and Local authorities; thirdly, that the salary of the teachers should be increased to twice or thrice the present rate and defrayed out of the national taxes; and fourthly and lastly, that a system of ample pensions should be established for deserving teachers.

EDITORIAL NOTES.

FLOWERS IN TOKYO.

Tokyo is undoubtedly a great place for flowers: the plums of Kameido, the cherries of Ueno and Koganei, the azaleas of Okubo, and the morning-glories of Iriya being deservedly famous. There has, however, been hitherto a drawback in so far as flowers "in foreign style" are concerned: the difficulty of obtaining cut flowers, bouquets and boutonnières, at any season of the year. The Botanical Gardens, it is true, have been in the habit of selling cut-flowers from the local hot-houses—very few in number—but the distance is so great from the central portion of the city that few people seem to know much about the Gardens, beautifully kept though they are. Moreover, the making of bouquets, etc., in foreign style, has hitherto not been practised by the otherwise well-drilled gardeners. A correspondent now informs us that a one-time member of the Yokohama Gardeners' Association has set up as a florist in foreign style in a very picturesque portion of the city—the little park to the right of Kudanzaka, opposite the French Legation. The whole place is redolent with perfume as a rule, nearly all the potted plants—including such old friends as mignonette, heliotrope, white violet, and roses in profusion—being kept in the open air, except in severe weather.

According to recent reports, the chrysanthemums at Dango-zaka are to be finer this year than ever before, nearly all the famous scenes of the late war being florally depicted. The pick of the lot will be, it is affirmed, a scene from the bombardment of Weihaiwei. As for the chrysanthemums themselves, the plants are decidedly backward in their growth, and a few of the rarer varieties have proved altogether failures. Still there will be a bewildering variety of shape and hue, and odorous blooms in the gardens by the middle of the present month.

At the foot of Dango-zaka there is—or was until quite recently—a little exhibition very well worth a visit. In huge wooden tubs were rockeries of various kinds of moss, so deftly arranged as to resemble real hills and mountains, tiny pines, microscopic bamboos, and other dwarfed plants being placed here and there to make the illusion still more complete. On the hill-sides were huts or chalets made of porcelain, or groups of peasants, travellers, and soldiers. Some war-scenes were simply perfect in detail so skilfully had all been planned and carried out. One of the very finest bits was the coast

near Okitsu, with a miniature train emerging from a tunnel, and fishing-boats in the bay; while a village nestled among the "woods"—composed of scores of artificially dwarfed trees—on the "mountain-side." It was indescribably pleasing, taken as a whole, and absolutely faithful to the original. The "Storming of Port Arthur" was another excellent and lively bit, and very life-like, though not more than two feet square over all. Altogether it was a marvellous exhibition of patient and artistic skill.

TSUKIJI LITERARY AND MUSICAL SOCIETY.

THE Tsukiji Literary and Musical Society has entered upon another season of activity. The first meeting was held at Prof. and Mrs. Gardiner's, 40, Tsukiji, on Monday evening, October 14th. The election of the officers resulted as follows:—President, Professor M. N. Wyckoff, Vice-President, Rev. T. S. Tyng; Secretary and Treasurer, Mrs. A. Florence Smith; Literary Committee, Mr. E. W. Clement, Miss Dawson, and Rev. T. S. Tyng; Music Committee, Miss Thomas, Mrs. Tyng, and Miss Hunt. The programme that evening was of a miscellaneous and somewhat extemporaneous nature. The second meeting was held at the same place on Monday evening, Oct. 28th, and was devoted to James Russell Lowell. Prof. Gardiner read portions of Underwood's sketch entitled "The Poet and the Man," and musical selections, vocal and instrumental piano and violin, were interspersed. So much interest was aroused in the subject of the study that it was decided to continue it for two or three more evenings. The next meeting will be held with the Rev. and Mrs. Tyng, 29, Tsukiji, on Monday evening, November 11th, when a varied programme on Lowell, together with music, will be presented.

MR. BREARLY AS A LONDON LECTURER.

At the Camera Club on Sept. 26th, under the presidency of Mr. Davison, a very interesting lecture on scenes and incidents of the Sino-Japanese war was given by Mr. D. S. Brearly. A series of views were thrown upon the screen, some of them coloured photographs, others drawings of war scenes made on the spot by Japanese "lightning artists." The Japanese "lightning artist," observes a London contemporary, maintains the traditions of Japanese art. Laughter greeted many of the views, especially those of single combats and naval engagements, which were treated with a naïveté and originality wholly Japanese. Nothing more curious can be imagined than the efforts made by the "lightning artist" to depict modern uniforms, modern ironclads, and modern siege guns. Thrown, enlarged, on the screen, the quaint grotesqueness of some of the scenes proved quite irresistible, and moved the club to hearty merriment. Portraits of the Emperor of Japan and of the Generals and Ministers whose names have been so much before the world of late, the temples of Nikko, Shinto and Buddhist priests—the whole of the social life of Japan and Korea, ancient and modern, passed through the lantern in quick succession, and were explained in a running comment by the lecturer.

"THE INDEPENDENCE OF KOREA."

In the highest or graduating class of a well-known metropolitan school, the "Independence of Korea" was recently given as a subject for an English composition, with the condition that the composition should be written in conversational style, the supposed speakers being an Englishman, a Russian, a Japanese, and a Chinaman. The following essay was adjudged the best. We quote it as well exemplifying the present feeling on the subject, and because it set forth the views of a large portion of students in particular. The essay is given without change, except in the case of one or two slight grammatical errors:—

JAPANESE:—"What is your opinion concerning Korean independence?"

CHINESE:—"Of course, Korea is one of China's vassal States. Although Li Hing-chang was, at Shimonoseki, recently obliged to recognize the independence of Korea, yet in reality it is not independent. It has paid us annual tribute for the last two thousand years. To a great extent it is

nothing more than a Chinese colony, so it is quite natural that the people of Korea should wish to be under our protection. Moreover, the manners and customs of the country strongly resemble our own. Therefore I believe that, sooner or later, Korea must be incorporated with China.

RUSSIAN:—"From my point of view, Korea is in a state of anarchy. The statesmen of that country think only of themselves; they have no real sentiment of patriotism. They are jealous, greedy, and bellicose, yet on many occasions have shown great timidity. They have no political principles worthy of the name. The people are very ignorant, superstitious, negligent, and stupid. In a word, they do not possess the capacity of forming a nation. Gentlemen, I think we had better divide the country up amongst ourselves, just as some of us did with Poland once upon a time."

ENGLISHMAN:—"That would be profitable to you perhaps, but certainly not to the advantage of Great Britain. At any rate, I doubt the possibility of Korea's remaining independent. In my opinion the best way to manage the Peninsula would be to bring it under the joint protection of the Great Powers. Or, in other words, the plenipotentiaries of the Great Powers should hold a congress to decide upon the difficult questions connected with Korea."

JAPANESE:—"My opinion is quite different from any of yours. I do not think that Korean independence is impossible. The corruption of the nation is chiefly the result of its ignorance. If we guide it to the best way, it will be able to gradually improve. Thirty years ago the state of my own country was quite similar to the present condition of Korea. At that time we had no idea of representative government; we knew very little about science and art; we had neither telegraphs nor railroads. The foreign ambassadors were threateningly asking for indemnities, while a civil insurrection arose in our very midst. After adopting western civilization, we became the representative government you now know. I think, therefore, that it is quite possible to bring affairs in Korea into order in a few years from now. I tell you, gentlemen, Korea has had intimate relations with Japan and China since ancient times, and these three are the only really independent states in Eastern Asia. Let Japan, China, and Korea manage the question themselves, and don't you Westerners interfere."

ENGLISHMAN:—"But if we put Korea in this way in your hands, what do you intend doing?"

JAPANESE:—"Our plan is to put railroads in the country; to increase the strength of the army; to put an end to the financial disorder; to cause Korea's commerce and industries to flourish; to make her abandon the old abuses; and to advocate the adoption of Western civilization."

CHINESE:—"Oh no! not the last! The adoption of Western ideas is not true civilization. That would be a retrogressive step, for it would do injury to the good old customs."

RUSSIAN:—"I differ from the views of our Japanese friend. To increase the strength of Korea's army would be an insult to her neighbours. Besides, Korea is too poor to keep up an army. If she really wants some soldiers my country will lend her a few regiments, for we have more soldiers than we know what to do with. Nor do I see any necessity for railroads, for my country is about to extend the Siberian railway to the southern coast of China."

JAPANESE:—"Oh, what's the use of your talking that way? We shall after all do what we think right and proper."

NEW COMMANDER-IN-CHIEF OF THE IMPERIAL GUARDS.

MARSHAL COUNT NOZU was to-day appointed Commander-in-Chief of the Imperial Guards in succession to the late H.I.H. Prince Kitashirakawa.

THE JUGGERNAUT OF KYOTO.

THE visitor to Kyoto, says the *Kobe Chronicle*, who takes a ride on the electric tram car or a walk in the immediate neighbourhood of its lines, can appreciate the sentiment of the poet who tells us that life is as a spider's thread. One is impelled to reflect upon life assurance policies, wills, and other business matters which call for attention before the thread is finally snapped, for the thought comes to every man who rides on a Kyoto car for the first time that he is riding to his doom. When, however, after being successfully extricated from a collision or two on the way, the car at length brings its human freight safely to the end of the journey, he breathes freely once more. Frequently a short paragraph gets into the papers of miraculous escapes. Last

week the shaft of a jinrikisha was smashed by the car at a level crossing, but the jinrikisha-man escaped unhurt. Again, on a later day, an old woman was knocked down by one of the cars and injured. Scarcely a day seems to pass without a more or less serious accident.

METALS.

MESSRS. S. W. ROYSE & Co. in their report dated September 28th, say:—Prices of Pig Iron advanced strongly during the first half of this month, and then suffered a considerable fall, the reason assigned being the fear of a strike in the shipbuilding trade. A recovery is, however, now taking place, and the trade appears to be in a good position. Manufacturers are well supplied with orders for some time ahead. Shipments of Pig Iron from both Scotland and Middlesbrough are satisfactory during this month, and the total shipments during 1895 show a considerable improvement upon those for the corresponding period of 1894. Prices of Pig Iron are to-day about 2s. 6d. higher than they were two months ago. The improvement in the finished Iron and Steel trade is well maintained. Copper and Tin have only fluctuated slightly during this month, and are at present steady, to-day's figures being within a few shillings of those current a month ago. Spelter is practically unchanged during the month, and Lead is just a shade easier.

BANGKOK ITEMS.

A CHINAMAN was killed in a Secret Society row in Bangkok on the 5th October. Several men were injured. A party of armed Siamese marines quelled the riot, which was the most serious that has occurred in Bangkok since 1889. A curious accident to a cook in Bangkok is reported by the *Siam Free Press*. While plucking snipe over an aperture in the kitchen floor his hand was suddenly seized by a snake from beneath and badly bitten. Remedies were at once applied by the cook's employer, and beyond a slight swelling and little pain he appears none the worse for his experience. It is supposed that the snake, probably a python, struck at the bird, and so bit the cook in the attempt to get the snipe. H.M.S. *Mercury* arrived at Bangkok on the 8th October. On the 10th a cricket match was played with a home team. The *Mercury* made 30 in their first innings and 28 in their second. The Bangkok team scored 128 in one innings.

SHANGHAI RACES.

Wet weather predominated during the Shanghai race-days, only the last being favoured, in the afternoon, with sunshine. Mr. Kanuck got 5 firsts, 5 seconds, and one third places; Mr. Ring 5 first, 2 second, and 6 thirds; Mr. Henry Morris, 3 first, 3 second, and 2 thirds; Mr. Ruby 2 firsts; and the other nine races were each won by different stables. Mr. John Peel only secured a couple of second places and a third. Mr. C. R. Burkill was the most successful jockey, landing 8 firsts, 4 seconds, and a third place: Mr. A. W. Burkill, Mr. Meyerink, and Mr. Midwood won four races each, Mr. Read, and Mr. Pike two each; Mr. Dallas, Mr. Crawford, and Mr. Kladt one each. The amount of money that changed hands were something tremendous, in comparison to the modest amounts which pass in Yokohama. Through the Totalisator there passed during the three days, \$41,210; through the Pari-Mutuel, \$34,930; through the Club Concordia Sweeps, \$34,140—\$110,280.

DEATH OF CAPTAIN JESSENS.

MANY people in Kobe as well as in Nagasaki, remarks the *Kobe Chronicle*, will deeply regret to hear of the death of Captain Jesselsen, late of the steamer *Ingo*, the sad event taking place somewhat suddenly on the *Hohenzollern*, during the last voyage of the steamer up to Yokohama. It will be remembered that some time, in the early part of this year, Captain Jesselsen was so unfortunate as to be overcome by charcoal fumes while sleeping in the cabin of his vessel, then at Osaka. He was quite unconscious when taken out, and though he was eventually brought round and after a few days appeared restored to his usual health, the shock then experienced appears to have told upon him, as he has been ailing more or less throughout the summer,

He gave up command of the steamer and took a trip down to Hongkong with the hope that the change would benefit his health, and was on his way back to Yokohama to consult a medical man when his illness took a turn for the worse, resulting fatally before the vessel reached its destination. He leaves behind him a widow and three children—the two boys being in a Tokyo school and the girl a pupil at Mrs. Rowe's school in Kobe. Captain Jesselsen has been many years running on the Japanese and Chinese coasts, and was extremely popular with all who knew him. For years he ran between Nagasaki and Shanghai with coal, having in one year made a record of 54 trips between the two ports. Very great sympathy will be felt with Mrs. Jesselsen at the sad loss she has sustained.

FRENCH INDO-CHINA.

M. ROUSSEAU, Governor-General of French Indo-China, left Haiphong on the 13th ult. for France, to give the Government the benefit of his advice and assistance in connection with the Indo-China budget and the proposed loan. A Havas telegram contradicts the report that he will not return to Tonkin. From the Tonkin papers we learn that an agreement has been arrived at between France and China by which French troops pursuing piratical bands in Tonkin are to be allowed to cross the frontier and co-operate with the Chinese forces in effecting the destruction of the bands. The zone within which the French are to be allowed to operate is to be marked out by a mixed commission of French and Chinese officers, and the commission was expected to commence its work in a few days after the date of the latest papers received. Our contemporaries are of opinion that piracy on a large scale will now be suppressed, and the concession made by China, coupled with the deliverance of the Lyaduet family by General Sou, is taken as a proof that China is now sincerely desirous that tranquillity should be established in the frontier regions.

"FAIR JAPAN."

Two dainty booklets have been issued by Messrs. Kelly and Walsh in time for the homegoing Christmas mail, bearing the above title. The verses sparkle with genial humour, both in the optimistic and the pessimistic sense,—for the one represents the poet on first landing in Japan, which he apostrophises—

Oh! sweet it is to dwell with thee;
Land of the Rising Sun—

and the other tells of his speedy departure from the country having learned that it is a land

Where noisome odours fill the air
And float on every breeze.

Mr. Ogawa has produced some charming colotypes from the negatives of Mr. O. A. Poole, which have more than ordinary artistic merits to recommend them. Altogether the booklets are very beautiful souvenirs to send to friends across the seas at the season of the year when such gifts are most appreciated.

THE ARREST OF MR. KIKUCHI.

AMONG the many arrests made in connection with the lamentable tragedy in Söul, none has caused more astonishment in the newspaper world than that of Mr. Kikuchi, correspondent of the *Kokumin Shimbun*. He is described as being a young man of 24, a fluent writer, and ardent patriot, without the least tendency to *sösht* ideas. Mr. Kikuchi has enjoyed the benefits of a really thorough education, and bears the high reputation of a blameless life hitherto; so strong hopes are entertained that he may prove innocent of the dreadful crime of complicity with which he is accused. We learn that the *Kokumin* people are doing everything in their power to make their correspondent's incarceration as light as possible. Special messengers are about leaving Tokyo with gifts of food and money for the prisoner, and no stone will be left unturned to secure his acquittal.

JAPAN AND AUSTRALIA.

SOUTH AUSTRALIA, which, however, extends through to Port Darwin on the north coast, has sent a Government Commissioner, the Hon. J.

Langdon Parsons—to Japan to inquire into the possibilities of extending trade between the two countries. He has brought with him trial shipments of South Australian products, samples of which will be on view at the Tokyo Chamber of Commerce from Tuesday to Saturday this week from 10 a.m. to 2 p.m. Japanese and Foreign Merchants are invited to inspect what South Australia can supply, and furnish particulars of what Japan can export to South Australia. We hope the mission of the Commissioner will be successful.

HAMANO SHIGERU.

GREAT commotion was noticeable on Saturday, the 2nd instant, in the rooms of the Tokyo Stock Exchange, this being the immediate consequence of the arrest of Mr. Hamano Shigeru and his colleagues of the *Chutetsu Kaisha*; for Mr. Hamano is one of the most daring and successful speculators in Japan, and holds thousands of shares in the largest concerns. As a manipulator of the share market, he is popularly believed to have no equal. There was therefore a marked downward tendency in the early morning, which grew almost to a small panic before business hours were over. The instability of everything but gilt-edged stocks was proved beyond dispute, and fears are entertained that this week will see a still greater fall. The opinion was loudly expressed, at the same time, that Mr. Hamano, although most probably guilty of the grave charges preferred against him, was only the victim of the unscrupulous clique that have been for months past doing all in their power to ruin the *Chutetsu Kaisha*—a set of men, members of the concern, who are rumoured to stop at nothing if they may in any way enrich themselves. At all events, the affair is now assuming such proportions that nothing but a very thorough sifting of the facts in the case will satisfy the public. Outside the precincts of the various exchanges, strange to say, Mr Hamano is not given the benefit of any doubt. The general public are firm in their belief that he and he only is the arch-conspirator.

AMERICAN NAVAL OFFICERS' WORK.

THE *Army and Navy Journal* (U.S.A.) says:—We are glad to know that some of our Naval Officers do good work in addition to their routine service. Surgeon F. B. Stephenson, U.S.N., has lately finished translations from several Russian publications about the gipsy moth, for the State Board of Agriculture of Massachusetts. During a recent cruise on the Asiatic Station, Dr. Stephenson made use of his opportunities to advantage in gaining a practical knowledge of the language of this nation—so rapidly growing in strength and influence.—Dr. Stephenson is also a member of the Société d'anthropologie de Paris, and of the Asiatic Society of Japan, Tokyo.

H.I.H. PRINCE KITASHIRAKAWA.

THE body of the late Prince Kitashirakawa, Commander-in-Chief of the Imperial Body Guards, arrived at Yokosuka on the 4th inst. at 7.40 a.m. by the *Saikyo Maru*, which was escorted by the *Yoshino Kan*. The bier was disembarked at night, and placed on a special train, which conveyed it to Shimbashi, where it arrived at 12.45 this morning. On the 3rd inst. H.I.H. Princess Kitashirakawa, and her children; Prince and Princess Komatsu (junior); and Count Hijikata, Minister of the Imperial Household, who was specially dispatched as a Messenger from the Emperor, proceeded to Yokosuka, and on the 4th inst. H.I.H. Komatsu (senior), Baron Takasaki, Mr. Sannomiya, and a few military officers also went down to the naval port.

NOTICE TO MARINERS.

THE following Notice to Mariners, referring to the rock on the north side of channel inside the Lyeemooon, in the Canton District of the China Sea, has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—Notice is hereby given of the discovery of a rock, covered only 9 feet at low water of spring tides, which is situ-

ated about 750 yards north-west of the N.W. point of the northern or Chinese shore of the Lyeemooon (British Admiralty Chart No. 1,466. This obstruction is the shoalest part of a patch of rocky pinnacles within a radius from it of about 200 feet, and with varying depth over them of from 3 to 8 fathoms. Vessels should not pass between this obstruction and the mainland to the north-eastward.

ALLEGED RUDENESS BY A FOREIGNER.

THE *Kokkai* publishes a somewhat mysterious paragraph to the effect that a certain foreigner pushed a Japanese lady violently out of the way during the performance of the *Miyako Odori* at Kyoto. A Mr. E. R. Burton, or Barton, an Englishman, is mentioned as having witnessed and reported the act of rudeness, and the *Kokkai* concludes its paragraph with these words:—"Foreigners that complain of Japanese men's treating foreign ladies discourteously, had better remember this incident well." We should be pleased to know what the *Kokkai* means by such an ominous utterance. The Tokyo journal seems to us to have been betrayed into an exhibition of childish and unreasonable petulance. It surely can not imagine that rudeness to a Japanese lady on the part of a foreigner would ever be condoned by his countrymen. If anything of the kind occurred during the recent festivities in Kyoto, it must have been under very exceptional circumstances, and its condemnation by all respectable foreigners goes without saying. To tell the truth, in so far as the polite treatment of ladies by gentlemen is concerned, the Japanese have everything to learn from Europeans and Americans, and nothing to teach them. Some people hold, indeed, that the treatment of women in the West is altogether extravagant, and that Oriental customs are, in that respect, much more rational than Occidental. We say nothing as to that, but we do say that, if the mere question of courteous and considerate treatment be under consideration, the advantage is all on the foreign side. Does it ever occur to a Japanese gentleman—we speak of ordinary folks—to make way for a lady at a railway wicket; or to offer her his seat in a tram-car or train; or to open or shut a window for her; or to consult her convenience before lighting a cigar in a railway carriage; or to perform for her any of the thousand little services that an educated foreigner delights to render to women of any nation and every social status? Instead of penning inflammatory paragraphs designed to suggest that Japanese ladies are rudely treated by foreigners, and to incite a spirit of retaliation upon the Japanese side, the *Kokkai*, did it desire to be just, should point out that Japanese women of all classes receive at the hands of foreigners far more polite and deferential treatment than they receive at the hands of their own countrymen, and that if an instance of rudeness occurred in Kyoto, it must be regarded as a most rare exception to an admirable and, on the whole, sedulously observed rule.

COLONEL BARROW OF HONGKONG.

ON the eve of Colonel Barrow's departure from Hongkong a testimonial was presented to him in public meeting, as a mark of esteem. Colonel Barrow was first Commandant of the specially raised Hongkong Regiment, and the presentation took the form of two pieces of plate, one for the Colonel, the other for the Mess of the Regiment, and an illuminated address. Part of the address ran as follows:—"Sir,—When Her Majesty's Government decided upon the addition to the Garrison of Hongkong of a native Indian Regiment, to be permanently stationed here, you were specially selected by the Military Authorities for the responsible duty of raising that Regiment and, as its first Commandant, of giving it such an organisation and bringing it under such discipline that it should be worthy to take its place in the field, or, in the camp, with the bravest and best of Her Majesty's Regiments. Your great military experience, your tact and skill in the management of men, and your extensive knowledge of the native races and languages of India have enabled you, with the valuable assist-

ance of the Officers associated with you, to perform the task imposed upon you with very great success, and, to-day, the Hongkong Regiment is as fine a body of men and as soldierly as any officer need wish to command, or any General desire to see in his division or brigade.'

A RUMOUR FROM CANTON.

THE correspondent of the *China Mail* who resides in Canton, sent the following communication to that journal on the 23rd of October:—A report has reached me that a scheme is being got up for the capture of Canton. It is said that several thousand men from Wai Chau and Chiu Chau have the business in hand, but it is not known who are the leaders. A prominent official appealed to the Centry in the Western suburbs to aid in defending the city, and there is no doubt a lively stir in officialdom just at this time. The officer who appealed to the Centry was formerly a police officer on Shameen, and it was he who gave the information as reported.

LETTERS TO NEWSPAPERS.

THE British public, observes a contemporary, seems to have been seized with a letter-writing mania, or is it that while news is scarce, Editors disclose to the world a fact of which they are made conscious all the year round? "A Constant Reader" of *The Times*, writing on the 17th Sept., says.—"Under the heading of 'Journalistic Hospitality,' you published last November a letter calling attention to a record which had just been established through the appearance of 48 letters on 35 different subjects in a single issue of *The Times*. May I point out that you have now broken your own record, as *The Times* of to-day contains 52 letters on 35 different subjects?"

THE "WIELAND."

ALL other efforts to extinguish the fire on board the German steamer *Wieland* at Singapore having proved unavailing, she was scuttled on the 20th ult. Her repairs will cost an enormous sum of money. It may be remembered that she got ashore on the Brothers some months ago, and had to be repaired at Shanghai at a cost of \$8,000. The owner of the *Wieland* went down to Singapore by the *Karlsruhe* from Hongkong. About 1,500 tons of cargo have been taken out of her, sugar and hemp, which has been safely stowed away in godowns.

THE RECREATION OF VISCOUNT ENOMOTO.

AN interesting volume could be written on the recreation of great men, says the *Kobe Chronicle*, and the book could be well illustrated with the caricatures which vividly convey the intelligence to the world. Viscount Enomoto, the Minister of Agriculture and Commerce, a vernacular journal tells us, has bought a loom invented by a Japanese, and he refuses all visitors save those on official business, so that the great art and industry of weaving may not suffer by the interference of polite wasters of time.

CRICKET AT KOBE.

ON Saturday afternoon a game of Cricket was played in Kobe between teams armed respectively with bats and broomsticks. The latter had much the best of the encounter. The Bats went first to the wicket and scored 61, 12 of which were extras, for eight wickets—W. Braess 11 and Hellyer 12 were the only double-figure innings. Tate took five wickets. The Broomsticks made 91 for three wickets, Lucas knocking up 32, including 9 threes, and Duff not out 22. Tate playing a second innings as a substitute made 19, not out.

THE U.S.S. "CONCORD" ASHORE.

THE U.S.S. *Concord*, says the *N.-C. Daily News*, went ashore on Josshouse Spit when going down river on the morning of October 31st, while in company of the *Monocacy*. The *Monocacy* tried in vain to tow her off at high water; but, as was expected, the *Concord* floated the following tide when there was more water, and proceeded to Woosung.

THE ATTEMPTED INSURRECTION AT CANTON.

ACCORDING to the Hongkong papers, some five or six hundred coolies were induced to leave Hongkong to take part in the uprising at Canton,

by offers of good pay and clothing. The *Powan* also took up to Canton, unknown to her owners, a large number of revolvers and some ammunition, all neatly packed in five casks of cement. The arms were seized at Canton, and this apparently upset the arrangements of the rebels, and the coolies refused to go further in the matter. For a time the Canton magistracy were greatly alarmed.

AN ENGINEERING TRIUMPH.

THE new bridge over the Danube at Tchernavoda, in Roumania, which has been built at a cost of 34,000,000 francs (£1,360,000), was formally opened on the 26th September with great ceremony by the King of Roumania. The bridge with its approaches is 3,628 metres (nearly 4,000 yards) in length, and the highest point above the level of the river is 30 metres (about 95 ft.). The structure is regarded as one of the engineering triumphs of the century.

THE EMPEROR'S BIRTHDAY.

THE rain poured down incessantly in Yokohama on Sunday, completely putting a stop to the attempt at decorations started the previous evening. At noon-day a salute was fired by the war-ships in harbour, which include the *Aurora* (Austrian), *Bayard*, *Isly*, *Lion* (French), *Pamiat Azov*, *Bobr* (Russian), *Porpoise* (British), and *Musashi Kan* (Japanese).

THE "KUNGPAI" DISASTER.

IN addition to the body of the late Captain Soden of the *Kungpai*, those of Mr. Ljungloff, the chief officer, and Master Eben Clements have been recovered from the wreck. Captain Soden's body arrived in Shanghai by the *Fungshun* on the 1st November.

DISTRESSING OCCURRENCE.

ABOUT eight o'clock last evening a woman named Toki, a servant of a foreigner living on the Bluff, accidentally shot herself through the head, with fatal results.

SIR N. R. O'CONOR.

SIR NICHOLAS R. O'CONOR left Peking on Nov. 2nd for Shanghai en route for Europe.

THE following are the Raw Silk shippers per O. R. & N. Co.'s steamer *Mount Lebanon* for New York:—

Messrs. Otto Reimers & Co.....	50 Bales.
Messrs. Robison & Co.	20 Bales.
Total	70 Bales.

THE ELECTRIC GIRL.

We read in the *Yorodzu Choho* that the exposure of Miss Abbott's secret by the scientific experts of Tokyo has destroyed her chances of a successful exhibition in Osaka. She was on the point of concluding an agreement to visit the latter city when Professor Kano and Dr. Marumo took her in hand, and showed—so says the *Choho*—that a skilful application of muscle was her whole accomplishment. Thereat the Osaka enterprise had to be abandoned. What is it, we wonder, that has satisfied Japanese intelligence with regard to Miss Abbott. If the explanations given in the columns of the *Choho* and the *Hochi* are sufficient to convince any thinking person, his moral calibre must be of a special type.

THE IMPERIAL GARDEN PARTY.

It does not appear to be certain that the Imperial Garden Party will not take place this year, though the general impression is in that sense. Presumably the official announcement of His Imperial Highness Prince Kitashirakawa's death will be made to-day (4th), and so far as we can gather, the period of Court mourning will be only a week, thus ending on the 10th. Under any circumstances, the Garden Party would not have taken place before the 9th, and so far as the chrysanthemums are concerned, the 15th would not be too late. For the moment, therefore, nothing definite can be asserted.

THE QUEEN OF KOREA.

Much interest attaches to everything connected with the unfortunate lady, lately known as Queen of Korea. The following account of a first visit to Her Majesty, made by Dr. Annie E. Bunker, appears in the *Korean Repository* for October:—

During the visit of Mrs. H. G. Underwood and myself to Her Majesty on the 14th. of September, we saw the Queen Dowager and she gave us each a handsome gold-embroidered *chumoney* or purse. Our visit to Her Royal Highness was in the same place where some years ago I went to see the Queen. Many changes have come since then and the Queen now lives in a new building, beautifully lighted with electricity, in another part of the grounds. It is just nine years ago this fall since I was first, in company with Dr. H. N. Allen, the King's physician, called to visit Her Majesty the Queen. She had been ill for some time and they had sent to Dr. Allen for medicines. As there was no improvement in her condition the Doctor assured them that, in order to treat Her Majesty properly, she must be examined, and so the writer was called.

It was a lovely autumn day, when in the early afternoon, we started for the Palace in our sedan chairs, with our *keyso* (soldiers) running ahead and clearing the way. My heart was thumping vigorously, and I wondered how I would be received, half fearing the ordeal.

On our arrival at the outer side-gate of the palace wall, we had to get out of our chairs and walk quite a distance, about a quarter of a mile, I should judge, to the Reception Hall. As we neared the place we were met by Prince Min Young Ik whom I had met, and who, having travelled much, knew something of the customs of foreigners.

He showed us some of the beauties of the palace grounds and after our walk around the artificial lake, he escorted us to the waiting-room and there had us served with foreign food, Korean fruit, and nuts.

Soon a messenger dressed in court costume came for me and, Prince Min accompanying me, we started for the Audience Hall. We first crossed a large open court, which I noticed had large potted plants around three sides of it but not a spear of grass growing in it anywhere. Ascending a flight of broad stone steps, crossing the narrow verandah and stepping over a high door sill, I found that we were at one end of a long, wide hall, the floors of which were covered with the soft, beautiful, figured Korean matting which is such a fine article and so hard to obtain. At the farther end of the hall I saw a large number of Koreans, men, women, and young girls. I made my three bows as I advanced and then found myself in front of the company among whom I soon singled out Her Majesty, and for the rest of that visit I had eyes for no one but her. In later visits I learned to distinguish the gentlemen from the eunuchs, and also the ladies-in-waiting by their peculiar head-gear and their fine skirts of silk gauze. The immense chignons worn by these ladies are objects of wonder, not only as to size but also as to how the intricate windings and braidings of the glossy strands is accomplished. One evening while witnessing some of the delightful and peculiar posture-dancing done by the dancing girls at the palace, I asked one of them if her chignon was not heavy—"Oh, said she, it is very heavy and makes my head ache." These head dressings vary in shape; sometimes they are long and narrow and then again they have large lateral loops.

The Queen, beautifully dressed in silk gauze skirts, with strings of pearls in her raven locks, a lady, short of stature, with white skin, black eyes and black hair, greeted me most pleasantly. She had on no enormous head-dress, but only her own glistening locks twisted in a most becoming knot low down on her neck. She wears on the top of her forehead her Korean insignia of rank. All the ladies of the nobility wear a similar decoration, but of inferior quality and workmanship. To me the face of the Queen, especially when she smiles, is full of beauty. She is a superior woman and she impressed one as having a strong will and great force of character, with much kindness of heart. I have always received the kindest words and treatment from her and I have much admiration and great respect for her. After first asking if I were well, how old I was, how my parents were, if I had brothers and sisters, and how they were, she proceeded to tell me that they had been told by Dr. Allen of my arrival in Korea: that she was much pleased at my coming and hoped I would like the country. All of this conversation was carried on through an interpreter who stood, with his body bent double, back of a door where he could hear but not see.

Prince Min, who had been standing by, now had a chair brought for me and I noticed that back of Her Majesty there was a foreign couch. The Queen telling me to be seated, sat down on this couch and then came the medical part of the interview.

I had noticed that two gentlemen had seated themselves when the Queen sat and when I got up to leave, they with Her Majesty rose and returned my bows.

Prince Min conducted me back to the waiting-room and there I waited for Dr. Allen who was having an audience with His Majesty. When he returned I learned from him that both the King and Crown Prince had been present during my interview. I was very glad that I had not known who the gentlemen were, for I fear my composure would not have been even such as it was. After being served with more food and fruit we were each given a certain number of soldiers to accompany us home and also, as it was dark, lantern bearers. The sight of the Korean lantern with its outer covering of red and green silk gauze is very picturesque, and as we passed many a dusky head peeped out through opened doors and windows to see what it all meant. The empty dark streets with the dark low houses on either side, the lantern bearers of the Doctor's chair and of mine with the attendant soldiers carrying their rifles made a picture at once interesting and unique. In recent visits we are permitted to go through the large front gate into the grounds and right up to the waiting room door. Upon arriving here tea, coffee, and fruit are served and then we are called in to Her Majesty, who receives us in one of the smaller private apartments. The King and Crown Prince are always present. After the interview we are permitted to proceed home immediately.

KOREAN NEWS.

Concerning the ill-advised attempt to give the title of Emperor to the King of Korea, it is stated that, despite protests from the Ministers of Russia, France, and the United States, the Korean Cabinet were resolved to carry out the measure, when the ex-Japanese Minister, Viscount Miura, on the occasion of his farewell visit to the Cabinet on the 19th ultimo, recommended, among other things, that the assumption of the title be postponed. His advice was adopted, the period of postponement being three months. But soon after his departure from Seoul, the advocates of the measure again began to agitate for its immediate execution, and their success was such that the date was fixed for the 26th ultimo, extensive preparations being commenced for the celebration of the occasion in a fitting manner. Then again a strong remonstrance from the foreign Representatives compelled the Korean Ministry to bow to the inevitable. In order to save face, however, the ceremony was performed, so far as concerned the presentation of the Imperial title, but the king, in conformity with a preconcerted plan, graciously declined the honour on the ground of his own unworthiness.

The Korean Government's financial position is said to be desperate. The Minister President recently issued a notification to the different Departments of State, urging the utmost economy and the dismissal of all superfluous officials. In some Departments, it is believed that the official staff might be reduced to one half of the present number without causing any inconvenience. To ensure the payment of the land tax a stringent law was recently promulgated for the punishment of proprietors attempting to elude by dishonest means their obligations in that respect. To enforce the law, a number of revenue inspectors were appointed.

The number of Chinese merchants in Seoul is reported to be steadily increasing. They are said to be slowly but surely re-gaining their former commanding position. The Japanese settlement, on the other hand, shows signs of gradual decadence, a number of shops in the neighbourhood of the South Gate having been recently closed.

The report of the grant to an American firm of the privilege to work some mines in An-san in Phyong-an-do, was recently denied, but the *Chuo Shimbun's* correspondent states that it is true. It was originally alleged that the contract had been secretly concluded by the Court without any reference to the Cabinet. But the latest story is that the agreement was signed by the Minister of Agriculture and Commerce.

With the return to Japan of Messrs. Hoshi Toru, Saito Shuichiro, Okamoto Ryunosuke, Ishizuka Eizo, and a few others, there remain only a few Japanese in the service of the Korean Government. They are Police Inspector Takehisa, Adviser to the Police Board; Mr. Niwo, Adviser to the Finance Department; Mr. Yamada, Adviser to the Postal Bureau; and Dr. Sewaki, Honorary Sanitary Adviser to the Home Office. Mr. Takehisa is expected to return home in a short time.

The growing of ginseng has hitherto been a State monopoly. But the Korean Government is said to have abandoned the privilege, as its maintenance has not proved sufficiently lucrative. In future, private persons will be free to grow any quantity of the root, provided that they pay the prescribed duty. It is believed that this method will be more profitable to the State than the monopoly system.

The *Mezamashi Shimbun's* Ninsen correspondent states that a certain Russian, lately living in the Palace in Seoul in the character of a building contractor, was discovered to be a spy. He is said to have left Ninsen on board a Russian man-of-war. His name, so far as we can gather from its transliterated form seems to be Sabachin.

The Japanese colony at Ninsen is stated to be in a very prosperous condition, the population having already reached five thousand. It is thus nearly as large as the settlement at Fusan.

The construction of new houses is going on at various places. Some of the residents contemplate establishing an electric light company, with a capital of 20,000 yen. A license is said to have been already obtained from the Consul. The formal organization of the company will take place on the return of Mr. Nishiwaki, Manager of the branch office of the First National Bank, who is now absent in Japan.

Every steamer arriving from Japan used to bring from thirty to fifty new comers to Korea. But since the issue of the recent Imperial Ordinance restricting the passage of Japanese subjects to the peninsula, the number of new arrivals is said to have decreased to only three or four per steamer.

FORMOSA NEWS.

Fang-liao has hitherto been mentioned as the landing place of the half of the Second Division under the command of Lieutenant-General Baron Nogi. But according to the latest letters from correspondents accompanying the expedition, the place where the debarkation actually took place is called Banshirin, a little over half a mile north of Fang-liao. The bay is open to the south, while to the north it is surrounded by a lofty range of mountains, which constituted an effectual barrier against strong gales blowing from the north-east.

A little before dawn on the morning of the 11th ultimo, the transports, headed by the *Yayeyama Kan*, dropped anchor in the smooth waters of the bay. The *Yayeyama* at once landed a party of marines, who took possession of the village on shore without encountering any opposition and prepared the place for the reception of the troops. A company of infantry, the first among the troops of the expedition to land, came on shore at 7.50 a.m., and were at once ordered to proceed along the coast in the direction of Tang-kang. Half an hour later, two more companies were landed; one being instructed to take the route along the shore toward Fang-liao, while the other was despatched in the direction of Katongha, a small village two miles and a half inland to the north, which was a strategical point of great value. Thus secured on all sides against surprise by the enemy, the work of debarkation went on rapidly and without any hitch, so that all the troops, coolies, horses, and other accompaniments of the expedition, with the exception of a part of the provisions to be afterward discharged at Tang-kang and Takow, had been got ashore by six in the evening.

The Company that proceeded to Fang-liao found it already deserted by the enemy, about five hundred of whom had been stationed there. They had fallen back upon Katongha, where they made a desperate stand. The company that marched northward along the seashore, met a few hundreds of the Black Flags and volunteers, including some women, who were put to flight without much difficulty, part flying to Katongha. The garrison at the latter place, thus receiving a fresh addition, was swelled into a strong body of troops, more than a thousand in all. Protected by double lines of walls encircling the village and by a moat of considerable width that ran almost completely round the place, the garrison made a sturdy stand. The engagement that took place here need not be reproduced, as it has already been described by our own special correspondent. Mention may, however, be made of the heroic conduct of an extremely young officer. Among the parties that gallantly charged the insurgents, the one that showed the most dogged courage was led by Sub-Lieutenant Maruyama, a youth of twenty who had graduated at the Military College in March last. Wading through the muddy moat, he was the first to climb the wall, when just as he placed his foot on the top, he was shot through the left side of his stomach. Undaunted by the wound, he brandished his sword and called his men to come on, when another bullet pierced his abdomen. He fell from the wall, but was attempting instantly to rise, when a fragment of a shell fired by the insurgents carried off his right hand. He died the follow-

ing day. Of the six non-commissioned officers under him, five were wounded.

The bombardment of Takow has also been described by our own correspondent. We may refer to some papers found by the *Nichi Nichi's* correspondent at one of the forts there. The first was a letter addressed by Liu Yung-fu to his son, who had command of the troops at Takow. The Black Flag leader informed his son that the proposal of surrender sent to the Japanese was simply a device to gain time. "The Japanese army," continued the curious epistle, "has become irresolute and wavering upon hearing of our proposal for capitulation. Taking advantage of this state of things, it may be expected that the English and French fleets will come and sink the Japanese ships and kill the proud Japanese General. In that case, I have no doubt that it will be easy to accomplish the establishment of a Republic in this island. You will, therefore, do well to put forth your utmost exertions in the defence of your post. Whether his proposed surrender was really a ruse to gain time, or whether his proposition having been rejected, he hastened to explain away his conduct by disavowing any real desire to surrender, it is impossible to say. The insolent language in which his letters to the Japanese commanders were couched, seems to favour the idea that the thing was a ruse, but if so, it was a device to gain time not for completing military preparations but for effecting his escape.

A proclamation posted in the barracks at Takow enumerated the acts that would be punished with death. They were (1) cowardly flight before the enemy; (2) feigning sickness on the field of battle; (3) disobedience to the commands of officers on the field of battle; (4) all mutinous disturbances; (5) violation of women; (6) desertion; (7) divulging of military secrets; (8) theft of private property; (9) assault resulting in death; and (10) selling implements of war and stealing generally.

Concerning the progress of the Brigade that landed at Pau-tay-chi, the *Nichi Nichi Shimbun's* correspondent writes under date of the 19th ultimo, from a nameless village a little over twenty miles from Tainan. The detachment, that marched along the seashore, to which the correspondent was attached, is said to have been obliged to fight its way against very obstinate foes, especially on the 18th. A powerful body of insurgents, including an artillery corps, had been reported to be gathering in the vicinity of Oyato, and the above mentioned detachment under Colonel Sasaki proceeded to attack them on the morning of the 18th. As the correspondent does not attempt to give any idea of the topography of the battlefield, it is difficult to follow his descriptions of the fighting that ensued for twelve hours, from sunrise to sunset. That it was a pretty hard contest at some points, may be gathered from the fact that hand to hand encounters took place in the course of the day. In one of these, all the officers of the company were wounded. Sub-Lieutenant Unoki had his head gashed; while Sub-Lieutenant Kamada, fighting with several insurgents, had one of his ears nearly cut off. It is related that he tore off the ear and putting it into his pocket, rushed upon his assailants. Toward sunset, the field was cleared of the enemy, about 400 of whom had been cut down or shot. The total loss on the Japanese side was 2 killed and 20 wounded.

According to a telegram received by the Government on the 3rd instant, Governor-General Count Kabayama and suite entered Tainan on the 26th ultimo, receiving an enthusiastic welcome from the people all along the way. Not a single house is said to have been injured in the foreign settlement of Tainan and Anping. A few foreigners and some Chinese fled to Amoy together with Liu Yung-fu, but the rest of the people were peacefully engaged in their respective occupations. In consequence of the long interruption of communication with other places, the people in Tainan and its vicinity were suffering from scarcity of food. There was a project among them to petition for the sale of rice stored in the Government granaries. The Custom-houses at Anping and Takow

are open every day, and considerable income is obtained from that source. Civil administration offices have already been opened at Tainan, Anping, and Feng-shan. The message concluded by saying that things were in a very satisfactory condition.

It is reported that the Governor-General will probably return to Tokyo with the last batch of the Imperial Guards. There was an understanding between him and the Cabinet Ministers when he first left for the South, that after the subjugation of the insurgents, he should return home. But as yet no official report of his return has been received in Tokyo. The first batch of the Imperial Guards are expected to embark for home at Anping between the 7th and 10th inst., and the whole Division will be in Tokyo by the end of the month.

On the morning of the 22nd ultimo, the Japanese troops formed a ring round Tainan, exactly as had been planned at the outset. The correspondents say that the report of Liu Yung-fu's escape caused universal disappointment among the troops, and in marching toward the southern capital of the island it was easy to perceive that they moved comparatively listlessly.

When Major-General Yamaguchi's corps entered Tainan, the citizens came into the streets and burned incense. Each had a piece of paper on his breast, with an inscription intimating that he was a good and loyal subject of Japan. Baron Yamaguchi, who is distinguished for magnanimous chivalry, set the example to his troops of treating the inhabitants with indulgence and consideration. But as had been the case at all other places, the gentleness of the Japanese soldiery was soon mistaken for weakness, and the citizens became insolent to the troops. A large number of the Chinese houses in the city were marked as the property of certain English merchants. But this artifice was too crude to impose upon the Japanese, who, taught by the experience at Yingkow, made a searching inquiry and soon exposed the fraud.

The head-quarters of the Army would have been established in the Government Buildings, but the latter being in a state of great confusion, the house of a rich merchant, named Li, was requisitioned for the purpose. The establishment is described as large and extremely elegant, one of the correspondents declaring that the furniture and every other appointment are the best he has thus far seen in his travels during the late war in Manchuria and afterwards in Formosa. It is the same mansion that was used by the Black Flag leader as his head-quarters.

As to the mode in which Liu Yung-fu escaped to the continent, various rumours are current in Tainan. Some assert that he crossed the sea in a junk; others that he took passage on a British ship; and yet others that, leaving originally by a junk, he was picked up by a Chinese official steamer, one of two sent by the Viceroy of Fukien to carry him off.

MR. KANO AND THE "LITTLE ELECTRIC MAGNET."

On the strength of information obtained from Miss Abbott's manager, we stated, in our issue of yesterday, that Professor Kano employed unnecessary roughness in endeavouring to test the character of Miss Abbott's feats, and had persistently refused to comply with the conditions laid down by the performer. But it appears now that Miss Abbott's manager is somewhat confused as to the identity of the Japanese that have been "investigating" on the stage in the Kinki-kan. It may be, therefore, that we owe Mr. Kano an apology, so far as concerns the question of roughness or irregularity. But his statements, as published in the *Yorodsu Choho*, remain, and it was to these that we chiefly addressed ourselves. If Mr. Kano can prove his case, his demonstration will be received with much interest.

CURRENT TOPICS.

It is but natural that the rumour of frequent meetings between Marquis Ito and Count Okuma should attract widespread attention in political circles—Tuesdays's *Nichi Nichi* has the following note.—"Marquis Ito visited Count Okuma again on the 27th ultimo, to view the horticultural exposition held in the host's garden. After a walk through the garden, he was entertained at dinner by the Count, the only other guest present being Marquis Nabeshima, the former feudal lord of the host. No political significance seems to attach to the meeting. It may, however, be stated that the Count seemed extremely pleased to converse with his old friend the Premier."

The *Kokkai* of the same day contains the following characteristic note:—"According to a report of the political meteorological observatory, a big star was observed, on the night of the 3rd instant, to traverse the firmament from Takanawa to Waseda, where it danced about with another large star, as though they were two human beings met to hold a close conference." It is not necessary to explain the meaning of this allegorical note, Takanawa and Waseda being the places where Marquis Ito and Count Okuma respectively reside.

The delegates of the Opposition parties are waiting upon the Ministers of State to ascertain their views about the Korean question. Thus far these politicians have refrained from resorting to open agitation. Their idea seems to be that their object, to wit, the resignation of the Cabinet, may be more smoothly effected by personal interviews with the Ministers than by an appeal to public opinion. They have not yet been able to see the Premier. In reply to their note seeking an interview with him, the Marquis sent them word that he should be very glad to see them at five o'clock on the afternoon of the 3rd instant. Being, however, unable to wait on him that day, they called at his house the following morning, when, the Premier not being at home, they left word that they should call again at a certain date. The delegates that sought to speak with the Premier were Messrs. Haseba Junko, Taguchi Ukichi, Inukai Ki, Minoura Katsundo, and Ohigashi Gitetsu, all members of the House of Representatives. Should the result of their interview with Marquis Ito be unsatisfactory to them, they intend, it is said, to carry their demand for the Cabinet's resignation to the bar of public opinion.

The *Kokkai* states that Viscount Tani has of late twice visited Marquis Ito and offered him some advice in connection with a certain political affair. Our contemporary opines that the advice must have related to the desirability of the Cabinet's resignation, so that the Korean problem may be dealt with by their successors on a new and more advantageous basis.

Count Okuma now attracts a great deal of public attention. We are informed that he was recently visited by Count Goto and Oki. Nothing is known about the nature of the conversation that took place between the host and the guests. Count Okuma, however, is reported to have declared that the call was simply one of courtesy, and it is said that the conversation turned on horticulture and various social topics.

Another circumstance much talked of is the return of Count Matsukata to the Capital. He is regarded with keen interest because, in the event of a reorganization of the Government—whenever such an occurrence takes place—he is certain to obtain a prominent position. Among the Satsuma men, he is considered the most likely candidate for the post of Minister President. Further interest is imparted to his movements at the present moment by the very general notion that he is on intimate terms with Count Okuma. People go so far as to say that, when he resigned his office of Finance Minister, he acted at the instigation of the leader of the Progressionists. Whatever may be the exact degree of intimacy

between the two Counts, it seems partly certain that their relations are not such as to preclude the possibility of coöperation. We do not say that the ex-Minister of Finance's return to the Capital is connected with any political question. Neither do we intend to hint that Count Okuma is desirous of coöperating with him. Our meaning is simply that there is no apparent obstacle to a political union between the two statesmen.

While men are turning more and more attention to Count Okuma and his doings, there is also a rumour of Count Itagaki's either entering the Cabinet or receiving the appointment of a Privy Councillor. The Radical leader's nomination to a Ministerial post would, in the estimate of the public in general, be less surprising than the return of Count Okuma to power. But, so far as we know, there seems to be no foundation for anticipating either event, at any rate immediately. As to the rumour of Count Itagaki's probable appointment to a Privy Councillorship, the *Kokkai* has the following:—"It is reported that Count Itagaki will probably be appointed a Privy Councillor. When Marquis Ito's first visit to Count Okuma took place, and it began to be said that the Progressionist leader would enter the Cabinet, Mr. Kono Hironaka repeatedly visited Baron Ito Miyoji. This is a fact beyond doubt. On the occasion of one of these visits, Mr. Kono is believed to have told the Baron that, should circumstances make it impossible to appoint Count Itagaki either to a Ministerial post or to that of President of the Privy Council, an ordinary Privy Councillorship would suffice. To this the Secretary-General of the Cabinet is reported to have answered that, if such were the case, he would see what could be done. Some time has elapsed since then, and it is believed in certain quarters that the appointment will take place one of these days. But according to our information there is strong opposition in official circles to his appointment, so that the event is at best very uncertain."

The journalistic world of Tokyo is promised the addition of a new magazine, called *Toyo Keisai Shimpō* (Oriental Economic Intelligence). It is to be published three times a month, together with a monthly supplement of trade returns. The editor will be Mr. Machida Chuji, formerly on the staff of the *Choya Shimbun*, a writer well known in the field of journalism. It is stated that he will have the assistance of such men as Messrs. Oishi Masami, Komuchi Tomotsune, Suyenobe Michinari, Amano Tameyuki, Hirota Kenjiro, Kure Bunso, and Kimura Seishiro.

The impression gathers strength that a political change of some magnitude is impending. It will take the form, according to general belief, of the organization of a Coalition Cabinet comprising statesmen of the elder generation. The *Tokyo Asahi* writes on this subject as follows:—"The leaders of the Constitutional Reform, Progressionist, and other parties, are endeavouring to carry out their purpose by discussing the question of responsibility directly with the Ministers of State. Should this stratagem fail, they seem resolved to make an appeal to the nation. The conduct of these politicians, however, being in accordance with the common rule of party tactics, need cause no surprise. But the visits recently paid by various statesmen to Count Okuma belong to a different category, and may justly be taken as indicative of an impending change of some sort in the political world. From their mutual relations, in the past, it would seem very improbable that these statesmen should join hands. But a certain personage, deeming it lamentable that petty personal feuds and struggles should mar the present important crisis in the expansion of the Empire, has worked hard to bring about a reconciliation between the different statesmen. He began by converting certain business men to his way of thinking, and then, working in a very circuitous but skilful manner, he extended his campaign to the leading statesmen. The result was a meeting between Marquis Ito and Count Okuma. More recently, Count Oki was induced to act as a mediator between

Count Okuma and Count Goto, and the latter paid a visit to the former at his residence. Count Matsukata, too, has come back to the Capital. His ostensible object is to be present at the marriage of his son, but rumour asserts that he, too, is connected with the meditated political re-arrangement. Possibly the rumour is well founded. Count Itagaki, also, is reported to be about to be appointed to a Ministerial post. From these indications, the public infers that a *Koshin Naikaku* is on the point of organization. We do not vouch for the correctness of the inference, but it is certainly worth while to notice these rumours for what they may be worth."

The *Nichi Nichi* has the following significant note on the situation:—"We are informed that the recent meeting between Marquis Ito and Count Okuma had no political meaning and that the conversation turned on social and personal subjects only. Inquiries about the matter have elicited these facts:—Count Okuma, through the medium of a certain person, informed Marquis Ito of his wish for an opportunity to converse with the latter, and pleading his physical infirmity, begged the Premier to be so kind as to pay him a visit. Marquis Ito willingly complied with the request, and a few days afterwards the meeting took place. The Premier was entertained at dinner by the Count and Countess, and the conversation ran pleasantly on their past experiences. The following day, Countess Okuma called at the Premier's residence and left her husband's card. It was rumoured that Marquis Ito had promised to be present at Count Okuma's garden party on the 10th ultimo. But that was not true, for as a matter of fact he was not invited to it. However, the horticultural exposition held in the Count's garden on the 27th, was visited by Marquis Ito. The conversation that he afterwards had on that occasion with Count Okuma is known to Marquis Nabeshima alone, for when the Premier arrived, all the other visitors had already left, and the former feudal chief of Saga was the only person present at the meeting. Much importance is attached to the absence of other witnesses, and in political circles the conference is regarded as a political event. On the evening of the 3rd instant, Counts Goto and Oki visited Count Okuma, the conversation lasting for several hours. Concerning this meeting, some persons say that its object was to consult about a plan for taking converted measures on the question of Ministerial responsibility; while others think differently. Yesterday (6th), Marquis Ito visited Count Matsukata, who had returned to Tokyo on the preceding day. From these circumstances, it has begun to be rumoured that the formation of a "Cabinet of all the Talents" is under contemplation. It is not likely that such a project is on the *tapis*, for a *Koshin Naikaku* may take three months to organize, but would not require as many days to fall to the ground. The thing is ridiculous." The *Nichi Nichi*, as our readers perceive, is very confident.

THE NEW FRENCH CABINET.

But little further news has been received as to the composition of the new French Cabinet. We know only that M. Bourgeois is President of the Council, Mr. Doumer, Minister of Finance, and M. Bertholet, Minister of Foreign Affairs. We are not in a position to speak of the latter's qualifications for the important office to which he has been appointed, or of his proclivities, but the general opinion is that he can not be expected to make a very brilliant successor to M. Hanotaux.

THE INDEMNITY.

A telegram from Mr. Kato, Japanese Representative in London, says that the first instalment of the Chinese indemnity was duly paid over by the Chinese Minister on the forenoon of the 31st ultimo, and lodged in the Bank of England to the credit of the Japanese Government. The amount of the instalment was £8,225,245 1s. 10½d.

THE LIAOTUNG QUESTION.

The telegram received on the 31st ultimo direct from Peking to the effect that the second meeting of the Plenipotentiaries charged with the conduct of the Liaotung negotiation had taken place on the 30th ultimo, and that everything was expected to be settled satisfactorily at the next meeting, may be taken as finally confirming the news forwarded *via* London, in the same sense. We may conclude, therefore, that the Chinese Government have agreed to pay an indemnity of 30 million taels for the restoration of the Peninsula, and it is also fair to infer that some guarantee is given by China as to the future of the territory. With regard to the latter point, however, we can speak from conjecture only. The indemnity will doubtless be paid immediately, it being in the interest of all parties that this affair should be terminated as quickly as possible. Japan wants to withdraw her troops before winter sets in, and the three European Powers, are, of course, anxious to see their work achieved rapidly. China can pay the thirty million taels at once. Her Franco-Russian loan amounts to a hundred million taels, and the sum handed to Japan on the 31st ultimo, as the first installment of the war indemnity, being only fifty million taels, there remain fifty millions out of which the Liaotung re-purchase money can be defrayed. The Liaotung question having thus been disposed of, Korean affairs remain the one dark spot upon the horizon of the Far East.

SUSPENSIONS OF NEWSPAPERS.

The *Nippon* was suspended on the 2nd, and the *Chuo* on the 3rd instant, both on the ground of having published matter prejudicial to public peace and order. The *Nippon's* offence consisted in an editorial article severely criticizing the Government on account of the honours distributed in recognition of war services. The Ministers of State were accused of arrogating to themselves all the credit of the recent triumphs and basking in the favour of the Emperor, while the people were commanded to toil harder and pay more to the Treasury. "To speak more plainly," wrote this extremely violent journal, "the people were told that, since the result of the war had not been good they must labour and die, while the Ministers were entitled to be honoured with patents of nobility and decorations. What impression ought to be gathered by the people under the circumstances? Here is a stage on which are acting a troupe of players, all of merely medium stature. But some of them are singled out, extolled as great men, and covered with titles of nobility and other marks of honour. In this way, a special class is formed, disturbing the natural equality of the people. What should be the feeling of the people under these circumstances?" The *Nippon* also made ominous allusions to the reasons why, in spite of their conspicuous loyalty to the Imperial House, the Japanese people endured the rule of the usurping Shoguns for seven hundred years. It did not state the reasons, but left its readers to infer that the intolerable tyranny and despotism of the Imperial Court had forced its loyal subjects to acquiesce in the illegal yet milder administration of military usurpers, who allowed more freedom to the people and provided better protection for life and property. The love of freedom and equality being the most natural and powerful sentiment of the human mind, the Ministers were reminded that a limit would be reached if they over-taxed the patience and loyalty of the people.

The *Chuo's* suspension must have been caused by an article on Viscount Miura, in which, under the *nom-de-plume* of a fortune-teller, the writer tried to justify the recent tragedy in Seoul. Had not the Queen been removed in the nick of time, her conspiracy with the Northern Power, said the writer, would have brought a worse calamity upon Korea. There was no doubt, he added, that all necessary preparations had been completed by Russia for a *coup d'état*, when the catastrophe was averted by a counter movement on the part of the Japanese and the Koreans

friendly to them. Consequently the murder of the ambitious Queen was held up as an achievement for which Japan ought to be grateful.

PEKIN NEWS.

The first topic mentioned in the latest letter from Japanese correspondents in Peking, is the negotiation between Earl Li and Baron Hayashi with reference to the evacuation of Liaotung. Communications on this subject were first made to the Tsung-li Yamén on the morning of the 14th ultimo. In the afternoon of the same day, Earl Li called at the French Legation where he had a short conference with M. Gérard. He then proceeded to the German Legation, and leaving his card there, hastened to the Russian Legation, where he conversed with Count Cassini for an hour. Late in the afternoon of the following day, the Tsung-li Yamén replied to Baron Hayashi intimating the appointment of Li Hung-chang as China's sole Plenipotentiary to negotiate the Liaotung question. At the time these letters were written—the 8th ultimo or thereabouts—it was generally believed that the matter would be easily settled in two or three conferences between the Plenipotentiaries.

As to the new Treaty of Commerce and Navigation, the *Yiji's* correspondent states that the negotiations will not be brought to a conclusion in the course of the present year, but that the Spring will probably be somewhat advanced before signatures are affixed, there being various difficult points to settle.

With regard to Earl Li's political position, the same correspondent remarks that all sorts of contradictory rumours and theories are circulated; the latest story is very favourable to the great statesman. At present Minister Wong is apparently master of the situation, there being none among his colleagues that dares to contradict him. But his helplessness in dealing with foreign affairs is apparent to all, and he himself is aware of it; whereas the impossibility of dispensing with the services of Earl Li becomes daily more manifest to the Advisers of the Emperor. Under these circumstances, the ex-Viceroy's influence is said to be slowly but steadily reviving.

Official reports from the different Viceroys to the Throne are said to contain important news about the measures that are being taken for the improvement and increase of the troops in the provinces. General Chang Shun of Ki-rin speaks in high terms of the promising results of the instructions given to the Artillery Corps under him by three cadets that he some time ago took into his service. These cadets received their training from instructors employed by Li Hung-chang.

The *Kokumin Shimbun's* correspondent received, one evening, a visit from a certain Chinese official. When the conversation turned on the recent war, the mandarin volubly lamented the miseries caused to his countrymen by the war, particularly the hard lot of the official class who had been commanded to contribute thirty per cent. of their salaries toward the redemption of the loans contracted for the payment of the indemnity to Japan.

THE LIAOTUNG NEGOTIATION.

A telegram dated from Peking, at 6 p.m. on the 4th instant, says that the negotiations for the rendition of the Liaotung Peninsula were brought to a successful conclusion on that day, Japan's proposals having been accepted without alteration. It was expected that the signatures of the Plenipotentiaries would be appended in two or three days. This news has been forestalled, for our readers have been for some days in possession of the fact that although the negotiations had not yet terminated, their conclusion without hitch was certain. With the exception of the condition that China agrees to pay to Japan on account of the Peninsula an indemnity of thirty million taels, the terms of the agreement are not published.

A GREAT FRAUD DISCOVERED.

A great fraud has been discovered in connection with the supply of iron pipes by the Japan Iron Foundry for the Water-works of Tokyo. The President of the Company, Mr. Hamano Shigeru, M.P., who has made his name and fortune by successful speculations on the Rice Exchange, and several others concerned in the fraud, were arrested during the night of the 30th ultimo. Recently, the Board of Aldermen received several anonymous letters, calling their attention to fraudulent practices by the company, but these epistles being naturally regarded with suspicion, no notice was taken of them. A few days previously to the above mentioned arrests, however, a mechanic in the service of the company sought audience with the Aldermen, and his request being granted, he laid before them an astonishing tale about the dishonesty of Hamano and others. The man's statements seemed to have a basis of fact. Measures were at once taken to inquire into the matter, when it was found that the story was only too true. According to what we gather from accounts in the vernacular press, the fraud appears to have been carried out in the following manner:—The process of testing the capability of the pipes to bear the required degree of hydraulic pressure has always been conducted by official experts, acting on behalf of the Municipality, and the examination has been made in the factory itself. The numbers on the pipes successfully passing the test were registered by the official experts, and on their subsequent delivery at the Water-works Office, they were identified by means of these numbers. This process was faithfully carried out by the company until about May last. By that time the rejected pipes had amounted to a large number, and as the finances of the company were steadily going from bad to worse, Hamano and others yielded to the temptation of making fraudulent use of the rejected pipes. For that purpose, they caused the numbers on the pipes that had successfully passed the test to be filed off, and fastened on the rejected pipes by means of lead, in such manner as to elude detection unless under very close examination. The good pipes from which the numbers had thus been filed off, had different numbers put on them, and were again presented for the official test, as new articles. In this manner quantities of unqualified pipes were delivered since May last. There is no exact knowledge of the number of defective pipes thus supplied, but it is supposed that about one-fourth of 3,100 tons—the quantity supplied since May—represents the defective portion. What makes the matter worse is that a large number of these pipes have already been used on the trunk line between the reservoirs at Yodobashi and Hongo. They must be taken up and re-examined, which, besides involving considerable expense, will seriously retard the progress of the work. By this time the Municipality of Tokyo must bitterly regret that they adopted the romantic course of attempting to artificially foster a home industry, instead of obeying business principles, and getting the pipes from abroad, when all these difficulties would have been avoided. For our own part, we do not think that they had any right to make such experiments. The health of a million citizens depends, in great measure, upon the purity of their water supply, and in arranging for the construction of the works, no factor of uncertainty or possible delay should have been admitted by the City Council.

Since writing the above, we learn that, after the arrest of Hamano and others on the night of the 30th ult., circumstances came to light indicating that the assistant official experts, charged with the duty of testing the quality of the pipes, were concerned in the fraud. They were at once deprived of official rank and placed under arrest. Their names are Mikawa Debuto, Sano Kisaburo, and Takata Wataro. The work of testing the pipes was under the general superintendence of Mr. Kawakami Shinzaburo, an official expert of the Municipal Government, but practically it was entrusted to these assistants, Mr. Kawakami visiting the foundry occa-

sionally only. One of the mechanics in the employ of the company is said to have committed suicide immediately after the apprehension of Hamano and others.

As to the amount of loss inflicted upon the Municipality, it is as yet too early to make any accurate estimate. But from what has already been ascertained, it is computed that the damage will not be less than 50,000 yen, including the cost of digging up the pipes already laid and re-examining them. In connection with this loss, the Municipality is taking steps to institute a civil case. The property of the Company and that of Hamano have been attached. Besides the damages that will directly fall on it by its fraudulent practices, the Company has to pay an indemnity of 50,000 yen for breach of contract. This, therefore, will be the end of that ill-fated concern.

As to administrative responsibility in connection with the incident, an animated debate is expected at the next sitting of the Municipal Council. The city's administrative affairs in general are in the hands of the Board of Aldermen; but in the case of the Water-works, the action of the Board having been deemed perfunctory, the superintendence of the Works was entrusted to a Special Committee. Thus the responsibility appears to attach to this Committee, but there will doubtless be technical points sufficient to provoke lively discussion.

THE RETURN OF THE JAPANESE TROOPS.

It is expected that the Imperial Guards will return to Japan before the end of this month, and the Liaotung question having been satisfactorily settled, the troops in Manchuria will also be carried home without delay. The Government further intends, we believe, to remove, at an early date, the remaining forces now stationed in Korea, so that the transports available for service will be kept very busy within the next few weeks. There is no conceivable reason why Japan should keep troops in Korea—over and above a strong Legation guard at any rate—for tranquillity having been restored in the peninsula, the protection of the telegraph lines and other duties now devolving upon the Japanese soldiers may safely be left to the Korean Authorities. If Japan contemplated pursuing her reform programme in the peninsula by force, if necessary, there would be reason for the presence of her troops there, but since she has definitely abandoned that notion, if, indeed, she ever entertained it, the sooner she removes all ground for suspecting the integrity of her purpose, the better for the peace of the East. We have not, for our own part, the smallest faith in the prospects of Korean reform, unless some Power take the matter in hand firmly and resolutely, but whether Japan should be that Power, is another question. At all events, the preservation of the peninsula against foreign occupation being her prime object, there is no reason why she should spend blood and treasure, and invite serious complications by striving for ends that lie beyond the range of that object.

VISCOUNT MIURA.

The *N.-C. Daily News* vindicating the accuracy of its marvellous Korean correspondent, says with reference to the latter's account of the *coup d'état* in Seoul:—"Our correspondent did not go far enough; he did not venture to say, though it now appears to be admitted on all hands, that the murder of the Queen of Korea was actually planned and carried out by the Japanese Minister." We can assure our Shanghai contemporary that if the phrase "on all hands" is intended to include Japan, the statement is as false as it well could be. No one in Japan, so far as we have been able to gather, believes that Viscount Miura was in any way privy to the murder. The general idea is that this dreadful incident was never contemplated by the Japanese Minister or by any other Japanese official connected with the *coup d'état*.

HIS IMPERIAL HIGHNESS PRINCE KITASHIRAKAWA.

The Official announcement of His Imperial Highness Lieut.-General Prince Kitashirakawa's death was made on the 5th inst., the time given being 7.15 a.m. on that day. The special train from Yokosuka carrying the Prince's body was to have reached Tokyo at 12.45 a.m. but did not get in until 1.10 a.m. Her Imperial Highness Princess Tomiko, widow of the deceased, his two sons, Princes Tsunehisa and Narihisa, and his daughter, Princess Takeko, His Imperial Highness Prince Komatsu, and His Excellency Viscount Hijikata, Minister of the Imperial Household, proceeded to Yokosuka to meet the body and accompanied it to Tokyo. At Shimbashi the train was met by Viscount Ayanokoji, Viscount Kagawa, Viscount Takatsuji, and Viscount Tachibana, representatives of Their Imperial Majesties the Emperor, the Empress, the Empress Dowager, and the Prince Imperial, respectively; by representatives of the Nobility, by the Ministers of State, and other high officials, numbering in all several hundreds. The Prince's body was carried on a couch of pure white pine, about ten feet long, covered with golden brocade. It was accompanied by Major Samoto, Chief of Staff of the Imperial Guards, who had come with the remains from Formosa, and a company of the Guards were drawn up at the Shimbashi terminus. The couch was at once carried by the Guards into the official residence of the Minister of State for the Navy. The funeral is fixed for the 10th instant, and the Court mourning will be for 3 days, commencing from the 5th. The mourning will therefore conclude on the 7th. During its continuance all dancing, musical, and theatrical performances will be interdicted throughout the Empire. The restriction will hold good in Tokyo on the day of the funeral also. An Imperial Ordinance in the above sense has been issued.

DECORATIONS TO FOREIGNERS.

The *Official Gazette* of the 5th instant announces that His Majesty the Emperor has been pleased to confer the following decorations:—

- Mr. H. W. Denison, Legal Adviser to the Foreign Office, the First Class of the Sacred Treasure.
- Mr. D. W. Stevens, Foreign Secretary of the Foreign Office, the Second Class of the Sacred Treasure.
- Mr. J. F. Bandinel, Acting Japanese Consul at Newchwang, the Fourth Class of the Sacred Treasure.
- Mr. W. H. Stone, Foreign Secretary of the Department of Communications, the Second Class of the Sacred Treasure.
- Mr. J. Henningsen, General Manager of the Great Northern Telegraph Company, the Second Class of the Sacred Treasure.
- Mr. C. C. Sonne, Engineer and Electrician of the Great Northern Telegraph Company, Fifth Class of the Sacred Treasure.
- Mr. E. Suenson, Commanding the Cable steamer *Store Nordiska*, Fifth Class of the Sacred Treasure.

We offer these gentlemen our congratulations upon their well-earned distinctions. Mr. Denison's eminent services are worthy of any honours that the Japanese Government has to bestow upon him. He now enjoys the distinction of being one of the two only foreign employés of Japan decorated with the First Class of a Japanese Order, M. Boissonade de Fontarabie being the other. Mr. D. W. Stevens, Foreign Secretary of the Japanese Legation in Washington, is one of this empire's ablest servants, and it is well known that he distinguished himself eminently in connection with Treaty Revision. Mr. W. H. Stone, Foreign Secretary of the Department of Communications, did work of the highest class during the war, and was ably assisted by Messrs. Henningsen, Sonne, and Suenson. The three last named are Danes, Messrs. Denison and Stevens are Americans, and Mr. Stone is a British subject.

A TRIBUTE TO THE LATE ADMIRAL TING.

Mr. Ooka Tsutomu, a writer on the staff of the *Chuo Shimbun*, has just published a handsome album containing facsimile reproductions of the late Admiral Ting's letters to Vice-Admiral Ito in connection with the surrender at Weihaiwei, and to the late General Tsoy, who had the command of the Chinese army on shore at the same place, and who killed himself at Liukuntau after the fall of the forts on the mainland. Besides these letters, the album contains a preface by Vice-Admiral Viscount Ito, a short but extremely well written sketch, and a very good portrait of the great Chinese Admiral.

Viscount Ito pays the following tribute to the memory of his honoured adversary:—"It is scarcely necessary for me to bear witness to the fact that intense solicitude for the lives and safety of the men under his charge was the sole motive that prompted the late Admiral Ting to surrender. The noble spirit of humanity and chivalry displayed by him moves our hearts and commands our most profound admiration. What a contrast to the cowardly and execrable conduct of his friend, Tsoy! A perusal of the letters preserved in the present volume, enables us to gather some idea of the attention to details and sound judgment that characterized the man, and did not desert him even in the hour of his tragic end. In him, indeed, we find some qualities akin to those of the great soldiers of former ages."

Mr. Ooka speaks of the Admiral in the following strain:—"He was a lively and intelligent man, distinguished alike for forethought and decision. He had the rare art of endearing himself to, and thoroughly controlling, the men under his charge. A touching and characteristic story is told about him. When our torpedo boats attacked the Chinese warships at Wei-hai-wei, No. 8 had the misfortune to founder, and the dead bodies of a few of its crew were picked up at Liukuntau. Admiral Ting ordered the corpses to be buried on the island with due attention, remarking that, although they were his enemies, their loyalty to their Emperor deserved honourable treatment at his hands. Death is easy to attain; it is within the reach of every person of the meanest sort. But to die an honourable death like a true man, is not to be expected from an ordinary mortal. The last days of Admiral Ting well became the true soldier that he was." Then alluding to the very sympathetic Edict issued by the Chinese Emperor on the occasion of the death of the cowardly General Tsoy, Mr. Ooka concludes as follows:—"Such Imperial praise was bestowed on a man like Tsoy, while in the case of Admiral Ting, not only was praise withheld, but high displeasure was proclaimed against him even after his heroic death! Who can reflect on these things without being moved to tears of sympathy for the unfortunate soldier?"

It is, indeed, a significant commentary on the most signal event of the late war that the memory of the greatest Chinese hero should be more cherished in Japan than in the country for which he sacrificed his life.

THE TOKYO IRON FOUNDRY CASE.

The Tokyo Municipal Council met on the 4th instant, to consider the question of instituting a civil suit against the Tokyo Iron Foundry Company. Mr. Kusumoto, M.P., President, was in the chair. A stormy debate ensued, the principal speakers being Messrs. Kojima Kanzo, Koizuka Ryu, M.P., Sakuma Teiichi, and a few others. Governor Miura, as Mayor of the City, briefly explained the circumstances that had led to the convocation of the meeting; and the origin and progress of the fraud were more fully reported by Mr. Suyeyoshi Tadaharu, M.P., a member of the Waterworks Standing Committee. According to his statement, the Committee received anonymous letters on the 27th of August and the 4th of September, alleging certain dishonest practices on the part of the Iron Foundry Company. The Committee immediately brought

the matter to the notice of the Board of Aldermen, who did not attach any importance to these documents and declared that, as the pipes were all subjected to a rigid system of testing, it was absolutely impossible that any fraud should be practised by the Company. Thereupon, vehement attacks were made upon the neglect of duty by the Board of Aldermen and the Mayors. The proposal for the institution of a civil suit against the Company was voted unanimously. A Committee of ten members was then elected to investigate the conduct of the Board of Aldermen and the Waterworks Standing Committee. The voting resulted in the election of Messrs. Kojima Kango, Koizuka Ryu, Sakuma Teiichi, Hasegawa Tai, Yoshino Seikei, and so forth. It was also decided to confiscate the security held in custody for the Company.

The *Fiji Shimpō* states that a similar fraud on the part of the Company was detected some time ago by the official experts charged with the duty of testing the pipes. On that occasion, an apology was made by the Company, the whole blame being laid on a certain employé in its service; and the experts did not think it necessary to report the matter to their superiors. These experts, as already stated, are now under arrest, as it has been discovered that they were subsequently concerned in the fraud.

The case has created a certain amount of excitement among frequenters of the Rice and Stock Exchanges in Tokyo. Hamano, the principal prisoner, is one of the most daring speculators in rice; while Mr. Amenomiya Keijiro, who is one of the largest shareholders of the Company, is equally well known as a speculator in stocks. Great fears are entertained that the progress of the case may involve him too. It is, further, vaguely reported that some well known persons in Tokyo may also be compromised. Indeed, all sorts of rumours are circulated.

THE HORSE-BREEDING INVESTIGATION COUNCIL.

The Horse Breeding Investigation Council's first session came to a close on the 29th ultimo. The following items were decided during the session:—

First.—The standards to be aimed at should be as follow:

A.—Riding Horses—height, from 4 *shaku* 8 *sun* to 5 *shaku*; and weight, from 90 to 110 *kwamme*.

B.—Horses for Draught—height, from 4 *shaku* 8 *sun* to 5 *shaku* 2 *sun*; and weight, from 100 to 130 *kwamme*.

C.—Pack Horses—height, from 4 *shaku* 5 *sun* to 4 *shaku* 7 *sun*; and weight, from 70 to 100 *kwamme*.

Secondly.—From two to four breeding pastures should be established in the O-u district and in Kyushu. Breeding stations should be established at from ten to twenty places in various parts of the country. Branch stations should be temporarily established at convenient places during the season of crossing.

Thirdly.—Breeding horses should be selected from among the pure Japanese, the half-bred, and the Arabian races, with a view to the production of a race specially suited to the requirements of the country. English pure blooded horses and American trotters should also be imported to meet special demands.

Fourthly.—Regulations for the inspection of breeding horses should be enacted.

Fifthly.—For the encouragement of the breeding business, competitive expositions should be frequently held and rewards given to deserving breeders by the Minister of Agriculture and Commerce.

Besides the above mentioned items, the Council had been asked to express its views on the subject of organizing horse-breeders guilds. But the discussion of this question was reserved to a future session, as the investigations of a special committee entrusted with the duty of collecting information had not yet been brought to a conclusion.

THE LATE PRINCE KITASHIRAKAWA.

The *Fiji Shimpō*, in a powerfully written article, urges that in the case of His Imperial Highness the late Prince Kitashirakawa, no reason whatever exists for observing the custom of deferring the official intimation of death until the body has reached the Palace of the deceased. In time of war, when the death of a member of the Imperial House, holding high rank in the Army and Navy, might affect the spirit of the military or the nation, it may be wise that the official announcement should represent such an one as dying quietly in his own residence. That was done in the case of H.I.H. the late Prince Arisugawa, who contracted his fatal malady at Hiroshima, died at Suma in Banshu, and was officially represented as having expired in his Tokyo Palace, the intimation being delayed until the body had been carried to the capital. A similar course is evidently contemplated with regard to H.I.H. Lieut.-General Prince Kitashirakawa, who died on the 26th ultimo in Formosa, but remains officially alive until to-day (14th instant), when the corpse is to be carried from Yokosuka to Tokyo by train. The suppression of the rebellion in Formosa having been completed, there can be no objection whatever to publicly announcing the truth about His Imperial Highness' death. On the contrary, the fact that he expired in the active discharge of arduous military duties and after months of active service in the field, is an honour to himself as well as to his country, and should be faithfully recorded in the pages of history. Therefore, the *Fiji Shimpō*, defying all official reticence, publishes in large capitals the fact that His Imperial Highness Prince Kitashirakawa died on campaign in Formosa on the 26th of October.

His Majesty the Emperor has been pleased to confer on the late Prince the Grand Collar of the Chrysanthemum and other distinctions.

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Anping Oct. 21st, 1895.

The van of General Nogi's Army advanced to within a few miles of Anping last evening without encountering any enemy on the way. It is a mystery how the Chinese troops retreated so quickly. The Admiral then decided to land a force of marines in the morning from the four men-of-war that were already near the port. At 5 a.m. the *Naniwa*, *Akitsushima*, and *Yoshino* took a circular course which brought them very close to the fort, but the Black Flags did not fire upon them. The landing force were then assembled and approached the shore, but were fired upon from the fort, which they answered with the small quick-firing guns mounted in the bows of their boats. The *Naniwa* and *Saiyū* then approached and fired a few shots, which silenced the Chinese forts, the Black Flags all retreating towards Tainanfoo.

The foreign residents were on board an English gunboat, and their property is undamaged. One German and two English men-of-war witnessed the landing, and at 9 a.m. the English gunboat *Twined* arrived from Takow. General Nogi's main army arrived to-day and Tainanfoo was occupied. It was the intention to make the attack on Anping and Tainanfoo on the 23rd, but as the Chinese would not fire on the Japanese men-of-war when they approached this morning, the latter were forced to take charge. Thus it was that the brave (?) Black Flags fought, "Resisting to the last."

Five thousand Black Flags, who had been without food for 24 hours, have surrendered, and the great problem now is how to feed them. They will be sent across to the mainland as soon as possible. The only loss of life to-day was four Chinese.

JAPANESE SHIPPING BEFORE AND AFTER THE WAR.

The *Kokumin Shimbun* publishes full and valuable statistics on the above subject, prepared by Mr. Tanaka, the Vice-President of an Osaka Shipbuilding Company, of which the following is a translation:—

To meet the demand caused by the war Japan's merchant fleet was increased by 87 vessels, with a tonnage of 132,963, between June 30th, 1894, and June 30th, 1895. This was an increase of 67 per cent. on the total number of ships in use before the war. The rate of increase prior to the year 1894 was 12 per cent. per annum. At the close of 1886 Japan possessed 227 ships, with a tonnage of 92,398. In December, 1893, her fleet had increased to 400 vessels the tonnage to 169,485. The subjoined table gives a minute account of the number, size, and weight of the ships in use before and after the war:—

TABLE I.

Class of ship.	May 31st, 1894.		June 30th, 1894.		Increase.	
	No. of ships.	Total tonnage.	No. of ships.	Total tonnage.	No. of ships.	Total tonnage.
Under 200 tons	227	21,620.40	255	24,304.67	28	2,684.27
Over 200 & under 500 tons	92	31,180.09	100	33,031.34	8	2,851.25
Over 500 & under 1,000 tons	37	24,608.16	40	26,864.57	3	2,256.41
Over 1,000 and under 2,000 tons	43	60,688.45	53	77,836.46	10	17,148.01
Over 2,000 & under 3,000 tons	14	34,932.72	41	102,753.60	27	67,820.88
Over 3,000 tons	3	9,639.30	14	49,833.53	11	40,204.23
Total	416	181,659.62	503	314,623.17	87	132,963.55

TABLE II.

This table shows the increase of ships during seven years before the war:—

Class of ship.	Dec. 31st, 1886.		Dec. 31st, 1893.		Increase.	
	No. of ships.	Total tonnage.	No. of ships.	Total tonnage.	No. of ships.	Total tonnage.
Under 200 tons	136	13,381.00	220	21,020.00	84	7,639.00
Over 200 & under 500 tons	43	13,566.00	88	28,684.45	45	15,118.45
Over 500 & under 1,000 tons	19	13,660.00	36	24,032.85	17	10,372.85
Over 1,000 tons & under 2,000 tons	30	28,143.00	43	61,975.43	13	33,832.43
Over 2,000 tons & under 3,000 tons	10	23,648.00	11	27,284.04	1	3,636.04
Over 3,000 tons	—	—	2	6,588.05	2	6,588.05
Total	237	92,398.00	400	169,485.73	163	77,087.73

From the first of these tables it appears that the large increase of ships caused by the war was confined to vessels of over 2,000 tons. Table II. shows that Japan's normal demand is for vessels ranging from 200 to 1,000 tons. While there is need of these vessels increasing at the rate of 16 per cent. per annum, since the commencement of the war the rate has been reduced to 8 and 9 per cent. per annum. It is only ships ranging between 1,000 and 2,000 tons that show an increase of 22 per cent. Japan's need of a large supply of small vessels has been increased by the war. In many of the bays where merchant vessels will be required to go in both China and Formosa the water is shallow and will only accommodate vessels of light draught. The war has saddled her with a large number of big ships and the great question to be settled now is what to do with these vessels. The number of vessels of 2,000 tons purchased since June, 1894, is 40, with a tonnage of 112,390. Most of these ships are over 20 years old. Only 15 of the number are supplied with new machinery. It is evident that these vessels are not good enough to be used for the opening of new lines of transport and traffic and are more in number than are required for the home coasting trade. The number of ships of over 200 tons whose age is over 20 years is 14, with a tonnage of 37,410. Those ranging between 500 tons and 2,000 that have reached that age number 30, with a tonnage of 30,636. Even if some of the worst of these vessels were laid up or taken to pieces and their machinery and fittings used for other ships the remaining number would exceed the requirements of the nation. It will be a source of deep regret if the fact of our possessing a larger number of big ships than are required should be a means of interfering with the building of small vessels, in response to the ever growing demand, proofs of the existence of which have been furnished in this paper.

NEW SOUTH WALES AND JAPAN.

The debate that took place in the Legislative Assembly of New South Wales, on the 11th of September, with reference to the advisability of that Colony's entering into treaty relations with Japan, showed that the Government of the Colony has no very clear notion of the problem it was asked to consider. On the 28th of August the following question had been asked in the House:—

What action has been taken by the Government in respect to the commercial treaty entered into between Great Britain and Japan last year establishing reciprocal trade relations between the countries named and their dependencies and possessions?

To this question the Colonial Secretary replied:—

This treaty was entered into on the 16th July, 1894, and contains a provision to the effect that certain colonies named, New South Wales being one, could come within the operation of the treaty upon notice given within two years from the date of exchange of ratifications. This Government does not propose to take any steps to bring New South Wales within the operation of the treaty. I may point out that those countries joining in the treaty with Japan engage that the Japanese shall have full liberty to enter, travel, or reside therein.

Nothing could have been clearer than that, at the time of giving the above answer, the Government of New South Wales had made up its mind not to bring the Colony within the scope of the Anglo-Japanese Treaty. But the members of the Legislative Assembly were not satisfied with that off-hand method of disposing of the matter. On the 11th of September, the Hon. A. Brown moved the adjournment of the House for the purpose of discussing the commercial treaty with Japan, and in the course of the ensuing debate, the Government seems to have seen the necessity of changing front, for the Colonial Secretary stated that the matter was still under consideration. His short speech is worth quoting:—

In the hope that what little I have to say will prevent any further time being taken upon this subject, I take an early opportunity of answering the hon. member, Mr. A. Brown. I may tell him at once that no decision has been conveyed either to the English Government, or to Japanese Government, that the matter has been and is still under consideration; and I am afraid some little time yet will have to be occupied in considering it in the most careful manner. The hon. member is quite right when he says that this is the first time that what you may call a question of foreign policy, has ever been brought before the colonial governments. He is also quite right in saying that it bristles with advantages; but, on the other hand, there are some very dangerous clauses in it. If we once enter into this treaty, we shall be compelled to stick to it. What we are endeavouring to do is to so manage matters that we shall get the benefit without the disadvantages. I can only say that as soon as anything is done definitely by this colony it will be communicated to the House. So far as the Cabinet is concerned, I can give the same answer as the Colonial Secretary gave in the other House, and that is that at present we cannot see our way to accept this treaty exactly as it stands; but nothing absolutely definite has been done. It is a matter which requires the greatest possible care. Once agree to admit the Japanese as they please, and we shall have them doing as was done in Honolulu. There are more Japanese residents there than white people. These people do not go there as emigrants, but they are brought down in shiploads as slaves. One of the greatest objections to the sending away of these people in hordes like this is the Emperor of Japan himself. The communications which the Queensland Government had with the Emperor of Japan show that the Japanese Government have expressly stated that they have no wish to see their people leave their own country, and come here in mobs, as they have been doing in regard to Fiji and Honolulu. Hon. members must see that it would not be at all politic for me to give forth to the whole world what consideration we are giving to the different parts of this treaty. What we are endeavouring to do is to get as much good from it as we can, to eliminate from it the clauses known to be objectionable, and to obtain all the advantages without the evils. The hon. member, Mr. A. Brown, may accept assurance that nothing has been definitely done, either with the British Government or the Japanese Government. No definite conclusion has been arrived at. I can only repeat that we cannot see our way to accept the treaty word for word as it at present stands. That is the answer given by the Colonial Secretary; and it is the explanation given by me to-night. The moment anything is done, it will within a few hours be communicated to the House, and nothing will be kept back.

Mr. Want's ideas about Japanese emigration to Hawaii require a great deal of correction. He entertains the extraordinary notion that the Japanese proceeding to Hawaii under contract are slaves, and that the Emperor of Japan himself is "one of the greatest objectors to this sending away of his people in hordes." But in point of fact the so-called "slaves" are men that eagerly seek the employment offered to them in Hawaii, where they live comfortably, are not over-worked, and save large sums of money; while, so far from the Emperor's being opposed

to the business, it was inaugurated with the consent of His Majesty's Government, and all the affairs of the emigrants are strictly regulated by a convention between Japan and Hawaii.

THE PRISONERS IN THE KOREAN CASE.

As already reported by telegraph, Secretary Sugimura, Consular Attaché Horiguchi, Police Sergeant Hagiwara, and seven constables, who arrived at Ujina on the 20th ult., were arrested in the same manner as the preceding batches of deportees had been. One of the constables, Watanabe Takajiro, is said to speak Korean as well as a native. His wife is a Korean, by whom he has a little boy. Watanabe being a favourite of the Tai Wön-kun, the latter stood god-father to his son.

The examination of the prisoners is daily going on at the Local Court in Hiroshima. The number of accused has increased to nearly fifty. It was at first reported that they were not allowed to receive any visitors, but that proves to have been a mistake: they are permitted to see any visitor provided that, in doing so, they observe the regulations. It was not the officials that prohibited the admission of visitors: the prisoners themselves declined to meet any one.

As to Viscount Miura and a few others, it is stated that they will be admitted to bail. In prison, the Viscount is said to devote his time to religious meditation according to the orthodox formulae of the *Zen* sect, of which he is a fervent disciple.

With regard to the military prisoners, their number has been increased to eight in all by the arrival of Major Umayabara and officers under him, namely five Captains and a Lieutenant.

CHINA'S PAYMENTS.

On the 31st ultimo, Japan received from China a sum in sterling equivalent to 74,152,444 *yen*, at the present rate of exchange. In addition, she is to receive, almost immediately, another sum of thirty million taels, or *yen* 44,491,466—at the same rate of exchange—on account of the Liaotung Peninsula. Thus she will have standing to her credit in the Bank of England a total amount of 118,643,910 *yen*. We know nothing as yet with regard to the disposal of this money, whether it will be brought to Japan in the form of specie, or kept in London to meet engagements arising out of the war or connected with the proposed increase of the national armament. It has been stated, we observe, that the question of exchange assumes much importance in such a conjuncture, since a difference of a half-penny in the sterling value of the *yen* involves a sum of over two million *yen*. But of course that is misleading. The price of the *yen* could not have anything to do with the matter unless the money were to be passed through the ordinary channels of trade transit, which is obviously impossible. The gold price of silver, however, may prove of great importance. For, what China was required to pay—adding the Liaotung money—was 46,065,600,000 grains of pure silver, and that amount, being converted into sterling at the present market rate, produces £13,160,392, approximately. But if, when the Government decides to ship the specie for the East, gold be found to have appreciated to the figure at which it stood two months ago, the quantity of silver obtained by selling the sterling will be very much greater than the quantity received from China. Thus, if gold were to appreciate to the point at which the silver *yen* represents 2s. 1½d., and if Japan could sell her 13½ million sovereigns at that price, her gain would be 2,500 million grains of silver, approximately. These are mere conjectures, but they serve to demonstrate the difficult character of the financial problem that Japan's statesmen have now to consider in handling the indemnity. The Cabinet in Tokyo is in the position to make a huge speculation, with results of considerable moment to the country. The price of a battle-ship may be very easily lost or won over the business.

CHINESE NEWS.

The celebrated Wū Ta-cheng, another of Earl Li's protégés, has become an object of Imperial displeasure. He has been deprived of his post as Governor of Hunan, and ordered to betake himself to his provincial home, without proceeding to Peking to await a new appointment. Wu's silly bombast when he assumed command of the troops at Old Newchang, and his subsequent paltry performances, justify this measure.

An excellent story comes from Peking. A leading member of the Tsung-li Yamén, evidently the great Wong, who is said to owe his position to his anti-foreign proclivities, found, on assuming office, that it was one thing to abuse the foreigner verbally and another to deal with him practically. Sir Nicholas O'Connor proved specially disturbing, for he actually pounded the table under the serene Mandarin's nose. The latter complained to London about this sledge-hammer diplomacy, whereupon the Marquis of Salisbury replied that Wong had better attend to Sir Nicholas, or he, the Marquis, would come out and do the table-pounding himself.

Touching the dispute about the "power behind the throne" that procured the degradation of the ex-Viceroy of Szechuan and his perpetual removal from office, we find the following in the *North China Daily News'* Peking correspondence:—

What are the real facts of the case? The Tsung-li Yamén positively refused to degrade Liu Ping-chang. The ultimatum was tabled before the whole Yamén in presence of the two Princes, the ex-Viceroy Li, and Ministers on Thursday, the 26th of September. The conference lasted several hours. They were given four days in which to declare their mind, and fourteen days within which the edict should be issued, failing which the case would be placed in the hands of the British Admiral. On Sunday evening, 29th September, just on the expiry of the fourth day, the edict was issued, and the government felt that its terms would certainly be satisfactory to the British people and British Minister. This is the whole affair and the dates of the ultimatum and the appearance of the edict should clear up this dispute. France's action, it is rumoured, consisted in agreeing to the Viceroy being punished but leaving it to the Chinese government to decide the nature of that punishment. But the British Minister surely had the right not only to demand a punishment but a proper punishment, and indicate a punishment that should be inflicted so as to satisfy the claims of Great Britain. The second edict punishing the Szechuan officials under the Viceroy implicated in the riots is expected to be issued this week. When the American Commission, which has already started, reaches Szechuan, say some two months hence, they will find the whole question settled and the guilty officials punished and dismissed from office. There will be nothing left for them to do. The British Minister has insisted upon the indemnity being levied upon the province and not paid out of the Maritime Customs or by the Empire as a whole. To this the Yamén has agreed. It might naturally be expected that this is exactly what the Chinese themselves would do. It goes therefore without saying the chances are that Liu Ping-chang will have himself the piper to pay.

It is explained that the recent discussion about the weight of the tael for the purposes of the Chinese indemnity, involved a very considerable issue. Two definitions of the weight are given, one in Williams' *Commercial Guide*, where the tael is set down as 579.84 grains of silver; the other in the tables of the Imperial Customs, where the weight is 575.82 grains. A difference of one grain per tael means a difference of nearly 500,000 yen in the total of the indemnity. Japan finally agreed to abide by the Customs figure, an apparently just decision.

News reached Nanking on the 28th of October that another anti-missionary riot had taken place in the south of Kiangsi, and that wholesale destruction of foreign property had resulted as well as the wounding of one Roman Catholic priest. Whether American property was included in the work of destruction is not known, but such is not unlikely to have been the case, as the Methodist and Episcopal churches have missions there.

It appears that among the newly issued

Hunan publications, said to be so violent in their anti-foreign tone, one bears the name of Wang Chi-chun, who was sent as special ambassador to Russia last year. This particular book can not be fairly described as unlawful. In its thirteen chapters the last only contains anything objectionable, and its worst accusations are not such as would warrant official interference. When we remember the kind of literature inspired at one time in the West by religious bigotry, we have no right to be surprised at the lucubrations of certain Chinese conservatives.

The ordeal that has to be endured by a Chinese expectant official summoned to kneel before the Dragon Throne, is a severe test of physical strength. A distance of nearly two miles has to be traversed on foot, from the outer city to the Palace precincts, and then comes a long wait in the small hours of the morning. It is believed that in the case of Yu Chih-kai, who was lately summoned from Hunan to Peking, nominally to receive one of the highest provincial posts in the empire, the effects of this ordeal were so severe as to create an impression of almost complete physical incapacity, and instead of being nominated a Viceroy or a Governor-General, as was expected, Yu received the comparatively insignificant post of Provincial Treasurer of Kuang-si.

It is complained that the proclamation issued by the Emperor of China with regard to the Kucheng massacre is mischievously inadequate. The document sets forth, with almost brutal frankness, the facts of the massacre—thus publishing far and wide what would otherwise have remained unknown to many provincials—and then applies to the terrible crime terms such as would be used with reference to any ordinary violation of the law.

It is stated that the chief factor operating to develop the Mohammedan rebellion in Kansu and Shensi, was the publication of an official proclamation which the Mohammedans interpreted as announcing their general extermination. Naturally they rushed to arms *en masse*, and their suspicions remained unallayed though the proclamation was subsequently explained to refer to insurgents only. The difficulty experienced by the authorities in quelling the rebellion is attributable in part to the demoralization caused among the people by the last Mohammedan rising. They retain such terrified recollections of that time that the apparition of a dozen armed Mohammedans is sufficient to scare a regiment of local militia. When the first rumours of a Mohammedan uprising began to spread abroad last spring, the whole province of Shensi stampeded, everybody thinking only of reaching a walled city, a fortified village, or a mountain top.

Another account of the origin of the Mohammedan rebellion is the following, which appears in the columns of the *China Gazette*, and is from the pen of a member of the China Inland Mission, stationed in Sinning-fu:—

While all the world has been gazing on the conflict between China and Japan, we in this far-off north-western city, 2,000 odd miles in the interior of this vast country, have been entirely ignorant of the whole affair save what we have got from friends in England. The only bit of life manifested here was last December, when several raw recruits were being enlisted and drafted to the seat of war. Scarcely had they got away when news was brought that a quarrel had arisen between two sects of Mohammedans—the old and the new religious sects, the latter being called Sahlahs—at Hsui-hua-ting, three-and-a-half days' journey from Sinning (eighty English miles) and a place under the prefect of this city. Major Hang apparently succeeded in procuring peace. A month later, however, the Taotai of Sinning was summoned to Lanchau by the Governor-General, and despatched to Hsui-hua-ting to settle the dispute. Unfortunately for himself and all his own circuit, he made a great blunder—he seized one of the chiefs and put him to death along with three or four other Sahlahs. This heaped fuel upon the smolderings of an old fire of years' standing (when their great chief was taken by the Chinese and put to death), and they immediately rose up in rebellion and surrounded the city of Hsui-hua-ting, imprisoning the Taotai and a general of Hocheo. When the first news came of the rebellion the people in Sinning and villages round were filled with dismay,

and when it was reported that the Chinese soldiers under Major Hang had been defeated all sorts of wild rumours were afloat and the greatest excitement prevailed. The facts appeared to be as follows:—A Mohammedan, of the Whitecap sect, was in league with the Sahlahs while he was supposed to be helping the Chinese. Knowing well the Sahlah district, he offered himself to Major Hang to be his guide, to help him over the Yellow River, and lead him to one of the villages where, he said, the people were willing to submit. Major Hang accepted the offer. The Mohammedan assisted the soldiers over the treacherous Yellow River, and marched them along the banks. Suddenly they were pounced upon by the Sahlahs, who had been lurking in both the valleys and at a given time advanced upon their foes, who had been led into this trap by their supposed Mohammedan friend, and were wholly unprepared for the attack. A desperate fight ensued; seventy-four Chinese soldiers were killed and many others wounded. Some were persuaded to give up their rifles on condition that they would be let go; but no sooner had the Sahlahs received the weapons than they discharged their contents into the bosom of the giver.

The news of the disaster reaching the Governor-General he at once sent out proclamations to the different cities under his jurisdiction, which seemed to make matters worse instead of better. The purport of the proclamation was that all the Sahlahs (20,000) should be slain, without mercy, no submission to be accepted. Whether the officials found out for themselves, or whether they were warned by others of the danger of such a severe proclamation, I cannot tell, but two days later a fresh proclamation was issued in much milder terms—saying that there were good and bad Sahlahs, and that a distinction would be made between them, exhorting the people, both Chinese and Mohammedans, to pursue their daily work and not to listen to idle rumours, also warning all against spreading false reports under pain of punishment.

Several other proclamations were issued in mild terms, but they could not stem the torrent already flowing from the first proclamation. Soon after the first disaster soldiers were telegraphed for from Liang-chau and Kan-chau, and about 2,900 have passed through this city on their way. Many others have been sent by way of Lan-chau and Hocheo. Tibetan soldiers have been called into active service with the promise of the land of the Sahlahs if they should succeed in exterminating them. A reward has been offered of five taels for every dead Sahlah, and ten taels for every living one brought to their officers. A general rebellion is expected any day.

The *N.-C. Daily News* of the 20th ult., says:—Mr. Robert Fergusson died yesterday, after a long and weary illness, to the deep regret of a very large circle of friends and acquaintances. Mr. Fergusson came to China some twenty years ago as Manager of the Chartered Mercantile Bank, and after some time left the Bank to become a bill and bullion broker. He was widely known and universally liked, he and his family, for whom the deepest sympathy is felt, being most popular in our society.

The following letter from Mr. Francis Bertie has been received in Shanghai by Mr. R. M. Campbell, the Chairman of the Public Meeting of the 5th of August last:—Foreign Office, 18th September, 1895.—Sir,—Your letter of the 9th ult., reporting the proceedings at the meeting of the community of Shanghai with regard to the massacre and outrages at Kutien and Szechuan has been received by the Marquis of Salisbury, and I am directed by His Lordship to say that the points raised therein are receiving the special attention of Her Majesty's Government.

The Viceroy Chang Chi-tung, of Nanking, seems to be the head and front of progressive impulse in China at present. He is said to have recently granted permission to a number of native syndicates to establish cotton weaving and spinning mills, silk filatures, a railway between Shanghai and Soochow, and from the latter place to Chinkiang, three steam launch companies to run between Shanghai, Soochow, and Hangchow, and way stations, and another company with larger steamers to run between Nanking and islands in the Yangtze and from Shanghai to islands on the Chêkiang coast, *i.e.*, the Chusan Archipelago. The latest permission granted is to build silk weaving mills to make the celebrated Nanking satin and silk-velvets. A number of skilled workmen from foreign countries will probably have to be engaged to teach the natives. The permission

of the Throne is reported to have been already obtained by the Viceroy for all the above.

A peculiarly daring robbery is reported from Kiang-yin. A band of thieves, supposed to be Canton soldiers from the opposite side of the river, took possession of the main street of the city at dusk in the evening, and quietly helped themselves to all the cash in one of the largest banks. They numbered about fifty, but not one of them was captured.

Shanghai is now distributing throughout China finely printed books containing the wildest falsehoods about the doings of the chief of the Black Flags. One of these veracious works alleges that the redoubtable Liu caused the propellers of the Japanese fleet to be fastened with wire, and having thus rendered the ships immovable, sent down on them a flotilla of fire-rafts and riddled them with cannon, so that 20 war-ships and 20,000 men perished by fire or water, several war-vessels of other nationalities also being accidentally injured. It is feared that if the circulation of such falsehoods continues, the Chinese may be excited to violence against foreigners, for their geographical education is not accurate enough to distinguish one outside nation from another.

Among the second batch of condemned criminals—14 in number—executed on the morning of the 21st of October at Kucheng, for complicity in the massacre of Christians, was Ming Cheong-chik, one of the principal ring-leaders. It is related that, while awaiting the death blow, this man's face was wreathed in smiles, and that his last words were to wish the Chinese Magistrate and the foreign Consuls quick promotion.

At the suggestion of the Japanese Representative in Peking, a class for the study of the Japanese language has been established in the Tungwen-kuan, or college for the study of foreign languages.

SOUTH AUSTRALIAN PRODUCTS IN JAPAN.

The exhibition of South Australian Products now open at the Tokyo Chamber of Commerce is attracting the attention it deserves, especially from the mercantile community of the capital. The Hon. John Langdon Parsons is in charge of the exhibits, having been sent by the South Australian Government as a Commissioner to Japan, China, and the Philippines, with a roving mission of enquiry, having for object the possibility of establishing or extending commercial relations between these countries and South Australia. One of the most notable features of the exhibition is its conciseness, only those articles that Japan, in particular, may find of value and use, being included. Many of the exhibits are accompanied by photographs of the place of production, and in the case of fleeces and hides, the aid of the photographic camera has always been sought to bring vividly to the mind the animal from which the fleece or hide is obtained. The South-down fleeces from the flocks of the Hon. J. H. Angas, Hill River, S.A., are very noticeable both for weight and fineness of texture. Photographs and stock-books are also shown of Hereford and Shorthorn cattle bred on the same estate. These animals were imported into Australia at an enormous original expense, but now a time has arrived when South Australia can afford to send drafts from her stocks for breeding purposes to Japan. The breeding of Herefords should pay in this country: their keep would not demand much more than do the dwarfish specimens of the bovine species now raised in Japan. The Hereford and Shorthorn breeds run to almost a ton apiece, while their hides are very superior. A very extensive assortment of South Australian wines—port, claret, hock, etc.—brandies, and cordials are on show, and these have received commendation from several foreign tasters for bouquet and good body. Flour, biscuits, raisins, preserved fruits, canned meats and fruits, jams, honey, olive oil, soap, tallow, etc., are all on exhibition and present

a very favourable appearance. Of course an exhibition of Australian products without Eucalyptus oil and other extracts from the valuable tree, would not be complete: the specimens shown by Mr. Parsons are of high quality and could be laid down here at remunerative rates. A novelty, at least to those unfamiliar with the recent development of Australia, is the show of ostrich feathers and eggs. The birds were originally imported from South Africa, and have thrived wonderfully in the Australian colony. The specimens of feathers shown are very prepossessing, both in their rough and in their cured and dressed stages. Altogether the exhibition is well worthy a visit whether one is interested in commercial matters or not. The Tokyo Chamber of Commerce is reached from Shimbashi in three minutes by *jinrikisha*, being situated near the Teishinsho buildings in Kobikicho.

WOOD-BLOCKS IN JAPAN AND EUROPE.

The expense involved in illustrating a book used to be terribly deterrent to European publishers. If we go back far enough in the history of literature, we find not infrequent cases of the same wood-blocks being used over and over again in the same volume to represent different events, scenes, and persons. In a paragraph recently contributed to *Notes and Queries*, it is stated that some of the cuts in "Vitas Patrum" (by Wynkyn de Worde, 1495) occur six or eight times, and are about as grotesque as illustrations could well be. Another economical device was to divide blocks into two parts, and combine the halves of different blocks. Ninety pictures could thus be produced with ten blocks. "Examples of these mixed blocks may be seen in the Strasburg 'Horace' and 'Terence,' printed about 1490. In the beautiful edition of Tyndale's New Testament, printed by Fugge, in 1552, there are many of these divided and mixed blocks, which are shuffled about in the most ingenious manner." The Japanese, on the other hand, were as extravagant in this respect as Europeans were economical. Take, for example, the well known, but now-out-of-print, novel "Inaka Genji." There are 76 volumes, each containing ten pictorial pages of letter press, a page of coloured illustrations, and two decorative initial pages, of which one is chromoxylo-graphic. Thus in the whole book there are 836 woodcuts and 152 chromoxylographs. Greater luxury of illustration could scarcely be attained. Indeed, the Japanese, novel of pre-Restoration days—we refer to the *Kusazoshi*—was unique; a veritable work of art. Nothing comparable in the same line existed anywhere else in the world. It must be confessed, however, that the illustrations are marred by wearisome sameness. Figures variously grouped constitute the iterated and re-iterated subject.

KUMAMOTO RESIDENTS v. THE MINISTER OF FINANCE.

Some time ago a retainer of an ex-*daïmyo* of Kumamoto brought an action against the Minister of Finance to recover certain damages and won his case. This, according to the *Fiji Shimpō*, from which we draw our information, has led the residents of the town of Kumamoto and 285 adjacent villages to take legal proceedings against the same Minister for the recovery of the sum of yen 109,053.53, which they allege has been owing to them by the Government for many years past. We have already published intelligence as to this case, but its particulars are worth recording. In the days when Kumamoto was governed by a *daïmyo*, the land known as 郷 *gō*, or *sato*, situated between the villages and towns of the province, was under the control of the local residents. In order to develop the resources of this land, the residents formed themselves into an association, collected a large sum of money, expended it in improving the district and reclaiming land on the sea-shore, and purchased a very large quantity of rice to be held in reserve in case of need.

Then, in the year 1869, the change of government took place. One of the effects of this change was the curtailment of the rights and privileges of the Association to such an extent that at first there seemed to be no other course open to it but to dissolve, dispose of its property, and divide the proceeds among the members. But on second thoughts and after considerable consultation they decided that neither their dissolution nor the sale of the rice was absolutely necessary, so long as the new government was assured that they thoroughly recognised, and bowed to the authority of, the officials placed over them. So they decided to hold on to the property and await the course of events. One of the results of the Saga rebellion was an extremely arbitrary act on the part of a Kumamoto prefect, Yasuoka, by name. Being of opinion that to allow a private corporation to hold such a large amount of property might at any time prove a source of danger to the Government, he seized the company's rice, together with other of their possessions, after the manner of those despotic times, sold the whole for the sum of yen 109,053.35, and forwarded the money to the Minister of Finance. Though astounded at the unscrupulousness of their Prefect, the company was at a loss how to proceed against him. Shortly afterwards the whole prefecture was convulsed by the Saigo rebellion, and the losses of the company were forgotten in the excitement of the events that followed. It is not unlikely that these losses would have remained unknown to the modern world had it not happened that the retainer, to whom allusion has been made above, brought a similar suit before the law courts and was successful in winning it. The plea of the Kumamoto peasants and townsmen is of no little interest. If the trial goes against the Minister of the Finance, the *Fiji* is of opinion that it will be the signal for the institution of legal proceedings against other officials who in the old despotic days seized private property in an unlawful manner. But surely there is in Japanese law a limit to the time within which legal action for the recovery of money must be taken. The case was set down for hearing on the 28th ult. So we shall soon learn whether the plea of the plaintiffs is allowed or not.

AUSTRALIA AND JAPAN.

We observe that Mr. E. Jerome Dyer is working hard to induce the colony of Victoria to enter into treaty relations with Japan. In the *Evening News* of Melbourne, of Sept. 20th, the following note appears:—

Mr. E. Jerome Dyer, who recently visited Japan and other Eastern countries, read an interesting paper before the Melbourne Chamber of Commerce, advocating signing the new treaty between England and Japan as a means of developing trade with the latter nation.

A very interesting discussion ensued, the members of the Chamber generally favouring the views advocated by Mr. Dyer.

The following resolution was eventually carried:—"That the thanks of this meeting be tendered to Mr. Dyer for his interesting paper, and that the subject be referred to the Council of the Chamber with a recommendation to give the matter favourable consideration."

The other Australian colonies, Queensland excepted, seem disposed to refuse to become parties to the Treaty, and there can be no doubt that the Labour Party in Victoria will offer strong opposition, but Mr. Dyer is sanguine of success, and he certainly seems to have made a good beginning.

COUNT MUTSU.

Count Mutsu continues to recuperate at his Oiso villa. His Excellency's health has greatly improved of late, though of its complete restoration no very strong hopes are held out. The Count's last attempt to resume his duties at the Foreign Office in Tokyo tried him so severely that he will probably refrain from repeating the venture, and will remain at Oiso until the spring, when his return to Tokyo may be looked for. He occupies himself at present chiefly with literary pursuits.

JAPAN IN KOREA.

IT has been publicly known for many months that the Japanese troops would be sooner or later withdrawn from Korea. Nobody ever imagined, we presume, that Japan intended to keep them there permanently. Such procedure would have amounted to military occupation of the peninsula, which is precisely what this empire, from first to last, has emphatically disavowed any intention of attempting. So long as Korea remained the field of fighting between Japan and China, each Power naturally despatched forces thither, and even after the Chinese army had been driven across the Yalu, the peninsula continuing to be Japan's basis of operations, it was essential that she should preserve her lines of communication thence into Manchuria. Our readers doubtless remember how much trouble the maintenance of those lines entailed; what repeated attacks were made by Korean insurgents upon Japanese commissariat stations, and how often the telegraph wires were cut by the Tonghaks. They also remember that the Japanese engineers set themselves, at an early date, to lay a line of telegraph from Wiju, *viâ* Tatung and Takushan, along the north and east coasts of the Yellow Sea, and that this line constituted the sole means of telegraphic communication between Japan and her military outposts in Manchuria and the Liaotung Peninsula. If Japan had retained possession of the territory originally ceded to her by the Shimonoseki Treaty—that is to say, the portion of Manchuria lying south of a line drawn from the Yalu *viâ* Chiulieng and Fenghwan to Haicheng and Yingkow, including the Liaotung Peninsula—it is within the range of possibility that she might have found it necessary to organize special arrangements for securing the safety and control of the line of telegraph passing through Korea from Wiju to Fusan, since, pending the laying of a submarine cable from Talien to some point in her own territory, she must have depended solely upon that line for keeping touch with her forces in Manchuria. But she would naturally have made every effort to have the task of guarding and conserving the line performed by Korea, and even had she been compelled to keep a force of constables or gendarmes in the peninsula for the protection of the telegraphs, their presence there for that definite purpose would not have partaken, in any sense, of the character of a military occupation. These simple considerations make it plain that when the Japanese Government consented, at the instance of Germany, Russia, and France, to restore the Liaotung Peninsula to China, the withdrawal of the troops from Korea became an inevitable consequence. In short, so soon as Japan ceases to hold any part of Manchuria, it would be entire-

ly useless for her to maintain a military force in Korea. There would be nothing for the soldiers to do there. Hence, as we stated briefly in our issue of the 4th instant, the recall of the troops from Korea may be looked for within the next three months; that is to say, in the immediate sequel of the return of their comrades from Manchuria.

We make this very obvious explanation because most singular and extravagant theories have been propounded by the local foreign press with regard to the military evacuation of Korea by Japan. It is inferred, in the first place, that Russian menaces have forced Japan to take this step; that the Cabinet in Tokyo had to choose between withdrawing the troops from Korea and fighting Russia. Nothing could be farther from the truth. We are in a position to assert that the Russian Government have not subjected Japan to any pressure of the nature suggested; that there has been no question whatever between the two Powers involving such issues; that the withdrawal of the troops from Korea is in no sense the result of Russian threats, and that when the retrocession of the Liaotung Peninsula removed the necessity of maintaining overland lines of communication with Manchuria, the return of the Japanese forces from Korea would have been a natural consequence though no such Power as Russia had existed. It is strongly to be deprecated that foreign local journalists, writing under the guidance of their own sensational conjectures, ventilate canards calculated to rouse the Japanese people to unjust passion against their own statesmen for subjecting the country to imaginary humiliation, and against Russia for adopting an attitude of menace and dictation absolutely foreign to the methods she has really pursued. Another extraordinary deduction drawn from the return of the troops is that Japan has abandoned her project of introducing reforms into Korea. Journalists writing in that sense evidently labour under the impression that the reform programme was to be pushed by force; that, in short, Japan was to arrogate the position of a military dictator in the peninsula, and that, in recalling her troops, she effaces herself completely. The mere statement of such a proposition is sufficient to expose its fallacy. The presence of a Japanese military force in the peninsular Kingdom was never at any time regarded as an essential factor in the introduction of administrative reforms, and the withdrawal of the force is consequently open to no such construction as has been journalisticly placed upon it. There may be reason to doubt the possibility of pushing Korea into the path of progress without employing coercive measures, but coercion does not enter into Japan's programme. Her troops in the peninsula were part of the military system hinging upon the posses-

sion of south-western Manchuria, and with the abandonment of the latter, their continued presence in Korea loses all *raison d'être*.

THE EMPEROR OF GERMANY.

IT is probable that the average public's idea of a great man differs essentially from the reality. Nor need we wonder that such should be the case, for the tests by which the world recognises greatness are the resultants of many forces not separately recognisable except by a scrutiny possible to intimates only. Yet these forces constitute the true elements of the man's character, and if we are to estimate him justly, we must be able to analyse them separately, instead of considering their synthetic action only. Take the case of Lord SALISBURY, for example, a statesman now much *en evidence*. Most Englishmen's conception of him is that he possesses great breadth of view, clear insight, and sagacious courage, and that, in dealing with the many problems that come up for solution at the Foreign Office in Downing Street, he gives attention to their general outlines only, not wearying himself with trifles or allowing his judgment to be obscured by details; a man, in short, that works *en bloc*, and is essentially massive rather than minute. Yet, in point of fact, Lord SALISBURY owes much of his success to his extraordinary mastery of details. The experience of a diplomat not unknown to our readers will illustrate this. It is the custom in the British Diplomatic Service for senior members of Legations and Embassies, on returning from service abroad, to wait upon the Foreign Secretary, who derives from their personal reminiscences information more or less valuable according to the questioner's skill and the questioned's powers of observation and narration. An official returning to London from St. Petersburg, some years ago, conformed with this custom, the more readily in that he possessed, as he thought, a quantity of useful information about the "back-stairs" politics of the Russian capital. But he soon discovered, in conversation with Lord SALISBURY, that the Marquis knew a great deal more about these obscure details than he did himself, and he left the Foreign Office in a state of unbounded astonishment that a Minister charged with the conduct of a world-wide empire's foreign affairs should possess such a grasp of comparatively insignificant minutiae. The truth is that no man can rise to real greatness without being thorough, and thoroughness is only another name for mastery of details. Superficial observers of the present German EMPEROR'S career might not be disposed to credit him with that quality. An idea has become disseminated that the KAISER is something of a *poseur*, and that he trusts rather to effect than to effective-

ness. The conception seems to have a measure of reason. HIS MAJESTY appears to possess the dramatic instinct, and standing on such a stage as he occupies, there is a strong temptation to strike attitudes. Then, too, he is evidently gifted with oratorical powers, and what is more, he evidently recognises the gift. Now rhetorical and dramatic displays are not usually associated with high statesmanship, and perhaps for that reason the roughly judging public are not disposed to take the EMPEROR very seriously. Even among the German themselves, eminently a sober, practical race, content to work for general results rather than for individual profit or fame, a sentiment of uncertainty exists as to the soundness of the hands that now hold the helm of State. Hence it is that special interest attaches to the recently published interview between Lord LONSDALE and a representative of the Berlin *Tageblatt*. Lord LONSDALE'S description of the EMPEROR is, in some important respects, precisely what folks in general would not have expected. This Sovereign, hitherto regarded as delighting to startle the world by meteoric comings and goings, spectacular displays and sensational harangues, is described by his host and guest as a man who, under a brilliant exterior, conceals one of the most painstaking, labour-loving minds that ever grappled with problems of statecraft. By unremitting study he has familiarized himself with details such as one imagines to be the exclusive property of specialists. From the price of a soldier's socks to the idiosyncracies of a great painter or sculptor; from the calibre and rifling of a new piece of ordnance to the carrying capacity and trading route of an insignificant merchantman, he seems to know everything. That means thoroughness, and thoroughness is never associated with caprice or hysteria. WILLIAM the SECOND appears to be the exact antithesis of NAPOLEON the THIRD in bases of character, though in superficials there is a certain resemblance between the two monarchs. Still a young man, holding the sceptre of a splendid empire, and called upon to direct issues of immense importance not to his own countrymen alone but to the whole of civilized humanity, there seems to be no reason why this already striking figure should not ultimately stand out from the pages of history among the greatest rulers of all time.

In connection with the action for damage brought by the Governor of Tokyo against Mr. Hamano, President of the Japan Cast Iron Foundry Co. the entire property of the company has been attached, and work suspended. The company is now in a critical condition. The shareholders will hold a general meeting on the 11th inst. to discuss the best method of settling the difficulty. Some shareholders propose instituting legal proceedings against Mr. Hamano with a view to obtaining recompense for damage sustained by the company through the illegalities of their late President.

THE CLIMATIC CONDITIONS OF THE TRANS-SIBERIAN RAILWAY.

THE Trans-Siberian Railway has such an important bearing upon the future of the Far East that all facts relating to its prospects will be read with interest. In that belief we now publish a study of the climatic conditions of the line. It has been compiled for this journal from a monograph now in course of preparation by Dr. WALDO, the author of Modern Metereology.

With regard to the moving of troops along the Trans-Siberian railway, the most important question is the amount of hindrance to be expected from snow. The rainfall throughout the whole route is small. From the eastern terminus to longitude 115° in the Amur region, the annual precipitation is from 12 to 16 inches, and West of Lake Baikal it is a little below 12 inches. Along the Amur valley to the East of this there is an increase to over 20 inches at Vladivostock. In northern Korea the precipitation is 24 inches, at the extreme south it is 34 inches. From a certain time in the autumn till a certain time in the spring the precipitation falls as snow. In the three winter months, in the region to the west of Lake Baikal about 2·5 inches of precipitation falls. (The amount is estimated in its water equivalent by melting the snow.)

For the greater part of the region to the East of Lake Baikal the winter precipitation is only ·5 inch. In the spring the precipitation is between two inches and 2·5 inches from the Western end to about longitude 95°. Then it decreases to less than ·8 inch just east of Lake Baikal and on the Upper Amur River. Then from long. 113° to the Eastward there is at first a rapid increase to 2·5 inches, and then a very slow increase from the Middle Amur to 3·2 inches at Vladivostock. In the autumn there is about 3·2 inches precipi-

tation along the entire route to Lake Baikal, where it decreases to 2 inches on the Upper Amur, increasing again to 5 inches on the Lower Amur and at Vladivostock. Assuming that half the precipitation in the autumn and spring months is in the form of snow, the following average amounts of water fall in the form of snow :—

	Water in form of Snow.	Inches of Snow.
Western terminus	1·5	7·5
Omsk, 75° longitude	1·3	6·5
Tomsk, 85° longitude	1·5	7·5
Irkutsk (near southern end of Lake Baikal)	1·5	7·5
Upper Amur	0·5	2·5
Middle Amur	1·0	5
Lower Amur	1·4	7
Vladivostock	1·5	7·5
Northern Korea	1·5	7·5
Southern Korea	4·7	23·5

With regard to the depth of snow, an estimate is difficult to make, for the density of snow varies from almost that of ice, when it is closely packed, to about one-fiftieth when it is in a very fluffy condition. Usually the snow accumulates all through the winter in Siberia, but when older and covered with new snow it packs very solidly. Assuming the average density to be one-fifth, the estimate in the above table is made. This of course does not take into account the amount of drifted snow, but from the observations of travellers there does not seem to be much tendency of the snow to accumulate locally in very great depths. In the year 1890-91, the actual depth of the snow at Lake Baikal was about 7 inches, and in the Amur region 6 inches. Hence the conclusion is reached that there is not very much difficulty to be apprehended from snow as an obstacle on the Trans-Siberian Railway.

With regard to the Summer Rainfall it is as follows :—

	Inches.
Northern Korea	12·16
Vladivostock	8
Middle Amur	12
Lake Baikal	8
Tomsk	7
Western Terminus to Tomsk	6·3

The heavily dotted line shows the route of the Trans-Siberian Railroad from the foot of the Ural Mountains, longitude 60, to Vladivostock: 1, Western Terminus; 2, Omsk; 3, Tomsk; 4, Krasnojarsk; 5, Irkutsk (near Lake Baikal); 6 is the Middle Amur River; 7, Chabarawka; 8, Vladivostock.

The heavy lines show the regions along which the average daily temperature remains below 32 F. for 170, 180, 190, and 200 days.

The line of 150 days passes in the neighbourhood of Vladivostock, and the line of 100 through Northern Korea. The lines of equal ten day periods lie nearer the coast than in the interior.

The total rainfall is small, but equally distributed, and is so far promising for agriculture. The following table gives the humidity :—

	Annual.	Aut'n.	Winter.	Spring.	Sum'r.
Western Route.....	75	82	85	70	70
Lake Baikal.....	—	70	—	60	70
Eastern part from Lake Baikal.....	70	72	75	65	80
Velocity of Wind, Per hour, miles.					Summer.
Korea	9				7 to 9
Vladivostock in immediate neighbourhood	13				11
Middle Amur	2				4
Upper Amur	?				4
Lake Baikal	?				4.5
Western Terminus.....	9				9

Thus there is a great contrast between the high wind velocities at the centre of the American continent and the low wind velocities of the Asiatic continent. There are violent windstorms, but they are relatively infrequent. The lowness of the wind velocity is favourable for the retention of the water in the ground, as with the rapidly of the wind evaporation increases rapidly. At the western terminus the average temperature is in Fahr. :—

	January.	July.
Western terminus.....	+ 3	68
Long. 75.....	— 4	68

To South-west of Lake Baikal :—

Middle Amur, 124° long. —22	72
-----------------------------------	----

Increasing to :—

Vladivostock	+ 3	68
Yellow Sea.....	+ 14 (water temp.)	77
Southern Korea	+ 32	—

The extreme maximum temperatures are from 91 to 98 along the whole route. The average extreme minimum temperatures are :—

Southern extremity of Ural Mountains (regular decrease to).....	—31
Tomsk, long. 85° (extreme minimum).....	—58
Lake Baikal, rise to South end, long. 104° (descending)	?
Highest northing of Amur River (continuing to about 126° long. whence rapid rise to)	—53
Vladivostock	— 4

The minimum temperature at the head of the Yellow Sea is 45° F. or 43° F. Hence a terminus on this sea would not be of much advantage. But the long route in the very cold Middle Amur region would be avoided, and there would be a gradual though very slow lessening of the minima from Lake Baikal to the Pacific coast. If the railroad runs into the Korean Peninsula the minimum temperature would be 21° to 14° Fahr. The average annual range of temperature from max. to min., along most of the route is from 110° to 125° F., but in the region to the West of Lake Baikal it has been as much as 160°. At Vladivostock the range is 90°; in South Korea 70°. A very important question is of course the duration of the period for which the waters, both ocean and inland, remain closed for navigation. These can be collected from the following table :—

Western Terminus.....	Oct. 23 ice begins	April 30 ice melts.
		April 21 ice breaks up.
Omsk, long. 75°.....	Oct. 18 ice begins.	
	Nov. 6 ice permanent.	
Tomsk, long. 98°.....	Oct. 15 begins	April 16 breaks up.
	Nov. 10 permanent.	
Lake Baikal, long. 114°.....	Oct. 20 begins	April 10 breaks up.
	Nov. 2 permanent	April 25 breaks up.
Upper Amur	Oct. 8 begins	April 13 breaks up.
	Oct. 30 permanent	May 5 in long. 125°
		breaks up (greatest north- ing of Amur river.)
Vladivostock	Nov. 2 begins	April 1 breaks up.
	Dec. 2 permanent	April 10 breaks up.

The duration of winter is the number of days the temperature is below freezing :—

	Ice covers water.	Temp. below freezing
Western terminus	160	173
Tomsk, long 85°	180	185
Lake Baikal	160	175
Highest Northing of Amur River	185	194
Chabarowka	160	170
Vladivostock	143	150
Northern Yellow Sea	120	130
Southern Korea	90?	100?

A DISGRACEFUL DEVICE.

WE have received from a Japanese correspondent a translation of a "memorandum" purporting to have been "presented by prominent members of the House of Representatives to the Ministers of State and Privy Councillors." Our correspondent observes that "vernacular newspapers refrain from publishing the memorandum for a reason not very difficult to guess," and at the same time has the impertinence to ask us to insert the document in our columns. The "reason not very difficult to guess" is the fear of suspension. Vernacular newspapers can easily foresee the danger to themselves of giving publicity to such memorials, and they consequently refrain from printing them. Does our correspondent imagine that, under these circumstances, a foreign journal published in Japan will lend itself to promote his illegal purposes, or that it has the smallest moral right to do so? If the Government of this empire consider that a certain restraint must be imposed upon the press, in the interests of public peace and good order, foreign journals published in the settlements are under a plain moral obligation to respect that opinion, and not to defy it merely because they enjoy a peculiar measure of liberty. Were there question of discussing the privileges possessed by foreigners under the treaties, or any other matter directly concerning the European or American residents, the foreign local newspapers would be entitled to use the full freedom secured to them under extraterritorial jurisdiction. But where there is question solely of a matter of Japanese domestic politics, nothing can justify a foreign newspaper in lending its columns for the ventilation of anti-Government manifestoes such as the vernacular journals are restrained by law from publishing. We emphatically decline to be guilty of any such abuse of the liberty we enjoy. Neither can we easily persuade ourselves that the course adopted by our correspondent possesses the sanction of the "prominent members of the House of Representatives" supposed to have signed the "memorandum." Does he seriously expect, or intend, us to believe that leading men among his country's legislators, finding their indictment of the Government so strong as to be debarred by law from publication in Japanese journals, have had recourse to journals of a foreign country? And if the signatories of the document

did not sanction such a discreditable step, are we to understand that our correspondent took it solely on his own authority? At any rate, we assure him that the foreign local press is not as exploitable as he seems to think. Another point, too, is noteworthy. It has been a frequent habit on the part of the organs of the "Opposition" to complain of the Government's want of courage in suffering local foreign newspapers to transgress the limits imposed upon the pens of Japanese journalists. Yet now we have leading members of the Opposition, "prominent" legislators, endeavouring to betray the foreign local press into the very abuse that they are so ready to denounce when it is not perpetrated in their own interests. Our correspondent is mistaken if he expects us to become a party to such practices, or if he hopes to put our columns to such uses. If no higher sense of responsibility restrained us, we should at least be careful not to bring odium upon foreigners by openly defying the restraints that our Japanese contemporaries are obliged to observe.

"TRILBY."

WE should all like to believe in the possibility of TRILBY if only because our hatred for SVENGALI might then be nursed with less sense of the ridiculous. Well, it is a comfort to learn that scientific men, having recently devoted attention to this subject, agree that vocalism developed, like TRILBY'S, under the influence of hypnotism, is quite within the range of possibilities. Experiments have shown that hypnotism can produce wonderful exaltation or development of faculty. It can not create, however. The faculty must be there normally, in however rudimentary a form. TRILBY had the organs of vocalization—splendid organs, too—and the rudiments of an ear. Under the training and "suggestive" prompting of SVENGALI, she developed both ear and voice. In all probability DU MAURIER had instructed himself on this point before he made the chief interest of his remarkable work centre on such a curious hypnotic phenomenon. Great artists, whether of the pen or of the pencil, never take anything on trust. DICKENS travelled seventy miles to find the waggon-driver whom he desired to depict in connection with the younger MARTIN'S journey from PECK-SNIFF'S to London, and devoted weeks to searching up scientific authorities for the spontaneous combustion of the rag-merchant in Cursitor Court. DU MAURIER might easily have satisfied himself that the Svengalization of the sweet sitter for "l'ensemble" did not encroach upon the domain of the supernatural. Dreaming in natural sleep is the every-day form of hypnotism, and in a dream CONDORCET discovered the conclusive steps of a mathematical calculation that had long baffled his waking genius, and COLERIDGE com-

posed "Kubla-Khan." CHARCOT'S "Clinique" as we read in the *Alienist and Neurologist*, describes the case of MARIE H., an inmate of the Salpêtrière, who in her normal state did not know how to read or write and could only do coarse sewing, but who, in the "vigilambulic" condition could read, write, cipher, crochet, and embroider. LADAME also tells of a lady who, in the second, or hypnotised, state, not only was free from many distressing symptoms that tormented her under ordinary circumstances, but could invariably win at a game otherwise certainly lost by her. Still closer to TRILBY comes a patient of Bonamaison Hospital, also spoken of in CHARCOT'S "Clinique." Hypnotised, she could do "the finest needle-work and embroidery with a dexterity utterly foreign to her normal condition;" could remember multitudes of facts ordinarily forgotten, and could "sing an English ditty learned in her childhood, of which she did not know the first word in her normal state." Thus the double personality of TRILBY may be accepted as a possibility. Many of our readers will doubtless share the lively satisfaction that we ourselves frankly confess to feeling at the knowledge that LITTLE BILLEE, the sweet, tender PHRYNE of the Rue des Pousse-Cailloux, TAFFY, the LAIRD, and all the other inmates of that delightful gallery, may be taken without the large grain of salt that deprives so many nectarian romances of their sweetness. Is it not conceivable that Miss ABBOTT'S wonderful feats, too, have something to do with the exaltation of faculty observed in the state of vigilambulism?

THE DOCTRINE of IMMORTALITY.

(COMMUNICATED.)

MR. STEAD, in a recent number of his *Borderland*, publishes a *résumé* of the controversy recently carried on in the United States on the question of the intrinsic immortality of man. Mr. STEAD'S essay furnishes the *Spectator* with an excuse for reiterating its own peculiar views on the subject of immortality. In many particulars that we could name the *Spectator* has considerably modified its views within the past fifteen years, but on the subject of a future life, the paper in consequence, no doubt, of the known sympathies and leanings of the chief editor, still champions the cause of the Christians that believe in conditional immortality, among whom Mr. GLADSTONE may perhaps be reckoned. According to this view, man is not naturally, by virtue of his creation, an immortal being. Though originally designed for immortality, his attainment of it was contingent on his obedience and was forfeited at the Fall. So that immortality can now only be obtained as a gift, through CHRIST'S redemp-

tion, and will only be attained by the saved. All not included in this category are subject to annihilation. It may be of interest to our readers to know that this doctrine received some twelve years ago the support of, and was publicly professed by, some of England's leading scientists. Professor J. C. ADAMS, the great astronomer, Professor G. G. STOKES, the great mathematician, Professors T. G. BONNEY and T. G. TAIT, and Dr. ARCHIBALL GEIKIE, in conjunction with such men as Dr. PEROWNE, then Dean of Peterborough, Dr. SWAINSON, then Master of Christ's College, and Lady Margaret, Professor of Divinity in the University of Cambridge; and the late Professor HENRY SMITH of Oxford, all allowed it to be publicly and repeatedly stated that they had discarded the ordinary orthodox doctrine of inherent immortality and eternal punishment in favour of the view that the *Spectator* has steadily maintained for a decade and a half. We are not in a position to say how far the opinions of such of the above-named eminent men as are living may have altered in the past ten years. The difficulties attached to the doctrine of conditional immortality are so enormous that we can hardly suppose that this special view did more than afford a temporary resting-place to minds destined to reach a higher plane of philosophic thought and belief. It is hardly conceivable that the advocates of this view can ever have clearly defined to themselves the consequences it involves. To say that men are to be saved from extinction only by believing in the doctrine of the Atonement, as explained by Church authorities, is to assert that all the moral magnets of antiquity and all the good men of modern times who with the greatest sincerity and seriousness reject the doctrine or live and die in entire ignorance of its nature, are, as a punishment or the result of fate, doomed to annihilation. For an organ like the *Spectator* which aims to be abreast, if not ahead, of the age to adhere to such a narrow-minded and thoroughly illogical position as that maintained by the preachers of conditional immortality is an anomaly that can be explained only by the fact that the polished writer who for so many years has been its chief editor has reached an age when men are usually incapable of undergoing mental transformations or development on new lines.

The old doctrine, elaborated by the Pythagoreans, adopted and remodelled by the Greeks, received with modifications by the Christian Church, and subsequently so amalgamated with Biblical teaching as to appear to all but the discerning few to be based on what is known as the Christian revelation, taught that the souls of all men are inherently immortal. With the Pythagoreans, certain Greek writers and orthodox Buddhists, the future existence

of the soul and its pre-existence are doctrines of equal weight and importance. To those that believe in personal and individual immortality, that is, in a continuance of the conscious *ego* of this world in the life to come, the doctrine of metempsychosis is attended with insurmountable difficulty. In considering that doctrine they argue thus: If in this life we have no recollection of anything that has happened in a previous existence, it is but logical to suppose that in a future life we shall have no recollection of our experience in this, and hence that to us the chief bliss of future existence—the continuity of the same conscious *ego* will be unattainable. For this and some other reasons which we cannot discuss now, the Christian Church rejected half of the Pythagorean and Greek doctrine and embodied the other half in its teaching. So that the exact position maintained by the Church has been that immortal souls are either begotten, created, or supplied at birth. Few people have the curiosity to inquire into the process of endowment. But such an inquiry is essential when it is important to test the logical basis of belief. Two theories are possible. One is that souls are supernaturally supplied to the bodies that stand in need of them. The idea being that a large stock is always held in readiness for emergencies, a kind of contingent fund of immortal souls; the other that the immortal soul awaits the beck and call of the parents of children, that is, that all children in whatever manner begotten inherit immortality. The latter theory, despite the monstrosity of its consequences, is held by most of those who have paid any attention to the subject. It was this theory combined with other philosophic considerations that led that logical divine of the seventeenth century, Bishop BUTLER, to maintain that immortality is not to be denied to animals. Consistently with the great doctrine of analogy which he elaborated with such logical acumen, he maintained that beings whose cause of birth and manner of birth bore an exact resemblance should alike be regarded as endowed with a nature capable of surviving death. But the Bishop has never had many followers. Though the huntsman has often contemplated with delight the prospect of mustering his favourite hounds in another world, the notion of the eternal perpetuation of the canine species has come as a shock to most of the sober-minded church-goers who look forward to the perpetual Sabbath exercises of the heaven of their thoughts. Though the theory of an ordinary animal origin of immortal souls is held by the majority of Protestant Christians at the present day, we must not forget that the other theory is not without its supporters. In his Ode on Immortality, WORDSWORTH was expressing the views of a large number of Christian believers when he wrote:—

Our birth is but a sleep and a forgetting :
The souls that rises with us, our life's Star,
Hath elsewhere had its setting
And cometh from afar ;
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come from
God.

To men whose minds are accustomed to the idea of constant supernatural interference with the laws of nature, the idea of souls being supplied to bodies as they are born presents no great difficulty. Once admit that miracles have taken place and may take place at any time, and it becomes only a question of a little more or less of the supernatural element being allowed to exist. The view of the Christian Church, then, briefly stated, is that all men are naturally and inherently immortal: that the wicked are doomed to future punishment, of a limited duration and as a probation, say some, of endless duration, say others. Among those consigned to perdition are to be reckoned all rejectors of orthodox teaching, all deniers of miracles, all men of the HUXLEY and SPENCER type, despite their sincerity. For the devout Christian above endless future bliss is reserved. Such men as MARCUS AURELIUS, SOCRATES, CONFUCIUS, SHAKA MUNI, and MAHOMET, notwithstanding all the good they accomplished, are not, according to this theory, worthy of ranking with the followers of CHRIST.

We have given the view of the *Spectator* and the thinkers it represents and the view of the Christian Church on the subject of immortality, and it is but fair to all parties that we should give the opinion of that large class of thinkers to whom the doctrines of PLATO and of modern Christian divines seem alike untenable and unsatisfactory. When discussing the ordinary philosophical argument in favour of immortality, the *Spectator* makes an admission that is worth quoting. "The separability of the soul and body," says the London journal, "only shows that they are not identical either in durability or in anything else. But to show that one survives the other no more proves that the survivor is immortal than the survival of a mother or son shows that that mother or son is immortal. We do not argue that because the body sometimes appears to survive the mind, the body will never die, and we must not therefore argue that because the the mind survives the body the mind will never die." This is equivalent to admitting that what is called the logical proof of immortality will not bear examination. All candid minds, however, desirous of defending the belief in immortality are wont to confess that it has no strictly logical basis. EMERSON, in his Essay on "Immortality" writes:—"We cannot prove our faith by syllogisms. The argument refuses to form in the mind. A conclusion, an inference, a grand augury is ever hovering; but attempt to ground it, and the reasons are all vanishing and inadequate."* Again, "There is a draw-

back to the value of all statements of the doctrine; and I think that one abstains from writing or printing on the immortality of the soul, because when he comes to the end of his statement, *the hungry eyes that run through it will close disappointed.*" . . . "It is not my duty to prove to myself the immortality of the soul. *That knowledge is hidden very cunningly.*" GÆTHER confesses that he is conscious of the same difficulty. "It is to a thinking being," says he, "quite impossible to think himself not existent, ceasing to think and live; so far does every one carry in himself the proof of immortality, and quite spontaneously. But so soon as the man will be objective, and go out of himself, so soon as he dogmatically will grasp a personal duration to bolster up in cockney fashion that inward assurance, *he is lost in contradiction.*" These are important admissions for men to make who are earnest believers in the inherent immortality of the soul. It is equivalent to saying the belief in immortality rests on feeling, intuition, instinct, aspiration, or desire, but not on reason. When we examine the writings of poetic geniuses of the type of GÆTHER and EMERSON, of philosophic mysteries such as HEGEL and MAX MULLER, or of the greatest modern Comtist, FREDERIC HARRISON, we find that they all believe in some kind of immortality. But in no case is anything like a strictly rational defence of the doctrine attempted. So that it is hardly to be wondered at that there should exist throughout Europe and America a large class of writers who boldly assert that nothing whatever can be known about the future destiny of the soul, but that the probabilities and that best of all guides, the analogy of nature, point to disintegration and dissolution. All who have thoroughly studied the doctrine of evolution are well aware that mind can only be scientifically discussed as joined to matter. We can conceive of disembodied spirits existing, but no proof of their existence ever has been given and ever can be given, say the school of thinkers whose views we are now giving. Where decisive proof is wanting probability is our only guide. In the matter under consideration the probability of final extinction at death amounts in some minds to a kind of certainty; not absolute certainty, perhaps, but certainty sufficiently powerful to make even a faint hope of a future existence an impossibility. To minds of the class to which we refer the very notion of the eternal perpetuity of every human being that has appeared on the world's stage is too absurd to be discussed seriously. Nature goes on producing more and more perfect types, but she never re-suscitates the half-developed organisms that have fulfilled their office and passed into oblivion. She respects the race,

but cares not for the individual. Why should any particular individual continue to exist when his place can be filled by men of equal if not greater capacity? The manner of our birth, the whole relationship of body and mind, the constitution of nature and the relentlessness of the fate to which we are all subject, point unmistakably to annihilation as the climax of our earthly existence. To find men of extraordinary talent like EMERSON resting the doctrine of a future existence on the soul's aspirations, and longings, saying we shall live for ever because we wish to live for ever, appears to the sober agnostic as quite pathetic. Not so do men argue when attempting to solve other difficulties or to predict the course of ordinary events. A man's desires and longings count for little when he comes into contact with the stern realities of everyday life. To base a forecast of events on the wishes of the individuals whose actions determine their course would be considered the height of folly when discussing ordinary human affairs. And yet this is the method followed by the majority of the modern defenders of the doctrine of immortality. It is hardly possible to imagine anything more feeble and childish than some of the arguments advanced by EMERSON and GOETHE. To quote one instance only. "To me," said GOETHE, "the eternal existence of my soul is proved from my idea of activity. If I work incessantly till my death, nature is bound to give me another form of existence when the present can no longer sustain my spirit." This is equivalent to saying that nature is under an obligation to comply with our wishes. Does her method of treating human beings in this life furnish a tittle of evidence to show that consideration for man's feelings is even allowed to interfere with the rigid working of her laws? What a hopeless confusion of ideas is revealed by the sentence quoted above. The eternal existence of an object—the soul—is asserted to be proved by a subjective motion, not even having reference to a distinctively mental attribute, but to *activity*, which is more physical than mental. The argument runs thus:—I like to be active. Death will interfere with this activity. Hence nature is bound to provide me with a *new* and *endless* form of existence in which my love of activity may be gratified. Poets are, as a class, said to be very illogical, but in this instance GOETHE seems to have reached the *ne plus ultra* of incoherency.

In his treatise on Logic when, discussing the philosophy of error, JOHN STUART MILL enunciates principles which account for the wide-spread belief in the immortality of the soul. "The sources of erroneous opinions are twofold," say MILL, "moral and intellectual. The moral may be classed under two general heads: Indifference to the attainment of truth, and bias; of which

* The italics are ours.

last the most common case is that in which we are biased by our wishes. . . .

The natural or acquired partialities of mankind are continually throwing up philosophical theories, the sole recommendation of which consists in the premises they afford for proving cherished doctrines, or justifying favourite feelings: and when any one of these theories has been so discredited as no longer to serve the purpose, another is always ready to take its place. This propensity, when exercised in favour of any widely-spread persuasion or sentiment, is often decorated with complimentary epithets; and the contrary habit of keeping the judgment in complete subordination to evidence, is stigmatised by various hard names, as scepticism, immorality, coldness, hard-heartedness, and similar expressions according to the nature of the case. But though the opinions of the generality of mankind, when not dependent on mere habit and inculcation, have their root much more in the inclination, than in the intellect, it is a necessary condition to the triumph of the moral bias that it should first pervert the understanding. Every erroneous inference, though originating in moral causes, involves the intellectual operation of admitting insufficient evidence as sufficient, and whoever was on his guard against all kinds of inconclusive evidence which can be mistaken for conclusive, would be in no danger of being led into error even by the strongest bias. *There are minds so strongly fortified on the intellectual side, that they could not blind themselves to the light of truth, however really desirous of doing so; they could not with all the inclination in the world, pass off upon themselves bad arguments for good ones.** If the sophistry of the intellect could be rendered impossible, that of the feelings, having no instrument to work with, would be powerless."

Our reason for giving the above passage in full is that it furnishes an exhaustive explanation of the attitude assumed by the various controversialists and theorists whose views on the question of immortalists we have stated in these articles. That individual and conscious existence after death is desired by the large majority of mankind is an undoubted fact. In the existence of this desire lies the danger of inconclusive evidence being accepted as conclusive, of the intellect becoming the slave of bias. It is only those who by the most careful and rigid mental discipline have accustomed themselves to regard with suspicion and mistrust any opinion *solely* based on emotion, that can estimate the value of the hackneyed arguments in favour of immortality at their true worth. The motto of such men is not that of ANSELM, *Crede ut intelligas*, but that proved saying of ABELARD,

* The italics are ours.

Intellige ut credas. All that can be known bearing on the future of the human soul points to annihilation, and this being so, no amount of intellectual sophistry, no ardency of feeling or desire can induce them to believe in the doctrine of the immortality of the soul.

There is one other opinion on the subject of immortality, which perhaps ought to be mentioned if only to be dismissed as not worth serious discussion. We are told by some that the only immortality they expect and desire is to be remembered by their friends; and, further, that it gives them satisfaction to know that none of the component elements of their being will be lost; their thoughts will live in the minds of posterity and the gases to which their bodies will be reduced will be utilised by nature in the formation of new organisms. To whatever comfort can be derived from such knowledge the refugees who have resorted to this sole remaining fortress of immortality are most welcome. Their view is so extremely moderate and their position impregnable that they may be said to have no enemies. It would, however, be an entire misuse of terms to speak of this class of men as believers in immortality. The only immortality that anybody really cares anything about is a state of conscious individual future existence—a state which will be a continuation of our present existence under happier auspices and conditions. As regards posthumous reputation, when we see how little real satisfaction, according to the published confessions of some of our greatest men, is to be derived from the highest earthly fame, we cannot imagine that it has ever had much attraction for any but the vainest of men.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE SUNDAY QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—When I read in your paper the other day a short article referring to the Imperial Birthday Ball of this year, which falls on Sunday, I wished very much to take the opportunity to write you a note, expressing my thought on the Sabbath question from a more serious point of view. Yesterday I noticed that you had a correspondent, who thought Sunday was "no better nor worse" than other days. The appearance of your reply to his correspondence in to-day's issue increased my desire greatly to express my own view, and now I steal a little time to write you a few lines which I leave under your discretion to print or not. As you know, we keep our Sundays entirely different from, and even opposite to, the manner, English and Americans are used to observe. To go directly to the point. Which is the better way—to make Sundays recreation days or do-nothing days, that is, do nothing except worshipping and meditating? Should we, as Christians, keep our Sabbath, just because our predecessors did keep it whether it was on Sunday or Saturday? It is not necessary now to enter into the question whether Sunday was the real Sabbath or Saturday. Keeping Sabbath can by no means be considered as a part of religion; it is merely a remnant of custom of the ancient religious people whose economic resources were more abundant compared with the circumstances they lived in. Now-a-days social stress is too great; the whole of one day out of every

seven is too valuable to be spent in worshipping and meditation. Men work every day, all they are worth: the great majority of them not being able to get time to recreate themselves. On Sundays, if they are Christian, they can not openly recreate themselves for fear of their traditional prejudice on the ground of religious bigotry. The point has been observed by some thinkers on social sciences. Japan, before conforming to Christianity, imported Sundays and turned them into pure recreation days. They are now observed in all the departments, as much as possible, of the government, virtually in all the educational institutions, public as well as private, and in banks and other principal industrial corporations. It is a pity, however, that the holiday does not include all the working men. The present state is, at any rate, a phase of progress in its right course—a phase, by no means very laudable, for those who enjoy the holiday are limited practically to higher classes of office-workers. We have still a hopeful future, as the Japanese public is now more or less aware of its necessity and advantages among the lower labourers. Sundays, as recreation days, would be, no doubt, a salvation to the hard-working labourers. There may be raised a question, in the country, about decrease of national productivity, for at present the labourers have hardly any holidays. Reply to this objection can not readily be given in definite figures. But it seems to have been already acknowledged that a twelve-hour day is more productive than a fourteen-hour day. Eight-hour days are even insisted on to be more productive than ten-hour days. It seems, then, that to take it for granted that a six-day week is more productive than a seven-day week, is not an over hasty conclusion. We may take into consideration, moreover, what kind of man is likely to work more days in health during his life, a man who works continually on all seven days of the week or another who works only on six, resting or recreating himself on the seventh? Suffice it to be said, that one recreation day out of every seven will surely relieve a large portion of hardship men now have to suffer. If a mere resting from work on the Sabbath does much to relieve them of hardship, free recreation on that day will do by far more. This system is now in the right course of progress in Japan, without that strong prejudice of religious bigotry as in England and America. To assist in the course of this progress is to promote human welfare. Throwing a useless nonsensical objection in its way is no less than running against the progress of social happiness. Religion, I think, does not exist for its own sake,—it is for humanity's sake that it has its utility and the foundation of its existence in society. It is merely nonsense to say that Sunday is sacred, and we should keep still on that particular day and count our past sins. Turning it to a recreation day as well as sacred day is, in truth, serving an object of religion. English and Americans who happen to be visiting in this country, should give serious thought to the question. If they do not learn any other instructive lesson in this country, whose social status is so different from theirs, they must at least notice the way Sundays are utilized in this country. It will be a practical lesson in several questions, which are now perplexing their ablest scientists.

It will be indeed a great pity if, as the *Mail* declared, "the great majority" of English and Americans will "feel constrained to absent themselves from the festival on the 3rd prox." But let them broaden their view just a little bit. Then they will feel no more constrained to take gladly the present opportunity to break their past bigoted record, that is, if they have been keeping their Sabbath as their bigotry dictated. Sunday did not exist for nothing; it has had its utility. But to adopt it to the advanced society of to-day, its character has to be modified. I express, in conclusion, my cordial wishes for the success of the coming Imperial Birthday Ball and for the hearty enjoyment of particularly English and Americans who have been invited to it.

I am, yours very truly,

SHO SHINOMICHI.

Mita, Tokyo, October 31st, 1895.

IS SUNDAY THE SABBATH?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your references to the subject of the ball to be given on Sunday the 3rd prox. in honour of the Emperor's birthday, you assume that Sunday is the Sabbath and that this opinion is held universally by Englishmen and Americans. Are you justified in making these two assumptions? I venture to think not. The Sabbath was the seventh day of the week; and the Jews who abide by the Law of Moses still keep, and quite correctly so, the seventh day as the Sabbath. But Sunday or the

Lord's day was and is, not the seventh, but the first day of the week; and the observance of it as a day of religious reunion rests not upon the Law of Moses but on the practice of the early Church. The two days are never identified or confounded in the New Testament. Some of the first Jewish converts continued to observe the Sabbath after having become Christians; but Saint Paul thought nothing the better of them, for doing so.

Is the Sabbatarian view of Sunday the only orthodox view amongst Englishmen? No doubt it alone was orthodox in the time of the Puritans; but Christian opinion has made a good deal of progress since then, and whatever may be the case amongst the dissenting bodies, the Church of England at all events is free from the mistake of confounding the Sabbath with Sunday. To any one seeking clear views and a full and impartial discussion of this topic I venture to recommend the perusal of Canon Hesse's Bampton Lectures, published some thirty years ago.

Yours faithfully,

H.

Yokohama, 31st, October 1895.

MISS ABBOTT'S EXHIBITION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though not present on the occasion, I am informed by unbiassed spectators that the treatment of Miss Abbott by the students under Mr. Kano at the Kinki-kan was, as you report in to-day's *Japan Mail*, thoroughly brutal; but that in spite of the brutality displayed she came out victorious. I fancy this is the first encounter of Miss Abbott with hoodlumism, but it is strange she should have met with this experience from students of the University of Japan.

T.

[We do not think that the rudeness referred to was propagated by Mr. Kano's students. From persons present and from independent sources we learn that the investigation conducted on the evening in question by *Jiyuiku* experts, of whom Mr. Kano is a leader, was taken advantage of by roughs unconnected with the students.—Ed. J.M.]

A PERSONAL APPEAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A very practical reason induces me to seek a little space in your correspondence columns. I feel sure that I voice the desire of a majority of your readers in beseeching the *Mail's* latest pair of polemicists to practise their pugnacity in private. Many of us think that "Secularian" is both clever—as he very well knows—and zealous. But, whilst he amuses us, we cannot admire a certain way he has of lying in wait for fighters weaker than himself, and then ridiculing their size. On the other hand, there are many Christians that do not relish Mr. McCaleb's championship of their faith, for reasons already obvious. There is such a thing as zeal without knowledge. If ill-trained lads must fight, they should at least learn not to make themselves a nuisance to the public. So we earnestly beg these belligerents to leave print and take to the post.

Yours faithfully,

P. B. PUBLICO.

October 30th, 1895.

THE SILENCE OF "SECULARIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Oh where, oh where has "Secularian" gone? Like as a sheep before her shearers is dumb, so he openeth not his mouth. Has he, unknown to us, welcomed Mr. McCaleb to his own fireside to discuss Messianic prophecy and so spared the Rev. gentleman the humiliation of showing in the *Japan Mail* the weakness of the clerical position. Or can it be that the valiant David of Nagasaki has slain the Kobe Goliath with the slings and arrows of his sarcasm?

It was astonishing to read—in the letter from your Nagasaki correspondent—that "Secularian" knew not of other "strange people" besides Mr. McCaleb in this enlightened age; and the Christian community ought to be grateful to Mr. Eric Erics for going out of his way to inform Secularian that avowed Christians really do exist, and are to be found even in the upper circles of society. If Secularian would like to be introduced to a few more noted characters who have accepted the gospel, permit me, Sir, to refer him to the police gazettes of Christian countries as well as to the missionary magazines; and if he is an Englishman he will find in the history of his country plenty of evidence that Christians have existed from the earliest times. Why, Sir, every school-boy knows that the honourable title of "Defender of the faith; head of the Church" has been held by each successive "most religious and gracious" sovereign onward from the time of our Royal Bluebeard, Harry the Eighth, author of "The Royal road to Divorce, together with sure methods of avoiding payment of alimony."

All down the long vista of the ages the Church is conspicuous, linked arm in arm with the State, sanctioning and often sanctifying its atrocious acts and sharing in the plunder of its robberies.

"Secularian" must surely be a hermit if he does not know of such "strange people" as Christians in the year of grace 1895. I pass over the guileless McCaleb, and ask him to cast his eye upon the "faithful laity" prominent among whom he will see the Christian Croesuses of the Jabez Balfour type, who build churches either by robbing widows' houses, or by unjustly taxing the labour of their servants. Such men are esteemed gentlemen and Christians—pillars of the Church. Oh what a goodly outside falsehood hath! A man endowed with the faculty of observation must, I think, be wilfully blind if he does not see that the Christian Church is a gigantic sham—as foreign as it possibly can be from the New Testament idea.

There are, of course, Christians and Christians; but it is perfectly ridiculous of Mr. Erics to argue that because a man avows himself a Christian; he therefore must of necessity believe in Messianic prophecy—which was the particular matter Mr. McCaleb and Secularian were debating. In priest-ridden countries where Catechisms exist "to be learned of every person," enjoining it as one's duty "to submit myself lowly and reverently to all my betters" (the parson, of course, being always the best) there are people—and a fairly large number of them—who get their "religious belief" so-called, as they get their coats—ready-made.

I imagine Mr. Eric Erics no longer doubts that it is still the fashion among eminent theologians to throw epithets at the heads of their opponents, like brickbats.

The Rev. Mr. McCaleb's last two letters should settle the matter. Clear proof was afforded in them that even in the nineteenth century when "enlightened and gentlemanly controversial methods" are taught, an "eminent theologian" can believe that whoever differs from him is "of necessity, either a fool or a knave"—and sometimes both!

Yours faithfully,

STILL ANOTHER KOBEITE.

P.S.—Perhaps I ought to say explicitly for Mr. McCaleb's information that I am not "Secularian" nor "Inquirer."

Nov. 3rd, 1895.

THE EVENTS OF 1870.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your article "The Events of 1870" in yesterday's *Japan Mail* comments on a recent Paris letter of *The Times* by referring to the columns of the London *Spectator* of July 16th, 1870, as though nothing had been made known in the meantime to rectify the view taken in the hurry of the moment by a London Editor. You quote a long passage from the antiquated article which you praise as "an exceptionally clear exposé of the reasons of the Franco-Prussian war," adding, however, that the strict accuracy of its statements is "now thrown under the shadow of a doubt." It is certainly a most important passage in the "accurate" exposé that in your opinion has now been contradicted for the first time; viz., the story of Comte Benedetti's "having adopted the extraordinarily unceremonious step of presenting the Emperor Napoleon's vexatious demand direct to the King of Prussia on the public promenade of Ems and the King's treating the insult in a Kingly manner." But what you represent as the latest revelation is by no means new to the readers of historical works on that great period. You evidently overlook the fact that Comte Benedetti has published the most accurate account of his doings at Ems (in a well known book entitled "*Ma Mission en Prusse*") as far back as 1871, and that ever since his statement that there was at Ems "*ni insulte ni insulté*" has been accepted as setting aside the popular anecdotes immortalized by a memorial stone at Ems and in the splendid comic song in honour of King William serenely drinking his cup of *Kröhenchen brunnen* as a King and hero. No wonder that Barthélémy Saint-Hilaire in his recent utterance passes over "in complete silence" Comte Benedetti's assertion of 24 years ago. The belief that "the first insult came from Benedetti" is by no means "everywhere entertained up to the present," as you state. Not Benedetti committed the insult, but Duke Grammont in his famous speech in the French Chamber on July 6th, 1870, before Benedetti put in an appearance at Ems.

The new book which Benedetti, according to Blowitz' letter to *The Times* is publishing just now, cannot possibly add anything to the complete account of his experience at Ems drawn up immediately after the event and corroborated throughout by his official and confidential correspondence with the then foreign minister of France. It

certainly must have quite another purpose. From the passage extracted from *The Times* letter I am inclined to believe that it is a repudiation by the Comte of gross misstatements and falsehoods which the former Prime Minister of France, Emile Ollivier, allowed himself to insert in the first volume of his bulky History of the Liberal Empire of which he was the leading spirit in the eventful time from January 2nd to August 9th, 1870. Some of the fabrications which Ollivier brought forth last year in defence of his unfortunate actions in 1870, have even found their way into the Paris letter quoted in your paper. You seem to believe that an unjustifiable act of Bismarck's supplied the wanted "offence" which "was bound to come," by altering the telegram sent to him from Ems so as to make war inevitable. If he did so, you feel justified in pronouncing against him "the anathema, was to him by whom the offence cometh." In order to satisfy you on the point that Bismarck in altering the wording of the celebrated Ems telegram for the purpose of making it public as he was authorized to do, simply abridged it without altering its sense, may even tone it down, I copy the original as made known to the world in the session of the Reichstag on November 23rd, 1892, and Bismarck's much blamed reproduction:—

ABBEKEN'S TELEGRAM:

"Seine Majestaet der Koenig

schreibt mir:

Graf Benedetti fing mich auf

der Promenade ab, um auf

meinet zudringliche Art von

Mir zu verlangen, ich sollte ihn

autorisieren, sofort zu telegraphi-

ren, das ich fuer alle Zukunft

Mich verpflichte, teils, niemals wie-

der Meine Zustimmung zu geben,

wenn die Hohenzollern auf ihre

Kandidatur zurueckkaemen, ich

wies ihn zuletzt etwas ernst

zurueck, da man i tout jamais

dergleichen Engagements nicht

nehmen duerfte noch Koenne.

Natuerlich sagte ich ihm, dass

ich noch nichts erhalten haette,

und da er ueber Paris und Mad-

rid fruher Genachrichtigt sei

als ich, er wohl einsaehe dass

Mein Gouvernement wiederum

ausser Spiel sei.

Da Seine Majestaet dem

Grafen Benedetti gesagt, dass

Er Nachricht vom Fuersten

erwarte, hat Allerhoechstder-

selbe, mit Ruecksicht auf die

obige Zumuthung, auf des Gra-

fen Eulenburg und meinen

Vortrag, Geschlossen, den Gra-

fen Benedetti nicht mehr zu empfangen,

soudern ihm durch einen Adj-

utanten sagen zu lassen; dass Seine

Majestaet jetzt vom Fuersten

die Bestaetigung der Nachricht

erhalten, die Benedetti aus

Paris schon gehabt, und dem

Botschafter nichts weiter zu sagen

habe.

Seine Majestaet stellt Eurer

Excellenz anheim, ob nicht die

neue Forderung Benedetti's

und ihre Zurueckweisung so-

gleich sowohl unseren Gesand-

ten als in der Presse nutgetheilt

werden sollte."

BISMARCK'S REPRODUCTION:

Telegram from Ems, July

13th, 1870. Nachdem die Nach-

richten von der Entsagung des

Erprinzen von Hohenzollern

der Kaiserlich franzoesischen

Regierung von der Koeniglich

spanischen amtlich nutgetheilt

war, hat der franzoesische

Botschafter in Ems an Seine

Majestaet den Koenig noch die For-

derung gestellt, ihn zu autorisieren,

das er nach Paris telegraphire,

dass Seine Majestaet sich fuer alle

Zukunft verpflichte, niemals wie-

der seine Zustimmung zu geben,

wenn die Hohenzollern auf ihre

Kandidatur zurueckkommen sol-

ten. Seine Majestaet

der Koenig hat es darauf abge-

lehnt, den franzoesischen Botschaf-

ter nochmals zu empfangen, und

demselben durch den Adjutanten

von Dienst sagen lassen dass

Seine Majestaet dem Botschafter

nichts weiter mittheilen habe."

You will see that the underlined words are practically identical. The "somewhat importunate mode" of Benedetti's approach and the "somewhat serious" manner of the King's refusal have judiciously been omitted in Bismarck's reproduction.

The charge that Bismarck had falsified the Royal message with a view of thereby provoking the war, is therefore quite ridiculous for anyone who takes cognizance of the evidence produced on this closely scrutinized question. It was based, 23 years ago, on a comparison (by some Frenchmen) of Bismarck's telegram with the report of the Adjutant Prince Radziwill on the proceedings at Ems. The whole accusation fell to the ground when it was shown that Radziwill's Report was written after the date of Bismarck's publication, and that Abeken's telegram was its real basis. But that does not prevent writers like Mr. Blowitz and M. de Lano to treat it as an established fact even now. Unfortunately, when Bismarck told one of the guests at Friedrichsruh in September, 1892, that the abridged telegram had made much more impression on Moltke and Roon than the original, some anti-Bismarckian German papers renewed the old canard; but they were promptly silenced by Count Caprivi publishing at last the original form, as stated above. How you were led to suggest that this charge, when resuscitated after 20 years of oblivion in the end of 1892, may be "a prominent, if not the chief, reason for the disfavour into which he has fallen with the present Sovereign of Germany" in the beginning of 1890, I am at a loss to understand. Finally, you adopt in your retrospective view the same over-cautious attitude which you so amusingly point out in the "Delphian utterance" of the *Spectator* of July 16th, 1870. You will "await the production of fuller evidence on each side to elucidate this most interesting page of modern history." Now, Mr. Editor, that demand seems to me extravagant after so much has already been publish-

ed. There was the "Enquête parlementaire" in 1871 going fully into the merits of all persons concerned, Benedetti's book of 1871, Gramont's account of 1872, Ollivier's recent publication, Madame Carotte's Souvenirs, Girardeau's "Napoleon III. intime," the Memoirs of King Karl of Roumania, Emperor William's, Roon's, Moltke's correspondence and notes, Emperor Frederick's diary, Bismarck's straightforward stories, Lord Loftus' Reminiscences, Lord Lyons' Despatches, Beust's Memoirs (to mention only the names of close observers) to enlighten us on that point. Is there really any fear that we cannot see the truth, and that men like Blowitz (who as you state yourself is never to be taken *au pied de la lettre*) may still deceive us? Honestly speaking, I am of opinion that you could have solved all your doubts, if time and circumstances had allowed you to refer to any of the recent standard histories of that period, e.g. Vol. III. of Sybel's grand work.

Hoping that the plural in the title of your article means that you will bring more abstracts from English papers reviewing the great events of 25 years ago, I have the honour to be,

Yours respectfully, HISTORICUS.
Tokyo, November 2nd, 1895.

CHINESE CHARACTERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of yesterday is published another letter by the person who arrogates to himself the position of censor on the subject of "Chinese Characters." I would not take the trouble to reply to his puerilities, were it not that, as he has already had three opportunities of expressing his views, it is, with your kind permission, my right to have the last word.

As regards the "on" he now changes his ground. What he in his haste called "erroneous" turn out to be merely "seldom used." I would remind him that he is no judge of what is the real "on" of any character, and that if he wishes to be certain, he must consult some standard Japanese dictionaries, which so far he has not done.

For instance, take the character 播. The "on" is *ha* not *han* in all Japanese dictionaries. I have not got my books of reference down here, but turning to those I have borrowed, the 四聲字林 集韻 and the 増補大廣益會玉篇大全, I am confirmed in my previously expressed opinion that the proper "on" of 播 is only "*ha*." The latter dictionary gives the very example I furnished, viz:—播棄, *ha-ki*, not *han-ki*. In my first letter I quoted the Chinese sound of the character to show him that he must be wrong, as I fancied he might possibly know the principles which regulate the Japanese pronunciation of a Chinese character. He apparently does not.

As to 拐 the same two dictionaries give only *kai* as the *on*, and the latter quotes the same example as I do, namely, 拐編, *kai-hen*. He has never been in a Japanese Court of Law, or he would know that 拐帶 is pronounced *kai-tai*.

"By all the Japanese I consulted." Let him find out the facts for himself by personal research, and not rely entirely upon his teacher, who may or may not be right. "拐編 is read *katari*," is it? How the two characters are expressed by *one kun* is incomprehensible. The *fukufu* is not read *katari* in any case. He will find the proper *kun* in my last letter.

I gave examples, with my authorities, in my last letter of 差, 牀, 襄, 旁, 竄, and others which he does not mention. (How about the proverb quoted by him that to be silent on any point is to acknowledge yourself beaten?) I shall not repeat my examples. He can refer to my letter.

He says 差 is read *sa* on page 138 of the Dai-zōho-kango. Yes, and I give *sa* as the first "on." But he is uncandid enough only to tell half the truth. On another page of the same authority, he will find the "on" given as "*shi*," which I also give, with my examples. He says if I had given what he is pleased to term the "usual" "on," in the characters he criticises, he would, have said nothing. This character is a case in point. I really fail to see how any "on" which is not to be found in any Japanese dictionary, but is simply occurs erroneously in colloquial use, is "of so incomparably much greater importance" than those which are to be found there.

Williams gives 𠩺 under the radical 十. That is sufficient authority for me. "I know very well that 𠩺 occurs in Buddhistic works in China, but to maintain that it is a Chinese character is very much the same as if one would pronounce? or! to be of Japanese origin, because in certain recent prints they are used in the sense of the particles *ka* resp. *yo*." What does this mean?

His sentences are so involved that it is often impossible to grasp his meaning. I shall be glad to include both? and! in the next edition of my work, if he can give me any authority to show they are Chinese Characters.

Then to take the characters 染, 梁, and 渠. It is admissible to put the first two, as I have done under the radical 木: it is absolutely wrong to place the last under Radical 𠩺. He misquotes Williams, as far as I can remember. The word "formerly" ought not to appear. To prove that I am correct as to these last mentioned characters, I refer him to page 84 of the 増補大廣益會玉篇大全.

There is an objection to admissions made in footnotes. They show an undue haste to appear in print,—a fault from which this critic is very far from free.

"He ought to know that 𠩺 when used in Japan is used as a secondary synonymous form of 𠩺." He ought not, because it is not so used. I said it was want of candour which made him persevere in his error: I find it is want of knowledge.

He is most emphatically wrong in saying that my 𠩺 *rai*, of *hō rai* is a misprint for 𠩺. It is not. See p. 71 of the 増補大廣益會玉篇大全; there is no such character used here as the one he gives.

Again, he says I "confound" 𠩺 with 𠩺, 𠩺 with 𠩺, 𠩺 with 𠩺, 𠩺 with 𠩺, and 𠩺 with 𠩺. I do not. Each one he names is the same, according to Williams, as the one I refer him to.

I am perhaps as capable as he of appreciating Mr. Gubbins' excellent dictionary. I observe he passes by in silence the points on which I quote the "Dictionary of Chinese-Japanese words" to show him his mistakes, and only mentions those on which he thinks Mr. Gubbins agrees with him.

Yours truly, A. H. L.
Kobe, October 31st, 1895.

[We can not publish any more correspondence on this subject.
—Ed. J.W.M.]

CAMPHOR AND THE CAMPHOR INDUSTRY IN JAPAN.

(SPECIALLY COMPILED FOR THE "JAPAN MAIL.")

One of the problems brought into prominence by the recent war and the annexation of Formosa to Japan, is the camphor industry. It is a problem in which Japanese and foreigners are interested: the former, because, owing to the steadily increasing demand for camphor in Europe and America, and the equally steady decline of the Japanese supply, they are anxious to turn to the fullest possible account the camphor-producing capacities of the newly acquired territory, the only place outside Japan where camphor can be cultivated: the latter because they apprehend that the supply having now fallen wholly under the control of one nation, whereas formerly it was in the hands of two competitors, the market will be completely at the mercy of the monopolist.

The supply of camphor in the interior of Japan is now indeed in a deplorable condition, for so ruthlessly have the precious trees been felled that few, if any, are to be found in private ownership. Those that still remain are in State forests, but even there the danger of extermination threatens, owing to the fact that the value of the trees prompts clandestine felling on a large scale.

The tree (*Curnamomum Camphora*, Nees) has peculiar habits. It grows only in certain localities facing south and within reach of sea air, where the average annual temperature is above 15° C. Thus, even in Japan, it can be cultivated only in Shikoku, Kiushu, and a limited part of Kii and Izu; that is to say, only in districts situated within 10° to 36° north latitude.

It attains the greatest size of any tree in Japan, specimens being frequently found that measure above 40 ft. in circumference. Such grand trees are to be seen chiefly in the precincts of shrines, on which account they are sometimes called *Shin-boku* (sacred trees). The tree being of comparatively slow growth (from $\frac{1}{2}$ to $1\frac{1}{2}$ inches in circumference annually, according to soil, cultivation, and so forth), the people of Tosa, where it is largely grown, are wont to say that its value increases at the rate of one *yen* a year. It is in truth the most precious and profitable tree in Japan, for even if the price of camphor be estimated at 30 *yen* per picul, or less than a third of the price now ruling, the yield from 1 *cho* ($2\frac{1}{2}$ acres) of land does not fall below 10,000 *yen* a year, after the trees have attained to a suitable size.

There are two or varieties in Japan, popularly distinguished according to the colour of the young

leaves, as "red camphor" and "blue camphor." Of the two, the former is generally considered to contain a higher percentage of camphor. Speaking generally, the percentage varies considerably according to locality, soil, age, and also in different parts of the same tree. The root and stump contain the highest percentage, and the yield becomes less the higher the section taken. Owing to the fact that the older the tree the greater the amount of camphor it contains, formerly, when the demand for this article was still comparatively limited and market prices were low, only trees above 80 years of age were used, and even then only the stump and the stem up to the first branch together with such portion of the roots as could be easily dug-out, were taken. Subsequently, however, as prices rose and the material became scarce, the tree was considered to have attained a suitable age even when its rings counted less than forty, and moreover, not only the small branches, but ultimately even the leaves were used for extracting camphor. In the case of a tree several centuries old, the bark becomes covered with a white deposit of camphor exuding from the wood of the trunk.

It is not clear how far back the manufacture of camphor dates in Japan. There are reasons for believing, however, that the industry was carried on in very remote times, and that the processes were imported from either China or Korea. In Tosa and Sakuma the manufacture used to be, and still is, most extensive. There, as also in other camphor districts, rigid regulations were enforced in pre-Restoration days for the protection of the trees. Any one clandestinely felling a tree, whether in a government or a private forest, was liable to severe punishment, exile, or even death being at times inflicted, according to the gravity of the offence. About 180 years ago, the feudal chief of Satsuma conceived the idea of carrying on camphor manufacture as an official business, and, during more than one century from that time, 120,000 cattie of crude camphor were sent every year to Nagasaki. It is said that the business yielded a net profit of about 1,000 *ryo* per annum.

Old as the manufacture is, the process is still primitive and admits of considerable improvement. In almost all the camphor districts the same methods are pursued. Abundance of water being a necessity, a site in the vicinity of a river is chosen, and a furnace is built of stone or brick. Upon it is placed an iron pot measuring, in general, 2.7 feet in diameter and 1.5 feet in depth. Over this pot is set a wooden cask, 3.8 feet deep and 2.6 feet in diameter at the lower end, and 1.2 feet at the top. The cask has no bottom but rests on a perforated board that serves at the same time as a cover for the pot. In the lower part of the cask a bamboo pipe is fixed to regulate the amount of water in the pot. After the cask has been set in position, it is plastered with clay to a thickness of about an inch, then tied round with ropes, and again plastered with clay. On a somewhat elevated spot, separated from the cask by a distance of from 5 to 7 feet, cooling receptacles, two in number and one within the other, are placed. These are made of pine, and are rectangular in shape, the lower measuring 6 feet by 3 feet with a depth of 6 inches, and the upper being somewhat smaller. The latter is separated horizontally into two compartments, the higher for receiving water that flows from a bamboo projecting over it, the lower for receiving the volatilized camphor steaming from the cask. In this lower compartment pieces of board, five to ten in number, are fixed cross-wise, and in the upper is a small bamboo pipe through which water is passed to regulate the temperature of the furnace. Finally, a bamboo tube connects the upper part of the cask with the upper compartment of the cooling receptacle. There is no division of labour: the man that chops the camphor chips and brings them from the forest is the same that manages the furnace.

The chips are small— $1\frac{1}{2}$ inches wide and about $\frac{1}{2}$ inch thick—and care is taken to cut them across the grain. About 30 *kwamme* (250 lbs.) of chips can be cut by an ordinary workman between morning to evening. They are packed closely into the cask from above. Water is then allowed to flow into the pot through the pipe from the cooling receptacle; when the pot is full the cask is closed with a furnace lid over which clay is thickly plastered. The fire is now lit, and kept burning strongly until steam is seen to issue from the pipe fixed in the upper compartment of the cooling receptacle, whereupon the fire is reduced, and a quantity of fagots sufficient to keep it burning slowly throughout the night is thrown in, the mouth of the furnace being then closed with stones so that only a small opening is left. This partial closing of the mouth of the furnace is said to be the most difficult part in the whole process. Next morning, water is again conducted into the iron pot;

the fire is fanned to a high temperature and then once more lowered, the mouth also being partially closed as before, after which the workman goes to obtain a fresh supply of chips, and on his return in the evening, the cask is emptied of the steamed chips and fresh ones are packed in. Thus the time generally allowed for extracting the camphor from the chips is some 24 hours. For about ten to fifteen days the furnace is kept alight. When the receptacles become thoroughly cooled the connection between the upper and lower compartments is severed. The camphor deposited on the boards and sides of the lower compartment is then scraped off, while that found floating on the surface of the water in the upper compartment is collected by skimming. The deposits thus obtained vary considerably in amount according to the quality of the raw material and the skill of the fireman. They range from about 35 catties to as little as 5 or 6 the average being a little over 20 catties. The camphor is next transferred to a tub called the "dripping tub" (tare-oke), where it remains for about three whole days, the tub, meanwhile, being tilted so as to facilitate the dripping process. Finally, the camphor is packed in another tub, having a duplicate cover to prevent evaporation. The junctions of the cover and the body are sealed with a narrow strips of strong paper, and the tub is ready for transportation to Europe or America. It holds about 120 catties of camphor.

The above is a brief account of what is commonly called the Tosa process. It will be seen at once how primitive and imperfect is the mode adopted. At present, however, owing to the difficulty of getting a sufficient supply of raw material in any one district mechanism of a more scientific nature can not be fully availed of. Nevertheless, it is easy to see that there is room to effect improvements in the present methods of manufacture even on a small scale, and also in the mode of packing. Prof. Moriya, of the College of Agriculture in the Imperial University, has convincingly proved the possibility of extracting a larger percentage of camphor by slightly improved processes. He substituted an iron still for a wooden, and an iron boiler for an iron-pot, and increased the number of cooling receptacles to two instead of one. The material used by him for experimental purposes was of such inferior quality that experts employing the old system could not expect to obtain more than 2 per cent. of camphor. But the Professor obtained 5.23 per cent. His experiments have also shown exactly how the percentage of yield differs according to the different parts of the tree used:—

	Per cent.
Twigs	2.21
Branches	3.70
Upper part of the stem	3.84
Lower part of the stem	4.23
Upper part of the stump	5.49
Lower part of the stump	5.74
Root	4.46

Average

These figures compare well with the following results of manufacture conducted by the old method at various places:—

Place.	Quantity of material.	Camphor obtained.	Percentage.
Kochi	1,813 catties...	30 catties...	1.65
Miyazaki	3,375 catties...	90 catties...	2.67
Fukuoka	1,000 catties...	20 catties...	2.00
Wakayama	625 catties...	10 catties...	1.60
Kochi	1,688 catties...	34 catties...	2.00
Wakayama	313 catties...	5 catties...	1.60

Average... 1,469 catties... 31.5 catties... 2.15

Crude camphor contains on an average 10 to 15 per cent. of oil, which, in turn, yields about 50 per cent. of camphor. Prof. Moriya's experiments show that camphor obtained from the upper part of the tree is more oily than that obtained from the lower part. Camphor is extracted from the oil by cooling the latter with freezing mixture.

The percentages of camphor and oil differ according to the season, the former being higher in winter and the latter in summer. Experiments conducted at a certain manufacturing establishment in Tosa gave the following results according to season:—

	Material used.	Camphor obtained.	Oil obtained.
Obtained in one day in summer.....	200 catties	4 catties	9 go
Obtained in one day in winter	200 catties	5 catties	3½ go

Further, camphor is more subject to evaporation during the hot months than in the cold season. According to quality, camphor is divided into four different kinds, viz., "Fyo-kare" (best dried), "Chu-kare" (moderately dried), both of which contain little oil and are chiefly intended for export to Europe and America; "yamakata shono"

(mountain camphor), and lastly "sat-sei shono" (re-manufactured camphor, that is to say separated from the oil), both of which are more oily and are of inferior quality. The two last are chiefly sent to China. Camphor is one of the staple exports of Japan. Practically speaking, it is now produced in Japanese territory only. Since it was first sent abroad, the quantity exported and the price have undergone considerable changes, the price having risen as the quantity has decreased, especially in recent years. The following table shows the export of camphor and oil from the first year of Meiji:—

Date.	Camphor.	Price per catty.	Camphor oil.	Price per catty.
	Catties.	Yen.	Catties.	Yen.
1868	468,154	77,097.960	105	...
1869	689,812	111,339.110	107	...
1870	1,360,361	83,704.850	111	...
1871	920,938	120,864.170	143	...
1872	650,969	88,721.950	136	...
1873	445,677	68,437.480	154	...
1874	1,123,514	155,550.230	158	...
1875	1,107,171	138,593.000	185	...
1876	1,203,639	174,517.560	198	...
1877	1,567,598	235,166.120	152	...
1878	1,004,952	321,664.840	101	...
1879	2,543,374	455,910.070	182	...
1880	1,649,961	598,223.970	226	...
1881	3,683,816	706,137.580	191	...
1882	5,000,423	869,127.930	174	...
1883	4,854,342	707,992.760	140	...
1884	4,571,995	510,503.060	120	...
1885	3,970,085	558,045.510	121	...
1886	5,430,033	920,027.810	170	...
1887	6,478,094	1,130,506.360	275	...
1888	4,555,469	1,017,887.380	223	...
1889	4,971,849	1,391,371.870	279	...
1890	4,463,881	1,031,992.540	433	...
1891	4,429,051	1,019,046.680	368	...
1892	3,064,095	1,274,554.600	416	...
1893	4,487,485	1,308,020.750	516	...
1894	3,071,378	1,023,950.350	495	...

It will be seen from the above that camphor attained its maximum export in 1887, and its maximum price in 1890, whereas the minimum price was in 1884. Since the fall of last year it has risen rapidly, until at present the quotation is approximately 100 yen per 100 catties. The prices commanded by crude camphor in Japan since 1887 are as follow:—

	Per 100 Catties.
1887	18.890 Yen.
1888	25.030 "
1889	30.500 "
1890	44.080 "
1891	37.070 "
1892	42.060 "
1893	52.850 "
1894	38.910 "
1895 (early part of the year) ...	57.870 "

The expense involved in the manufacture of 100 catties of crude camphor may be roughly estimated from quotations, given in vol. 22 of the proceedings of the Dendrological Society of Japan. They show the results obtained by an expert of Ehime Prefecture in 1889:—

Expenses involved in manufacturing 100 catties of crude camphor, workman's wages, &c.....	5.00
Fuel	1.30
Tub25
Paper and Rope015
Freight (from Uwajima to Kobe)245
Miscellaneous expenses020
	6.830

To obtain 100 catties of crude camphor about 230 *kwamme* (1,917lb. approximately) of superior chips are expended, and as 12 cubic feet of the tree cost, on the average, 6 yen, we may conclude that that about 15 yen is consumed in extracting 100 catties of crude camphor. At the present market rate, therefore, the manufacture of camphor must prove a very lucrative business, since there is a margin of some 20 yen of per 100 catties.

Of the camphor exported, the greater part goes to America, Hongkong, England, and Germany, in all of which places it is used for various purposes, as for the manufacture of cellulose or "artificial ivory" for cubical gun-powder, and also for medical and certain domestic purpose. That exported to Hongkong is there refined and again shipped abroad.

It is impossible to give even an approximate estimate of the supply of raw material remaining in Japan proper, the principal sources of present supply being roots of trees cut down decades ago, and timber illicitly felled in State forests. Reckless cutting of trees has reduced this profitable business to a sad condition. Under the circumstances, it is not possible to obtain any trustworthy figures relating to the yearly yield of crude camphor in the various districts. The only datum we have is that the quantity of camphor exported stands to that used at home in the ratio of 9 to 1. Of the total quantity exported, seven parts out of every ten are manufactured direct from the trees, while the remaining three are obtained by distilling and freezing the oil.

Such being the present condition of the camphor industry in the interior, the Japanese are paying

keen attention to the problem of Formosa camphor. But owing to the still unsettled state of affairs in the island, no definite information has yet been obtained. There is, however, a vague belief that the supply must be immense. What is thus far known about Formosan camphor is founded chiefly on mere rumour and can not be considered trustworthy. The only attempt thus far recorded to cultivate the camphor tree in the West was made by the United States Agricultural Board. Some 15 years ago it obtained seeds from Japan and planted them in the State of Florida. It is said that the young trees are growing very vigorously. By and by, therefore, America may prove a formidable rival of Japan. To complete this sketch, we may give a brief account of the Sumitomo Camphor Refinery in Kobe, the only establishment in Japan that produces the refined camphor comparable with the best brands manufactured in the West. It was only from 1892 that purified camphor came to be produced in Japan, and the new department was due solely to the enterprise of Mr. Takagi, Chief Expert of the Sumitomo Refinery. Mr. Takagi is a graduate of the Sapporo Agricultural College. Six years ago, he and Mr. Teshima, now Director of the Technical College, were sent abroad by Mr. Sumitomo, a wealthy merchant of Osaka, to inspect mining operations and, at the same time, the refining of camphor in Europe and America. The trip proved entirely fruitless, with reference to the camphor refining business, for, wherever the travellers went they found, to their great disappointment, the doors of the refineries shut to them, the "imitative instinct of the Japanese being already regarded with dislike and distrust in the West. Thus, without practical initiation into the art or chemical works to guide him, Mr. Takagi was obliged to undertake, in 1890, the management of the Refinery, established only a few months previously. He encountered many difficulties during a period of two years, but aided by his extensive chemical knowledge, he at last succeeded in elaborating a process of refining, and obtained a patent in 1892. The news that a Japanese expert had discovered the process of refining camphor was received with considerable alarm in Europe and America, for it was apprehended, and not without reason, that the export of crude camphor from Japan would cease, and that the Western market would be monopolized by the cheap Japanese production. The alarm was soon converted into a serious practical problem when, shortly afterwards, a Hamburg refinery, one of the largest in Europe, sent for Japanese samples and then for a considerable quantity of camphor refined at the Sumitomo works, the samples have demonstrated that the Japanese refined camphor was not inferior in quality to the best European, and was about 2 per cent. cheaper. The matter was taken notice of in the *London Chemist and Druggists Journal*, and an editorial very complimentary to the discovery appeared. This served the excellent purpose of spreading the reputation of the Sumitomo camphor throughout Europe and America, and a large number of orders were quickly received from various places in the West. The druggists and refiners of Europe, fully convinced of the gravity of the situation, concerted measures to compete with the new rival, and at last concluded to boycott it, which they did for about a year, but before the minimum price at which the Japanese were ready to sell had been reached, the league broke down. A serious obstacle to the expansion of the Japanese refined camphor industry is the cost of transportation. One of two things must happen, either steps must be taken to have the freight cheapened, or the export of crude camphor from Japan and Formosa must be stopped. One or the other or even both are extremely likely to happen, and some day or other refined camphor from Japan may be found in sole possession of the Western camphor market.

A circular issued by the English agent of a certain German refiner last spring alleged that the camphor produced at that refinery was better in quality and cheaper than the Japanese article, the latter being thus taken as a standard of comparison. The Sumitomo camphor obtained meritorious recognition at the World's Fair in Chicago and at the late Domestic Exhibition. The Refinery exported about 300,000 catties last year, but the quantity cannot be increased this year owing to insufficiency in the supply of raw material, though the demand is constantly increasing. Applications to be appointed agents have been received from almost every country in Europe, but a refusal had to be made in each case, owing to the insufficiency of the quantity produced. The export is now in the hands of two or three resident merchants of Kobe.

YOKOHAMA GENERAL HOSPITAL.

The annual general meeting of subscribers to this institution was held in Keil's Building on Wednesday afternoon, with Mr. A. O. Gay in the chair. Among those present were Messrs. J. Carey Hall, R. Reiffinger, S. Debrabant, P. Dourille, J. Adam, P. Muraour, G. Goudareau, P. Launay, P. Beretta, E. Adet, J. H. Brooke, A. Dumelin, A. J. Wilkin, R. Pohl, Rev. E. C. Irwine, Dr. Hall, E. Campredon, Marthoud, E. Delmas, W. B. Walter, Dr. Ritter, &c.

The CHAIRMAN referred briefly to the accounts pointing out that there was over \$83 to the credit of the institution. In conclusion he said he would be happy to answer any questions that might be asked. Proceeding, he said the question that they should have to settle would be as to the disposition to be made for the next year. Dr. Mecre proposed to retain the premises for another year and after that possibly to make some further arrangement. He might state, however, that the Committee had another intimation not sufficiently developed to lay before the meeting, but which still, even if Dr. Mecre continued his arrangement for charity patients, might be considered, though of necessity held in abeyance at present.

Mr. DOURILLE proposed, and Mr. ABILY seconded, the passing of the accounts, which was agreed to by the meeting.

STATEMENT OF RECEIPTS AND DISBURSEMENTS
FROM OCTOBER 1ST, 1894; TO SEPTEMBER
30TH, 1895.

RECEIPTS.	
October 1894 to May 1895.	
To Subscriptions per list	\$1,541.00
February 1895.	
To from Mrs. Morris, President of King's Daughters Society	280.00
To from J. H. Brooke, Esq., Contribution from another	25.00
To fee from 3rd class patient	80.00
	\$1,870.00
To Balance of Cash	\$83.25
Balance from last Account	\$27.83
DISBURSEMENTS.	
October 1894 to September 1895.	
By paid for Charity Patients in General Ward, including Burial expenses \$25	\$716.00
By paid Medicine, for outside Patients	87.00
INFECTIOUS DISEASE WARD.	
By paid C. M. Smith, Wages and Sundries	356.79
By paid Advertising Meeting	7.00
By paid Prem. on Fire Insurance	31.13
By paid Medicines	24.45
By paid for Repairs caused by earthquake, &c.	356.55
By Balance	83.25
	\$1,870.00

E. & O. B.

Yokohama, 30th September, 1895.

Examined and found correct.

A. O. GAY,
Hon. Treasurer.J. T. GRIFFIN } Auditors.
O. KEIL }

Yokohama, 30th October, 1895.

The CHAIRMAN wished to know whether there were any suggestions to be brought forward relative to the hospital, or would the meeting leave the matter in the hands of the committee?

Mr. CONIL proposed the continuance of the present arrangement.

This was seconded by Mr. LAUNAY.

The CHAIRMAN called for remarks on the proposition that Dr. Mecre's offer for a renewal of the present contract should be accepted.

The CHAIRMAN said the committee had one proposition before them, which as yet had not been fully gone into, but he could say that it would not interfere with Dr. Mecre's possession of the hospital. He believed it would be best to leave it to the committee to be dealt with. It in no way interfered with the proposition before the meeting; he suggested that it be left with the committee, as the new proposition was as yet too crude to lay before the meeting.

Mr. WILKIN understood that the proposition before the meeting was that Dr. Mecre's lease of the hospital be renewed; was it to be understood that the acceptance of Dr. Mecre's offer included the making of necessary improvements on his part?

The Rev. E. C. IRWINE believed that all agreed with him that matters connected with the general hospital concerned the whole community. Feeling this he was sure that all present would agree that this should be discussed at a meeting where all members of the community were fully represented. They must also consider that the doctor who in former years took over the hospital, did so at a very remunerative rate, \$150 per month. Since then circumstances had changed, so that now the Hospital charged no rent, but Dr. Mecre gave in return the privilege of sending charity patients to the hospital at the rate of \$1 a day. This the committee fully appreciated, but at the same time it was beyond all doubt that the community now required, in common with the advance in such

matters, better buildings than those existing. They could not expect Dr. Mecre to meet this outlay, and to repair them would involve a considerable outlay and be a difficult task. Dr. Mecre proposed a renewal of the lease, and the committee would be loth to put him to inconvenience, but at the same time they felt that the buildings were not satisfactory. There was no statement in his letter that the buildings would be put in repair. The letter only stated that as the contract was about to expire, he asked for a prolongation under the same conditions. The meeting would observe in that letter nothing was said relative to reparation of the buildings. The committee had before them another proposition from another gentleman for the erection of buildings on ground unoccupied by Dr. Mecre. It would be no detriment to him, and would meet with the view of the others. Meanwhile, without a more explicit letter from Dr. Mecre, it would be premature for this meeting to renew the contract. It would be premature in face of the other proposition, and until the receipt of a further letter explaining more clearly what he proposed to do.

Mr. DEBRABANT remarked that if nothing was voted to-day Dr. Mecre could take no proper measures. In about seven weeks' time the contract would elapse, and he thought it would be better to allow him to renew the contract and then consider the new proposition.

The Rev. E. C. IRWINE thought it advisable to hold another meeting of subscribers, and this he thought would be more satisfactory both to those who were present and to others who were not present.

The CHAIRMAN pointed out that there was already a proposition before the meeting. The last speaker could put his remarks in the form of an amendment.

The Rev. E. C. IRWINE said he would then propose that the meeting be adjourned.

Mr. W. B. WALTER thought it advisable that the wishes of the community should be consulted before the renewal of the lease. It seemed that at the outset Dr. Mecre had paid \$150, but that now he paid nothing at all, which difference he believed the community had to pay. The question was, is the hospital satisfactory? They had a hospital, but it was not a satisfactory one, as it offered them no conveniences, and prevented them from making use of it. The hospital had been founded for the purposes of the community, and the fact of the community not making any use of it led him to infer that it was not satisfactory. He seconded Mr. Irwine's amendment.

The CHAIRMAN said that Mr. Walter seemed unaware of the whole circumstances of the case. In exchange for the rent of \$150 originally paid, Dr. Mecre now paid, as a result of various changes made, the ground rent, fire insurance, and other incidental expenses which relieved the community of all charges. In addition to this he took in charity patients at \$1 each, for which everything was included. Consequently the cost to the community were the fees for charity patients, amounting to \$715, with \$24 for burial. This would modify what Mr. Walter had said, and he would see that it was no expense to the community.

Mr. WALTER asked whether all the repairs were done by Dr. Mecre.

The CHAIRMAN—Yes.

Mr. WALTER remarked that the buildings were old and no doubt cost a lot to keep in proper repair. Still the account showed an expenditure of \$1,500 of the community's money, while \$715 was for charity patients. He was inclined to think that charity patients were taken in at Hongkong at very much the same rate.

The CHAIRMAN pointed out that the major part of the expenses were connected with the infectious ward and other expenses due to the earthquake.

Mr. DUMELIN recommended the renewal of the present contract, so as to leave them time to consider the other propositions. In view of the difficulty in raising subscriptions, he suggested the present arrangement should go on for another year.

The CHAIRMAN said that time was short, only about seven weeks before the end of the year, and the committee were desirous of knowing how they were to go on. He suggested a decision be arrived at rather than a postponement. This would not interfere with the other proposition which could be worked together. Dr. Mecre had been in possession ten years; to ask him to discontinue at so short a notice would be very inconvenient—it seemed to him scarcely right.

The amendment proposed by the Rev. E. C. Irwine was then put to the meeting, and having been lost, the original proposition was then put forward and carried.

The CHAIRMAN remarked that as usual the committee would be pleased to have a new committee proposed.

Mr. DEBRABANT—Are the present members

composing the committee willing to serve? If so, the meeting would be pleased to have them continue for another year. This was seconded by Mr. Reiffinger and carried.

After the usual vote of thanks to the Chair, the meeting separated.

AUSTRALIA AND JAPAN.

Sydney, September 12.

The official inquiry into the loss of the *Catterthun* is making slow progress, the proceedings having been adjourned to admit of search being made for an alleged uncharted rock, south of the small Seal Rock. Should any such rock be found to exist, as asserted by the fishermen in the vicinity, a fresh survey of this portion of the New South Wales coast will become necessary. The disaster does not appear to have lessened public confidence in the other vessels running between Sydney, Japan, and China, for it is generally believed that the commander of the ill-fated vessel had deviated from the almost uniform practice of giving the Seal Rocks a wide berth merely to save a few hours on the voyage. Now that the real danger of such a proceeding has been made manifest, it is not likely to be knowingly repeated.

Some little excitement has been occasioned at Newcastle by the appearance of "beri-beri" at that port. It seems that recently there arrived at Newcastle from Rio de Janeiro the Norwegian barque *Seringa*. The vessel was inspected in the usual way by Dr. Miles, the health officer, and being found free from what are considered contagious diseases, was granted pratique. After the process of disinfection to which all ships coming from an "infected port" are subjected, had been performed, Dr. Miles discovered, however, that no less than seven men on board, including the master, Captain Dahl, were suffering more or less acutely from "beri-beri," and the case of the captain and one of the seamen were so severe that they were ordered to the hospital, where they still remain, though both are progressing satisfactorily towards recovery. The rest of the men affected continued at duty, and they also appear to be returning rapidly to their normal condition of health. Several instances of beri-beri having been previously reported, the matter became discussed by the medical authorities of the port, but without practical result, the various doctors disagreeing hopelessly respecting the true character of the disease. The only point on which anything approaching unanimity prevails is, that with the increase of maritime intercourse with Japan, China, Java, etc., beri-beri may become unpleasantly familiar to Australians. It is not improbable that the matter will engage the attention of the various colonial governments.

His Excellency, Rear Admiral Bridge, Commander-in-chief of the Australian station, has been carefully studying the lessons of the recent war. Replying to a representative of the *Brisbane Courier*, who asked him, "What influence would you say the development of Japan will have upon Australian defence?" the Rear Admiral replied:—"The development of Japan is a matter of considerable importance. Whether Japan be hostile or friendly the naval centre of gravity, so to speak, has undoubtedly been moved by the rise of Japan as a naval Power. It is not to be supposed that this is a new thing. It was perceived by naval officers years before the Chino-Japanese war began, and it is a very remarkable fact that not one of the more or less eminent persons that have written books about Japan foresaw in the smallest degree, as far as you can see from their works, either the rise of Japan as a naval Power or the imminence of a conflict between it and China, while every naval commanding officer, without exception, who visited Japan within the last fifteen or twenty years has been struck by and has reported the rapid increase in numbers and efficiency of the Japanese navy, and the certainty that they felt that a war between China and Japan was due to come off before long. Japan now either is or is about to become one of the more important of the secondary naval Powers, and if armies and navies are any use, and there is any reason for their existence at all, it cannot be disputed that this has brought about a considerable change in the strategic conditions of the East, whether north or south of the line." The opinions expressed by Rear Admiral Bridge are shared by all the leading officers on the Australian station.

The treaty between Japan and Great Britain continues to be discussed by the Australian press. A Victorian provincial journal says:—"It is a remarkable and most interesting fact that Japan, in the flush of her success, should seek so earnestly to effect a political alliance with Great Britain, and this is a matter of deep concern to Australia. . . . Alliance between England and Japan

will mean that the fleet of the latter, strengthened by the Chinese war indemnity funds, will be equipped in the British-dock yards; but this is a mere trifle as compared with the other facts that the fleet of the growing Power will, with those of the greater, make assurance double sure of the control of the water-ways of the world, whilst preserving Australia from any risk of Japanese invasion. We confess it would be serious for us to have to fight the Japanese, for they are so English in all their methods. We would prefer to trade with them peacefully; to do the best we could to keep on friendly commercial and political terms. And it would be a great relief to Australia to learn that Her Majesty the Queen and the Mikado had joined hands in alliance. We should then have new avenues open to the adventure of trade. When the foreign policy of Great Britain is in the hands of Conservatives—especially when they are assured, as they have been by the recent elections, of an extended term of office—it is usually brilliant, determined and safe. And it seems to us that an Anglo-Japanese alliance is just the one they wanted to fill a present blank in the political scheme of the world. What diplomatists ever seek for is so to manoeuvre that the conditions they make and the alliances they form will ever tend to ensure perpetual peace. These are best secured by the control and mastery of the water-ways of the world. Japan, if attacked at sea by Russia, would lose all the spoil of her victories, possibly be effaced as a growing nation. Supported by the moral influence of Great Britain none dare interfere with her, and with such an alliance the road would be opened for the natural trade which must spring up between Japan, who wants our wool, and we, who desire a new market. The question is one of really great concern to us; we trust the solution of it may prove satisfactory."

On the other hand, there are several Australian journals which seem to regard with apprehension the possible establishment of trading relations between Japan and Australia. One of these, published in New South Wales, says,—“Our Importers, as a rule, do not buy in the dearest market, and those who form the medium between manufacturer and purchaser do not distress themselves or refuse to act, if the labour is poverty-stricken European, Celestial or Japanese. Soon we may expect a parcel-post system to Japan, and people will be able to send there for cheap goods as they do now to Sydney or England for printing, &c. Or in lieu of that we may soon expect to see in the metropolis or Newcastle Japanese importers competing successfully with the Chinese and European merchants. Then there will be outcry after a trade is established. This is freetrade, proper.” Such nonsense is hardly worth quoting, but it characteristically illustrates a phase of Australian popular feeling which is ceaselessly endeavouring to find expression.

Queensland merchants are bestirring themselves with a view to bringing their colony within the terms of the Anglo-Japanese treaty. Speaking of the meeting of the Brisbane Chamber of Commerce committee on the Anglo-Japanese treaty with reference to which the committee had decided at the last meeting—“That this committee, believing that it would be of advantage to all the colonies, and to Queensland in particular, to come under the Anglo-Japan Treaty of 1894, recommends that view to the whole chamber for their further consideration”—one of the leading members, Mr. Trundle, said that there did not appear to be the slightest chance of the treaty being accepted by any of the colonies, with the exception perhaps of Victoria. He fully believed that if the treaty was accepted it would be a good thing for Queensland. It would help the colony to get rid of its exports, and it would be a good thing for labour, but there was what might be termed the domestic question to be considered—the unrestricted or free immigration of Japanese subjects to Queensland. Although he thought that was a bit of a bogey; and would not be afraid to compete against any Japanese, yet it was pregnant with danger in the minds of some people, and he would be the last man in the world to take any action deemed prejudicial in the minds of the people generally. He believed it was a mere matter of sentiment, but the Government of Queensland had not the British pluck to say, “We accept that treaty.” He moved that the ques-
 ion be dismissed from the business paper, with a respectful letter to the Adelaide Chamber (who brought the matter under the notice of the Brisbane Chamber), stating that further consideration was futile on account of the improbability of the Queensland Government acquiescing. It was decided to leave the matter over till the quarterly meeting of the chamber.” It may be added that the whole of the Australasian Chambers of Commerce are in favour of the treaty, the real objections coming from members of the Labour

party, which at present is extremely strong in most of the colonies.

In the New South Wales Legislative Council, one of the members moved the adjournment of the house to call attention to the action of the Colonial Government in regard to the Japanese treaty. He said this was one of the most important questions that had ever engaged the attention of that Chamber. Some time ago, during the Address in Reply, he called the attention of the head of the Government to a paragraph in the Governor's Speech in which they were seriously concerned about the influx of Asiatic labour, and he was told that the question was receiving the serious attention of the Government. He ventured to point out that the Government had not considered the Japanese treaty, although they had had it for seven or eight months. The Attorney-General admitted the seriousness of the issues involved, and went on to inform the House that the matter had not received the attention of the Government; but he promised that when a decision was arrived at the House would be informed. The question had either received the serious attention of the Government or the answer previously given by the Colonial Secretary had been incorrect, for he had informed the Legislative Assembly that the Government did not propose to take any steps to bring New South Wales within the operation of the treaty. He thought that the matter was one in which this colony should not act single-handed, but that it should act in unanimity with the neighbouring colonies. Assuredly, if they carried out what the Colonial Secretary had decided, so far as this colony was concerned, the Japanese might exclude from their waters all commerce which was directed from New South Wales. They would, as far as they were concerned, refuse to allow goods coming from New South Wales to enter into consumption in Japan. Ministers had never yet been called upon to exercise the judgment that belonged to statesmen. The British Government said, on behalf of British possessions and on behalf of the Crown colonies—“We will accept this treaty on the basis on which it has been submitted and agreed to; but we exempt from its provisions the self-governing colonies,” and among them was New South Wales. He thought a conference of the Premiers of the Australian colonies ought to be called to consider the provisions of the Japanese treaty. In reply the Colonial Attorney General said no decision had been conveyed to either the English or the Japanese Governments. The matter had been and was still being considered carefully, and he was afraid that it would have to receive consideration for some little time longer. This was the first occasion on which a question of foreign policy had been brought before this Government. The treaty bristled with advantages. But, on the other hand, there were some dangerous clauses, and when once we entered into the treaty we would have to stick to it. What the Government had to do was to get the benefits of the treaty without its disadvantages. The House might take his assurance that nothing had been done definitely either with the English or the Japanese Government. The Government could not see its way to accepting the treaty word for word as it stood. Within a few hours of anything definite being done it would be communicated to this House and nothing would be kept back. Another member of the council said it was of great importance that in that matter this colony should not take isolated action. The whole question of coloured labour, if it was to be dealt with effectually, must be dealt with from an Australian standing. Before any step in relation to the treaty was taken in regard to binding this colony one way or the other a conference should be held, at which the views of all the Australian Governments should be ascertained, and, if possible, united action should be taken. Another member having spoken the motion for adjournment was put and negatived.

Commenting upon this episode, the *Sydney Morning Herald* said:—Until the matter was mooted in the Legislative Council no very definite attention was given, at all events publicly, to the terms of the Treaty, yet, as the discussion showed, the question has its interesting side. When the British Government entered into the treaty last year the expressed condition was that the commercial and trading advantages secured should be shared on the understanding that the Japanese should have free entry to all parts of the Empire that chose to join in the treaty on those terms. For England the condition was a safe one, since there is no danger of an influx of Japanese to any appreciable extent there. The case is otherwise with the Australian colonies. Here we have our Asiatic question. We are only a few weeks' sail from China and Japan, and the danger of over-immigration from either or both of those

countries is far from being a sentimental one. The disadvantage at which such an influx of coloured races would put us far outweighs any possible commercial advantage that might accrue, and desirable as the one may be it is too high a price to pay when purchased at the expense of the other. As the Attorney-General said, the treaty bristles with advantages; but the policy of this and the other Australasian colonies on the Asiatic question is declared and fixed. The thoughtfulness of the Home Government in leaving the colonies a choice in such a matter is to be commended, and courtesy requires that it be acknowledged by this colony expressing her intentions in the matter before the term of consideration expires. For the question evidently demands no consideration, nor even so much delay as would be necessary for federal action. Queensland has already taken a definite course in the matter, and all the colonies are sufficiently at one to leave no room for hesitation. The only ground for delay would be suggested by the remark of Mr. Want last night that the Government may get concessions under the treaty without accepting the objectionable clauses. If that can be done, so much the better but on the question of the unrestricted admission of the Asiatic alien we have no choice."

In the Victorian Legislative Assembly notice of several questions relative to Japan have been given. One member is to ask the Premier if he is aware that the Japanese are now colonising Australia, and that the war party in Japan intends to take possession of this continent on the first opportunity, and he will urge the hon. member to secure immediate federation with a view to establishing Australian nationality. In reference to this, it may be mentioned that translated extracts from two or three Japanese vernacular papers have found their way into Australia and become rather widely reproduced. The same member is also to ask—“1. Is the Government aware that cholera is raging in Japan and China, and will it take measures to quarantine all vessels from the infected ports? 2. Will the Government endeavour to induce the other colonies of Australasia to do the same? 3. Is the Government aware that the Japanese are now colonising Australia, and that the War party in Japan intends to take possession of this continent on the first opportunity? 4. In view of these facts and probabilities, will the Government take steps to secure immediate federation, as the only secure defence of Australian nationality?”

Alluding to the recent discussion in the Queensland Legislative assembly on the subject of alien labour, the *Brisbane Courier* says:—“We are all agreed in the desire to make this a white man's country. We all heartily wish that tropical Queensland may be settled as far as any kind of settlement is possible by a white population. Not a no-man's country like nearly all the other tropical portions of Australia. We want settlement and civilisation—the civilization of Europe, not that of Asia. And therefore if for the sake of founding this superior settlement and civilisation we temporarily avail ourselves of coloured labour, that labour must be limited as to numbers and controlled as to occupation. And the limitation and control are the fact to-day. It is simply absurd to talk of the few thousands of coloured workers endangering the interests of the white population. The truth is that the white population is much indebted to the few thousands of coloured workers. Something was said in the House yesterday about Japanese immigration. Irresponsible electioneering talk deserves little notice. Any Australian Government, however, will need to talk courteously and act warily in regard to Japan. Mr. Nelson's explanation of the policy of the Government will, we think, be entirely satisfactory to thoughtful Queenslanders. And it should not be overlooked that Japan may yet become a faithful ally of Australia. Russia's anxiety to strengthen her position in the North Pacific is perhaps Australia's greatest external menace. Fortunately for us it is also perhaps Japan's greatest external menace. Japan and Australia may yet have to fight one enemy.”

The French now frankly acknowledge that their battle-ship *Marengo* is a mistake, and she has been sold by auction, probably for old material, at Cherbourg. She was launched as long ago as 1869, and since then large sums have been expended on various experiments, undertaken with a view to making her a satisfactory fighting machine, but the Parliamentary Committee on the Navy decided that nothing could overcome her inherent instability. She was a wooden ship of 7,748 tons, 3,673 horse-power, and an extreme speed of 13.50 knots.

H.B.M. COURT FOR JAPAN

Before R. A. MOWAT, Esq., Judge—WEDNESDAY,
November 6th, 1895.

J. BIEBER AND BRO. VERSUS THE CHINA NAVIGATION CO., LIMITED.

The Court resumed the hearing of this case at 10.30 this morning.

The claim was for \$1,079.28, damage done to a shipment of leather on board the *Taiyuan* while on a voyage from Sydney to Yokohama.

Mr. G. H. Scidmore represented the plaintiffs, and Mr. A. B. Walford the defendant Company.

Mr. Scidmore said he regretted to announce that he found it impossible to produce his witness, Mr. Lubowski. The British Consul had been informed of his condition, and counsel himself had seen Mr. Lubowski on Monday evening and was satisfied that it would be dangerous to remove him to Yokohama on even to take his evidence on commission. Indeed, his client had instructed him to say that he would rather lose his case than jeopardise the health of his friend. Counsel would therefore have to proceed with his case as best he could. Mr. Bieber wished to make a correction of a statement that had appeared in the published report of the case.

Mr. Walford said that he wished to explain that any damage which he admitted was not the damage which Mr. Scidmore desired to prove. The only damage admitted was manufacturer's damage, and that only to a slight extent—certainly not to the extent that Mr. Scidmore alleged and wished to prove. He made the explanation in order that Mr. Scidmore might not be misled by any statement he had previously made.

Mr. Bieber, recalled, wished to correct his statement as to the date of the sale of the leather. It was on the 5th not the 3rd June that he sold the leather.

In answer to Mr. Walford, witness said—I do not recollect ever receiving from America leather damaged in this manner.

By the Court—There were 50 hides in the first sample lot of leather that I had from Australia. I received three different shipments of leather from the same people in Australia. They were also damaged, and the intending purchaser refused to take them. They came through the same ship-owners, but I believe were transhipped in Hongkong. The sample lot came up in November last.

To Mr. Scidmore—The samples were in clean and good condition when they were delivered.

His Honour—Samples generally are, are they not?

In answer to Mr. Walford, witness said—When I saw the rolls of leather on the *hatoba*, some were round and some a little flat, the leather having naturally been packed tight and so flattened a trifle. I do not know whether they would have stood up on end. There are two ropes round the roll in Court, one is a Japanese straw rope.

George Moffatt Bond, sworn, said—I am master of the steamship *Rosary*. I have been a ship-master for ten years, and have been engaged in the Australian trade.

Mr. Walford—I don't know whether this evidence is permissible, we adjourned for the production of expert evidence.

His Honour—It would be very undesirable to shut out any evidence, especially as the other expert witness cannot appear.

Witness, continuing—I have conveyed leather from Australia. The leather is always shipped in rolls, like the roll produced in Court. The leather is never covered. In receiving a shipment of leather on board and before signing the bill of lading, I should examine the ends of the bale principally, because the ends would receive moisture and collect dust, which the middle would not. Looking at the bale in Court, I should describe it as stained on the bill of lading. I should make that statement from observation of the ends. I should not sign a clean bill of lading for it—I would write, bale stained. In stowing it, I should take particular pains to place it as far away from the iron of the ship as possible, because the ship will sweat, and the leather would draw the moisture to it. If the voyage was fine, I should, with such a cargo, open the hatches to allow of ventilation. If the hatches were not opened between Sydney and Hongkong the ship would sweat, and the moisture would fall on the cargo. If the leather was stowed with glue-pieces, bones, fungus, etc., and the hatches were not opened all the voyage, the effect would be that moisture would drop from the deck on to the leather and stain it. I recognise "Stevens on Stowage" as a leading book among shipmasters. He is correct when he says that damp air will damage a shipment of leather by staining it. If I had a cargo similar to that just described and I

kept the hatches and ventilators closed all the voyage during fair weather, I should expect upon reaching Hongkong to find the leather damaged. The damage would resemble the damage shown in Court.

Cross-examined by Mr. Walford—The damage would be this—that the ends would be black and stained. It would not necessarily be wet as leather dries fairly quickly. I have not had a very large experience of leather, but I have carried it several times. I am of opinion that owing to the ends of the bale being loose and soft, they would collect moisture easier than the hard centre. The colour of a bale of leather is grey, and any bale not grey I should describe as stained. I have never seen leather tanned black. I have carried raw hides and tanned hides.

Re-examined by Mr. Scidmore—Good leather might have another colour than grey, but I call the bale in Court grey.

His Honour—I am afraid you will not find many people to agree with you, but it lets us know what you call grey.

Witness, continuing—The leather in Court is marked with black and is stained; I should describe it as damaged.

The bale of leather in Court was then opened for inspection by the Judge. Two kinds of rope were around it—one a Manila, and the other a Japanese straw rope.

Mr. Walford, in opening his case, said that the plaintiffs had tried to establish three propositions. The first of these was that the goods were shipped in good order and condition; the second that they were delivered here in a damaged condition; and thirdly, that the damage was of such a nature that it could only have been done on ship-board. He would take these propositions in their reverse order, leaving the principal point, the condition of the goods when shipped, until the last. As to the condition of the leather when shipped, he should rely upon the evidence given by the ship's officers. They stated that the leather was stowed in the 'tween deck and reached, if the term was permissible, almost from the floor to the ceiling of that compartment, so that it was impossible for all the hides to be damaged in the way plaintiff alleged. To do that, it would have been necessary to have flooded the whole of the 'tween decks, while the evidence of the ship's officers went to show that the 'tween decks remained dry all the time of the voyage. When the last witness was examined upon this point he said that only the loose ends of the rolls would attract moisture, and that it would not be possible for the moisture to get to the centre of the bale. In addition to that, he thought that water might possibly have dropped through the deck on to the leather. If such had been the case why was it that there were no signs upon the leather of such water dropping. He would submit that had water dropped through the deck like that, then the leather would have borne marks here and there, not marks in masses. Besides these stains would have been on the outside of the roll, they could not have got into the middle of the leather.

His Honour—He says that the ends would attract the moisture, not the middle.

Mr. Walford—Yes, he does not admit that the moisture could have made its way into the middle of the bale. Another point which I could emphasise is that the plaintiff has been engaged for over seven years in the leather business, yet he never saw any leather from America damaged in this way before. Yet he has three different shipments from Australia, in three different ships, and they were all damaged in the same way. This, I think, is a strong point in favour of the ship.

His Honour—Where did he obtain the American leather from?

Mr. Scidmore—From San Francisco. The voyage is in northern latitudes and about 14 to 17 days.

His Honour—Yes, and the Australian voyage is through the tropics and is much longer and hotter.

Mr. Walford—Yes, it is much longer and hotter, but I submit that even if the ship did sweat, such sweating would only make the leather damp not black. The probability is that the leather was either black before it went to the tannery, or that it became so before the processes of tanning were completed. I submit that the leather that Mr. Bieber imported was blackened in the tannery; or it may have been blackened on its way from the tannery to the docks. Uncovered packages, such as this leather, are very liable to get dirty in passage along piers, and docks, and *hatoba*. The second point raised by the plaintiff is that the leather was delivered in a damaged condition. We deny that it is damaged, only that it is black, and I will bring evidence to prove that the presence of black marks on the leather is not indicative of damage. Indeed, we shall bring evidence to en-

tirely refute the suggestion. Then again, there is no evidence as to the extent of damage, the money damage, which the plaintiff alleges he has sustained. He tells us that he was offered \$35, and then he sold it for \$30. Why he did this was not explained, neither does the Court know. Thirdly, there is no evidence at all as to the condition of the leather when it was shipped. This is a most important point.

His Honour—Except the *prima facie* evidence of the bill of lading: but that of course is not conclusive evidence. It would be very difficult to prove the condition of the goods when shipped unless a man was sent down to Australia for the purpose.

Mr. Walford—Yet, one part of the plaintiff's case, as he stated in opening, rests upon the bill of lading signed by the mate to the effect that the goods were received in good order and condition. But the case of *Peter der Grosse* bears specially upon this point. It is a good authority in such a matter, the bill of lading being of almost a similar description and wording. Counsel then quoted from the finding of the English Court in this case, and urged that because a package was received and signed for as being in good order and condition it did presuppose that the shipmaster was aware of its weight, value, or contents—they would be unknown with such a bill of lading as was signed in this case. A package was received on board the ship purporting to be a roll of leather, it was signed for as such, though for all the mate knew the contents might have been brown-paper or a substance similar in colour to leather. He referred his Honour to Scrutton's little book upon the subject in hand, and in commenting on the words: "Shipped in good condition—weight, value, and contents unknown—quality and quantity unknown; quoted Article 52, which reads:—"The insertion of either of these clauses in the bill of lading by the master or broker repudiates his liability for any description of the weight or contents of the goods contained in the bill of lading: but he is bound to carry and deliver safely the goods received by him whatever their contents or weight may be. These clauses only admit as against the shipowner that a package was shipped externally to all appearances in good condition. If such goods are delivered damaged the shipper must give *prima facie* evidence either that they were shipped in good condition internally, or that the damage resulted from some external cause within the control of the shipowner." Plaintiff had not proved that the damage was caused by something within the control of the shipowner. The evidence of the ship's officers was to the effect that no damage could have been done, after the shipping of the leather.

His Honour said that *Peter der Grosse* was appealed; had Mr. Walford a copy of the report containing the case?

Mr. Walford said he had not, but he would point out that in the case of *Peter der Grosse*, the goods, feathers, were enclosed; in the case before the Court the leather was not, having come up without covering, as was the rule with such leather. There was a certain ambiguity in the statement "received in good order and condition," for this reason. When the ship's officer received the leather he would only look out for wet—so he told them—and would pass the package as in good order and condition. Upon the goods being delivered here, an expert might be found, who, on opening the package, might say that the leather was damaged because it was black. The ship's officer did not open the package at all. The plaintiffs, however, assumed that if the leather was stained the ship's officer would have marked it as being so. But he was not an expert in leather. Besides, the leather was not shipped as red leather; if it had been shipped as red leather the ship's officer might then have marked it as being stained black. There is no evidence, I contend, that the leather is otherwise than in the condition in which we received it. We can easily rebut the plaintiff's proposition on the point. I can even follow him into his own country. Mr. Bieber declared that the proper colour of leather was brown. His last witness says it is grey.

His Honour—The last witness said, "that kind of grey."

Mr. Walford—Then he is not a good authority on colours. Mr. Bieber and he certainly hold different opinions in regard to the colour of leather. I am going to bring evidence in regard to the nature of tanning processes. There are many different kinds of bark used in tanning. The bark of the mimosa tree, and sometimes the mangrove is used in Australia for tanning. Both of them produce a strong tanning fluid, very strong indeed it is sometimes, and the liquid is very liable to blacken the hide. In South Africa the same mimosa bark is used, and the South African leather is always black. In other places the leather is tanned by vegetable mixtures, while in

some instances iron salts are used, the effect being to make the leather black. There thus being so many instances of black leather being shipped, why should the present lot of leather attract the notice of the ship's officers? Then again, the blackness may be accidental. In a certain part of the process of making leather, lime is used to soften the hair on a skin so as to enable it to be removed the more easily. If this lime is not wholly removed before the tanning commences the skin will come out with these blotches upon it.

His Honour—Do these blotches appear on the outside or do they go right through?

Mr. Walford—The blotches are on the side where the hair has been. Another reason for marks upon the skin would be that certain parts being thinner than the rest, would be come over-saturated with the tanning fluid. And yet another reason for spots on the thicker parts would be that too much pressure has been used in polishing the leather. If too much pressure has been used in the polishing, the effect is a blackening of the leather. Sometimes iron rollers are used in polishing the leather, and if the leather is not quite dry, it is liable to get black. Having gone a little further into the process of tanning, Counsel said that he did not admit that the presence of tannic of iron upon the leather caused any difference its quality. The presence of the black marks on the leather did not really indicate that there was any damage at all. His Honour would no doubt understand that it was quite possible to ship bad leather "in good order and condition," as it was to ship good leather. Having again referred to the case of *Peter der Grosse*, Mr. Walford said that the plaintiffs had failed to prove that the damage to the leather was obviously from an external cause. The bill of lading, though *prima facie* evidence, was not conclusive evidence upon the point. Whatever presumption arose from the bill of lading being signed as to the goods being received in "good order and condition," he would not recognise that the black edges of the leather was a thing that the officers should notice. The bill of lading could not be taken as equivalent of the opinion of an expert as to the condition of the contents of the roll of leather. His case shortly was this: It was quite immaterial to them how the leather came damaged. We can show that it was immaterial to be noticed by the mate.

His Honour—The sea-captain this morning said he should have noted it?

Mr. Walford—And our mate said he would not.

His Honour—Quite so.

Mr. Walford—Our mate said that he would not have noted the black edges—that it was not in his opinion a subject for remark.

His Honour—But the sea-captain who appeared in Court this morning said that he would not have given a clean bill for it.

Mr. Walford contended that the evidence of the last witness was immaterial, for the point they wished to emphasize was that the leather had been damaged during the process of manufacture. That the leather had been damaged from "obviously external causes" had not been proved by the plaintiff, and he would call evidence to prove that it was not so.

An adjournment was then made for tiffin.

Upon resuming, Sekido Jutaro, leather and boot manufacturer, warned, deposed—I am the manager of the Yokohama branch of the Sakuragumi. We are largely engaged in the leather trade. I have had 13 years' experience of the leather trade, and have been 10 years manager. I have to do with manufactured articles only. I remember making the contract to get from Bieber Bros. 100 rolls of leather from Australia, in December last. The first part of the consignment arrived in April of this year. Messrs. Bieber notified us of it arrival, and I went to examine it at the Customs House. I saw the Australian leather there. I remember seeing 45 bales: 22 or 23 rolls arrived in one lighter. They were soiled. I could only see the outer part of the bales or rolls. I did not see the inside, but I noticed the ends were discoloured. I thought the discolouration was caused by coat-dust. The fact of there being dirt, showed that the leather was damaged. Some ends are of value; others are of no value or use. The particular ends I speak of were stained black, but they were of more or less value. As compared with the rest of the hides the ends were of some value. This is the first time I have seen leather discoloured in this way. I communicated with the head office of the Sakuragumi, and after two or three days they sent a man down from Tokyo. The roll now lying unpacked in Court I have seen before, when first brought here by the plaintiffs. The leather that I saw on the *hatoba* was packed in such a way that it would stand upon end.

Cross-examined by Mr. Scidmore—I have never

before seen leather arrive from abroad stained at all. The contract arranged by us with Messrs. Bieber was for \$44 per picul. I saw the leather twice at the *hatoba*. After seeing it the second time, I refused to take delivery of the leather at any price.

Robert Hille, sworn, deposed—I am an Austro-Hungarian, residing in Yokohama. I am a tanner by profession. My experience goes back some 25 years in Austria, Germany, Switzerland, Denmark, Russia, Sweden, and Norway.

His Honour—That's all over Europe I should think, where else have you been?

Witness continuing—In South Africa, British India, and Dutch East India. Coal dust does not damage sole-leather. The polishing of sole-leather is the last step in its manufacture. I have looked at the leather now lying in Court. Black stains are in no way a necessary indication of damage. I see that there are black stains in that leather. On some of the hides there shown the black stains have been produced by the tanning, others have been made by the polishing. If the leather had been soiled before polishing, no effect would appear, but if wet had made its appearance the polish should have gone. Dry damage would not have spoiled the polish, wet damage would have done so. There are many different ways of tanning, many different barks being used. The colour would be greatly affected by the different barks used. In Australia, I am informed that they used mimosa bark; they are also using mangrove. I know that the tannin derived from mimosa-bark is a very good agent, and produces a firm leather. It is a strong liquid, and has a tendency to blacken leather if applied in a too concentrated form. In South Africa I have used bark from a kind of mimosa tree. The colour of the leather produced there is much darker than any I have seen here. South African leather is dark red, like the edges of the leather in Court, the colour of the edges. It is extremely difficult to produce a uniform colour in the edges; and it is extremely difficult to produce a uniform colour with these strong liquids. I have no experience of tanning with minerals. I have seen the process. The hides come out dark then. I do not consider the leather in Court to be dark.

The colour brought out by mineral processes is about the same as the edges of the hides in Court. The difference in the texture of the hide would make a difference in the colour of the tanned leather. If one part of the hide is more saturated than another, the surface would be darker. The time of tanning may vary from one year to a little less, especially less for light weight leather. Sole leather may be produced in weeks, but the product is bad. You can not hurry it. By hurrying the process, the colour would be darker. The hair is generally, in the case of sole-leather, loosened by means of the action of a solution of lime. The lime is extracted from the skin before the process of tanning begins. If the lime is not properly removed it will have a bad effect, causing spots, and giving a general dark appearance. It is only usual to apply warm liquor when it is desired to effect a quick tanning. It would make the thin parts of the hide absorb the tannin too quickly, and cause them to be over-saturated, presenting a darker colour to the rest of the skin. The dark colour I refer to, is similar to the colour on the ends of the leather in Court. There is no damage at all upon the hide I have been shown; the defects on the skins having been caused before they were even taken to the tannery. The defects in the hides in Court have not been made on board ship, they were in the hides before they went to the tannery. It is not the worse in quality for being black. The colour has no bearing on the substance. [Witness then described the hides, and their various parts.] Continuing, he said that a small black mark on the head-piece was caused by the action of the air; it was caused after the process of tanning was completed, but before polishing.

His Honour—Then all leather would be marked that way?

Witness—Yes, if proper care is not taken; and the skin is not covered. Sole-leather is hung up to dry several times, and should never be exposed to the action of air. Taking up another skin witness said that the black marks on its head were caused by the pressure of the rollers, while another spot was caused through the lime not having been properly extracted. The defects were in the offal parts of the hide, and offal parts are of much less value than the other parts.

To this Honour—The leather I am examining is well tanned.

His Honour—Does well-tanned leather smell like that?

Witness—Yes, this does not smell different.

His Honour—Then you don't smell it as I do.

—[Laughter.]

Witness—No.

To Mr. Walford—All the defects I have pointed out were made during the process of tanning. All the hides in the roll are less damaged than the one I am examining. The leather has been tanned in warm liquor. I see no marks of over saturation. The polishing rollers are sometimes made of iron, sometimes of brass. If made of iron, it has some effect upon the leather, darkening it, if the leather is in a too wet state. The result of drying leather quickly is to render leather brittle and make it black.

Cross-examined by Mr. Scidmore—The stain I am now examining is caused through impurities in the tanning liquid. It is not caused by water dropping on it. Moisture would not bring it out, nor affect the colour of the skin—clear water would not affect the colour, but dirty water would. A close, steamy atmosphere would not produce the dark stains on the skin. There is no end to the number of processes of tanning sole-leather. I have not heard of the Heinsechling process of tanning.

Mr. Scidmore having read out the names of two other German tanning processes.

Witness said he could not tell the name of the process adopted in tanning the leather in Court, but it certainly was by some vegetable process.

This concluded the evidence.

Mr. Walford—I have nothing more to submit than I have already given in my opening, and I will not weary the Court by repeating it. I will only submit that, as has been shown in evidence, there are a hundred different ways in which damage can be done to leather, and that the damage done to the leather shown here to-day cannot have been "obviously external damage," within the meaning of the term. At any rate, there was not sufficient damage on the package for a ship's officer to note on the bill of lading. It seems that when the leather arrived at Yokohama, the manager of the Sakuragumi could not say if the leather was damaged—he sent up to Tokyo for advice—although he had had thirteen years' experience of the business. Therefore how could one expect a ship's officer to pass an opinion upon the quality and condition of the leather?

His Honour did not understand the action of the Japanese as being of that nature; he sent to his head office for advice, upon seeing the condition of the leather, as was but natural.

Mr. Walford—He thought that it was coal-dust marks upon the leather, and coal-dust will not damage leather. I leave the case in your Honour's hands.

Mr. Scidmore—The law upon which the plaintiff relies, as mentioned in my opening, is to be found in the case of the *Freedom*, the case of the *Peter der Grosse*, and *Kay v. Wheeler*.

Mr. Walford—I don't think my friend can introduce that?

His Honour (to Mr. Scidmore)—You should certainly have cited it in your opening, so that Mr. Walford might have replied thereon.

Mr. Scidmore—I think he case of *Kay v. Wheeler* is recited in the judgment of *Peter der Grosse*. I will look. (After reference) I am mistaken, it appears in the arguments of Counsel. The case of the *Freedom* was injury done by rats. The principle involved in that case is what I apply to this case.

His Honour—But in that case it was not disputed that the goods were not delivered in the order and condition in which they were shipped. Here it is disputed.

Mr. Scidmore said the bill of lading signed by the mate was *prima facie* evidence that the goods were shipped in good order and condition, and it must be considered as good evidence. The goods were shipped in good order, but it must be admitted that the evidence conclusively proves that they were delivered in bad order externally and internally. It was not for the plaintiff to show where the damage was done.

His Honour—What evidence as to internal damage can you get. You do not mean to say that the officers should open every bale before signing a clean bill of lading?

Mr. Scidmore—No, but the ship is liable for internal as well as external damage. The defendants' say this: we received the goods in good order as there was nothing in their appearance to denote that they were not in good order and condition, and we delivered them as we received them. After the evidence that had been given in Court as well as the production of a sample bale itself, he could only say that such a proposition but nothing short of an insult to the intelligence of the Court. The testimony of the ship's officer was that he passed the goods without remark because all he would look for was "wet." The testimony of

Captain Bond was very different. Counsel then quoted authorities from Cary's Carriage by Sea, and argued that no exception could be taken in the bill of lading as to the quality of the goods. Having alluded to the nature of the cargo packed along with the leather—glue-pieces, bones, fungus, etc., Mr. Scidmore continued: But I think it reasonable to conclude from the defendants' evidence that from the nature and collocation of this cargo of animal, vegetable, and, to some extent, putrescible matter, by improper packing and insufficient ventilation, and the proximity of the ship's water tank, during a voyage through the tropics, where especial care is necessary, the atmosphere in the hold became heated, damp, and vitiated, without means of escape, and that this atmosphere was the proximate cause of the damage. To this must be added the carelessness admitted in discharging the coal and the small injury done by cutting.

Mr. Walford—We are quite willing to pay anything that is right.

Mr. Scidmore, continuing, said the defence set up had been very ingenious, but it would not hold. The whole of the testimony given before the Court tended in but one direction, that the damage did arise on board the ship. Captain Bond had stated that if the hatches and ventilators had been closed during a fine voyage all the way from Sydney to Hongkong—as the ship's officers stated—and with such a cargo as they had in the 'tween decks, he would expect to find on opening the hatches damage similar to this.

His Honour—I considered that a very ingenious question to put. If the hatches had been opened and rain had come on they would have been blamed for that; and as the hatches were not opened they are blamed for keeping them closed. What have you to say in regard to the expert evidence given this afternoon?

Mr. Scidmore—The evidence of the tanner is the most absurd ever placed before a Court of law.

His Honour—I am glad you mention it.

Mr. Scidmore—He said that coal-dust would not injure leather.

His Honour—I can quite understand that, if the leather was not wetted; and he is using "damage" in a different way from what we do.

Mr. Scidmore—He said that there were a hundred different processes of tanning, and yet when asked in Court by what process the sample of leather he was shown, was tanned, he could not say. Neither had he heard of the well known processes of tanning that I mentioned to him. He has never been to Australia, and all he knew of tanning processes there was what he had heard.

His Honour said he would deliver judgment on Friday morning at 10.30.

LADIES' LAWN TENNIS CLUB.

The following handicap has been made up for the Ladies' Singles "Handicap Cup"—Autumn, 1895, competition—in the Yokohama Ladies' Lawn Tennis Club:—

—15 Mrs. Gillett	—30.3
—15 Miss Rice	—30.3
—11 Mrs. Campbell	—15.5
—11 Miss Wheeler	—15.5
—0 Miss K. Page	scratch.
+ 2 Miss A. Page	+ $\frac{2}{3}$ of 15
+ 2 Mrs. Todd	+ $\frac{2}{3}$ of 15
+ 3 Miss Alice Rickett	+ $\frac{2}{3}$ of 15
+ 9 Miss Rickett	+15.3
+12 Miss Thomas	+30

Miss K. Page, bye	
Miss Thomas, bye	
Mrs. Campbell, bye	
Miss Wheeler	
Miss Rickett	
Miss Rice	
Mrs. Gillett	
Mrs. Todd, bye	
Miss A. Rickett bye	
Miss A. Page bye	

Best of 3 sets to win. Players to meet at differences of their respective odds, but in no case must less than the full game of 4 points be played by one or other in a tie. Advantage sets to be played throughout:—W. F. Page, F. Gillett, W. Sutter, Handicappers.

Owing to the lateness of the season it is requested that the ties be played off as soon as possible.

"MIXED DOUBLES" HANDICAP—AUTUMN, 1895.

—14 Mrs. Campbell and Mr. Murray ..	—30.2
—12 Miss Wheeler and Mr. Gresson ..	—30
—11 Miss K. Page and Mr. Page	—15.5
—9 Miss Rice and Mr. Wilson	—15.3

—3 Miss A. Rickett and Mr. Morris ..	— $\frac{2}{3}$ of 15
0 Mrs. Gillett and Mr. Walter	Scratch.
0 Mrs. Dinsdale and Mr. Jackson ..	Scratch.
+ 3 Miss A. Page and Mr. Caro	+ $\frac{2}{3}$ of 15
+ 3 Mrs. Carew and Mr. O'Regan ..	+ $\frac{2}{3}$ of 15
+ 3 Miss Rickett and Mr. Balden	+ $\frac{2}{3}$ of 15
+ 3 Miss Thomas and Mr. Campbell ..	+15

Best of 5 sets to win. Other conditions and handicappers same as above.

YOKOHAMA CHIHO SAIBANSHO.

CRIMINAL SECTION.

Before Judge TAKAHASHI BUNNOSUKE, President; and Associate Judges HARA SEIICHI and OHASHI JUTARO.

WEDNESDAY, 6th November, 1895.

THE POLITICAL ASSOCIATION CASE.

Ozaki Yukio, Suzuki Shigeto, and Kudo Kokan were convicted by the Kojimachi District Court, Tokyo, some time ago, of having infringed the Law of Public Meetings and Political Associations, they having assembled at the Atago-kan, Shiba, Tokyo, for the purpose of discussing various political questions. The accused, however, appealed to the Tokyo Local Court against that decision, and the latter Court transferred the case to the Yokohama Chiho Saibansho.

All the accused were present to-day, when the case was called on. Mr. Numata and Mr. Kojima defended Messrs. Suzuki and Kudo; Messrs. Minagawa, Moriya, and Maruyama represented Mr. Ozaki.

The prosecution was in the hands of Public Procurator Takigawa.

After various questions had been put and answered by the accused,

The Public Procurator urged that the accused were guilty, on the ground that they had actually organized a political association and

become managers thereof. The Public Procurator then urged that although the organization had no fixed articles, name, office, or managers—which are essential to the formation of a political association—the persons who assembled at the Atago-kan had a common aim in which they agreed to co-operate, and its existence was known to the public as the *Doshi-kai*. Having given various instances of the accused having acted as managers, and adduced evidence that the association was a political one, the Public Procurator asked that the accused be punished in accordance with the 30th article of the Law of Public Meetings and Political Associations.

Mr. Kojima urged that Suzuki Shigeto was not a manager of the so-called political association. He pointed out that the Procurator's argument was weak as to that allegation. Suzuki denied being appointed a manager, nor were there any persons who could have appointed him to that position. Even supposing Suzuki was a manager of the party he had nothing to report upon to the police, as at that time there was no name, no articles of association, nor any office of the association. Suzuki, therefore, could not be regarded as having infringed the Law.

Mr. Numata argued that the association was not a political organization. The accused were politicians, but they only assembled at the Atago-kan to discuss some important political subjects. They had a proper right to do so, and they did not violate the law in so doing. If such an action was an infringement of the law, the Cabinet Ministers were doing the same kind of thing at Nagatacho every day, and they also must be regarded as the violators of the law. If the nature of any association was to be judged by the name given to it by the press or the general public, it would lead to grave mistakes. Some persons called the present Government the *Hanbatsu Seifu* (Clan Government), and if the former argument was right the Government became a Clan Government. Although a name was given to the association by the press, it yet had no name in fact, and possessed no essentials of an organised political association.

Other barristers having addressed the Court, Judgment was given as follows:—The decision of the Kojimachi District Court is quashed, and the accused are acquitted on the ground that although they had often met at the Atago-kan since the 1st of June there was not sufficient evidence to show that the association was a political organization.

FORMOSA.

The Amoy correspondent of the *China Mail*, writing under date Oct. 23rd, says:—

When the Japanese cruiser stopped the *Thales* outside she made seven of the Chinese passengers prisoners, but allowed the *Thales* to proceed, on the understanding that the prisoners were to be handed over to the British Consul upon arrival at Amoy. Two Japanese officers accompanied the prisoners on board the *Thales*. The Consul liberated the seven men, who were undoubtedly Chinese soldiers. The cruiser is waiting outside, and we expect she will stop the *Thales* when she leaves to-night for Taiwanfoo.

Taiwanfoo was to be occupied by the Japanese the night the *Thales* left. Liu managed to evade them, and the soldiers, finding themselves deserted by their General, threw down their arms and did not attempt to fight. Mr. MacCallum, Liu's Commissioner of Customs, is still in Taiwanfoo. It was extremely foolish of him not to take the chance of clearing out in the *Thales*.

H.M.S. *Pique* arrived this morning from South Formosa, and reports that all is over with the Black Flags; the Japanese came, they saw, they conquered, or rather they did not have anything to conquer. The *Pique* was at Anping, and the *Tweed* at Takow, when the Japanese arrived off the coast. One of the Japanese troopships, which happened to be nearest in shore, drew fire from the Chinese forts, and had a derrick shot off her deck. After this warning the Japanese kept their distance. Next morning the warships began to bombard at seven o'clock, and the Chinese replied with spirit for a time. Soon, however, it was evident that the Chinese were helpless, for the Japanese kept at a range of 6,000 yards ($3\frac{1}{2}$ miles) and the Chinese guns would not tell at that distance. By eleven o'clock there was not a man left in the forts; but the Japanese, to clear the neighbourhood and make everything perfectly safe, went on shelling until after one o'clock. Then they began to land, and took possession without further ado. The rest of the proceedings were uneventful. The *Tweed* and the *Pique* had been waiting about a long time in hope

to see some fighting, but when the worst came to the worst it did not amount to a fight.

The Douglas steamer *Haitan* arrived here to day from Foochow and Amoy. At the latter port she fell in with the *Thales*, which has been doing a tremendous passenger trade with Formosa as the Chinese stampede from Taiwanfoo grew more frantic. The Japanese were in full possession by Monday, and were anxious to find Liu Yung-fu. The remnant of the Black Flag army, 9,000 men, had piled-arms and surrendered unconditionally when they found themselves leaderless, and they had all sorts of stories to account for Liu's mysterious disappearance. One report was that he had gone away in a fishing junk; another that he was on the *Thales*; another that he had disguised himself as a woman to escape. The *Thales* had left by the time these stories got about; she had on board over a thousand passengers, Chinese refugees from Tainanfoo, and she had been very carefully examined by the Japanese before they let her go; but in such circumstances not much of a search can be made. As soon as the Japanese found that Liu had slipped through their fingers they stopped all ingress and egress, refused to allow any communication with the German steamer *Dante* which had come to pick up passengers, and sent away the swift despatch vessel *Yayeyama Kan* to overtake the *Thales*. She was caught about 20 miles out of Amoy, and another search was made. After keeping her about ten hours, the Japanese decided on seven suspicious characters whom they wished to take away, but Capt. Bathurst denied their right to do so. Meantime, the *Thales* had been sighted from Amoy, and the signal had been put up, and people began to wonder why she did not come in. Inquiries were made at the signal station and it was found that she was being detained by a warship. The *Haitan* then went out from Amoy to where the two vessels lay, and ultimately the Japanese agreed to let the seven Chinese go to Amoy in charge of two Japanese officers, and refer the matter to the British Consul for decision as to the right of detention. By the time the *Thales* did get in, two of her passengers had died; and, strange to say, two new ones had been born on board.

When the seven men were brought to Amoy, the Consul (Mr. Gardner) decided to release them. He had immediately on hearing of the trouble wired to London, to Peking, and to the British Admiral at Foochow, whence the *Alacrity* was sent down with all speed.

It is positively asserted that Liu's son was among the passengers on the *Thales*, but that the seven suspects were nonentities.

CRICKET.

YOKOHAMA V. KOBE AND OTHERS.

A match was arranged on Saturday between Yokohama and Past and Present Kobe Residents. Unfortunately the pressing engagements of the Kobe visitors prevented them from putting in an appearance on the Cricket ground, and the scheme was altered, Morris going over to the Kobe side along with some Tokyo players. A pleasant game resulted, though the scoring was far from high. Edwards' bowling analysis is the most remarkable feature of the match. Scores:—

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 6.

At a Cabinet Council held yesterday, it was decided that all Embassies should be separately urged to demand from the Porte immediate measures to terminate the anarchy so hurtful to Christians of all nations, otherwise they must in concert adopt the necessary measures.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, November 2.

The first snow this year fell during last night—a heavy fall.

At 3 a.m. this morning a fire broke out, and before it was extinguished about 200 houses were destroyed.

(FROM THE "N.-C. DAILY NEWS.")

London, October 31.

Continental Bourses are flat, owing to a strong anti-English article in the unofficial portion of the St. Petersburg *Official Messenger*.

Lord Salisbury, speaking at Watford, stated that he would endeavour, for the sake of continuity, to execute the foreign policy of his predecessors.

London, November 1.

M. Bourgeois—a Radical—has formed a new French Cabinet, in which M. Doumer will be Minister of Finance, and M. Bourgeois Minister of the Interior. The post of Minister for Foreign Affairs is unfilled, M. Hanotaux declining to accept the office because he objects to the annexation of Madagascar, which is the policy of the new Cabinet.

The uneasiness in the political situation, especially as regards the relations between Great Britain and Russia, continues, and the Bourses are in a nervous state.

Reuter's correspondent at Accra states that the King of Coomassie has rejected the ultimatum of Great Britain (as wired on the 17th of October) and that he prefers war, for which he is fully prepared.

(FROM TONKIN PAPERS.)

Paris, October 16.

A man fired a revolver at M. Resseguier, manager of the Carreaux glassworks. The would-be murderer escaped.

Paris, Oct. 18.

The white troops in Madagascar will return to France in December.

Paris, October 20.

Senator Magnier, compromised in the Southern Railway affair, has been condemned to one year's imprisonment.

Paris, Oct. 21.

Te Deums have been chanted in Paris and in the Provinces in honour of the victory in Madagascar.

Russia threatens to issue an ultimatum if the Tai Wön-kun attempts to exercise power in Korea.

Paris, Oct. 22.

The opening of the Chambers has been quiet. Numerous questions have been lodged, notably on the subject of Madagascar and the anarchist outrage at Carmaux.

Paris, Oct. 23.

The feeling in both Chambers is favourable to the Ministry.

The King of Portugal refusing to go to Rome because of the Pope, the relations between Italy and Portugal are very strained.

(FROM "EL COMERCIO.")

Madrid, Oct. 16.

The assistance of the Leon Battalion, garrisoning Puerto Rico, has been requested by General Martinez Campos. The battalion has left for Cuba.

With the view of accelerating the campaign in the Gran Antilla towards the end of November, forces are being concentrated so as to organize twenty battalions more.

Oct. 18.

The Zamora column, in Cuba, has surprised

and destroyed several parties of insurgents, capturing their encampments, horses, arms, and provisions.

Cholera has broken out in Egypt.

10,000 Mauser rifles have been despatched from Hamburg for the use of the army in the Philippines.

(FROM JAPANESE PAPERS.)

Shimonoseki, Nov. 6.

No. 17 torpedo boat left here for the east yesterday.

Sapporo, Nov. 6.

Snow fell here last night, and accumulated to a depth of a few inches.

Nagoya, Nov. 6.

The Kuwana-Mayegasu section on the Kansai Railway Co. will be opened for traffic to-morrow.

Söul, Nov. 6.

Count Inouye had an interview with the King yesterday, when the Count presented to His Majesty a letter sent by the Emperor of Japan. It is said that the doubts entertained by various Foreign Representatives in regard to Japan's conduct in connection with the recent disturbance, were removed by the arrival of the Count, and the relations between the Japanese Minister and other Foreign Representatives are familiar and smooth. Everything is in a satisfactory condition. Doubts were entertained by the native and foreign residents, but these have disappeared with the Count's arrival.

Akita, November 6.

Dysentery is now very prevalent here, 107 cases being reported on the 5th and 6th inst.

Niigata, November 6.

Twenty-three dysentery patients were reported here to-day.

Hiroshima, November 6.

The preliminary examination of the military officers has nearly concluded. The arrival of two other officers concerned in the *émeute* is expected, and upon the conclusion of their examination a Court Martial will be opened.

It is stated that the Judicial authorities have not at present sufficient evidence, and they have asked the Japanese Legation in Söul to collect additional materials.

Some 346 soldiers of the Second Army Division reached Ujina to-day, and at once embarked on board a transport. They will be disembarked at Anping.

Söul, Nov. 7.

Count Inouye was entertained at the U.S. Legation last night. Ken Zai-ko, Vice-Minister of War, has been appointed Chief Secretary of the Cabinet Office.

Hiroshima, Nov. 7.

Two deportees, named Hasumoto Yasumaro, of Shiga, and Oura Shigehito, of Nagasaki, arrived at the Nishima Quarantine Station at 2.30 o'clock this morning by the *Hinoda Maru*. They were at once arrested and taken to the Hiroshima Local Court, where they received preliminary examination.

Nagasaki, November 7,

Major-General Baron Hasegawa has arrived here.

Kobe, November 7.

Mr. Oyama, Japanese *Chargé d'Affaires* in Austria, arrived here by the French mail steamer *Yarra* this morning, and leaves for Yokohama to-morrow by the same ship.

Shimonoseki, November 7.

The *Oshima Kan* arrived off Moji this morning from the west.

Kamiri Katsuyo, formerly a Major, who was sentenced to seven years' hard labour for having stolen some articles while employed in the administrative office in the occupied territory, arrived here yesterday by the *Hinode Maru* from Talien. The man was handed over to the Shimonoseki police. He shot himself while at the police station, the wound being fatal.

The following telegram was received by the Government yesterday.

The Treaty of Commerce and Navigation between Japan and Brazil was signed at Paris on the 5th inst. by Mr. Sone, Japanese Minister to France, and the Brazilian Representative in Paris.

Soul, Nov. 8.

Mr. Uchida, Japanese Consul, accompanied by police constables, proceeded to-day to the residences of the persons now under arrest, and confiscated swords and other materials bearing upon the Korean case.

Shimonoseki, Nov. 8.

The *Chow Chow Foo* left for Nagasaki yesterday afternoon.

Nagasaki, November 8.

Two Russian men-of-war went to Vladivostok yesterday.

Shimonoseki, November 8.

Major-General Shioya arrived here this morning to inspect forts at Shimonoseki and Moji.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

GAME No. 385.

A remarkable game (French Defence) played by the Canadian representative:—

- | WHITE. | BLACK. |
|-------------------------------------|-----------------------|
| W. H. K. Pollock. | Dr. Tarrasch. |
| 1—P to K 4 | 1—P to K 3 |
| 2—P to K 5 | 2—P to K B 3 |
| 3—P to Q 4 | 3—P to Q B 4 |
| 4—B to Q 3 | 4—P to K B 4 |
| 5—P to Kt Kt 4 | 5—P takes Q P |
| 6—P takes P | 6—Q to R 4 ch. |
| 7—P to B 3 | 7—Q takes K P ch. |
| 8—Kt to K 2 | 8—Kt to Q B 3 |
| 9—Castles | 9—B to B 4 |
| 10—R to K sq. | 10—Q to B 3 |
| 11—Kt to Q 2 | 11—K P takes P |
| 12—P takes P | 12—B to K 2 |
| 13—Kt to K B 3 | 13—K to Q sq. |
| 14—B to K Kt 5 | 14—Q to B 2 |
| 15—B takes B ch. | 15—Kt(Kt sq.) takes B |
| 16—Q to Q 2 | 16—P to K R 3 |
| 17—Kt to K 5 | 17—Kt takes Kt |
| 18—P takes Kt | 18—P to Q Kt 3 |
| 19—Kt to B 4 | 19—B to Kt 2 |
| 20—B to Kt 5 | 20—Kt to B 3 |
| 21—P to K 6 | 21—Q to K 2 |
| 22—Kt to Kt 6 | 22—Q to Kt 4 ch. |
| 23—Q takes Q ch. | 23—P takes Q |
| 24—Kt takes R | 24—Kt to Q 5 |
| 25—P to K 7 ch. and White wins (a). | |

(a) Decidedly one of the brightest and most original games of the tournament. White by 2—P to K 5 goes dead against modern theory, for that move has long been discarded by authorities. Nevertheless, he gets a crushing attack, and every move tells. At the finish Black's only resource seems to be K to K sq., and then follows, perhaps, B takes P ch. and R to Q sq., pinning the knight which threatens a disagreeable check at B 6.

We copy from the *Weekly Times* the following valuable rules which we think will be of great assistance to some of our solvers.

FIRST PRINCIPLES OF CONSTRUCTION.

There are two admittedly high-class text-books on this splendidly interesting branch of the game—viz., *The Chess Problem*, by H. J. C. Andrews, E. N. Frankenstein, B. G. Laws, and C. Planck; and *Chess: its Poetry and Prose*, by A. F. Mackenzie. At starting three leading principles are given in *The Chess Problem*, necessities of "Beauty of Solution." These are worth quoting in full:—

- 1.—Elegance and subtlety of the key move;
- 2.—Brilliantly and depth of the several lines of play (variations) following the opening move;
- 3.—Excellence of the mating positions.

Taking these rules for granted, as they will naturally commend themselves to every student—the more fully so as his tastes and experiences advance—it would appear almost superfluous to enter upon any prolonged discussion of details. And yet our correspondence convinces us of the tremendous difficulty many experience in grasping these apparently elementary ideas. In brief, then—for we can only summarize what, if quoted in full, as it deserves to be, would occupy several columns—check and capture keys are objectionable for the following reasons:—

1.—They have upon their face the appearance of great strength, whereas the moves leading to the solution should always be those which at first sight appear weak and improbable; they should, if possible, be quiet and unaccompanied with violence. In fact, the stronger keys are in appearance the more objectionable do they become.—*The Chess Problem*, p. 7. May we not also extend this principle to the variations, or different lines of play that follow the opening move?

2.—A checking key must force the defence into adopting some definite reply. Black's resources, even though not narrowed—and it is seldom they are not so—are positively defined, and as a natural consequence much of the element of real strategy is at once eliminated.—(*Chess: its Poetry and Prose*, p. 7.)

3.—Captures have, putting aside altogether their commonplace character, this forcible objection,

that at the very outset the defence, of necessity poorly situated in other respects, is deprived of some of his force, and this is properly described as "repulsive."

4.—The capture even of a pawn, possibly allowable in exceptional cases, would be a fatal objection if it were obviously of great use to Black, as, for instance, if the pawn threatened to check or to make a capture itself, or by moving, to greatly strengthen Black's position.

So far the authorities. We have limited our quotations to the points upon which we find general readers most need enlightenment. We may add that under the head of objectionable keys Mr. Mackenzie notes, among others, restricting the movements of the defence, and especially of the King; moving pieces from an *en prise* position; pinning pieces; stopping a threatened ch. to the White King; and moving from obscurity or idleness into a more useful situation.

Solvers must try to grasp these simple rules, because, as we pointed out last week, they form separately and collectively, the surest basis on which to form a judgment. Of perhaps 20 possible alternatives, the knowledge of even the elements of construction will soon enable any solver to dismiss at once about 18.

The *New Zealand Mail* remarks that many reasons have been given for the fact that so many chess masters belong to the Jewish race. "A London writer has said that the Hebrews made a profession of chess because their business talents allowed them to make a good thing of it. Alapin, Albin, Englisch, Gunsberg, Jasnowgradsky, Lasker, Rosenthal, Steinitz, Tarrasch, Taubenhaus, and Winawer are cited as amongst the best living examples." It will be noticed, however, that most of these players belong to the classes of wanderers, from whatever cause, from native land. Professional players may often be of Hebrew extraction, but it is to this class that they really belong. The best general explanation that can be offered of Jewish proficiency in chess is that "the Hebrews are accustomed, from an early age, to a logical way of thinking."

CHESS CHAMPIONS.

"Every man who breaks a record is," says Mr. J. Gunsberg, "champion by right, and every man who gains public admiration is a champion by acclamation. To become a champion by right is not very difficult; all that is required is talent as well as good physical condition, youthful vigour, and a species of worldly wisdom—or shall we call it cunning?—that bides its time and chooses its opportunities well. Then success is sure to come. On the other hand, to become a champion by acclamation is far more difficult. In fact, the better way of putting it is that it is impossible except by those especially endowed, for to obtain that distinction one must have not only great talent, but something more, and that is genius. When that is combined with all the other qualities, then we have a true and thorough champion, both by right and acclamation. Such a combination of qualities is rare. Unfortunately it happens more often than not that a player will have great genius but be deficient in some of the other qualities necessary to success. In spite of this, such a player will nevertheless be champion by public acclamation both hearty and enthusiastic. Such a champion is Blackburne. The champion by right feels aggrieved. "Have I not beaten the man you acclaim?" But for all that the public heeds him not, simply because sentiment is stronger than record—it cannot be broken."

Pamiat Asova (14), Russian cruiser, Captain Schoukhnine, 1st November,—Hakodate.

LATEST COMMERCIAL.

IMPORTS.

Market quiet, but prices fairly well maintained. The present dullness is now attributed to "Harvest operations." There is some little enquiry for Yarns and Grey Shirtings, but all else is lamentably quiet.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ lb, 38½ yds, 35 inches	\$2.30 to 2.90
Grey Shirtings—9 lb, 38½ yds, 35 inches	2.75 to 3.35
P. Cloth—7 lb, 24 yards, 32 inches	1.70 to 2.00
Indigo Shirtings—12 yards, 14 inches	1.90 to 2.40
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
	PER YARD.
Cotton—Italians and Satteen Black, 32 inches	0.16 to 0.22
	PER PIECE.
Velvets—Black, 35 yards, 22 inches	7.75 to 9.75
Victoria Lawns, 12 yards, 42-3 inches	0.75 to 0.90
Turkey Reds—2.0 to 2.4 lb, 24/25 yards, 30 inches	1.60 to 1.75
Turkey Reds—2.8 to 3 lb, 24/25 yards, 30 inches	1.85 to 2.10
Turkey Reds—3.8 to 4 lb, 24/25 yards, 32 inches	2.35 to 2.65
Turkey Reds—4.8 to 5 lb, 24/25 yards, 32 inches	2.90 to 3.40

WOOLLEN.

No. 32s, Two-fold	51.00 to 53.00
	PER HAT.
No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Market quiet. Buyers have "shut up," having bought enough for the immediate future. Quotations the same, but tending towards ease. Tin Plates are dull, with a large stock.

	PER PICUL.
Flat Bars, ½ inch	\$3.25 to 3.30
Flat Bars, 1 inch	3.20 to 3.25
Round and square up to ½ inch	3.20 to 3.30
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.30 to 4.50
Galvanized iron sheets	9.00 to 9.50
Wire Nails, assorted	5.60 to 6.00
Jim Plates, per box	5.75 to 6.00
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

At length Importers have made a stand and refused further concessions. The natural consequence is that buyers are now more inclined to operate, and there should be a good business ere long.

American	\$1.90 to 1.95
Russian	1.85 to 1.90
Langkat	—

SUGAR.

Brown—Small arrivals and large sales have reduced stocks to a low figure. Prices have advanced, and the outlook is healthy. White—Market firm, with a fair amount of sales.

	PER PICUL.
Brown Takao	—
Brown Manila	\$4.40 to 4.75
Brown Daitong (New)	3.80 to 3.85
Brown Canton	3.70 to 4.40
White Java and Penang	6.40 to 6.70
White Refined	6.25 to 9.50

EXPORTS.

RAW SILK.

Dealers at last reduced prices to a point which induced large purchases on the part of one or two shippers. But the buying is by no means general: stock is 16,000 piculs, and there seems no reason for an advance in prices, especially on the medium and common qualities.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 den.	Nom.
Filatures—Extra 13/15, 14/16 deniers	\$940 to 950
Filatures—No. 1, 10/13 deniers	900 to 910

Kakedas—No. 1½	800 to 810
Kakedas—No. 2	780 to 790
Kakedas—No. 2½	760 to 770

WASTE SILK.

Dealers are inclined to be current, and there is more business accordingly. Quotations unchanged, but working in favour of buyers. Pierced Cocoons still remain a dead letter.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$130 to 135
Noshi—Filature, Good	120 to 125
Noshi—Oshu, Best	130 to 135
Noshi—Oshu, Good	120 to 125
Noshi—Oshu, Medium	110 to 115
Noshi—Shinsu, Best	80 to 85
Noshi—Shinsu, Good	70 to 75
Noshi—Bushu, Best	140 to 145
Noshi—Bushu, Good	130 to 135

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1891, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.
Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

YOKOHAMA: SATURDAY, NOV. 16TH, 1895.

BIRTH.

At 211, Bluff, the wife of L. J. HEALING of a Son.

DEATH.

On the 14th November, 1895, Mr. YOSHIKAWA TAJIRO, President of the Nippon Yusen Kaisha.

SUMMARY OF NEWS.

MR. OYAMA, Japanese *Chargé d'Affaires* in Austria, arrived in Tokyo on the 9th inst.

A RICE-MERCHANT of Tokyo named Suzuki Kichibei, a chronic sufferer from hemiplegia,

was burned to death in his house on the 7th inst. Suspicion is attached to his wife.

A FALL of hail was experienced in Yokohama on Thursday morning.

THE death is announced of Mr. Awaya Shinazo, M.P., which took place in Osaka on the 10th inst.

H.I.H. PRINCE NASHIMOTO was decorated with the Grand Cordon of the Rising Sun on the 10th instant.

THE Government granted a charter to the promoters of the Yokohama Commercial Bank on the 11th inst.

MR. YAMAGATA, Secretary of the Tokyo Municipality, has sent in his resignation, in connection with the Water-works scandal.

SOME 280 gendarmes will be stationed in Söul and Ninsen after the withdrawal of the Japanese garrisons from Korea.

THE date for the convocation of the 9th session of the Imperial Diet has been fixed for the 25th of December next, by Imperial Rescript.

THE State funeral of the late Prince Kitashirakawa took place in the capital on Monday: full honours were accorded the princely dead.

MR. MIYAKE TSUNENORI, a distinguished lawyer, who proceeded to Formosa with Viscount Takashima, died on the 1st inst. in the island.

SURGEON W. F. ARNOLD, of the U.S. Navy, lately arrived in Japan to make investigations into Asiatic cholera, at the request of the Secretary of the Navy.

RINDERPEST has broken out at Yukiura-mura, Nishi-sonoki District, Nagasaki Prefecture, and has spread to Matsushima-mura, where seven cases have been reported.

THE concert in aid of the funds of Christ Church, Yokohama, passed off very successfully on Friday evening, nearly every seat being booked and occupied.

THE Educational Authorities have decided to turn the Kyoto High School into a university. The matter will be brought before the Diet at its approaching session.

MR. OBATA, Governor of Kagawa, was released from his post on the 9th inst. at his own request, and was succeeded by Mr. Fukano, Secretary of Tottori Prefecture, as formerly stated.

THE first two days of the Autumn Meeting of the Nippon Race Club were anything but pleasant as regards the weather. Thursday, however, was bright and sunshiny, with a stiff northerly breeze.

THE new officers of the Yokohama Rice Exchange are Messrs. Tanaka Fukutaro, Oki Kotetsu and Fujino Zensuke, Directors, and Tomoda Kahei and Yoshida Heinosuke, Auditors.

THE rumours in Tokyo regarding a probable reorganization of the Cabinet were increasing in strength and probability, when a coalition between the Ministry and the Liberal Party restored the situation.

H.I.M. THE EMPEROR was unable to attend the Yokohama races this year, in consequence of the death of Prince Kitashirakawa, but he sent a very handsome pair of vases as a prize: these were won on the second day by a Japanese-owned pony.

It is stated that the naval authorities have concluded the compilation of the estimates and plans for various new ships of war. Four of them will be battle-ships of 15,000 tons each,

and four others cruisers of 7,500 tons. Torpedo-boats and smaller cruisers will also be built.

THE Tokyo Water-works scandal has brought about more arrests during the week. The loss sustained by the city is variously estimated between yen 200,000 and yen 900,000.

MR. YOSHIKAWA, President of the Nippon Yusen Kaisha, died at Oiso on the night of the 11th inst. He had long been suffering from consumption. The funeral will take place on the 20th inst.

THE Norwegian steamer *Borjg*, bound from Kobe to Vladivostock, stranded on Wednesday when a few hours from the former port. No lives were lost. The vessel was floated yesterday, and, being found to have received no injury, proceeded on her voyage to Vladivostock.

THE Osaka Marine Court of Inquiry suspended, on the 31st ultimo, the certificate of Miyaoka Hyakuzo, a pilot, for three months, in connection with the stranding of the *Riversdale*, which took place off Kabutojima, Sanuki Province, on the 24th of April last.

It is stated that H.I.M. the Emperor proposes to dispatch an Ambassador to attend the Coronation ceremonies of the Czar, which are to take place in February next. The Ambassador will probably be ordered to visit other Courts in Europe, and proceed home *via* America.

REUTER TELEGRAPHS:—According to telegraphic advices from London, the British Minister at Washington (Sir Julian Pauncefote) has approached the U.S. Government with a view of inducing limited co-operative action in Turkey between the two great representatives of the Anglo-Saxon race to give protection to British and American subjects in the Sultan's dominions. In addition to his diplomatic difficulties, the Sultan is now confronted with a financial crisis in Constantinople, and the Sublime Porte has proclaimed a *moratorium* for four months—during which time none of the liabilities of the Government will be discharged. Telegraphic news indicates that while the crisis in Constantinople is passing, affairs on the Asiatic side are growing more threatening, and a general revolt is feared. That this is so is shown by the fact that the Porte has requisitioned forty thousand men of the reserves, and the situation is likely to be further complicated by the circumstance that the Czar is to be petitioned by the Armenians, who pray for his protection against their oppressors.

THE Import trade continues quiet generally for Textiles. Yarns show some sign of improvement, but Cotton and Woollen Piece-goods are generally dull, Italian Cloth and Velvets being the exception. The Metal trade has not revived, the business done being hardly enough to make quotations. The Kerosene trade is looking up, buyers being unable to hold off any longer, and to fill immediate requirements have had to put up an increase of 10 per cent. or thereabouts, being willing to go on, but holders are in no hurry for business. In the Sugar trade, arrivals have not been equal to sales, and as the stock goes down prices go up. There is a steady trade in White sorts at late rates. There has been a quiet week in the Silk trade, though more enquiry has been made during the last few days. Prices, which are without quotable change, have a tendency in favour of buyers. There is nothing doing in Waste, and the conditions of the market are unaltered. Next to nothing moving in the Tea trade, the leaf on offer not being of a desirable kind. There has been very little alteration in rates of Exchange, which are much the same as a week ago.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The reported coalition between the Government and the Liberals naturally engrosses a large share of journalistic attention. The expected announcement of the matter has not yet been made by the Liberal Party, but the revelations published in the *Nichi Nichi* are regarded as equivalent to an official declaration. Various stories are told about the circumstances that led to this open coalition. One is that Marquis Ito's visits to Count Okuma and his unconcealed desire to resign his office, caused much excitement among the younger official followers of the Premier and the leaders of the Liberal Party. The first step decided upon by the Premier's followers in office was—so runs the story—to sound Marquis Yamagata as to the probability of his accepting the post of Minister President. The attempt proving unsuccessful, they next fell back upon the only alternative of begging the Premier to remain in office. Just at this juncture, the Liberal leaders, equally alarmed by the report of the Premier's intended retirement, opened communications with the above mentioned younger officials of the Government, and these two coteries of politicians combining, decided upon an immediate proclamation of the long-existing entente between the Cabinet and the *Fiyu-to*. Their united efforts proved successful, and the result is the declaration made by the *Nichi Nichi*. In this way the path to an understanding with the Progressionist leaders has been effectually barred. Such is the substance of the rumour most widely circulated. We are further told that Marquis Ito has abandoned all thought of resignation. But other persons think differently. In their opinion, Marquis Ito's resolution to resign is irrevocable, and has not been in any way affected by the proclamation of the alliance with the Liberal Party. We do not profess to believe entirely in either of these rumours. We note them simply because they are very generally circulated. The comments of the *Nichi Nichi* on the subject have already been reproduced. We therefore confine ourselves in the following paragraphs to the principal articles appearing in other papers.

The independent, that is, non-party section of the press, welcomes the news as inaugurating a new epoch in the history of constitutional Government in Japan. The *Nippon*, for instance, writes as follows:—"The Ito Cabinet having effected an alliance with the *Fiyu-to*, the natural result will be a more distinct line of demarcation between the contending parties, and a consequent tightening of the bonds that unite the different sections of the Opposition, until the latter will finally be amalgamated into a single party. Under these circumstances, we cannot but regard the present political departure as a step in the right direction." As to the circumstances that have brought about this important change, our contemporary accepts the first story repeated in the foregoing paragraph, and writes in a manner highly unfavourable to Marquis Ito. Being preëminently quick in reading the signs of the times, the Premier, says our contemporary, did not fail to perceive that he was steadily losing public confidence. He, therefore, resolved to resign, and in order to find a suitable successor, visited Count Okuma and Count Matsukata. But his conduct provoked resolute disapproval among his followers, such as Mr. Yoshikawa, Marquis Saionji, Baron Ito, Viscount Nomura, and so forth. Alarmed by this excited and indignant attitude, the Premier, thinks the *Nippon*, changed his mind, and decided to continue in power with the help of the Liberal Party. As to the latter, our contemporary dubs it a subservient tool in the hands of the Cabinet. Nothing more rational could have been expected from the *Nippon*.

The *Fiji Shimpō* is heartily glad of the coalition, and says that it has long been wishing for such an incident. There being now no real ground of difference between the Government and any of the political parties, our contem-

porary sees nothing singular in the present alliance, and believes that the combination will be made stronger by giving office to the leaders of the *Fiyu-to*. This political change will finally lead to the introduction of a system of Government by Party, and in the language of religion the *Fiji* declares that the kingdom of heaven for party politicians is near at hand. Thus our contemporary hails the news with delight, but at the same time wishes to draw attention to the fact that a coalition between the Cabinet and the Liberals will hardly suffice to secure smoothness in the relations between the Government and the Diet. There is danger of a split in the ranks of the Liberals in consequence of such a connection. The decisive step has been taken at the discretion of the principal members of the Party in Tokyo, and it is but natural to expect that the measure will be disapproved by some of the provincial Liberals. In that event, the strength of the Party in the Diet may be considerably weakened, and it may be impossible for the Government to secure a majority, while it is very probable that the other parties will combine more strongly than ever against those in power. Consequently, the *Fiji* counsels the Government to effect an understanding with the Progressionists. Between the Progressionists and the Liberals there is unanimity of views on essential political questions, and no reason exists why the two parties should not combine. There has of late been some ill-will between them, but since their political creeds coincide, no difficulty should offer in effecting a reconciliation, especially at a time like the present, when party strife ought to be shunned by all the true lovers of the country.

The Progressionist organs pretend to view the matter with a degree of indifference little to be expected from them. In this connection, it will be sufficient to quote the comments of the *Kokumin Shinbun* and the *Mainichi Shinbun*. Strictly speaking, the former journal is not an organ of the Opposition, or indeed of any political party. But as its sentiments are entirely in sympathy with the Progressionists and others of the same camp, it may practically be classed as a representative of the Opposition. It doubts, in the first place, whether the reported coalition is true, but supposing it to be well founded, it further doubts the probability of the connection lasting for any length of time. Marquis Ito's defects, says our contemporary, lie in his want of decision, constancy, and perseverance. The *Kokumin* is confident that many members of the Government are opposed to an alliance with the Liberal party, and doubts whether the Premier will have courage to persevere in his course despite the opposition of these discontented persons. As to the Liberal Party, our contemporary compares it to the Chinese Empire. Like Japan's big neighbour, the Liberals lack power of cohesion. There is reason to apprehend that the party will be split up by the public announcement of a coalition with the Cabinet. The *Kokumin* is strongly disposed to suspect that the whole affair is the work of some interested schemers on both sides. On the one hand, not only are a large number of the Liberals entirely ignorant of the matter, but on the other, even the Premier himself is probably still undecided what course to follow. Thus our contemporary imagines that the public announcement of the coalition is a device on the part of some intriguers who desire in this way to precipitate an arrangement ardently wished for by themselves. "Two pieces of jelly cannot make a stone wall," says the *Kokumin*, "and as we are intimately acquainted with the inner circumstances of both sides, we are led to fear that the present endeavour for their combination, so far from being crowned with success, may end in furnishing fresh material for public laughter and ridicule."

The *Mainichi Shinbun* writes in a similar strain. While, on the one hand, says our contemporary, Marquis Ito was alarmed by the extraordinary increase in recent times of the strength of the popular opposition to his Government, there were, on the other, some men independent

of parties who, perceiving the powerlessness of the present Cabinet, began to advocate the theory of reconciliation between the *Meiji* statesmen, as a means of placing the foreign affairs of the country in surer hands. The latter proposal of non-party men found a response in the heart of the Premier, who, glad of any help at such a critical moment as the present, visited the Opposition leader on the pretext of exchanging social courtesies. Our contemporary does not profess to know in what way the overtures made by the Premier were received by Count Okuma, but it states that, if the Cabinet means to be in earnest, it should first tender its resignation in a body, and leave its successors free to conduct the affairs of State according to their judgment. All measures of compromise short of such a course are deprecated by the *Mainichi*. The Premier, says that paper, seems to have been sincerely desirous of retiring from office, and inaugurating a new order of things. But such a course appears to have been stoutly opposed by his followers, who, from habit as well as obvious considerations of self-interest, are now more enthusiastically in favour of the policy of standing aloof from parties than their chief. Under these circumstances, the Premier was unable to decide on any course of action, when the plan of temporary coalition with the Liberals was proposed and accepted by him as a scheme for tiding over the present crisis. So the *Mainichi* does not think that the connection will survive the coming session of the Diet, and considers that, viewed in this light, the incident is unworthy of any serious attention.

The question of the Iron Foundry fraud continues to engage much attention. The *Nippon* severely censures the police authorities for negligence in matters of administrative police. While respectable politicians and innocent students are subjected to a provoking system of political espionage, swindlers and sharpers are left free to practise their mischievous arts upon the innocent and unwary. How on earth the police could have prevented the fraud, or interfered in any way, the *Nippon* does not say.

Other questions that have been discussed during the present week are the settlement of Formosa, the Liaotung peninsula, the employment of the war indemnity, and so forth. The comments on the Liaotung question have already been reproduced, and those on the remaining topics do not merit special reference.

EDITORIAL NOTES.

MR. OISHI ON THE SITUATION IN THE EAST.

MR. OISHI MASAMI recently delivered an address on the above subject at a meeting of the Young Men's Christian Association of Tokyo. Before proceeding to the subject of his lecture, he begged to say a few words on a topic to which he thought it advisable to draw the attention of his youthful audience, the institution of public lecturing. It is a practice borrowed by the Japanese from the Occident. More than twenty years have elapsed since the practice of lecturing was first introduced in Japan, but Mr. Oishi is grieved to notice that the institution is still in a state of infancy. The art of addressing a public meeting is properly understood by very few persons; while the public in general is lamentably deficient in capacity to profit by what is said from the rostrum. The tardy progress made in this direction is to be ascribed to the comparatively low degree of development of national intelligence. What Mr. Oishi most deplores about public speakers in Japan, is that they are deficient in independence and originality of thought. They either rehearse what they have heard from others or repeat what they have read in books. He recommended his hearers to form the habit of independent observation and thought. "Try to think for yourselves about whatever question comes under your notice." After dwelling at some length on this topic, the lecturer proceeded to discuss the interesting theme forming the caption of this article. The

first thing that strikes all observers of current events in the East is the fact that this part of the world is now the scene of an ever increasing competition between the different Powers, not only in commerce but in politics. Countries and races unfit for this keen race of life have to yield. India was the first to fall, and now China is already tottering. The common malady of these two races is lack of national spirit and utter disorganization of society. Under these circumstances, it is scarcely necessary to point out that Japan's *vis-à-vis* in her career of expansion is neither Korea nor China, but the Powers of the West. The lecturer then alluded to an address once delivered at a public meeting by Lord Salisbury, in which the Marquis insisted on the importance of pursuing a vigorous policy of colonial and commercial expansion. That the English Premier is carrying out the policy once propounded by him, is proved by the attitude adopted by England about the Kucheng massacre. It is needless to say that the same strong policy is followed in the East by the other Powers of Europe. The East has thus been converted into a stage on which Western races are to enact their drama of encroachment. What ought Japan to do under these circumstances? Mr. Oishi strongly urges his countrymen to direct their attention and energies to the acquisition of an important foothold on the continent. He naturally refrains from saying what part of the continent should be annexed, but he remarks that such a region should be selected as will, first, repay its occupation, and, secondly, facilitate further territorial expansion. The three weapons absolutely necessary for the attainment of this object are armament, diplomacy, and money. The nation should strain every nerve to complete its preparations in these three different fields.

THE FIN DE SIÈCLE SOLDIER.

MR. ARCHIBALD FORBES received his baptism of fire long before the opening days of the antiseptic treatment of wounds. We are therefore surprised to find him railing at the humanitarian principles that now prevail in military surgery. In a recent book he says:—"The soldier is coddled nowadays to the extent of being really deteriorated by over-tenderness of treatment. He has an anæsthetic administered when the top joint of his finger is being taken off; he has hypodermic injections when he has a twitch of pain; he is treated with champagne, with all sorts of delicate extras, and everything that can make a man reluctant to own to convalescence. In the old days of the Peninsular War men had natures of more pith, and did not seem to die in much greater proportion than nowadays [as a matter of fact modern battlefields seem to be less bloody than even those of the days of Brown Bess], although they were entirely strangers to all this demoralising excess of dry-nursing." Mr. Forbes seems to imagine that callous indifference to suffering in the field and camp tends to harden the fighting-man. Certainly the records of our War Office prove that the veterans of the Peninsular and other wars in the earlier years of the century were the results of the "survival of the fittest" principle; but only to take these into account is to wilfully shut one's eyes to the long legacy of terrible disease that the wounded and invalided of those wars bestowed upon the English nation.

COLLISION WITH A SHARK.

"A CURIOUS thing," writes a correspondent to a home paper, "occurred on the last homeward voyage from Australia of the P. & O. Royal Mail steamer *Himalaya*, when the ship while steaming up the Red Sea ran into and killed an enormous shark. The sea was dead calm at the time, and the brute must have been basking in the sun upon the surface, as they often do, when the ship struck it. Though under easy steam she was then running quite nineteen land miles an hour, and anyone acquainted with the huge proportions of a great ocean liner will understand the force and impetus with which the sharp stem must have been driven into the shark's body. It was not quite cut in two, however, and was carried some distance before the engines were

topped and reversed to enable the ship to get clear, when it turned over and sank, apparently dead; but for some time after being struck it was alive, and lashing out furiously with its tail. I am not sure to what size these monsters actually grow, but this one must have measured at least twenty-five feet. It is also interesting to speculate how, upon the theory that a fish never sleeps, this one allowed itself to be run into—especially as these incidents seem by no means rare."

ARRIVAL OF THE U.S.S. "OLYMPIA."

THE United States steel commerce-destroyer *Olympia* arrived at Yokohama on Saturday morning. She left San Francisco on August 23rd and arrival at Honolulu on September 2nd. Owing to cholera prevailing at that port, she went to Lahano, Maui, S.I., about seventy miles south of Honolulu, when she stayed for some time. The cholera dying out somewhat the *Olympia* returned to Honolulu and coaled. On the 23rd of October the cruiser left Honolulu for Yokohama and proceeded under easy steam in pleasant weather till Nov. 1st, when a gale came on. This lasted for about 900 miles. The officers of the *Olympia* report passing the O. & O. steamer *Coptic* on Nov. 2nd, who reported "cholera on board." The *Olympia* was built in 1893 at a cost of £477,600. She has a displacement of 5,800 tons, is 340 feet in length, and 53 feet beam. Her mean draught is 21 ft. 6 in., and she is driven by two propellers, which are worked by engines having an indicated horsepower of 13,500 nominal draught, 17,363 forced, her speed being 21.69 knots. At 10 knots an hour her coal supply will carry her 10,000 nautical miles. The hull is of steel and the deck of the same material is $4\frac{1}{2}$ inches to 2 inches in thickness, while the barbettes are protected by $4\frac{1}{2}$ inches armour. Her armament is very extensive, consisting of four 8-in., ten 5-in., fourteen 6-pounders, six 1-pounder quick-firing guns, and four machine guns, and six torpedo tubes.

NAVAL NEWS.

H.M.S. *Grafton*, says the *China Mail*, first-class cruiser, sails from England on the 12th November for Hongkong with relief crews for the ships ordered to pay off here:—*Alacrity*, *Daphne*, *Pigmy*, *Redpole*, and *Plover*. The *Grafton*, is a sister ship to the *Edgar*, and is of 7,350 tons, 12,000 horse-power, 12 guns. Her presence on the China Station will give temporary strength to Admiral Buller's squadron. H.M.S. *Æolus* is expected in Hongkong shortly, as soon as it is deemed advisable to reduce the strength on the Yangtse. Admiral Buller is expected here with the *Centurion* and other vessels about Wednesday next. He will go to Singapore soon after. Mrs. Buller and son are expected in Hongkong shortly. H.M.S. *Pigmy* arrived at Canton 29th October. H.M.S. *Mercury* has been docked at Singapore.

YOKOHAMA CHARITY HOSPITAL.

THE report of the Yokohama Charity Hospital for the half-year ending June 30th, 1895, has just been issued. It states that the work has been most successfully carried on during the period under review. Owing to the departure of Mrs. Lindsley for America, late hon. treasurer of the Society, and of Mrs. Megata for Tokyo (secretary), their places have been filled by Mrs. Okoshi. At present the Management of the hospital is conducted by Dr. Rokkaku; Dr. Tokunaga and Dr. Ito, assistants, as before, and Miss Kadokura, Midwife. The number of patients who have received treatment in the hospital during the half year were:—Paying patients 76: of which those that left entirely cured number 32; remaining, 14; left before recovery, 17; died, 13; free patients, 16; remaining, 3; out-door patients, 61—total, 259. The total receipts had been \$1,217.29; the expenditure \$913.34, and \$303.95 remained in hand.

DEATH OF THE GOVERNOR OF CANTON.

MA PI-IN, the Governor of Canton, died in his yamen on the 25th October at 9 p.m. His Excellency was seventy-six years of age and was

appointed Governor of Canton last November. His fourth son was with him at the time of his death. The remains were confined on the 26th ult. The Viceroy and all the high officials went to the deceased's yamen to pay the usual tokens of respect to his memory. A report was set in circulation to the effect that Ma was the victim of poisoning, the poison having been administered at an official feast, when he and the other five officers partaking of food together, were all on their return home attacked by symptoms of poisoning. At these feasts the guests sit in groups, usually six at a table, and it was only the guests at the Governor's table that showed any signs of illness. The other five recovered, but the Governor was not so fortunate. It is said that the poisoning was the work of gamblers and other bad characters in revenge for the suppression of the gambling houses which Ma had brought about. On inquiry, the Hongkong *Daily Press* found that this report was not generally credited by the Chinese. The late Governor's illness commenced some three weeks ago and throughout its course there was nothing to suggest foul play. The report is supposed to be based on the well-known hatred entertained for him by the gambling fraternity, who would probably not have hesitated to put him out of the way by foul means had the opportunity of safely doing so presented itself, but as a matter of fact, it is said, they have been relieved of his inconvenient presence by natural causes.

UNRULY JAPANESE COOLIES IN HONGKONG.

SOME sixty Japanese coolies employed on board one of the Japanese transports now docking at Hungnam, Hongkong, got quarrelling with some Chinese coolies the other day. In the course of the dispute the Japanese produced knives, sticks, and revolvers. Upon the police coming up to disperse the mob, one Japanese, named Tamaru, stabbed a Chinese constable and a Sikh policeman, one on the arm and the other in the back. The man was arrested along with five others. Fines of \$10 were imposed on all, except Tamaru, who was sent to gaol for six months with hard labour.

DEATH OF MR. YOSHIKAWA.

THE *Shogyo Shimpō* says that Mr. Yoshikawa Taijiro, President of the Nippon Yusen Kaisha, who has been suffering from consumption for a long time, died on the night of the 12th inst. at Oiso, where he has been staying for the benefit of his health. Mr. Yoshikawa was yesterday decorated with the Medium Cordon of the Rising Sun in recognition of services rendered by him during the late war.

CLOSE OF THE KOBE CRICKET SEASON.

THE cricket season was brought to a conclusion at Kobe on Friday with a match between Tea and The Rest. Tea won, hands down, with 188 for eight wickets against 27 for The Rest—the latter team's collapse being perfectly inexplicable. Football was started the following day.

THE NEW "MOYUNE."

THE new *Moyune* is one of the largest cargo steamers that has ever entered these waters, her tonnage capacity being 9,039. She is 410 ft. long, with 47.10, ft. beam, and 29.2 ft. depth; with a single propeller she attains an average speed of 13 knots an hour.

DESTRUCTIVE FIRE IN YOKOHAMA.

Shortly after 4 a.m. yesterday fire broke out in an unoccupied house at No. 87, Sumiyoshicho, Rokuchome, Yokohama. The flames soon spread to the adjacent buildings, although a considerable number of firemen promptly answered the call. Eleven houses were either destroyed or considerably damaged at Sumiyoshicho, Rokuchome, and at Aioicho Rokuchome. Among the houses completely burnt was the residence of Mr. Sakai, on the staff of the *Japan Mail*—that contained a valuable private collection of Japanese art objects—and the office of the Gaishinsha, the parcel delivery company. The office and residence were insured, but the fine art collection, valued at over yen 30,000 is completely lost. The fire is said to have been caused by an incendiary.

CURRENT TOPICS.

Rumours about probable changes in the Cabinet begin to assume a more definite shape. The latest story is that the new Ministry will contain, among others, Marquis Yamagata (Premier), Count Okuma (Foreign Affairs), Count Matsukata (Finance), and probably also Viscount Takashima (War). Among other statesmen supposed to be likely to enter the Cabinet are Count Inouye and Count Kuroda. The former is expected in Tokyo in about a fortnight. Viscount Enomoto, Minister of Agriculture and Commerce, will, it is stated, be accredited to Russia as Baron Nishi's successor. Against this plan of a Coalition Cabinet, there is said to be powerful opposition among the younger officials of the Government, who favour the formation of a Ministry by men of their own generation. Baron Ito Miyoji is supposed to be one of the leading spirits of their party. These reports are circulated by the *Naigai Tsushin-sha*, an agency that has earned notoriety for enterprise rather than honesty. Stories derived from such a source are, of course, reproduced here with all reserve. Whatever be the accuracy of the details, however, it now seems to be a fixed belief among a large section of the public that some changes in the Cabinet will occur at no distant date. Some journals venture even to predict that the time for the event will be before the 20th instant.

Besides the return of Count Matsukata to Tokyo, and constant meetings between the older statesmen of various parties, additional matter for speculation has been afforded by the recent visit of Marquis Tokudaiji, Lord Keeper of the Privy Seal, to Marquis Yamagata in Kyoto, and the expected return of the latter to the capital in a short time. It has been given out that the Lord Keeper did, indeed, see Marquis Yamagata in Kyoto, but that the visit had no political significance whatever, the object of the ex-Kuge's journey to his native city being to worship at the family mausoleum. As to Marquis Yamagata's return to Tokyo, it is stated to be connected with the marriage of his daughter to Mr. Funakoshi. But these explanations serve only to increase public belief in the political importance of the events.

With regard to Count Oki and Count Goto, who seem to be on very good terms, it may be noticed that their chances of getting into the Government seem rather slender. Some folks assign ministerial posts to them. Count Oki, indeed, is understood to be very intimate with Count Okuma, and in the event of the latter's joining the Cabinet, we should not be surprised to find the ex-Minister of Education in possession of a good office outside the Cabinet. But it appears beyond the limits of probability that a minister's portfolio should be offered to him.

The report that Baron Ito Miyoji has tendered his resignation is emphatically denied by the *Nichi Nichi*. Suffering from a chronic disease of the alimentary canal, the Secretary General of the Cabinet was advised by his physician to make a journey to a health resort, and having obtained the necessary permission, he was on the point of leaving Tokyo, when an attack of influenza not only obliged him to postpone his journey but also incapacitated him from attending his office. It was probably in these circumstances that the rumour of his resignation originated.

The delegates of the Opposition parties, Messrs. Ohigashi Gitsutsu, Haseba Junko, Minoura Katsundo, and Taguchi Ukichi, obtained their long-sought interview with the Premier at his official residence on the morning of the 9th instant. Mr. Ohigashi, as spokesman of the party, explained the object of their visit, which was to recommend the joint resignation of the Cabinet in connection with the Korean question. Lest verbal representations should be imperfect and misleading, the spokesman presented to Marquis Ito a written memorial on the subject. The Premier, after a glance at the document, pointed out a gross misrepresentation of facts concerning the Korean *émeute* of 1884, and re-

turned the paper, declaring it unfit to be received. His Excellency then told his visitors that the duties owed by the Ministers of the Crown to the Emperor and the State did not allow them to act in such a rash and irresponsible manner as that recommended by the delegates. The latter took leave after having talked with the Premier for about forty minutes.

The rumours now circulating in Tokyo are so contradictory, that the safest course would be to treat them with indifference, were there not a very general belief in well informed circles that Cabinet changes of some sort are sure to take place before long. For the sake, then, of indicating the trend of political opinion, we reproduce some of these rumours. It is stated that, in conversation with a certain visitor, Count Okuma declared it to be true that he was offered a Ministerial post, but said that whether he would enter the Cabinet was as yet uncertain, the Government's answer to conditions proposed by him being a necessary preliminary. This report is, however, pooh-poohed by the *Nichi Nichi*, which says that the ignorance of persons crediting such a story will cause Count Okuma himself to smile. Another rumour is that a section of the Cabinet is in favour of Marquis Yamagata's taking the place of Marquis Ito, the latter rendering assistance from "behind the curtain" to Count Mutsu and Marquis Saionji in the conduct of foreign affairs. According to this programme, the only other changes in the Cabinet would be the appointment of Viscount Tanaka, present Vice Minister of the Household, to the Ministry of Justice, and the transfer of the present Minister, Mr. Yoshikawa, to the Department of Agriculture and Commerce, the chief of the latter, Viscount Enomoto, becoming a Privy Councillor. A third view is that Marquis Yamagata has declined the Premiership, and that the programme under contemplation is based upon the appointment of Count Matsukata to the post of Minister President and Count Okuma to that of Foreign Minister. This arrangement, it is said, has a fair chance of being successful, for the two Counts are on very good terms. It is even rumoured that Count Matsukata, while Minister of Finance, strongly urged upon the Premier the advisability of appointing the Progressionist leader to the portfolio of Foreign Affairs. Further, there are men very confident that, despite prevailing rumours to the contrary, the Cabinet is really in no danger of a crisis, but this assurance is received on all hands with doubt and misgiving.

What makes the situation still more confused is a report that the Radical Party is about to proclaim alliance with the statesmen in power. This rumour has been in circulation for the past few days, but we have forborne to notice it, as it seemed at least premature. Now, however, there appears to be some foundation for the theory. The facts are described by the *Nichi Nichi* in the following note:—"The Radicals, impressed with the increase of the nation's responsibility since the war, have recognized the paramount necessity of harmonious coöperation between the Government and the people for the successful carrying out of the State policy. They consequently adopted a Party resolution that, under the circumstances, it was not advisable to demand the Cabinet's resignation on account of the Liaotung question. Shortly after proclaiming that resolution, they opened communications with those in power in a conciliatory spirit, and an exchange of views took place. It is said that the statesmen in power naturally welcomed the approaches made by the Radicals with the object of accomplishing the much desired coöperation between the different sections of the nation, and consented, in so far as might be possible, to pursue the same line of policy as that Party. On the part of the Radicals, too, the question of alliance with the Cabinet is said to have been definitely settled at a meeting. The fact is expected to be proclaimed in a few days."

In connection with this important piece of news, the *Nichi Nichi* makes some interesting

remarks at the end of an editorial article in which it strongly ridicules the idea of a coalition between either Marquis Ito, Marquis Yamagata, or Count Matsukata on one side, and Count Okuma on the other, saying that, however friendly these statesmen may be personally their sense of dignity and of responsibility for their publicly expressed opinions would not allow them to occupy seats in the same Government. The *Nichi Nichi's* comments run in the following strain:—"After the above article was in print, we have come into possession of important news regarding the relationship between the Radical Party and the statesmen in power. According to what we learn, it seems that the Ministers are no longer disposed to hold strictly by the views expressed by them to Marquis Saigo and Viscount Shinagawa on the occasion of a farewell banquet to the two latter at Count Kuroda's residence, on the 12th of August, 1892. But it does not appear that connection with the Radical Party would involve any important change in the policy of the Cabinet. Indeed, the Government and the Radical Party began to approach each other from the moment the latter issued its manifesto on the question of the Liaotung Peninsula. It may also be noticed that the news under consideration does not affect in any way what we have said in the above article. We are convinced that the statesmen in power will not forget that they are Ministers of the Crown and not nominees of any particular political party. The Radicals, on the other hand, must bear in mind that, although they support the policy of the Government, they are not to look for direction to Marquis Ito, Marquis Saigo, and others."

How the announcement of a coalition between the Cabinet and the Radical Party will affect the situation, is the question asked everywhere. It is believed by some that the Radicals, acting in concert with a certain influential coterie in the Government, have decided to take an early opportunity of proclaiming the coalition, so that there may be no room left for any Ministers to attempt a reconciliation with the Progressionists and others. If the report of the coalition be true, as it now seems to be, then the obvious inference is that all the rumours about probable changes in the Cabinet are entirely fallacious. It may be taken for granted that the National Unionists will join the coalition, and it is presumable that, whatever changes may take place in the *personnel* of the Cabinet, the vacancies will be supplied by men connected with these parties. There will be a possibility of speaking more definitely in a week or thereabouts.

ANOTHER REPRESENTATIVE OF
BRITISH INDUSTRY.

Another large English Company which aspires to a share of patronage from Japan is Palmer's Shipbuilding and Iron Co., Limited, of Jarrow. This firm, we understand, has sent, or is sending, a special envoy to push its interests in Tokyo, and if the satisfaction it has always given to its own Government and to others that have placed orders in its hands, is to carry any weight, as we should imagine it must do, the firm ought to stand well in the competition. Among the ships built at this Yard during the last five years may be cited the first class battle-ships *Resolution* and *Revenge* of 14,150 tons displacement, carrying 18 inches of armour; the cruisers *Pique*, *Rainbow*, and *Retribution*, of 3,600 tons; and the torpedo boat destroyers *Janus*, *Lightning*, and *Porcupine*. The Spanish ships of 7,000 tons *Infante Maria Teresa*, *Admiral Oquendo*, and *Viscaya*, each carrying 12 inches of armour, may also be said to have been practically built by this Company, as the Dockyard at Bilbao where they were constructed was established and is worked by Sir Charles Palmer in partnership with the Spanish capitalist Señor Martinez de las Rivas.

FUNERAL OF H.I.H. PRINCE KITASHIRAKAWA.

Under gloomy skies the funeral of H.I.H. Prince Kitashirakawa took place on Monday in Tokyo. The order of the funeral cortège, of the march, and of the last obsequies at the temple, was carried out in rigid adherence to the plan already published in the *Official Gazette*. From first to last there was neither jar nor misstep: everything being done with the most punctual precision, and in an impressive silence singularly characteristic. It was like the pageant of a dream. The crowd, reverently mute as the sad though brilliant train passed; the absence of all music, except within the temple grounds; the deserted streets everywhere except in the immediate vicinity of the route chosen—all combined to give a most pathetically sad impression. There was evidently a decided sense of national bereavement. The onlooking crowd exhibited a most reverential mood, and hardly a whisper could be heard as the long cortège wound from the Marine buildings to the six miles distant temple at Toyoshimaoka.

Starting punctually at nine o'clock—the ceremonies having begun at the residence two hours previously—the train, headed by portions of the First and Third Regiments of the Imperial Guard, with arms reversed, and two companies of Lancers, on foot, wound through Uchi-Saiwai-cho, passing in front of the official residence of the Home Minister; then through the Hibiya Gate, turning to the left, following the direction of the moat. On passing Tatsu-no-Kuchi, a turn to the left again brought the procession past the Treasury Department. Thence on across the Kanda Bridge, to the left by the moat as far as Nishiki-cho. Turning to the right, Nishiki-cho was followed up to Ogawa-machi, which, opening into Sarugaku-cho at the corner where the Toyo-Kwan Bazaar stands, led across the Suido Bridge. Turning here to the left, and passing the Koishikawa Arsenal, the route went on to the Yedo River, whose left bank was followed up to Ishikiri Bridge. Thence left through Kobinata Suido-cho, and with another turn to the right into Otowa-machi. The next turning brought the train into the broad street debouching into the temple itself.

The crowd was enormous all along the route, the vicinity of the princely residence, Hibiya Gate, Nishiki-cho, Ogawa-cho, the Suido Bridge and both banks of the little Yedo-gawa being impassable from early morning. All Government schools, as well as nearly every private educational establishment, had closed for the day, and their pupils lined the route in various places, drawn up in military order. Hundreds of special constables succeeded in keeping perfect order, though with no little difficulty in Kanda District, where a number of minor casualties occurred. The upper storeys of buildings along the line of march were deserted, it being, of course, an act of sacrilege in Japan to look down upon a procession in which were so many persons of exalted rank. In several places, especially on the banks of the Yedo-gawa, private citizens had set out *sakaki* (*Cleyera japonica*) and other evergreen trees. Trade was everywhere at a standstill. All national and private banks were closed. The whole city was in mourning.

The procession was of great length, taking nearly one hour and a half to pass a given point. It was essentially simple, and not nearly so ornate as had been popularly expected. Of stands of *sakaki* trees and flowers there were but sixty all told, though of huge dimensions. It had, of course, been requested that such tributes should not be sent in; only the privileged few were allowed to do so. On the other hand, the number of those taking either direct or indirect part in the obsequies, was enormous. Within the temple grounds there were fully ten thousand people. The two wooden sheds erected for those in attendance on the services at the temple, gave shelter to more than six thousand persons. Including soldiers and others, the train was supposed to be composed of not less than twelve thousand, while fully one-seventh of the total population in Tokyo—say 200,000

people—lined the route of march. Yet despite this enormous concourse, there was everywhere apparent the greatest decorum. Truly, a Japanese crowd has not its counterpart anywhere.

The order of the funeral cortège was as follows:—

HERALD.	
Mounted Police.	Mounted Police.
Inspector.	Inspector.
Chief Inspector of Police (on horseback).	
Mounted Police.	Mounted Police.
Military Band.	
Detachments of the First and Third Regiments of the Imperial Guards.	
Four <i>Sakaki</i> -bearers.	Four <i>Sakaki</i> -bearers.
do.	do.
White Banner.	Red Banner.
(Ten banners in all, carried by white-robed bearers.)	
A Shinto Priest.	
Box containing Offerings, borne by four bearers clad in white.	
Shinto Priests, clothed in ceremonial <i>Shitatare</i> .	
Wooden bench.	Wooden bench.
<i>Uhi</i> (rain coat).	<i>Uhi</i> (rain-coat).
Wooden bench.	Wooden bench.
(The above borne by <i>hakuchō</i> , or bearers clad in white.)	
Shinto priest, mounted.	Shinto priest, mounted.
Assistant Head Priest, in carriage, attended by <i>hakuchō</i> on foot.	
Chief Priest, in carriage. Mounted Shinto Priests.	
Brocade Banner	
(Borne by six <i>hakuchō</i> .)	
Priestly Musicians, in Ceremonial Garb.	
Musicians.	Musicians.
do.	do.
do.	do.
Growing <i>Sakaki</i> -tree, borne by four <i>hakuchō</i> .	
<i>Sakaki</i> -trees presented by members of the Imperial Family.	
Forty stands of flowers, borne by three bearers each. Some of these were of exceptional size and beauty, surmounted by tufts of many-coloured maples or the bright red berries of the <i>Nandina</i> .	
Decorations and Medals of the deceased Prince, borne on cushions by officers of the Prince's Household.	
Armed officers walked on each side of those carrying the decorations.	
Various Military Officers.	
THE SARCOPHAGUS,	
of snow-white pine, borne by 16 wrestlers who had followed the forces to Formosa.	
Seventy <i>hakuchō</i> in attendance.	
Wounded Military Officers who had come back from Formosa with the deceased Prince.	
The Princely Body-guard, of 10 soldiers, in the frayed and travel-stained garments worn during the campaign in Formosa.	
Imperial Body Guards.	
Retainers of the late Prince's household, carrying rain coat and leading the late Prince's three favourite horses.	
The late Prince's foreign and Japanese Swords borne by retainers.	
The late Prince's Shoes, borne by retainers.	
Chief Mourners, H.I.H. Prince NARUHISA, in coarse mourning garb, straw-sandaled, on foot, followed by his two younger brothers,	
H.I.H. Prince TSUNEHISA	
and	
H.I.H. Prince TERUHISA.	
These little mourners were escorted on each side by attendant priests.	
The Chief Steward of the late late Prince, on foot.	
The Retainer of highest rank of the late Prince, on foot.	
The late Prince's family, in carriages.	
The late Prince's relatives, in carriages.	
Officers connected with the obsequies, in carriages.	
Retainers, on horseback.	
Ministers of State.	
Officers of <i>Shinnin</i> rank, Dukes and Marquises.	
Officials of the Second Grade.	
Holders of the Highest Order of Decorations (<i>hun itto</i>).	
Nobles by creation.	
Holders of decorations higher than the third class.	
Peers.	
Members of the Upper and Lower Houses, mounted or in carriages.	
Armed Guard.	
Rear Guard.	

Chief Inspector, mounted.	
Mounted Police.	Mounted Police.
do.	do.

The temple grounds were reached at about 11.40 a.m. To the left of the main entrance places or rooms were apportioned to the students of the Nobles' School, the Foreign Consular Body, and other foreign participants, while the Corps Diplomatique (which was fully represented) had rooms apart to the right of the grand flight of stairs. After a brief pause for refreshments, a movement was made towards the two great sheds on both sides of the sarcophagus. The arrangement here was as follows:—

SARCOPHAGUS.	
Representatives of Their Majesties the Emperor and Empress.	Officiating Priests.
The late Prince's family and relatives.	Priest Musicians.
Members of the Upper and Lower House.	Ministers of State.
Priests of high rank (Shinto and Buddhist).	Priest of highest rank.
	Corps Diplomatique.
	Consular body and foreign dignitaries.
	Military Officers.
	Naval Officers.

The services were in accordance with the ceremonial of the Shingon sect: simple, yet highly impressive. The wail of the *shō* reed-organs and funeral flutes seemed to accentuate the profound stillness. When a short eulogy had been made on the deceased Prince by a priest, who offered prayers, and after various offerings of rice, water, *saké*, and fruits had been made before the sarcophagus, the family and relatives of the departed—preceded of course by the representatives of their Imperial Majesties—made obeisance before the coffin. They were followed by the members of the Imperial family, the Ministers of State, and a few officers of the highest rank. A triple salvo of guns announced that all was over. The ceremonies at the temple lasted nearly two hours. By half-past two the crowd were wending their way homewards.

THE PRISONERS IN THE KOREAN CASE.

Two additions were made to the prisoners in the Korean case on the 7th instant. They are Oura Shigehiko and Hashimoto Yasumaro, interpreters in the employ of the Korean Government. The Preliminary examinations are said to be making rapid progress, so that, in spite of the great number of the accused, the task is expected to be finished before the end of the present month. The prisoners are stated to be all in good health. Viscount Miura spends the time reading novels and religious meditation. He refuses to touch the food supplied him by his relations, saying that the prison rations are good enough. Messrs. Okamoto, Shiba, and Kunitomo spend their time studying the Chinese classics.

As to the military prisoners, they are daily undergoing examination at the head-quarters of the gendarmes. It is believed that they will be acquitted of the charge on which they arrested.

THE PACIFICATION OF FORMOSA.

His Majesty the Emperor has addressed an Imperial Message to the Governor-General of Formosa, in connection with the complete suppression of the insurrection. The Message runs thus:—

We express approval of the manner in which the troops under your control advanced southward, and overcoming many difficulties, swept away the insurgents from Tainan and acquired speedy possession of that place. It is Our desire that you now put the affairs of the island in order, so as to establish peace and good order everywhere.

The Empress also caused her Master of Services to convey the following intimation:—

It having been reported to Her Imperial Majesty the Empress that the troops under the command of the Vice-Governor-General of Formosa have advanced southward and driven the insurgents from Tainan, Her Majesty desires that the expression of her satisfaction be conveyed.

To these Messages H.E. Count Kabayama made the usual formal and brief replies, through H.I.H. Prince Komatsu, Chief of the Staff.

KOREAN NEWS.

Count Inouye arrived at Ninsen on the 20th ultimo, and was received by Mr. Hiki, Secretary of Legation, Consul Hashiguchi, Consular Attaché Iijima, and a large number of other Japanese officials and residents. Stopping that night at Ninsen, the Japanese Ambassador and suite went up the Han river by the steam launch *Dai-ichô Aurai* on the 31st, reaching Yong-san at seven in the evening. At Yong-san the Count was met by several hundreds of Japanese and Koreans, including the Korean King's representative, Yu Kitsu-ei, and several other distinguished courtiers. From thence the party proceeded to Sôul in palanquins, escorted by a body of Korean constables. The Ambassador is staying at the Japanese Legation, and his suite are lodged in a hotel in the settlement. The Korean Government had proposed to prepare suitable quarters, but the offer was declined by the Japanese Minister.

The news that Count Inouye had been ordered to proceed to Sôul is said to have produced a strong impression in the Korean capital. The man most keenly affected was the Tai Wôn-kun, who at once began to show great uneasiness, knowing well with what sort of person he would now have to deal. As to the Cabinet Ministers, they, too, appear to have awaited the arrival of the Ambassador with considerable anxiety. On the other hand, the Count's mission produced a universal feeling of security among the Japanese residents.

Concerning the present condition of the Min faction, the *Kokumin Shimbun's* correspondent states that they are believed by well informed persons to be considering ways and means of taking vengeance on their enemies. They have all left the capital and are in hiding at various places not very far away, so as to be ready to take advantage of every turn of events. Their leader, Min Yong-chun, at one time supposed to have escaped to Wôn-san and from thence to Vladivostock, is said to be staying in the neighbourhood of Sôul. Recently two suspicious looking persons were arrested in the act of attempting to remove part of the late Queen's private property from one of the palaces. Admissions made by them under examination suggested a strong probability that they had been acting under the direction of Min politicians. They stoutly refused, however, to reveal the names of their employers. One of them was then released, and his movements being watched by the police, it was discovered that he held communication with several of the Mins. Though direct evidence is not yet forthcoming, it is believed to be almost certain that Min Yong-chun was the principal instigator. The conjecture is that the Mins are secretly collecting a fund with the object of a counter revolution.

The *Fiji Shimpô's* correspondent tells a curious story about Hong Jong-u, Kim Ok-kyun's murderer, and his confederate Ken Toju. That these men had fled across the frontier into Russian territory has been stated in these columns more than once. It is now mentioned that as soon as they entered Russian territory, they assumed the character of Special Ambassadors to St. Petersburg to ask for Russia's protection. It seems likely that they had with them some documentary evidence to establish their assumed status. They were received with due honour by the Governor of Usuri, stopping at his official residence as his guests. The facts became known in Sôul some time in the summer of the present year, where the news created considerable surprise among politicians. Some accused the Queen of being the sender of the mission, while Her Majesty is said to have tried to lay the blame on Pak Yong-ho. It is very singular that no body seem to have doubted that the so-called Ambassadors were not acting on their own account. They appear to have had in their possession some incontestable instrument establishing their official capacity. It must have been obtained through some irregular channel. The upshot of the mutual recrimination between the Court and the Cabinet, was that two officials were sent to Usuri to inform the

Russian Governor of the illegality of the powers carried by the so-called Ambassadors. Telegraphic communications that then took place between the Russian Governor and the Russian Legation in Sôul, elicited the reply that the "Ambassadors" were not properly appointed officials. But, in spite of this reply, the Russian Governor refused to believe that he had been entertaining impostors, and was in great wrath with the Korean officials that first brought the unwelcome news, even threatening to detain them prisoners. Escaping at midnight, they reached Vladivostock, and, through the assistance of the Japanese Consul there, made their way to Wôn-san, and thence to Sôul. Such is the story which they have told on their return. The so-called Ambassadors are still stopping at Usuri.

FORMOSA NEWS.

According to the *Fiji Shimpô's* correspondent, writing under date of the 26th ultimo, the inhabitants of Tainan-fu, taught by their experience with the Black Flags, were apprehensive that their property would suffer at the hands of the Imperial troops, and consequently, most of them shut themselves up in their houses, refusing to supply merchandise to the Japanese even when assured of liberal pay. Some of the military coolies are stated to have behaved in a disorderly manner, but the prompt and impartial restraint to which they were subjected by the gendarmes produced an excellent impression upon the citizens. In reply to the question why they did not open their shops, the merchants are said to have invariably stated that they were awaiting the arrival of the Governor-General, when, they conceived, there would be no fear of violence on the part of the soldiers and coolies. It is also mentioned that many disguised Chinese soldiers are in hiding in the city. They are believed to be assiduously engaged in disseminating disquieting rumours, which in part accounts for the suspicious attitude of the people.

The same correspondent recounts an adventure that he had on the night of the 21st ultimo. The city of Tainan was then occupied by a part of the 16th Regiment. After a fruitless search for the headquarters of the detachment, he was walking through a quiet and abandoned part of the city, when, through an opening in a bamboo grove, he observed a light issuing from a window. Being hungry and tired of walking, he approached the house and knocked, whereupon the door was instantly opened and two or three big fellows appeared. They good naturedly invited him to enter and sit at a table on which were confusedly placed several bowls and cups. The party had just finished their evening meal. A bowl and a small quantity of liquor still remained, and these were placed before him. Having satisfied his hunger, he had leisure to look around him more minutely. His entertainers were all stout-looking, soldierly men, and the furniture in the house was so ill assorted, and things in general were in such a condition, that it looked more like a place taken possession of by soldiers or robbers than a peaceful habitation. His apprehension was confirmed when he began to conduct a written conversation with his hosts. They showed a particular desire to gather information about the movements of the Japanese troops and the strength of the Army that was about to enter the city. The Japanese correspondent, wishing to produce an impression, wrote that 80,000 troops were to come the following morning. This news visibly disconcerted the Chinese. He was earnestly invited to pass the night at the house, but being in no easy frame of mind, he hastily beat a retreat, without meeting with any accident. He has no doubt that these were followers of Liu, and that a large number of men of the same description are in hiding in the city.

Concerning the prevalence of sickness among the Imperial Guards, the *Nichi Nichi's* correspondent states that, during the march from Chia-i to Tainan, few of the officers were in ordinary health. Major-Generals Kawamura

and Sakai were suffering from malarial fever; Colonel Isaki was attacked by dysentery; and another Colonel was sick with fever. In a certain Company, there were only fourteen healthy soldiers. But most of the sick officers proceeded in palanquins by the side of their troops. The only perfectly healthy officer was Colonel Sameshima, Chief of the Staff.

THE LATE PRINCE KITASHIRAKAWA.

It is amusing to read the excited criticism penned by a foreign journal in Kobe with reference to the actual date of the late Prince Kitashirakawa's death and the date as officially announced. The *Kobe Herald* charges the Japanese Authorities with "stooping to an act of wilful and deliberate deceit," and declares that "the etiquette of the Japanese Court compels the Imperial Family to concoct and father an unblushing misstatement." Truly it is difficult to sympathise with such language when there is question simply of a point of etiquette. It has been the custom in Japan from time immemorial not to make any official announcement of the death of an Imperial Prince until the body has been carried to the palace of the deceased. We do not fully understand the reason of the habit, neither can we profess to feel any respect for it. It is merely a traditional usage, and of course if its observance signifies a tribute to the dead, we can easily conceive the Court's unwillingness to depart from it. But can it properly be called an act of "wilful and deliberate deceit?" No one is deceived, nor is there, so far as we know, any desire to deceive anyone. Nothing is involved beyond due observance of the ceremonial procedure laid down in such cases. The code of Court etiquette requires that certain things shall be done at certain periods, and to comply strictly with these rules, the death cannot be officially announced until the corpse is within immediate reach. That, we believe, is the whole explanation. It is quite insufficient, from a Western point of view, and we think that the custom might be changed with advantage. But to denounce it as "an act of wilful and deliberate deceit" is extravagant.

THE RUSSO-CHINESE SECRET TREATY.

It appears that an anonymous correspondent of the *Hongkong Telegraph*, writing from Nagasaki, is the originator of the story that a secret treaty has been concluded between Russia and China by which the former secures the privileges, first, of running the Siberian railway across a part of Manchuria; secondly, of constructing a railway from Tsitsikar *via* Moukden to Port Arthur, these railways to remain under Russian management and administration for 20 years; and thirdly, of anchoring a fleet in Port Arthur at all times. This treaty is said to have been concluded in the autumn of 1894, and to have been carried to St. Petersburg by Wong Chi-chuan, who went to Russia ostensibly to offer China's congratulations to the new Czar. Despite the inherent improbability of this story; despite its explicit denial by the Russian Embassy in London, and despite the British Government's avowed conviction of its untruth, the sensational journals of the East still insist upon crediting it. They are able, apparently, to persuade themselves that six months before Germany, France, and Russia combined to prevent the occupation of the Liaotung Peninsula by Japan, on the ground that if she held that part of Manchuria as well as the northern littoral of the Yellow Sea, the independence of Korea would be illusory—six months before the three Powers took that step, Russia had virtually secured the Peninsula for herself. The faith of these sensational editors is magnificent. It finds a parallel only in the audacity of the anonymous Nagasaki correspondent.

THE RAILWAY REUNION.

The fifth Railway Reunion was held at the Maple Club, Shiba, Tokyo, on the 8th instant. There were present over a hundred persons, representing the different railway companies throughout the country. Among them, we may mention Messrs. Ono Gishin, Watanabe Hiromoto, Shoda Heigoro, Nakamigawa Hikojiro, Takahashi Shinkichi, Nishimura Sutezo, Hara Rokuro, Yonekura Ippei, Matsumoto Jotaro, Kato Tokuzo, and so forth. Proceedings commenced at 10 a.m., with Mr. Ono in the Chair. The first topic brought forward for discussion related to the regulations of the Reunion, and some proposed changes were unanimously approved. Then followed a measure of importance. It was introduced by Mr. Watanabe Hiromoto, President of the Ryomo Tetsudo Kaisha, and related to the establishment of a Railway Association for the purpose of conducting researches in subjects connected with railways. The scope of the Association was further to include the maintenance of a school of railway management, and the publication of a railway magazine. Considerable funds are necessary for the prosecution of such extensive tasks, but a sufficient sum of money will be forthcoming if the Association be joined by a majority of the companies. The proposition was entrusted to a Committee. This completed the proceedings in the forenoon. After luncheon, the session was resumed at half-past one. The first measure debated related to the presentation of a memorial to the Government for the insertion of a new article into the Private Railway Regulations, in the sense that railway companies may combine the business of working copper, iron, coal, or sulphur mines, and may also run steamship lines connecting with their railways. It was decided to entrust to the Sanyo and Nippon companies the drawing up of the memorial and its presentation. Lastly, those present were invited to propound and debate any questions suggesting themselves. At six o'clock the evening, they sat down to dinner.

A STORY FROM CHINA.

Changwha is the capital city of Hunan, the great province that represents one-fifteenth of the area of China proper. Last May, a famous idol, called Wangyeh, was attacked one night in his temple in Changwha, was thrown from his pedestal, and had his eyes abstracted. People desired to charge the Christians with the crime, but there happened to be no Christians in Changwha. *Faute de mieux*, a number of Hupeh men, supposed to be favourable to Christianity, were seized. Wu Ta-cheng was then Governor of Changwha. He has long enjoyed the reputation of being one of the most enlightened and progressive among Chinese high officials. But it is hard to be enlightened or progressive in the capital of Hunan. Besides, Wu having failed as a General in the Manchurian campaign, had decided to throw in his lot with the Hunan faction. He dressed in a cotton robe and straw sandals, the mourning garb of China, proceeded to Wangyeh's temple and prostrated himself before the remains of the fallen idol. Then, there being no evidence against the Hupeh men, he had them brought before the idol and subjected to the ordeal of lot, when, as a matter of course, they twice drew a tally indicating their guilt. Condemnation would have followed, but the Provincial Judge interfered on the grounds that China had no law authorizing such evidence, and that the god having lost his eyes, could not be expected to clearly distinguish the innocent from the guilty. The Hupeh men were finally liberated, but not before they had been stripped of all their worldly possessions. As for the real culprit, one of the notorious Chou Han's men came forward and confessed that he was the eye-stealer, having been bribed thereto by foreigners. So the all-responsible Occidental was dragged into the trouble after all.

BISHOP CORFE.

Bishop Corfe continues to publish most pessimistic views about Japan's influence in Korea. He talks of the independence of the Kingdom as being a mere myth because Japanese soldiers are to be found not in Seoul alone but also in Ping-yang, and in other parts of the provinces. The Bishop evidently forgets—indeed we can scarcely expect one of his cloth to remember—that the main road from Seoul to Wiju *via* Ping-yang is now, and has been for 16 months, the only over-land line of communications with the Japanese forces in Manchuria. He also seems to forget that an offensive and defensive alliance exists between Japan and Korea, and that, under these circumstances, the presence of either Power's troops in the territory of the other, does not at all affect the latter's national independence.

The Bishop further accepts, without question, the most anti-Japanese view of Pak Yong-ho's conduct. "This month has seen," he writes, "another shameful piece of work in Seoul. The assassin Pak, who was brought back to Korea by the Japanese last year, and then forced by them upon the King as an enlightened reformer, had become Prime Minister. He was discovered in a plot against the King, who, acting for once on his own responsibility as an independent sovereign, issued a proclamation to arrest him. But the Japanese protected him, and, disguised as a Japanese soldier, this man actually marched down with an escort of Japanese soldiers to the river, where a Japanese launch was ready to take him to Chemulpo, where a steamer had just looked in to take him to Japan, where he now is, and where, I suppose, he will remain until the Japanese want to conjure with him again."

We must confess that such obvious bias as the good Bishop's writings display is unusual in the case of a church dignitary discussing lay matters. In the first place, it has never been proved that Pak conspired against the King: the best established theory is that he became entangled in the meshes of Min intriguers. Besides, the Bishop forgets that information of Pak's so-called plot was given by a Japanese. He also forgets, or perhaps has not heard, that the informer is totally discredited among his own countrymen. Finally, Bishop Corfe is wrong when he alleges that Pak is in Japan. The fugitive found no refuge here, but passed over at once to the United States.

By way of general conclusion, Bishop Corfe writes:—"We have now finished just one year of Japanese occupation, and there is no European who has resided here all this time but will tell you that if there was hope of lifting Koreans a year ago there is much less hope now. The stone which Japan has bound to Korea is steadily sinking her. The latest (and he ought to be the best) witness of this is Count Inouye, the Japanese Minister in Korea, himself, who has stated publicly in Japan that there will be no reformation for Korea until the Japanese in Korea have themselves been reformed." What is "the stone which Japan has bound to Korea?" The phrase is effective, but if Bishop Corfe were asked to explain it, he would be considerably perplexed we imagine. So far as we can make out, he refers to "the cruelty, the greed, the deception, and the selfishness of the Japanese now in Korea." Count Inouye denounced these failings, but was never so silly as to draw the deduction imputed to him by Bishop Corfe, namely, that "there will be no reformation for Korea until the Japanese in Korea have themselves been reformed." If Bishop Corfe holds such singular views, he ought to advocate the withdrawal of all Christian propagandists from the East, on the ground that there can be no Christianization for the Orient until Occidental residence in the East has ceased to be disfigured by eminently un-Christian features. But Bishop Corfe is not practical or logical. He is essentially a pulpit politician. "I must be permitted to doubt," he writes by way of conclusion, "whether the Executive of a country which has so little power over its nationals is fit to undertake the far greater

task of reforming a whole nation. It is a curious and sad confession of an incapacity which everyone, save the Japanese themselves, has foreseen from the first." Does the worthy Bishop imagine that it falls within the capacity of any Executive to correct such failings as "cruelty, greed, deception, and selfishness" on the part of its nationals? And does he not perceive that, if Japanese statesmen are incapable of introducing reforms in Korea, because of their incapacity to reform their own nationals, then the much talked of reforms successfully inaugurated in Japan itself within the past thirty years must be all mythical? We strongly advise the Bishop to restrain his pen and exercise his faculty of reflection a little more vigorously. His present displays of intemperance and prejudice will only bring contempt and dislike on the cause for which he came to the East. We might reasonably adopt his own phraseology and ask, "how can the Christian doctrines of justice, charity, and generosity be propagated in Korea so long as their chief propagandist makes such exhibitions of injustice, uncharitableness, and illiberality?"

THE CANTON AFFAIR.

If the accounts thus far published be correct, the plot recently formed to seize Canton partook of the character of a genuine reform movement. The ringleader, Huang, had been for many years abroad, spending his time in the United States, in England, and in Germany. Possessed of wealth, social status, and a wide circle of friends in his native province of Kuangtung, he was easily able to foment discontent against the corrupt, unprogressive, and incapable Government of his country, and his propaganda found favour with emigrants returning from abroad, so that soon a very large number—thirty thousand men, it is said—were pledged to support his scheme of overthrowing the dynasty. The capture of Canton would have placed the insurgents in an excellent position to procure arms and ammunition as well as supplies of money, and moreover numerous accessions to the ranks of the rebels were expected from among the literati of the city. The programme was to start the insurrection at three points simultaneously in the north of the province, and when the troops had thus been drawn off from Canton, to seize the city. As usual the certainty of reward as an informer compared with the chance of it as a successful rebel, induced one of the associates to betray the plot. But it is alleged that only a very small fraction of the rebels have been arrested, and at any rate the affair indicates that possibly there may arise from among the Chinese themselves a leader who, in his position as a usurping Sovereign, would be compelled to centralize the administration, and thus eliminate the provincial interests at present fatal to progress.

TRADAL MISSIONS TO THE EAST.

The Blackburn Chamber of Commerce is about to despatch a commercial mission to China for the purpose of opening up new markets and developing the present trade in English-made goods. As a general rule it is difficult to perceive what practical results such missions can hope to accomplish. In special cases, where it is known that orders of exceptional magnitude for a particular class of goods are about to be given by a country, it is obviously useful that experts in that class of commodities should proceed to the country, furnished with drawings and specifications of a more explicit character than the merchants on the spot can be expected to possess. But for the rest, the resident British merchants are thoroughly competent to develop new markets, if that be possible, or to exploit those already opened. In point of enterprise, shrewdness, and familiarity with existing conditions, the resident merchant has nothing to learn from, though he may have a great deal to teach to, gentlemen sent out fresh from Europe with vague ideas, large expectations, and indefinite conceptions.

THE STATE OF THE EAST.

If it were possible to plunge the East and West into war by sensational writing, the feat would have been accomplished long before this by the local English Journals of Yokohama. As a soothsayer, the courage of one of these journals is simply astounding. It keeps on predicting and predicting and predicting, with just as much solemnity and assurance as though its prophecies had not invariably been falsified by events. It reminds us vividly of that splendid American eagle that soared and soared and soared until it soared its sanguinary tail off. Youth, they say, is the only fault that time can be implicitly trusted to correct, but time does not seem to be conferring even that boon on our verdant contemporary.

THE LIAOTUNG QUESTION AND THE JAPANESE PRESS.

The news of the settlement of the Liaotung question has thus far received a rather scanty measure of journalistic attention in Tokyo. In truth, the question having been discussed for the past five or six months, little remains to be said about it. We may, however, refer to the few comments made by the vernacular press. The *Nichi Nichi Shimbun* is glad to learn that the problem has at last been disposed of, and appreciates the labours of the Plenipotentiaries of Japan and China. The question, however, had been previously arranged between Japan and the three European Powers concerned, so that the so-called negotiations between Baron Hayashi and Earl Li were merely a matter of form; and although the treaty has still to be ratified by the Sovereigns of the two countries, it may be regarded as already final. The *Nichi Nichi* observes that, in this matter, the policy of the Japanese Government has undergone a change. Originally it was the aim of the Tokyo Cabinet to admit no interference by the allied Powers in the settlement of matters relating to the return of Liaotung, but in practice these Powers have been suffered once more to come between the parties directly concerned. Probably such a change of policy was necessitated by good reasons. But our contemporary thinks it proper to defer the discussion of this topic, as well as of other subjects connected with the transaction, until the treaty shall have been promulgated.

The *Fiji Shimpō*, although not professing to possess any special knowledge, is disposed to conclude that, in handing over the Liaotung peninsula to China, Japan has exacted from the latter a solemn promise never to cede the territory to any foreign Power. In demanding its cession, Japan's idea was to claim it not merely as a fair prize of her victories, but also as a security for the independence of Korea. Rightly or wrongly, however, the Powers judged its permanent occupation by Japan to be dangerous to the peace of the East, and this empire having deferred to their wishes so far as to give up her legitimate conquest, is entitled to insist that the rendited territory shall not fall into the hands of any other Power. The report lately circulated about a secret treaty between Russia and China has turned out to be untrue, but the *Fiji* fears that some such surprise may at any moment be sprung upon Japan. Supposing that a promise has been exacted by Japan that China will never cede the peninsula to any Power, the task of making good this pledge will eventually fall upon Japan, for the Middle Kingdom is scarcely capable of implementing such an engagement. Consequently matters stand pretty much in the same position as though no such promise has been obtained, for in either case it will be upon her own will and power, and not upon any paper arrangement, that Japan will have to rely for keeping the Manchurian coasts free from foreign encroachment. The *Fiji* earnestly hopes that this fact will be always kept in mind by its countrymen.

The *Yomiuri Shimbun* does not think it necessary to offer any comment on the manner in which the Liaotung question has been settled:

nothing befits the occasion but a sigh. But however regrettable the termination of the affair may be, evacuation of the peninsula having now been finally decided, our contemporary urges the Government to withdraw the troops with the utmost celerity, partly because delay would cause considerably trouble and expense on account of the approach of winter, and partly because it is desirable to let the world know that, when the Japanese once resolve to forego any advantage or right, they can do so graciously and promptly.

LAWN TENNIS HANDICAP IN TOKYO.

A lawn tennis handicap (doubles) was played at the British Legation in Tokyo on the 8th and 9th instant, for prizes given by Mr. and Miss Lowther. The play was on the American system, each couple playing all the others, the games were 25 up, and the handicap points were as follow:—

CLASS I.	
Miss F. V. Dening.....	} Scratch.
Mr. F. H. Trevithick	
Miss Divers.....	
Mr. M. Kirkwood	
CLASS II.	
Mr. Pownall	} Receive 5
Mr. Wileman.....	
Miss Lowther.....	
Captain Brinkley	
Mrs. MacMillan	
Mr. Paget	
Mrs. Kirkwood	
Mr. T. H. James	} Receive 7
CLASS III.	
Miss Munter	} Receive 10
Mr. Lowther	
CLASS IV.	
Miss Palmer	} Receive 17
Mr. Tuke	
CLASS V.	
Miss Tuck	} Receive 17
Mr. Parlett.....	
Madame La Baronne	
d'Anethan	
Mr. Vieugué	

The playing commenced at 10 a.m. on Friday, and at 11.30 on Saturday, and the players were entertained at luncheon in two parties, by H.E. Sir Ernest Satow and Mr. and Miss Lowther. The weather was perfect, bright and still, and both of the courts being in excellent order, the affair proved most enjoyable. Unfortunately Mr. Kirkwood fell and injured his knee so severely that he was obliged to give up playing after having competed in five sets only. The following are the final scores and places, the points received by the players being, of course, included in their totals:—

	Points obtained.	Games Won.	Places
Miss Palmer	214	5	1
Mr. Tuke.....	211	7	2
Miss Munter	211	5	
Mr. Lowther	211	5	
Miss Tuck	208	6	3
Mr. Parlett	204	5	4
Madame La Baronne d'Anethan	203	6	5
Mr. Pownall	185	3	6
Mrs. Wileman	177	3	7
Miss Dening	176	3	8
Mr. Trevithick	103	2	Played only 5 games.
Mrs. MacMillan.....			
Mr. Paget			
Miss Divers.....			
Mr. Kirkwood.....			

The tie for second place having been played off, resulted in a victory for Miss Munter and Mr. Lowther, who thus won 8 sets out of a total of 10. Mr. Lowther presented the first prize for the ladies to Miss Palmer—a silver box, richly inlaid with gold and having on the lid a finely chiselled design of swallows and willow sprays in high relief—and the second prize to Miss Munter—a pretty little *doubonnière* of cloisonné enamel. The first prize for the gentlemen—a gold scarf pin in the form of a tennis racket and ball, the latter a handsome pearl—was presented by Miss Lowther to Mr. Tuke.

THE IRON FOUNDRY CASE.

As had been apprehended, Mr. Amenomiya Keijiro, former President of the Tokyo Iron Foundry Company, was arrested on the 8th instant at the Maple Club, Shiba, where he was attending a conference of the delegates of the Railway Companies. Simultaneously with his apprehension, his city residence and suburban villa were subjected to a search, and many valuable documents were seized. It is stated that the confession made by Hamano led to the arrest of his predecessor. As the case progresses, the fraudulent practices resorted to by the prisoners appear in an even worse light. Besides substituting bad pipes for good, the company, according to the latest discovery, tampered with the gauge used in testing the hydraulic pressure that the pipes were capable of resisting. The official examination of the gauge conducted at the Local Court on the 6th instant revealed the astounding fact that the machine indicated 160 pounds of pressure whereas the real force measured was only 100 lbs. This discovery makes it necessary to dig up all the pipes supplied by the Company, the great majority of them being believed to be unfit for use. Thus the loss caused to the city is now estimated at about 200,000 yen.

The arrest of Mr. Amenomiya has created a stir on the Stock Exchange. His speculative operations are well-known to have been the principal cause of the extraordinary high price attained by the Tanko Tetsudo shares. These shares have already commenced to fall, the depreciation being as much as two yen per share on the morning of last Saturday.

The amount of loss inflicted on the City of Tokyo by the fraud of the Iron Foundry Company is now believed to be far greater than was supposed. Estimates naturally differ. Some put the amount at about 200,000 yen, while many calculate that it will exceed 900,000 yen. The latter estimate may be a little exaggerated, but it is now taken for granted that the City has been cheated out of a considerable sum of money. The number of arrests made has reached twenty. Of the officials of the company, only two remain at large, but they, too, it is believed, are under police surveillance, and may be apprehended at any moment. Mr. Amenomiya's property has been attached. Its value falls far short of the popular estimate, and it is believed that a considerable portion of it must have been previously transferred to the names of other persons. Mr. Yamagata Isaburo, Secretary of the Tokyo City Government and *ex officio* an Alderman of the City, has tendered his resignation in connection with the case. The other Aldermen have also resigned.

The excitement among the citizens of Tokyo is increasing. Indignation meetings are held by the better sort of people, strongly censuring the negligence of the Aldermen and the members of the Municipal Council. The inhabitants of Nihon-bashi and Kanda Wards have decided to present a memorial to their municipal representatives calling upon them to resign—should the latter hesitate, the citizens threaten to resort to a more decisive method of compulsion.

BARON ITO.

Baron Ito Miyoji is just now the subject of malicious slanders by some papers in the capital. It is pretended that he has tendered his resignation in consequence of the discovery of some letters of his at the house of Hamano Shigeru, the principal prisoner in the Iron Foundry case—letters which, though not implicating the writer, yet lay him open to a charge of serious breach of official discipline, since they contain allusions to various important State secrets. Such is the story published by the *Nippon* and other journals. The whole tale is a falsehood invented by some enemies of the Baron, whose exceptionally brilliant official career has created numerous enemies in and out of the Government. As already stated in these columns, Baron Ito has not tendered his resignation, there being no cause for such a step.

AUSTRALIA AND JAPAN.

If there be any possibility of opening a trade with Japan the Australians certainly deserve to succeed, considering the enterprise they have displayed. We do not think, however, that the prospects are very bright at present. Not the slightest doubt can be entertained that the Japanese will by and by manufacture their own woollen and cotton-and-woollen fabrics, just as they are now manufacturing their cotton. How long the time is distant, we have no means of judging, but when it comes there will unquestionably be a large demand for Australian wool in this country. A trade in leather also may be developed, but we do not see much chance for frozen beef, on which the Australians build some hopes, unless a contract can be arranged with the War Department by way of preliminary. Beef eating does not appear to find such rapidly increasing favour among the Japanese as might have been expected from the taste developed at the outset. After all, beef is not so very attractive as a viand unless it be well cooked, and the cooks that profess mastery of *seiyō ryōji* in Japan are thoroughly competent to spoil the best beef. Perhaps much of the fault is to be laid at the door of the beef-eaters themselves. We have heard of an excellent cook who confessed that a few months at a restaurant in Tokyo had almost deprived him of his skill, for to serve tender meat to his customers involved its certain rejection as over-kept. The average Japanese wants something to set his teeth into. The era of tastefully furnished restaurants and good cooks is still a long way off in Japan, we imagine, and until it comes beef will never be a staple article of food. As for mutton, the Japanese will not look at it, and even if they wanted it, Australia could scarcely supply it in competition with China. Putting the Japanese nation aside, however, it seems strange that the foreign communities in the East do not draw more largely upon Australia for their supplies. Bacon and hams, for example, of the finest quality could be supplied from Adelaide or Melbourne at prices 40 per cent. lower than those paid here for the same articles from England, and in the matter of tinned soups, fruits, vegetables, and so forth, almost equally marked economy could be effected by dealing with Australia. Against Australian wines there still exists a strong prejudice, though truly its justification is hard to find except in the case of some special vineyards. The Australian vitners have spared no expense to produce good wine. They have employed the best French experts, and are now in a position to export wines of excellent and uniform quality at prices very much lower than those at which European wines can be laid down in Japan. Store-keepers adhere to the old grooves, but it really does seem that a paying business might be done by introducing Australian stores and wines on a large scale for the use of the foreign residents in China and Japan.

THE WATERWORKS AFFAIR AND COUNT MATSUKATA & BARON ITO.

Under this heading, the Tokyo News Agency reports as follows:—"Since the arrest of Messrs. Hamano Shigeru and Amenomiya Keijiro, various rumours are circulated about many of their acquaintances. Among the latter, the most censured are Count Matsukata and Baron Ito. These personages are but slightly acquainted with Hamano, and yet men pretend that they have had some secret and irregular transactions with Hamano. Messrs. Hamano and Amenomiya are well known men in society. The latter especially is received by the most distinguished personages, as he has a seat in the House of Representatives. A few years ago, his wild-duck preserve was much frequented by distinguished persons. Baron Ito was one of these, visiting it on two or three occasions. Subsequently, however, Hamano's society began to be shunned by his acquaintances of the better class, as it was rumoured that he might make use of their names

for dishonest purposes. Of late, these persons, among them being the Baron, entirely ceased to associate with Hamano. Under these circumstances, all the above stories are entirely without foundation. According to information, so far from the Count and the Baron being in any way associated with Hamano, neither of them ever wrote a single note to him during the time of their acquaintance."

SICKNESS OF JAPANESE TROOPS IN FORMOSA.

According to a recent number of the *Sensō Jikki* (War Recorder), the experience of Japanese troops in Formosa has been little less painful than that of the French Army in Madagascar. No place has a worse name than Chang-hwa for insalubrity of climate. The land there is low and marshy and the air was so full of malaria during the 20 days that the Japanese troops were stationed in the neighbourhood that it is stated there was not a single man exempt from sickness. A hospital prepared for the treatment of some 200 wounded soldiers was required to find accommodation for as many as 550 new patients per diem. There were companies that had only 14 men fit for active service, and there was a battalion which when ordered to take the field, could not muster more than 200 men. It is said that quinine had little effect on patients suffering from malarial fever in Chang-hwa. Statistics giving the number of patients under treatment in hospitals on September 30th at Kielung, Taipeh, Sinchuh, and Wulung are as follow:—

Cholera	124
Dysentery	373
Forms of Diarrhoea	881
Beri-beri	1,670
Malarial Fever	304
Other complaints	923

Total 4,275

The above figures by no means represent the whole amount of sickness. It is stated that in addition to the above every military doctor has under his care a number of patients for whom no accommodation can be found in the hospitals; so that the actual number of sufferers exceeds 5,000.

HUNAN.

The province of Hunan is as large as Great Britain; has twenty millions of inhabitants; abounds in resources agricultural and mineral; and is traversed by four large rivers rendering every part of it easily accessible. Yet it remains to this day the anti-foreign reservation of China. In the terms of peace originally proposed by Japan at Shimonoseki, the opening of Siangtow was included—Siangtow described by Williams as "one of the greatest marts of China." It has a population of a million, is a centre of trade and banking, and extends for three miles along the bank of the river and nearly two miles inland, with thousands of boats lining the shores. The Viceroy Li opposed numerous objections to the opening of this place. Nor can we wonder that he did, for the Viceroy of Nanking, the great Chang Chi-tung, within whose jurisdiction Hunan lies, never ventured to send foreign experts thither for the purpose of surveying its minerals—coal, zinc, tin, copper, iron, cinnabar, and gold—and found it impossible even to erect a line of telegraph there. It is a pity that the Japanese agreed to abandon their demand. Hunan remains hermetically sealed, and considering the earnestness of the Occident's search for new markets, it is wonderful that twenty million Hunanese with seven large cities, immense exportable resources and corresponding purchasing power, should be left in their seclusion to compile anti-foreign literature and defy the progress of civilization. The *N.-C. Daily News* has a forcible and interesting article on the subject.

THE MINISTRY AND THE RADICALS.

Public announcement of a coalition between the Ministry and the Radical Party will be made on the latter's part by its periodical organ, the *Fiyu-to-ho*, the next number of which is expected to appear soon. Mr. Kurihara Ryoichi is stated to be engaged on an article proclaiming this important news. Meanwhile, the *Mesa-mashi Shimbun*, which is understood to be connected with a section of the Radical Party, preserves complete silence on the subject, a circumstance that attracts considerable attention. Perhaps its reticence is to be attributed to the prudential consideration that it would be unwise to attempt any incomplete revelation prior to the official proclamation of the fact by the Party's recognised organ. Apprehensive of some misunderstanding on the part of the provincial Radicals, a deputation under the leadership of Mr. Matsuda Masahisa will, it is said, be sent from the head-quarters of the Party to make a tour throughout the country.

There seems to be little doubt that the National Unionists will definitely range themselves on the same side with the Radicals, but their organ, the *Chuo Shimbun*, says nothing of any such intention. It may be inferred that the National Unionists are still considering the problem, not as to whether they should support the Government, but as to the definite relationship that they ought to maintain with the Radicals.

Writing on this subject editorially, the *Nichi Nichi* remarks as follows:—"Without stopping to inquire into the considerations that have induced the Radicals to tread the same path with the statesmen in power, it would seem but just to recognize that the conduct of these politicians are based on honourable motives. They appear to have been guided by the conviction that the great responsibility with which the nation is charged in consequence of the late war requires hearty union between the Government and the people. As to the origin and progress of the coalition, there is a history to be related. When an agitation was raised about foreign affairs toward the close of the year 1893—an agitation calculated to be productive of prejudicial results to the foreign intercourse of the country—the Radicals had the courage to stand aloof from the prevailing tide of popular excitement. The Diet had subsequently to be dissolved twice, and shortly afterwards the war with China broke out. During that eventful period, it was observed that the Radicals always held themselves independent of petty party struggles, and that they furthered the aims of the national policy, whenever an important question of foreign affairs came up for discussion. They pursued the same sensible course not only during the war but also with regard to the Liaotung question. During all this while, the Radicals were in no way connected with the Ministers. On the contrary, they were almost diametrically opposed to the latter on questions relating to civil liberty. Now that the Empire is charged with the solution of various problems that have to be solved under the jealous and suspicious eyes of Foreign Powers, the Japanese can not afford to engage in petty party contentions, and in recognition of this circumstance, the Radicals have taken the decisive step of coöperating with the statesmen in power, who, on their part, are ready to welcome with sympathetic appreciation the sincere solicitude of these party politicians for the welfare of the country. Is not such a change in the political situation a matter for sincere and profound rejoicing and congratulation? Political parties are the unavoidable accompaniments of a parliamentary system of government. The Ministers of State, though advisers to the Crown, are yet bound to consult the views of the Diet in the conduct of state affairs, and it is consequently impossible for them entirely to ignore the various parties in the Legislature. There are two ways in which they can manage the Diet, either by coöperating with one or two particular parties in it, or by keeping themselves independent of any party and skillfully playing the various factions against one another. The former plan was adopted by the Yamagata and Matsukata Cabinets, the

parties coöperating with them being the *Taisei Kai* (since dissolved) and the National Unionists respectively. The existing Cabinet has hitherto endeavoured to follow the second policy of matching the various parties against one another, without a definite understanding with any of them. By pursuing this policy, the present Cabinet was barely able to pull through the first session of the Diet, and in the following session things came to a crisis necessitating two dissolutions in rapid succession. The breaking out of the war with China brought about a temporary truce in the warfare of political parties. With the cessation of the war, however, the party politicians so far forgot the gravity of the situation as to renew hostilities, and, adopting the Liaotung question as a weapon, they began to agitate for the retirement of the Ministers of State. In their eagerness to accomplish that object, they showed themselves ready even to sacrifice the execution of some measures of the first national importance. Under these circumstances, those in power naturally turned their eyes in quest of politicians sincerely devoted to the interests of the country. No wonder that their choice fell upon the Radicals, who, in common with the National Unionists and other Moderates, have always evinced a determination to serve the State first and their party second. Formerly, it is true, Viscount Shinagawa and his followers might have been regarded as the political friends of the present Ministry. But only four days after its organization, the Cabinet renounced all connection with them, on the occasion of the farewell dinner given to Viscount Shinagawa, when he was about to leave the capital, in company with Count (now Marquis) Saigo, for a political campaign in the provinces. Since then, personal intercourse apart, there has existed no understanding between the Government and any of the political parties. The Ministers, however, now seem to have changed their policy, after mature consideration of the existing situation. The question to day is what will be the relationship between the Cabinet Ministers and their new political friends? It is not likely that Marquis Ito, Marquis Saigo, and others will join the Radical Party and assume its leadership. It is also scarcely necessary to state that the Ministers, as advisers of the Crown, are bound to abstain from negotiating with, or pledging themselves to, any political party in respect of the administrative policy to be followed in the future. Hence the connection between the Ministers and the Radicals may be best described by stating that they recognise their mutual similarity of views and sentiments. The relationship, in other words, is not close enough to warrant a statement that the Ministers, in their collective and formal capacity as a Cabinet, have obtained the adhesion of a political party. Nevertheless, since the two sides are agreed in solicitude for the good of the country, it may justly be expected that the Radicals will support the Government's policy as regard foreign affairs and the completion of the national defences; while, on the other hand, the Government will not hesitate, in so far as seems proper, to adopt the views of the Radicals on questions of domestic policy. Only within the limits, indeed, is it possible for the Imperial Ministry to coöperate with any political party, and within these limits coöperation may take place not only with the Radicals but with any other party. So, in one sense, the present departure in Japanese politics may be regarded as a first step toward general unity between the Government and the people. Nothing could be more inadvisable than that the present connection between the Government and the Radicals should rest solely on the basis of an assimilation of principles for the sake of official emoluments. Should that be the case, the coalition could not be said to have been formed by men devoted to the interests of the country. Such a state of affairs would be contrary to the professed principles of the Government as well as of the Radicals. We are confident that neither the Radicals nor the Ministers of the Crown are capable of conduct so base."

The rumour that Count Itagaki is about to be

appointed President of the Privy Council, is not worthy of credence. It is believed that for the present none of the Radical leaders will receive official appointment.

As to the condition of the coalition, it is reported that there is no definite understanding between the Cabinet and the Radicals. But many believe that the Radicals are confident of obtaining the Government's approval of their views concerning the amendment of the Newspaper Regulations, the Political Association Regulations, the Law of Election, and so forth.

DR. MARUMO AND MISS ABBOTT.

Dr. Marumo, of Tokyo, a well-known graduate of the Imperial College of Medicine, says that he has discovered the secret of Miss Abbott's so-called powers. Not that he claims any great credit for the discovery; indeed he is said to have requested the *Hochi Shimbun's* representative, from whose account we are about to quote, not to write in any bombastic style, for anybody acquainted with the elementary principles of experimental and transcendental physics would find little difficulty in satisfactorily explaining the feats performed by the Georgia Magnet, if he only applied his attention to the matter in a right manner. Before proceeding to explain the secret, Dr. Marumo called to the room his wife, his daughter (a child of five years), and his student, and successfully performed all the feats exhibited by Miss Abbott, not omitting even the increasing of children's weight by suggestion from a distance. As to the cataleptic feat in which Miss Abbott is rendered so rigid as to support the weight of any heavy person standing on her body while she is laid horizontally on the top of two chairs, this was not performed by Dr. Marumo on the present occasion. But he had achieved it successfully on a former occasion when another writer on the staff of the *Hochi* was present. That he performed these feats in a satisfactory manner, is most emphatically vouched for by the writers. Not only did Dr. Marumo succeed in performing the feats, but his wife and student showed themselves equally proficient in the art, which, according to his theory, is within the reach of anybody.

The secret, in Dr. Marumo's opinion, may be explained partly by the principles of experimental physics and partly by those of transcendental physics. All the feats performed with chairs, and poles or sticks, for example, are easily accounted for by the principles of the lever, parallelogram of forces, and resolution of forces. By a skilful application of these principles, the forces exerted in opposition to the performer may be so directed as to spend themselves instead of pressing upon him or her. By way of example, the trick of holding a stick against the pushing of antagonists may be cited. In that feat, Miss Abbott inclines forward by raising one of her feet and keeping it at the back of the other foot. In such a posture her centre of gravity is located about the middle of her breast. Now she takes care to hold the stick right in front of her neck or chin, so that the force applied by her antagonists presses against her far above the centre of gravity. By maintaining a proper ratio between the direction of the antagonistic force and her centre of gravity, she manages to resist the pushing of several persons. She requests her antagonists to be gradual and steady in exerting their strength. This condition is necessary, in Dr. Marumo's opinion, to enable her to adjust the ratio between the antagonistic force and her own centre of gravity. As to the holding of a stick upright against attempts to pull it down, this is accomplished by pressing the stick obliquely by the application of her hands at the two ends of the stick, thereby meeting a vertical force with an oblique one. With regard to the lifting of a chair with several persons on it, Dr. Marumo is represented to have stated that, although this puzzled him a great deal at first, he found it to be one of the most childish tricks of all. The weight of the persons on the chair is naturally made to fall backward, so that the centre of gravity of the whole mass passes down

through the back legs of the chair. In that position, the whole mass may be easily made to oscillate round the back legs of the chair as a pivot. This motion gives an appearance of the chair being raised, whereas in fact it is not raised.

Dr. Marumo acknowledges that there are other performances which cannot be adequately accounted for by the principles of experimental physics alone. These are the increase of a child's weight by suggestion from a distance, and the cataleptic stiffening of the body. These feats belong, in his opinion, to the domain of transcendental physics; in other words, they are to be explained by the subtle action and reaction of mind. In the first of the above mentioned cases the result is produced by three concurrent influences; namely, the performer's self-conviction that the children will not be raised; the little one's strong confidence that they have become immovably heavy, and a strong prepossession to the same effect on the part of the person that attempts to lift them. As to the cataleptic performance, the Doctor thought fit to withhold the explanation of the manner in which the result is obtained, for the publication of the truth might lead to its employment for mischievous, nay, even criminal purposes, as has actually happened more than once in Europe. Neither does he think it at all necessary to explain the truth, for it is well-known to every novice in the science of medicine. In speaking of the principles of what he calls transcendental physics, he is said to have repeatedly referred the *Hochi's* representative to a well-known work by Dr. Turner of Germany on the subject, from which he cited several attested instances of the manner in which a strong prepossession produces material phenomena without any material agency.

It is scarcely possible to follow these explanations unless they are accompanied by mathematical figures and demonstrations. Besides, we cannot but think that Mr. Marumo's interpreter, not being himself a mathematician, fails to convey a really clear and accurate exposition of the Doctor's meaning. Take, for example, the feat in which Miss Abbott, poisoning herself on one heel, holds a stick horizontally before her, somewhat below the level of her shoulders, and defies four or five men to push her backward by exerting their strength on the stick. Mr. Marumo says that in such a position Miss Abbott's centre of gravity is located about the middle of her breast, and that she takes care to have her antagonists press against her far above the centre of gravity, when, by a proper adjustment of the direction of the pushing force, she can successfully resist it. Now any one can examine this explanation. It is only necessary to conceive a straight line placed in an inclined position and having its lower extremity pivoted. Through a point in this line a force of fixed magnitude—the performer's weight—acts vertically downward, and at a point higher up, a horizontal force—the push of the experimentalists—acts horizontally. There can be no stability in such a system unless the resultant of the vertical and horizontal forces coincides with the inclined line—i.e. the direction of the performer's body—and thus passes through a fixed point—her heel. Moreover, we have to assume that her body is a perfectly rigid line. Considering, however, that the horizontal force is of virtually unlimited dimensions, while the vertical force is invariable, we fail to see how the direction of the resultant can be so effectually controlled. With regard, again, to the stick held upright while one man, or several, attempt to pull it down, Dr. Marumo's explanation leaves us quite in the dark. He tells us simply that a vertical force is met by an oblique one. What that means we cannot tell. It is conceivable that if a steady point—a fulcrum—could be obtained in a stick held at a greater or less angle to the vertical, two forces acting vertically downwards from either end of the stick might neutralize each other. The stick would then represent the beam of a weighing machine. But how is the steady point to be obtained? It is a mathematical principle that the pressure on the fulcrum of a bal-

ance is equal to the sum of the momenta acting on either side of it. If Miss Abbott obtains a steady point by holding the stick near the middle, she must exert a force of immense magnitude. If either Dr. Marumo or Professor Kano would publish a scientific demonstration, accompanied by diagrams, the public's judgment could be soundly exercised, but these confident allegations based on vague proofs suggest doubts only. We may say, in conclusion, that Dr. Marumo's explanation of the chair-lifting feat is directly opposed to the evidence of our own senses. We have actually seen the back legs of the chair raised, not once but many times, through a height of several inches from the ground. If the Doctor had said that the weight of the persons heaped upon the chair was made to fall forward, so that the centre of gravity fell over, or nearly over, the front legs, then there would obviously be little or no force acting downward through the back legs, and the apparent lift would be merely a simple tilt, not beyond the strength of a woman. Can the weight be thus distributed, however, when the lowermost person on the chair sits with his back pressed tightly against the chair's back? The natural result of the position occupied by a number of persons heaped upon a chair is that the centre of gravity is located somewhere near the back legs, in which position it would be comparatively easy to tilt the front legs, but immensely difficult to raise the back. We do not wish to be understood as denying that Professor Kano or Dr. Marumo has discovered the truth about these feats. Being ourselves unable to explain them, it would be unpardonable presumption to deny the ability of others. What we allege is simply that the journalistic interpretations of the two experts' reasoning are obviously insufficient, but whether the fault lies with the interpretation or with the original reasoning, we do not profess to determine.

FIRE ON THE "WANDERING JEW."

\$150,000 WORTH OF CARGO DESTROYED.

At one o'clock yesterday morning, says the *Hongkong Daily Press* of Oct. 31st, a seaman on the American ship *Wandering Jew*, now lying in the harbour, was going along the upper deck of the fore part of the ship when he pushed a hatch back and volumes of smoke issued through the aperture. He at once called the captain and mates, and an examination of the vessel proved that a fire had broken out in the lower 'tween decks. The captain (Mr. Nicholls) immediately gave the usual fire alarm by firing muskets, rockets, and blue lights. An attempt was made to get down to the seat of the outbreak, but the dense smoke prevented the men from going lower than the main deck. The fire signals were responded to with commendable promptitude, and by two o'clock the steam fire engine was alongside the vessel and pumping water into the fore hold. Hon. Commander W. C. H. Hastings, Superintendent of the Fire Brigade, also turned out as soon as the alarm was given. The vessel was towed into shallow water and scuttled. Holes were drilled in the upper deck and the hose passed through them, and water was poured into the vessel. Everything was battened down, but it is almost a certainty that the work of drenching the whole of the cargo will not be completed until this morning. The cargo consists of 825 boxes of fire crackers and 25,000 rolls of matting, and the whole is valued at \$150,000. The major portion of it was shipped by Messrs. Siemssen and Co., but none of the insurance companies in the colony will suffer, as all the cargo was insured in America. How the fire originated is not known. It is very fortunate indeed that the vessel had not left for New York, her destination. On Friday last the ship was almost ready to sail, but it was decided to wait for four hundred additional rolls of matting from Canton. These were to have been shipped yesterday. She is now lying on the mud bank near Stonecutter's Island, and will of course have to be docked after the damaged cargo is taken out. It is thought that the fire must have been smouldering for some days.

THE KOREAN COUP D'ETAT.

The Korean correspondent of the leading Shanghai journal continues to exercise his really curious faculty of mischief-making and credulity. His latest is this:—"As events come to light, there seems no doubt whatever that the *coup* was simply the completion of what Pak Yong-ho tried to do a few months ago and failed; but General Miura was sent over to see it properly carried out." What a splendid *farceur* this correspondent must believe Japan to be! She sends a Minister to Korea for the express purpose of carrying out a certain *coup d'etat*, and when he has very thoroughly obeyed his instructions, she arrests him and tries him on a criminal charge! Is it possible that the *North China Daily News* can not procure some Korean correspondent other than this crack-brained romancer?

AN AWFUL RECORD.

It seems to be pretty clearly established that the number of victims carried off by cholera in the city of Peking during the summer of this year was fifty thousand. Assuming the population to be seven hundred thousand, it follows that one person out of every fourteen died, and as the epidemic lasted for two months only, the deaths must have been over eight hundred daily, or about eleven hundred and fifty seizures per diem, supposing the rate of mortality to have been seventy per cent. If, further, we note that the ravages of the disease were comparatively little felt in the Tartar city, the state of affairs that prevailed in the Chinese section presents itself in terrible proportions.

"TRILBY."

The *Medical News* of Philadelphia, quoted by the *Literary Digest*, holds that the hypnotic incident in "Trilby" is not a possibility. It argues the matter thus:—

"In 'Trilby' we have a charming little story utterly wrecked and ruined by a baleful and ghastly shadow of hypnotic influence, which hangs over it like a pall. Like most such 'glooms' it has, happily, no counterpart in real life, not even in the life of the hospitals. There are two absolutely essential elements lacking in the verisimilitude of Svengali's influence over Trilby: Willingness to submit to being influenced on the part of the subject, in the first place, and the original possession of the faculties which she exhibited at his suggestion in the second. Without the first requisite hypnotism can never take place, though, of course, after the hypnotic state has been reached the subject's actions may be entirely beyond the control of her own will. As to the second, an absolutely tone-deaf person, as Trilby avowedly was, could no more be endowed by hypnotic influence with the power of appreciating harmony and distinguishing shades of musical expression, than she could be changed from a blonde to a brunette. Every physiologist knows that, no matter what her vocal powers might be, she would be utterly incapable of harmonious song unless she could hear and correctly appreciate the tones of her own voice. Deaf-mutes, for instance, are dumb, simply because they can not hear the sounds made by their usually perfect vocal apparatus, and consequently can not regulate and combine them into articulate speech. No amount of suggestion or mesmerism can draw out of any subject anything more than was in them before. The popular idea that hypnotism is a sort of connecting-tub, through which the moods, will, impulses, and powers of the operator can be poured into the mind of the subject, is entirely unfounded. Finally, the mysterious decline and death of Trilby from the 'fearful drain upon her nervous force,' without pain or symptom of disease, are highly artistic, but extremely unnatural. People do not die that way at thirty-one, except in novels, or from that cause at any age. In short, we are thankful that the painful later experiences and early death of Miss Trilby O'Ferrall not only did not happen, but could not have happened; and we sincerely hope that Mr. Du Maurier will recognize the fact in his forthcoming sequel.

"Death and disease are painful and piteous enough; but, like a certain other morbid influence, not half so black as they are painted, and even from the hospital-ward and the post-mortem table we may learn that

'There are nettles everywhere,
But sweet green grasses are more frequent still.
The blue of heaven is greater than the cloud.'

MILITARY AND NAVAL INCREMENT.

The *Kokkai*, with much show of assurance, alleges that it has been decided to add one Brigade to each of the present Divisions of the Army, and, further, to increase the number of Divisions by two. The latter change would not produce any sensible effect on the force available for service within Japan proper or beyond the sea, for two Divisions will be required for permanent service in Formosa. But the adding of a third Brigade to each Division would signify the virtual doubling of the present force. As to the Navy, the *Kokkai* says that it will be raised to a tonnage of 250,000.

GOLD.

By way of sequel to what we recently wrote on the subject of the increased out-put of gold and its probably paralysing effects upon the bimetallic agitation, for the present at all events, we quote the following interesting paragraph from the *Spectator*:—

It appears, then, that in the first fifty years of the present century, the gold produced was worth £163,248,560, showing an average output of about 3½ millions' worth per annum. During the succeeding forty-five years, taking the output for 1895 at a fair estimate, the gold won will have been worth £1,153,088,600, having been turned out at the rate of about 25½ millions' worth per annum, and the average value of the results for the ninety-five years comes to a little less than 14 millions a year. The gold turned out last year was valued at £33,400,000, and this year's mining is expected to result in a return of 40½ millions. The figures, most of which are taken from "Le Marché Financier en 1894-1895," a trustworthy and interesting work compiled by M. Raffalovich, are quite sufficiently startling, showing as they do that this year's output of gold is nearly three times as great as the average annual yield during the present century. But when we look forward and take into account the confident predictions of experts whose forecasts have hitherto proved singularly correct, the possibilities of increase in the immediate future open up a still more remarkable picture. At present the world's production may be divided, very roughly, into four equal parts, which are contributed respectively by Africa, Australia, the United States, and "other countries." But it is expected that the output of the chief field in Africa will be more than doubled within the next few years, and a proportionate increase is looked for from the other established fields in this highly auriferous region. An enormous amount has also been invested lately in Rhodesia, though the possibilities here are still a matter of conjecture. As to the probable yield from Western Australia opinions are very much divided, and the Londonderry fiasco certainly encourages careful estimates. The field has hardly been scratched as yet, but there seems little doubt that it is extraordinary rich on and just below the surface, and a large addition to the Australian return is expected from this tract. Moreover, British Guiana is said to be developing well, and it is maintained that there is untold mineral wealth in Central America if only capital could be raised to work it. Apart, however, from hypothetical additions to the world's supply of gold, it is safe to estimate that early in the next century the annual output will be worth from fifty to fifty-five million sterling, or about sixteen times as much as in the early years of the present century. As to the results of this addition to our monetary resources, it is difficult to foresee them clearly, and their discussion leads one into very rugged and difficult paths. It is obvious, however, that bankrupt States which are struggling on with dirty and unsanitary paper-money will have a good opportunity for establishing a metallic currency, and that the use of gold in the arts will be considerably increased. There is no doubt that the rise in the buying-power of gold has stimulated its production; but it is not so certain that the expected increase in its amount will cause a rise in general prices. On the contrary, it is very probable that the abundance of gold may lead to a further expansion of the credit system and a consequent development of the production of general commodities which would prevent any material advance in their values. The output of gold has been increasing fast and steadily during the last twenty-five years, and prices have been falling *pari passu*, though the conditions have been so much complicated that it is possible to argue that the fall in prices would have been far greater if the increase of the gold-supply had not happened at the same time, and that henceforward, assuming that the cheapening of transit and the improvement of industrial processes are not carried still further, the weight of gold in one scale will force up general values in the other. The next few years will solve the problem; but probably, even when they have passed, economists will differ as to the actual meaning of the solution.

The Authorities propose spending yen 150,000 upon improving education in Formosa. It is stated that some elementary, middle, and normal schools will be established there in 1897.

The Nippon Yusen Kaisha and its branches in all parts of the country will be closed during the five days commencing the 13th inst., in connection with the death of the President, Mr. Yoshikawa.—*Kokumin Shimbun*.

THE WAR SCARE.

IF some basis could be discovered for the war scare now sedulously promoted by journalistic sensationalism in Yokohama, we might be disposed to believe ourselves in the neighbourhood of a crisis. But even those that profess to be acutely sensible of impending trouble and hubbub, do not attempt, and are obviously unable, to explain what is the matter. There is vague talk, indeed, of strained relations between England and Russia in connection with the Armenian affair. But that is pure conjecture. When the latest detailed news reached us about the complication with the Porte, Russia and England were in perfect accord, and nothing, so far as we know, has since occurred to disturb their harmony of action. In the East, there is an equally conspicuous absence of any cause of quarrel. No issue of any serious character—we may even go so far as to say, no issue whatever—has recently presented itself between the two countries, and if their relations be strained, it must be owing to some sudden and wholly unexpected incident. Is it conceivable that such an incident, had it happened, could remain hidden from the public? Surely not. Yet many people, though ignorant of any such incident, seem to imagine that war can not be averted without difficulty. A vaguer or more unreasoning dread could not easily be conceived. The other day, an anonymous newspaper correspondent in Nagasaki—in Nagasaki of all places under the sun!—undertook to make a revelation about a secret treaty between England and Russia. He chose the *Hongkong Telegraph*—the *Hongkong Telegraph* of all papers in the East!—as a medium of communication, and *The Times'* correspondent in Hongkong was betrayed into telegraphing the news to the great journal. Then Reuter re-telegraphed it out here, and the sensation-mongers, entirely failing to perceive the inherent impossibility of the story, not only accepted it as true, but refused to abandon their delusion even after the Russian Embassy in London had given an explicit denial. On that occasion they had at least a cock-and-bull tale to serve as basis for their perturbation, but in the present instance they have nothing at all. For the news that English Consols have fallen two points and a half, can be referred much more easily to events that we know to have been recently taking place than to complications suggested solely by imagination and inconsistent with our latest trustworthy intelligence. Two months ago a speculative mania for South African mining stock had assumed such dimensions in London and Paris that a financial panic in both cities was already apprehended. If it has come, as was almost inevitable, there need be no difficulty in interpreting the present depreciation of English Consols. With a simple explanation so pal-

pably in sight, there is surely no occasion to go abroad in search of war scares. The season, also, must be remembered. Russia can not fight in the East, even were there reason to fight, until the spring of 1896 is well advanced. She is entirely without harbours of refuge, coaling stations, or dock-yards—unless, indeed, she has Japan for an ally, which contingency we see no reason to take into account. Looking at the situation from another standpoint, we observe that if a cause of quarrel has arisen between England and Russia in connection with Armenia, the statesmen of St. Petersburg must have been taken entirely by surprise, otherwise they would not have detached the large squadron now on the Pacific Station—a squadron that must remain eliminated from the European field for over two months, since the Suez Canal would be closed for the ships' return voyage. Everything, in short, points to the baseness of the present war scare. We regard it with absolute scepticism.

JAPAN'S FORCES IN KOREA.

WE referred, pretty fully, in a recent article to the intimate connection that exists between the presence of Japanese troops in Korea and the occupation of Manchurian territory by Japan. Holding the Liaotung Peninsula and the northern littoral of the Yellow Sea it would be absolutely necessary that Japan should preserve her overland lines of communication through Korea to the Yalu River, at the outset at all events. In the course of time, she might bring herself into telegraphic touch with her Manchurian possessions by laying a submarine cable to Talien, and she might establish coastwise stations that would enable her to dispense with commissariat lines through Korea. But pending these steps, Korea must remain, in a certain sense, a Japanese basis of operations for the retention of southern Manchuria, and a military force must consequently be maintained in the peninsula. So soon, however, as she agrees to strip herself of all her territorial acquisitions beyond the Yalu, there ceases to be any need for keeping open the Korean lines, and all the troops engaged for that purpose may be withdrawn. There can be no difficulty whatever in comprehending that very simple statement of facts, or in perceiving that since, by the terms of the Convention recently concluded in Pekin, Japan has engaged to restore her Manchurian acquisitions, she may, so soon as the rendition is effected, recall from Korea whatever forces are there engaged in the maintenance of her lines of communication. We make these remarks because our original reference to the return of the troops appears to have been interpreted in the sense of a much more sweeping measure than we intended to describe. We do not suppose that the Japanese
